28. How can our programs be improved? What specific comments do you have regarding the curriculum?

36 responses

nil

Discipline and Hard work is very important

Awareness about Research initiative by the teachers is to not there.

Skill based , industry related and employment generation should be the objective of the courses.

NA

More practical components to be included.

It should be more of research oriented

Introduce skill based papers, more tie up with industry, inculcate research attitude specially among the Commerce and Humanities, encourage the students to work beyond clock hours, and not just for the sake of salary but be dedicated, devoted and loyal.

Focus on research, belongingness for the institution, innovative way of thinking, flexibility and above all sincere and dedicated to the profession.

Curriculum should also help the Students to develop their personality and values.

Internships should be made compulsory for undergraduate program in Commerce

New updated technology and new research based topics should be added to the curriculum

Need updation

Skilled based program in order get placements

1.Include more practicals in theory subjects like stock market or net banking in Economics.
2.Make internship compulsory even though it may b for very short duration.
3.Make industry visits compulsory in few subjects covered in a course.

Need to include practical assignments and case studies in commerce subjects.

Has to be updated based on modern needs

1. Curriculum need to be enhanced as the technology advances.
2. Course be restructured regularly.

Let the curriculum be more practical oriented for the students to be industry ready

Linkage with Industries and stakeholders

In today's scenario being professional faculty students should be innovative in thinking and have practical approach.

The present curriculum is well planned and designed to provide quality education and research in biological sciences.

Personal challenge to make it a bit less bulky.

.

Nil

Some workshops or training program on communication skills, work ethics can be included in the curriculum. Some on the job training or internships can also be included.

The Undergraduate programme at Chowgule College has four components that provide ample opportunities to the students to develop the traits mentioned in the questionnaire.

We are constantly striving hard to bring in ways and means to develop these traits amongst our students through academic credit programme as wells as non evaluative credit programme.
Non evaluative credit programme offers ten credits of which six are through organization, administration, supervision and participation in extracurricular activities. The entire programme is eighty percent governed by students and rest by the support of the faculties. All of the traits mentioned in the questionnaire are involved in the programme. The remaining four non evaluative credits can be earned through internship programme that also provides the student to develop these traits.

More focus on startups and employability programs. More of practical oriented, self learning based courses for making students critical thinkers and solve problems. Presently our students are having unidirectional (syllabi focused)approach and lack self and peer learning unlike in most of the renowned Universities.

Curriculum (English) needs to be aligned with skill based areas. Assessments should encourage the use of technology within the classroom. Syllabus should contain a teaching course. Evaluations should be research oriented.

We can improve by making it more student centric and by giving an opportunity to use the knowledge in practically and provide students with career guidance while they're in 3rd year.

More contribution towards Research Work

I was a student of MA Philosophy, I would suggest to add more Electives which could help student to implement in real life situation.

By inducing strong base of disciplinary knowledge and problem solving approach

There should be industry experts invited for Guest lectures

The courses should focus more on practical necessity of a student for their future purposes, like replacement, skill enhancements, critical and creative development, etc. More fun based and student's involvement learning should be conducted.

Better information and interactive sessions
