<u>Learning Outcomes</u>	<ol style="list-style-type: none"> 1. Students will understand the concepts of human rights in terms of equal opportunities and result equality for women. 2. Students will develop the skills to analyse the existing laws and the legal system for substance, structure and culture of the law, so as to appreciate empowering characteristics of the law, while also locating the lacunae in the the law and legal systems, in order to monitor and lobby for advancing women's rights. 	

OPTIONAL COURSES

Programme: M. A. (Women's Studies)

Course Code: WS0-111

Title of the Course: WOMEN'S HEALTH - CRITICAL DEBATES

Number of Credits: 4

Effective from Academic Year: 2018-19

<u>Prerequisites for the course:</u>	Student should be registered with Goa University Post-Graduate Programme	
<u>Objective:</u>	The course discusses the debates around health policy and programme in India and stresses the potential for women's agency and autonomy with respect to improving their health and environments.	
<u>Content:</u>	Module 1: Health, Gender and Power: Discrimination, Food access and Health. Traditional medicine: women and the power of knowledge over traditional health systems, family kitchens, pregnancy and childbirth etc. Harmful traditional practices and women's health. Women's bodies as sites of control -menstruation, family planning and contraceptive technology. The gender of health care providers.	12 Hours
	Module 2: Health Policy in India: Welfare to Empowerment, Family Planning, Surrogacy Laws, Maternity Benefit Act. Reproductive health and health care. Debates around Pre-Conception and Pre-Natal Diagnostic Test (PCPNDT) Act, abortion and medical termination of pregnancy. Women's health and the global environment. Medicalization of women's health concerns. Women as consumers of health care and health insurance.	12 Hours
	Module 3: Women's Experience and Health: Health and Violence: Psychological concerns and women coping with stress (pre-menstrual syndrome, post-natal depression and other mental health concerns): Alcoholism, drug abuse. Lifestyle and health including sterility. Special issues in women's health (menopause, cervical and breast cancer, hysterectomy, violence, AIDS and aging). Occupational health concerns (women in construction, mining etc.) and health issues of marginalized women (commercial sex workers, women living in remote locations, etc.)	14 Hours 10 Hours

	Module 4: Understanding health from available data sources (sex ratio, mortality, morbidity, hygiene and sanitation, etc.): WHO, NFHS, DLHS, State Health Intelligence Bureaus etc. State health related schemes and programmes.	
<u>Pedagogy:</u>	lectures/brain-storming sessions/assignments/self-study/ documentaries and discussion/ group readings and discussions/ poster making/presentations

<u>Learning Outcomes</u>	<ol style="list-style-type: none"> 1. Students will learn about the women's contribution to Indian history. 2. Students will learn to analyse critically the process of writing history. 3. They will develop the skills to use unconventional research tools to understand women's contribution in the society. 	

Programme: M. A. (Women's Studies)

Course Code: WSO-114

Title of the Course: A GENDER REVIEW OF LITERATURE

Number of Credits: 4

Effective from Academic Year: 2018-19

<u>Prerequisites for the course:</u>	Student should be registered with Goa University Post Graduate Programme	
<u>Objective:</u>	This course aims to develop in students the understanding of how to read any literary text from a gender perspective. Highlighting the politics of exclusion of women, the male dominant narratives, students will explore the cultural, social, economic, political and psychological biases inherent in the field of literature. The course will analyse and interpret the various kinds of writings and oral narratives of women across time.	
<u>Content:</u>	Module 1: Women in Literature: Feminist literary criticism, the history of feminist literary criticism, different phases of feminist literary criticism (men's treatment of women, 'gyno-criticism', the 'mad' woman, etc.) with reference to selected texts.	12 hours
	Module 2: Women and Literature: The oral tradition and women's voice of resistance. Women in Bhakti Period: (Mirabai, Akka Mahadevi, Andal, Bahinabai). Women's writings as a form of protest. Women's autobiography.	12 hours
	Module 3: Understanding South Asian society through women's writings (Selected women's writings from - Bangladesh, Pakistan, Sri Lanka, Nepal).	12 hours
	Module 4: Women's contemporary writings as voices of resistance to caste, colour, class and gender. Women's writings from Goa	12 hours
<u>Pedagogy:</u>	Lectures/group discussions/assignments/self-study/book reviews/ creative writing

Title of the Course: GENDER AND POLITICAL PROCESSES

Number of Credits: 4

Effective from Academic Year: 2018-19

<u>Prerequisites for the course:</u>	Student should be registered with Goa University Post Graduate Programme	
<u>Objective:</u>	This course will introduce students to the perspectives and challenges around Panchayati Raj Institutions in India and will help students understand the key determinants and barriers to women's political participation in India. The course will cover issues of women's agency, autonomy and political empowerment. The politics of reservation (the 73 rd and 74 th Constitutional Amendments) and current debates around the Women's Reservation Bill including the Quota Campaign. The course will also introduce students to the role of civil society and the role women play in governance through participation in social movements, activist groups and NGO's. The concept of leadership through women's collective action will be discussed. The Kerala <i>Kudumbashree</i> experience will be discussed.	
<u>Content:</u>	Module 1: Concept of Democracy. Politics and political participation. Relationship between democracy and citizenship (historical exploration). Women's struggle for political participation; women's suffrage movement and importance of women voters. Women in Indian Nationalist Movement.	12 hours
	Module 2: Indian Constitution and provisions for women. Women's political participation and Indian democracy. A history of local self-government in India. Women in local self-government: Prospects and challenges. Politics of Reservation. Quota campaign. Analytical reflections on case studies of women in panchayats.	12 hours
	Module 3: Governance through civil society movements and organisations. The <i>Kudumbashree</i> experience in Kerala	12 hours
	Module 4: Women in politics in Goa. Experiences from the field.	12 hours
<u>Pedagogy:</u>	lectures/assignments/self-study/quiz/documentaries/	

	discussion/ group readings and discussions/ presentations/ framing policies and schemes/ interviews with women in politics

<u>Learning Outcome</u>	1. Students will develop a basic political awareness from a gendered perspective.	

Programme: M. A. (Women's Studies)

Course Code: WS0-116

Title of the Course: GENDER AND MEDIA

Number of Credits: 4

Effective from Academic Year: 2018-19

<u>Prerequisites for the course:</u>	Student should be registered with Goa University Post Graduate Programme	
<u>Objective:</u>	The media (film, television, magazines, newspapers and the internet) plays a major role in "constructing" gender, and "popular" views of what appropriate behaviour is. The course will examine various images of gender in media with examples from the late 20 th century to the present. Using theories from cultural studies, film and gender studies, and communication studies, students will explore different processes and practices of gender, specifically in terms of media representations of femininity and masculinity.	
<u>Content:</u>	Module 1: Theories from cultural studies, film and gender studies, and communication studies: media and representation of femininity and masculinity. Male gaze. Media and construction of gender norms and stereotypes: Film screenings and discussion on Stereotypes: Portrayals of the rural woman, woman in paid employment, morality and the bad woman, popular culture and interpretation of gender.	12 hours
	Module 2: Critical analysis of Gender in Magazines and Newspapers. Advertising and the image of women. Women's magazines. Politics of paid news.	12 hours
	Module 3: Internet and its social impacts. Internet and women: empowering or a tool for disempowerment. Role of Information Communication Technology in women empowerment.	12 hours
	Module 4: Media, gender - its intersections with caste, class and religion. Enactment and representation of social norm about gender - its impact on identity formations and communication. Media as a socio-cultural mechanism that shapes individual and collective notions of identity: essentially what it means to be male or female.	12 hours

<u>Pedagogy:</u>	lectures/assignments/self-study/ films, documentaries and discussions/ group readings and discussions/ presentations/ short film making

<u>Learning Outcomes</u>	<ol style="list-style-type: none"> 1. Students will be able to interpret data and analyse the demographic situation from a gender perspective. 2. Students will understand work and workplace and be able to critically assess various government schemes and programmes on work for women. 	

Programme: M. A. (Women's Studies)

Course Code: WSO-118

Title of the Course: GENDER, ENVIRONMENT AND ECOLOGY

Number of Credits: 4

Effective from Academic Year: 2018-19

<u>Prerequisites for the course:</u>	Student should be registered with Goa University Post Graduate Programme	
<u>Objective:</u>	This course looks at the relationship between society, gender and the environment and will draw from literature from the growing field of feminist political ecology and ecofeminism. Women's role in various Environmental conflicts and environment movements such as the Chipko, Narmada Bachao Andolan, and other such cases will be used to aid the understanding of the relationship between political economy, society, gender and the environment. This course will introduce students to some of the key environmental issues and what is meant by ecofeminism. Questions of sustainable use of natural resources, environment management practices and grassroots level conservation, eco-consciousness, relationship between women and nature, livelihood vs environment conflicts, environment and women's agency, knowledge of traditional healing systems, gender and water, women's role as farmers, environmental stewards, activists and women's contributions to scientific research will be studied.	
<u>Content:</u>	Module 1: Feminist Political Ecology. Ecofeminism. Theories and debates on gender and environment	4 Hours
	Module 2: Mapping Environment Movements across the country: Development, Environment, Livelihoods and Conflict: Chipko, Narmada Bachao Andolan, Silent Valley - A People's Movement that saved a forest, Nagaland and Amur Falcons- Bano Haralu, Stork lady of Assam-Purnima Barman, Female forest Guards of Gir, Goa Bachao Abhiyan, SEZ Movement, Agitations against mining, tourism, etc.	14 hours
	Module 3: Environment and Women's Agency: Relationship of Women with Environment. Women, Land and Agriculture. Women's Knowledge of Traditional Health Care and Practices	10 hours

	Module 4: Women and nature conservation in India - workshops on Solid Waste Management: Segregation, Vermi-compost, Recycling/ Outreach Programmes: Street play, Awareness sessions in schools and villages / campus walk for basics of natural history: flora and Fauna and rain water harvesting. Case studies of movements (Traditional knowledge systems for biodiversity conservation: Vegetation management, Sacred Groves, Agriculture, cultivation of medicinal plants, traditional ethos, water and biodiversity). Women and Environmental activism: Finding and supporting passion for change, Online Activism/Media Journalism, Informed Activist, Pursuing a career in activism, Challenges for women wildlifers /Environment activist Environment NGO's in India: Greenpeace, Ashoka Trust for Research in Ecology and the Environment, Nature Conservation Foundation, Wildlife Conservation Society, Wildlife Conservation Trust, Bombay Natural History Society, World Wide Fund for Nature, International Union for conservation of Nature and Natural Resources, Wetlands International, Convention on International Trade in Endangered Species, etc.	20 hours
<u>Pedagogy:</u>	lectures/assignments/workshops/ street play/brain storming sessions/outreach programmes/campus walks/documentaries and discussion/ presentations	
<u>References/Readings</u>	Agarwal Bina. 2010. Gender and Green Governance: Political Economy of Women's Presence within and beyond Community Forestry. <u>Learning Outcomes</u>	1. Students will understand the impact of the political economy on the local realities affecting the	

	<p>environment.</p> <ol style="list-style-type: none"> 2. Students will understand the vital role that women play in conservation of nature, sustainable use of natural resource, mitigating environmental conflicts and addressing environmental issues through activism. 3. Hands-on training in solid waste and water management practices while building their capacities to conduct outreach programmes and environmental activism. 	
--	--	--

Programme: M. A. (Women's Studies)

Course Code: WSO-119

Title of the Course: GENDER AND EDUCATION

Number of Credits: 4

Effective from Academic Year: 2018-19

<u>Prerequisites for the course:</u>	Student should be registered with Goa University Post Graduate Programme	
<u>Objective:</u>	Students will be exposed to Paulo Freire's ideas on the inadequacies of the 'banking system' in education and his ideas on a non-formal system of learning and bell hooks method of 'engaged pedagogy'. To give the students an opportunity to get a hands on experience with 'connected teaching', this course will be a project based course where students will be given an opportunity to experience what Mary Field Belenky calls 'connected' learning and the Krishnamurthy philosophy of education.	
<u>Content</u>	Module 1: Debates around importance of education and education as a SDG. Role of education and women's status. Paulo Freire: NFE and 'banking system' in education. bell hooks engaged pedagogy. The Belenky's 'connected teaching' and the teaching/learning ideas of Krishnamurthy.	14 hours
	Module 2: Critique of Government Programmes and Policies to improve Education for Women in India: Female literacy & non - formal education for women development, National Literacy Mission (NLM). Sarva Shiksha Abhiyan, Kasturba Gandhi Ballika Vidhyalaya, Mahila Samakya, NPEGEL, District Primary Education Programme, NEP, RTE, NFE, Beti Bachao Beti Padhao, Swachh Bharat Swachh Vidyalaya.	20 hours
	Module 3: Gender critique of education and gender audit of education in India: focus on Goa.	14 hours
<u>Pedagogy:</u>	lectures/assignments/self-study/ documentaries and discussion/ group readings and discussions/ presentations/ text interpretations/workshops/ field projects

<u>Learning Outcomes</u>	<ol style="list-style-type: none"> 1. Students will be able to critique education and existing school curriculum from a gendered perspective. 2. Students will be able to conduct workshops based on alternate pedagogical tools. 	

Programme: M. A. (Women's Studies)

Course Code: WSO-120

Title of the Course: WOMEN AND VIOLENCE

Number of Credits: 4

Effective from Academic Year: 2018-19

<u>Prerequisites for the course:</u>	Student should be registered with Goa University Post Graduate Programme	
<u>Objective:</u>	This course will introduce to issues of violence, masculinity and male identity and how forms of violence get legalized by social custom and tradition. The course will give an overview of different forms of violence from both a historical as well as global perspective. The different forms of violence, the evolution of society's response to that form of violence, the laws, programmes and services to address that form of violence will be discussed. The course will include concerns around domestic violence, rape, including custodial rape, intimate partner violence, honour related violence, violence against women as a weapon in war, paedophilia and child abuse, self-inflicted violence and suicide, female genital mutilation, molestation and teasing, trafficking and forms of violence that are not covered by the law. The aim of the course is to explore and problematize the connection between gender, sexuality, culture and violence.	
<u>Content:</u>	Module 1: Violence, masculinity and male identity and how forms of violence get legalized by social custom and tradition, subtle forms of gendered violence and cultural sanction. Crimes against women as under the IPC, understanding the status from Statistics	12 hours
	Module 2: Different forms of Violence: dowry, domestic violence, rape, including custodial rape (Mathura Rape Case), intimate partner violence (Marital rape debate), honour related violence, violence against women as a weapon in war, paedophilia and child abuse, self-inflicted violence and suicide, female genital mutilation, molestation and teasing, trafficking.	18 hours
	Module 3: Nirbhaya and after: Legal Interventions, Criminal Amendment Act 2013, society's response,	10 hours

	<p>role of media, services and programmes</p> <p>Module 4: Violence and media reporting, various case studies (National and Local) Indecent Representation of Women and trolling.</p>	8 hours
<u>Pedagogy:</u>	lectures/assignments/self-study/ documentaries and discussion/ group readings and discussions/ presentations	
<u>References/Readings</u>	<p>Agnes Flavia. 2008. <i>My Story... Our story of rebuilding broken lives</i>. <u>Learning Outcomes</u>	<ol style="list-style-type: none"> 1. The students will be able to explore the relationship between cultural construction of masculinity and the perpetuation of violence against women and other sexual minorities. 2. Students will be informed about the various forms of violence against women and the politics of its normalization in a patriarchal society. 3. Students will be able to critique of media in handling of 	

	<p>issues of crimes against women.</p> <p>4. Students will also be able to critically assess the responses of state to the violence against women.</p>	
--	--	--

Programme: M.A Women's Studies

Course Code: WSO 121

Title of the Course: Basic Research-enhancing Skills

Number of Credits: 2

Effective from AY: 2018-19

<u>Prerequisites for the course:</u>	Any student registered for a Master's Programme in Goa University can apply for this course	
<u>Objective:</u>	This course aims to enhance the research skills, sampling techniques, methods of data collection, particularly referencing using software and quantitative methods for social science research.	
<u>Content:</u>	Module 1: Meaning and scope of statistics, representation of statistical data. What numbers can tell. Using secondary data quantitative sources to make inferences about society. Graphical representation . Sources of data	8 hours
	Module 2: Basic quantitative research methods and sampling techniques . administering standardized questionnaire , data collection , data entry and using computer programmes for analysis and data presentation Practical sessions	8 hours
	Module 3: Manual of style, using Zotero for referencing ,endnote, adding references to the research project or report practical.	8 hours
<u>Pedagogy:</u>	lectures/ practical sessions / hands on training in collecting data/ entering and interpreting	
<u>References/Readings</u>	Bhattacharjee, Anol.(2012). "Social Science Research: Principles, Methods, and Practices" Textbooks Collection. 3 http://scholarcommons.usf.edu/oa_textbooks/3 Kothari ,C.R. (2012) Research Methodology .New Delhi:New Age International Pvt. Ltd. Kothari C.(1985). Research Methodology: Methods and Techniques.New Delhi: Wiley Eastern Limited. MLA Handbook for Writers Of Research Papers 7th Edition. New Delhi: Affiliated East-West Press Pvt. Ltd. Thamilarasan M.(2014). Research Methodology for Social Sciences , New Century Publication Zotero software link : https://www.zotero.org/download/	
<u>Learning Outcomes</u>	1. Students' research skills will be enhanced 2. Students will learn styles of referencing 3. Students will be able to apply the learning in conducting future research like in dissertation, project work	

Programme: M.A Women's Studies

Course Code: WSO- 122

Title of the Course: Gender Sensitivity and Equity

Number of Credits: 2

Effective from AY: 2018-19

<u>Prerequisites for the course:</u>	This course is a mandatory course for all MA students of the Faculty of Social Sciences in Goa University other than students of the Department of Women's Studies	
<u>Objective:</u>	This course aims to develop the basic understanding of gender related issues in the society among students with multidisciplinary approach.	
<u>Content:</u>	Module 1: The universal commitment to Gender Equality and Social Equity - SDGs, Provisions in the Indian Constitution, Towards Equality Report and the creation of the discipline of Women's Studies in India. Sex and Gender: Non-duality of these terms. Nature vs Nurture debate, socialisation, stereotyping.	8 hours
	Module 2: Social Equity. Power, Intersectionality. Marginalised sections based on caste, class, abilities, religion etc. Women's rights as human rights. Women's issues in Goa.	8 hours
	Module 3: Introduction to Laws: Sexual Harassment at Work Place (Protection, Prohibition, and Re-dressal Act of 2013) and Protection of Women from Domestic Violence Act of 2005. Forms of violence against women: a review.	8 hours
<u>Pedagogy:</u>	This course will be taught through workshops of 6 hours each conducted over 4 Saturdays in the conference hall of Goa University/lectures/ group discussions/ assignment/quiz games/tutorials/assignments/films/documentaries/group	
<u>References/Readings</u>	Government of India. 2005. DV Act 2005 http://ncw.nic.in/acts/TheProtectionofWomenfromDomesticViolenceAct2005.pdf Government of India, 2013, Sexual Harassment of Women at the Workplace (Prevention, Prohibition and Redressal) Act of 2013. http://www.iitbbs.ac.in/notice/sexual-harrassment-of-women-act-and-rules-2013.pdf Pilcher Jane and Imelda Whelehan. 2005. 50 Key Concepts in Gender Studies. New Delhi: Sage Publications. UNDP. 2014. Women's Rights are Human Rights. file:///C:/Users/admin/Desktop/WomenRightsAreHR.pdf	
<u>Learning Outcomes</u>	1. Students will be enabled to develop the sensitive approach towards gender issues. 2. Students will have an understanding of equity, its importance in our society.	

Programme: M. A. (Women's Studies)

Course Code: WSD-111

Title of the Course: DISSERTATION

Number of Credits: 8

Effective from Academic Year: 2018-19

<u>Prerequisites for the course:</u>	Student should be registered for the MA Women's Studies Programme	
<u>Objective:</u>	Although this course can be in lieu of two Optional Courses, all students of Women's Studies are encouraged to undertake research. Through the research project and dissertation the research, reading and writing skills of the student will be sharpened.	
<u>Content:</u>	Every student will have a guide from within the Department of Women's Studies who will mentor the student through this completely independent project.	
<u>Pedagogy:</u>	Research proposal writing, self-study for literature review, drawing up methods appropriate for the study, data collection, analysis and report writing.	
<u>References/Readings</u>	As per the topic selected by the student	
<u>Learning Outcomes</u>	Students will develop confidence to write project proposals and undertake independent research.	

ANNEXTURE-I

SYLLABUS OF M.SC. (ELECTRONICS) (Effective from AY: 2018-19)

The Course requirement is completion of 64 credits(ie 16 credits/semester,

SR. NO	COURSE CODE	TITLE	CREDITS	TYPE
SEMESTER-I				
1	ELC 101	MICROELECTRONICS AND VLSI DESIGN	4	L
2	ELO 101	ADVANCED DIGITAL COMMUNICATION SYSTEMS	4	L
3	ELO 102	NUMERICAL COMPUTATION AND ALGORITHMS(FLIPPED CLASSROOM)	4	L
4	ELC 102	ELECTRONICS PRACTICALS – I	4	P
5	ELO 181	SWAYAM-I	4	L
			TOTAL	16
SEMESTER II

			TOTAL	16	

Programe: M. Sc. (Electronics)

SEMESTER I

Course Code: ELC101 **Title of the Course:** MICROELECTRONICS AND VLSI DESIGN

Number of Credits: 4

<u>Prerequisites for the course:</u>	Should have graduate level knowledge in analog and digital electronics	
<u>Objective:</u>	This subject will introduce to the VLSI Technology , various fabrications processes involved in IC design , Electrical and Electronics analysis of few circuits, Some Design examples of VLSI circuits, Circuit Optimization techniques, Advance circuits designs examples of Memory, Registers, Synchronous circuits etc.	
<u>Content:</u>	An overview of VLSI, Modern CMOS Technology	4
	Silicon Logic, Logic design with MOSFET.	5
	Physical structure of CMOS Integrated circuits	4
	Fabrication Technologies of CMOS Integrated Circuits	7
	Elements of Physical Design	3
	Electrical characteristics of MOSFETS	6
	Electronic analysis of CMOS Logic gates	5

	Advanced Techniques in CMOS Logic Circuits	6
	System specifications using HDL, General VLSI components	4
	Memories and Programmable Logic	4
	Tutorials: 1. 2 nd order Butterworth filter using P-Spice student version. 2. Current Mirrors using P-Spice student version. 3. CMOS based Op-Amp using P-Spice student version. 4. Study of Lithography. 5. Compares various Static memories.	
	Total	48
<u>Pedagogy:</u>	Lectures/ tutorials/assignments/self-study	
<u>References/Readings</u>	1. Introduction to VLSI Circuits and Systems, John P. Uyemura, WILEY. 2. Principles of CMOS VLSI Design, N.H.E. W. & Eshahiraghian, Addison Wesley 3. Modern VLSI Design System on Silicon, Pearson Education Asia. By W. Wolf. 4. VLSI Technology, S.M. Sze, McGraw-Hill (1995). 5. Basic VLSI Design, Douglas Pucknell, K. Eshraghian, Prentice Hall India.	
<u>Learning Outcomes</u>	Students should be able to design fundamental gates and customize them for specific electrical and electronics application, Should understand the fabrication processes involved in VLSI technology, Write the Hardware descriptive form of circuits, Synchronize the combinational and sequential circuits, design a static and dynamic memory cell, Understand the Programmable logic building blocks.	

Course Code: ELO 101

Title of the Course: ADVANCED DIGITAL COMMUNICATION SYSTEMS

Number of Credits: 4

<u>Prerequisites for the course:</u>	Graduate level understanding in basics of Electronic Communications	
<u>Objective:</u>	This course is intended to introduce students to the basics of wireless systems – concepts, theory. It covers various modulation techniques, to enable the student to synthesize and analyze wireless and mobile cellular communication systems over a stochastic fading channel	

<u>Content:</u>	<p>Introduction to Mobile and Cellular Communication Systems: Main Definitions, impact of Mobile and Cellular Radio Communication Historical overview. Fundamental of Radio Mobile and Cellular Practices Radio mobile links and cells, Frequency re-use, Principles of Cellular Com. Mobile Telephone Switching Subsystem, The mobile frequency spectrum, Hand-off, Cochannel and adjacent channel interference limitations, Near-far problem, Power Control.</p> <p>Mobile Communication Channel including antennas: The mobile wireless propagation channel, Notions on antennas especially the near and far field concept, Line of Sight (LOS) propagation, Multipath fading , outdoor and Indoor Propagation, Flat and selective fading, Special antennas for base stations and headsets, Deterministic, Empirical and Statistical Methods for propagation link computations.</p> <p>Overview of Mobile and Cellular Radio Communication Modulation and Detection Techniques: Analog modulations and detection: AM, FM, PM, ACSB, Hybrid and Digital modulation: PCM, ASK, FSK, QPSK, QAM, MSK, etc, Coherent and noncoherent detection, C/N, S/N, Eb/No and BER relations, Probability concepts, Mobile Radio links parameters.</p> <p>Overview of Multiple Accesses Techniques: Simplex, Duplex TDD and Time Division Duplex, Time division multiple access (TDMA) FDMA and OFDM, Code Division multiple access (CDMA), Hybrid multiple access, Management of voice, Data and Video (Multimedia) information.</p> <p>Modern Digital Radio Systems: standards, proposals and comparisons GSM (Europe and all over the world) - TDMA, IS-54 (U.S.A.)- TDMA, IS-95 (U.S.A., Korea) CDMA-, PHS (Japan) - TDMA, Frequency Hopping (FH) (U.S.A.) - CDMA, PCS, PCS Cordless telephone 2nd generation (CT-2), Cellular digital packet data (CDPD), and Wireless LAN, New standard trends Edge, 3rd and 4th generation beginning, LTE,</p> <p>Mitigation Techniques for Mobile System: Overview of Natural and manmade external noise sources, Radiation hazards effects from base stations, Mobile and portable equipments.</p> <p>Diversity Techniques for Mobile Radio Systems: Dispersive channels, Space diversity, Frequency diversity,</p>	<p>6</p> <p>8</p> <p>10</p> <p>09</p> <p>07</p> <p>04</p>
------------------------	--	---

	Equalizer techniques Tutorials: 1. Study of Global Positioning system working principle. 2. Study of mobile Service providers in Goa Region. 3. Study of AIR station Bambolim, Goa. 4. Study of Distance Education Infrastructure Setup (DEITE) at Goa University. 5. Study of various interfacing of mobile set eg. Bluetooth.	04
	Total	48
<u>Pedagogy:</u>	lectures/ tutorials/assignments	
<u>References/Readings</u>	1. Steele, R., Hanzo, L., "Mobile Radio Communication" 3rd Edition Wiley 2005. 2. Rappaport, T.S., "Wireless Communications: Principles And Practice, 2/E, Pearson 3. Wireless Communications (WIRELESS COMMUNICATIONS, 2ND ED, Molisch A F), Wiley	
<u>Learning Outcomes</u>	At the end of the course, 1.the students will be able to understand the design, specifications and the performances of various wireless communication systems 2. Apply the cellular concepts to evaluate the signal reception performance in a cellular network. 3. Apply the traffic analysis to design cellular network with given quality of service constraints. 4. Determine the appropriate model of wireless fading channel based on the system parameters and the property of the wireless medium. 5. Analyze and design receiver and transmitter diversity techniques.	

Course Code: ELO102 **Title of the Course:** Numerical Computation and Algorithms
Number of Credits: 4

<u>Prerequisites for the course:</u>	Students should have a knowledge of programming	
<u>Objective:</u>	The primary objective of the course is to develop the basic understanding of numerical algorithms and skills to implement algorithms to solve mathematical problems on the computer and also Data Bases.	
<u>Content:</u>	Computer Programming: Introduction to Algorithms, Elements of Computer Programming language Basics of algorithm design, general model, Dynamic programming model, principle of optimality, backtracking models.	08 hours

	<ul style="list-style-type: none"> Algorithm order and complexity. Backtracking example. <p>Data Structures: Introduction to Data Structures, Vectors and Lists, Binary Trees, Graphs, Hashing.</p> <ul style="list-style-type: none"> Implementation of Shortest path algorithm Implementation of binary tree <p>Theory of Numerical programming: Theory of numerical errors, Numerical Integration: Trapezoidal & Simpsons rule, Romberg method, Improper integrals; Numerical Solution of linear equations: Gauss-Jordan elimination and Lu decomposition, Numerical Solutions of nonlinear equations: Bracketting, bisection, Secant & Regula-falsi method, Newton-Raphson method; Numerical Solutions to Ordinary differential equations: Runge-Kutta method, Modified midpoint method, Richardson extrapolation.</p> <ul style="list-style-type: none"> Trapezoid methods, Newtons Raphson methods Bisection and Regular falsi methods Runge Kutta <p>Database: Basic Concepts, Relational Data Model, Database Design, DBMS storage structures and access methods, Query Processing, Transaction Processing, Security & Integrity, Distributed Databases, Client Server Computing.</p> <ul style="list-style-type: none"> SQL for database Client Server data base query <p>Tutorials:</p> <ol style="list-style-type: none"> Implementation of Vector in C++. Implementation of List in C++. Implementation of minimum path algorithms in C++. Simple Example of Database querying in C++. Case study on the Emerging Trends in databases (Data mining). 	<p>10 hours</p> <p>24 hours</p> <p>06 hours</p>
	Total	48
<u>Pedagogy:</u>	lectures/ tutorials/presentation/practical	
<u>References/Readings</u>	<ol style="list-style-type: none"> Data structures using C and C++ by Yedidyah Langsam, Moshe J Augenstein, Aaron M Tenenbaum, Prentice Hall of India, 1995 Data Abstraction and Problem solving in Java by Frank M Carrano, Janet J Prichard ,Addison-Wesley, 2001 Numerical Recipes in C, William H. Press, Brian P. Flannery, William T. Vetterling, Saul A. Teulosky, Cambridge University Press, 1990. Numerical Mathematical Analysis, J. B. Scarborough, Oxford and IBM Publishing Company (1979). Numerical Recipes in C: The Art of Scientific Computing by William H Press, Brian P Flannery, Saul A Teukolsky - Mathematics – 1992. Fundamentals of Database Systems, 4th Edition by R Elmasri, S Navathe Addison-Wesley, 2003 	
<u>Learning Outcomes</u>	After completing this course they will be able to use	

	numerical methods for solving a problem, locate and use good mathematical software, get the accuracy you need from the computer, □ assess the reliability of the numerical results, and determine the effect of round off error or loss of significance. Solve a linear system of equations using an appropriate numerical method	
--	---	--

Course Code: ELC 102 **Title of the Course:** ELECTRONICS PRACTICALS –I
Number of Credits: 4

<u>Prerequisites for the course:</u>	Should have studied graduate level basic level electronic subject. It is assumed that students have a working knowledge of passive and active components and digital circuits.	
<u>Objective:</u>	The hardware experiments give a student hands-on experience to design the basic digital and analog circuits, usually found in house hold appliances. The simulations experiments give understanding of the digital communications having various modulation techniques and also data correction and detection in general communication system.	
<u>Content:</u>	<p>Hardware experiments</p> <ol style="list-style-type: none"> 1. Design of variable voltage supply @ 2 Amps. 2. Temperature Controller using 741. 3. Design of Function Generator. 4. Design of 4-bit UP-DOWN Counter. 5. Design of Power Amplifier 10 Watts. 6. Design of Stepper driver using Monoshot & 555 Timer. <p>Software Simulations</p> <ol style="list-style-type: none"> 7. Implementation of MSK modulation and demodulation. 8. ASK, FSK, QPSK, modulation & demodulation. 9. QPSK, modulation & demodulation 10. DS-CDMA simulation. 11. Channel Coding methods. <ol style="list-style-type: none"> a. Convolution b. Block code 12. Error detection and correction Algorithm <ol style="list-style-type: none"> a. CRC b. Hamming code 	
	Total	96
<u>Pedagogy:</u>	Presentations /assignments/self-study	
<u>Learning Outcomes</u>	The student will understand and should be able to handle basic equipment in house hold. Also, he will thoroughly understand the basics of communication system for modulation, data coding , error coding channel coding methods.	

Course Code: ELO181

Title of the Course: SWAYAM-I

Prerequisite/objectives/learning outcomes as provided by course on SWAYAM website.

Number of Credits: 4

SEMESTER II

Course Code: ELC 201

Title of the Course: EMBEDDED SYSTEMS DESIGNS & IoT

Number of Credits: 4

<u>Prerequisites for the course:</u>	Should have studied microprocessor and C programming at graduate level	
<u>Objective:</u>	<ul style="list-style-type: none">Architectures of Microcontroller and its programming with Interfacing various Interfaces is discussed in depth in this paper.In this course students are going to learn how to develop apps for Android phone using SDK.To Understand the Architectural Overview of IoTTo Understand the IoT Reference Architecture and Real-world Design ConstraintsTo Understand the various IoT Protocols (Data link, Network, Transport, Session, Service)	
<u>Content:</u>	<p>Architectures: Embedded system , Computer Architecture, RISC/CISC and Harvard/Princeton Architectures, Introduction to 8-bit Micro controllers , ARM : Introduction to 32/64-bit Processors, Latest ARM ,ARM Architecture & Organization, ARM/THUMB, ARM/THUMB Instruction Set, ARM Exception Handling,Timers/Counters, UART, SPI, PWM, WDT, Input Capture, Output Compare Modes, I2C .</p> <p>Interfacing: LED, Switches, ADC, DAC, LCD</p> <p>Programming : ARM programming in Assembly and C (GNU Tools),</p> <p>Introduction to Android & app development</p> <p>IoT ARCHITECTURE AND PROTOCOLS: IoT-An Architectural Overview– Building an architecture, Main design principles and needed capabilities, An IoT architecture outline, standards considerations. <u>Learning Outcomes</u>	<ul style="list-style-type: none"> • Students will be able to develop their own embedded platform using ARM • They will be able to design android application for mobiles • understand where the IoTconcept fits and possible future trends; understand the various network protocols used in Application 	

Course Code: ELO201 **Title of the Course:** OPTICAL COMMUNICATION SYSTEMS

Number of Credits: 4

<u>Prerequisites for the course:</u>	The Knowledge of Electro statics and electromagnetics. Also, basic understanding of analog and digital communication is preferable.	
<u>Objective:</u>	The paper highlights importance of optical communication over existing copper cable and microwave communication. It also gives an elaborate view of electromagnetic spectrum usage for various applications starting from telephony till satellite communication. A strong theoretical base is created to understand the difference between ray theory and wave theory approach for passage of signal in optical fibers. The estimation of noise in optical detection is discussed in detail. The paper emphasizes the industrial needs in cabling technique and type of cable used. Different techniques of optical fiber manufacturing and measuring their characteristic are discussed.	
<u>Content:</u>	<p>Light Propagation in Optical Fiber: Geometric picture, Pulse spread due to material dispersion, loss mechanism, Theory of Optical waveguides, methods of waveguides analyses , modes in steps and graded index fiber, new types of optical fibers</p> <p>Fiber Optics Technology: Glass fiber fabrication, cable design, coupling, splicing and connectors, splicing methods, connectors, fiber measurements.</p> <p>Optical Sources: LED and LDs, development of Laser diodes structures, transmitter circuits, Coupling efficiency of source to fiber.</p> <p>Optical detectors: Photodiodes, Avalanche diodes and other detectors.</p> <p>Receiver sensitivity and BER: Receiver design, Noise in detectors.</p> <p>Communication System design: System requirement, System design, Link analyses, Power budgeting.</p> <p>Transmission: TDM, Undersea fiber optics communication system , WDM and DWDM techniques</p>	<p>7</p> <p>7</p> <p>6</p> <p>6</p> <p>8</p> <p>7</p> <p>7</p>

<u>References/Readings</u>	1. Optical Fiber Communication by A. Selvarajan and etal TMH, .	

	2. Optical Fiber Communication by Gerd Keiser , MGH , . 3. Optical Electronics, 4 th Edition by A. Yariv, HRW publication,	
<u>Learning Outcomes</u>	The students at the end of the paper, will have some knowledge of designing a point to point optical link for a given situation. They will also be able to choose the right type of components if an assignment of optical network design is given. The course is also useful for students who would like to join telecom industries, as many aspects of practical situation are discussed during course of study. They are also taught to monitor signal losses during course of signal transmission. The student from this course will be confident	

Course Code: ELO 202 **Title of the Course:** OPERATING SYSTEM AND RTOS
Number of Credits: 4

<u>Prerequisites for the course:</u>	Should have studied digital electronics at graduate level	
<u>Objective:</u>	This course develops to focus on concept of highlighting the various methods of improvising speed of computing machine through the operating system organization and various entity managements. Further the subject is developed to analyse the small embedded system developments through the Real Time Operating Systems for task management efficiency.	
<u>Content:</u>	Introduction to Computer Organization and Architecture : hardware vs. software -the virtual machine concept, concept of von Neumann architecture, hardware components and functions, trends in hardware development, system configurations and classifications.	6 hours
	Process Description and Control: Processes, process states, processor modes, context switching, CPU scheduling algorithms, threads.	5 hours
	Concurrency Control: Concurrent processes, critical section problem and solutions, mutual exclusion solution requirements, semaphores and monitors.	5 hours
	Deadlocks: Characterization, detection and recovery, avoidance, prevention.	5 hours
	Inter Process Communication: classical IPC problems and solutions, IPC techniques.	3 hours
	The Input/Output and File Subsystem: I/O devices, controllers and channels, bus structures, I/O techniques (programmed, interrupt driven and DMA), I/O subsystem layers. Concepts of files and	6 hours

	<p>directories, issues and techniques for efficient storage and access of data. I/O and file system support for graphics, multimedia, databases, transaction processing and networking.</p> <p>The Memory Subsystem: Memory types and hierarchy, module level Organization, cache memory. Memory partitioning, swapping, paging, segmentation, virtual memory.</p> <p>The Central Processing Unit: CPU components, register sets, instruction cycles, addressing modes, instruction sets, concept of micro-programming ,Basics of RISC approach, pipelined and super-scalar approaches, vector processors and parallel processors, hardware support for the OS.</p> <p>µCOS case study</p> <p>Tutorial</p> <ol style="list-style-type: none"> 1. Implementing Lower Level Shell 2. Implementing Signal in Unix 3. Hard disk partitioning in Linux 	<p>8 hours</p> <p>6 hours</p> <p>4 hours</p>

<u>Learning Outcomes</u>	Will able to generalize the understanding of the computing machine and various entities associated with the enhancement of the efficiency. Will able to handle the operating system management process, memory, I/O, Secondary Disk and organizations of various. Students will able to handle any operating system for process and task managements if follows the documentations of the same.	

Course Code: ELC 202 **Title of the Course:** ELECTRONICS PRACTICALS-II
Number of Credits: 4

<u>Prerequisites for the course:</u>	Should have studied microcontrollers and embedded system.	
<u>Objective:</u>	The students will handle experiments on processor and	

	controllers like 8086, 89C51, PIC and ARM controller derivatives for Input Output operation, Various communication interfaces, data acquisition, task management.	
<u>Content:</u>	1. Coping the memory segment using 8086 Assembler 2. Sorting of numbers using 8086 Assembler 3. Multiplication & Division using 8086 Assembler 4. LCD & LED Interfacing to ATMEL 89C52 5. 7-segment Interfacing to ATMEL 89C52 (BCD counter) 6. Display Temperature using ATMEL 89C52 7. Serial Transmission and reception PIC16F877 8. Configuring On - chip ADC PIC16F877 9. Waveform generation using I2C based Max5822 interfaced to PIC 16F877 10. Hex Keypad Interfaced to ARM controller 11. LCD & LED Interfacing using ARM controller 12. Switching of tasks using ARM controller a. OS - I using ARM b. OS - II using ARM 15. Shell programming - Web Application. 16. Shell programming - System Management 17. Shell programming - Data processing	
	Total	96
<u>Pedagogy:</u>	Presentations /self-study/laboratory design and implementation	
<u>Learning Outcomes</u>	Should able to analyze the architectures of any processor, controller. Will able to designs some application using embedded system using tasks for real time applications. Should able to handle any computing machine using shell script for computing and management.	

Course Code: ELO 281

Number of Credits: 4

Prerequisite/objectives/learning outcomes as provided by course on SWAYAM website

Course Code: ELO 203

Title of the Course: BASICS OF MEDICAL

IMAGING

Number of Credits: 1

<u>Prerequisites for the course:</u>	NIL	
<u>Objective:</u>	This is a basic course to give an idea of various radiology techniques used in hospitals for imaging internal organs. While the major part of the course deals with X-ray based imaging techniques, other popular techniques such as ultrasound and Magnetic Resonance Imaging are discussed in depth. The	

	mathematical tools used for imaging analysis are also discussed briefly. Advanced techniques such as 3D imaging and Doppler methods are explained in a concise manner.	
<u>Content:</u>	<p>UNIT-I :Basic Medical Imaging : Basics of medical imaging, X-ray, CT , Ultrasound, MRI, PET-CT, SPECT-CT, Gamma Camera, Catheterization Lab. Aspects of light imaging, convolutions and transforms, photometry lenses and depth of field, Image perception and 3D Imaging, Image acquisition, Display, Image processing operations, scanning & segmentation.</p> <p>UNIT-II: Ultrasound Imaging: Principles of Ultrasound, Basic Ultrasound instrumentation, Image Characteristics: Ultrasonic Texture, Speckle reduction, Compensation of Phase Aberration, Tissue Characterization. Imaging techniques: (A mode, B Mode, 2B, B/M, 4B , Gated Mode, 3D, 4D, M-Mode, Echocardiography) ,Doppler Methods, Image recording devices, Image artifact,</p>	<p>6</p> <p>6</p>

<u>References/Readings</u>	<p>1. Introduction to Medical Imaging: Physics, Engineering and Clinical Applications ,Cambride</p> <p>2. Medical Imaging: Principles and Practices,CRC press.</p>	
<u>Learning Outcomes</u>	<p>This course enriches a common man regarding non-invasive techniques used by hospitals and clinics to monitor the various health related issues. The course also prepares a student for higher learning in field of biomedical electronics.</p>	

Course Code: ELO 204

Title of the Course: Data Science and Machine Learning

Number of Credits: 04

<u>Prerequisites for the course:</u>	Should have the knowledge of basic linear algebra and reasonable programming experience	No. of Lectures
<u>Objective:</u>	The objective of this course develop the fundamental knowledge of concepts related to data science and see how Data Science helps to analyze large, unstructured data with different tools	
<u>Content:</u>	1. Introduction: What is data science? Exploratory data analysis, Data Science Process, Data Case Studies	03
	2. Types of Data: Structured and Unstructured data, Quantitative and Qualitative data, Data levels	03
	3. Python Structuring Data Science: Why Python, Working with Python, Reviewing basic	03

	python	
	4. Visualizing Data: Matplotlib, Bar Charts, Line Charts, Scatterplots, For Further Exploration	03
	5. Working With Data: Exploring One-Dimensional Data, Two Dimensions, n-dimensions, Data classes, Cleaning and Munging, Manipulating Data, Rescaling, Dimensionality Reduction	05
	6. Machine Learning: Modeling, What is Machine Learning? Overfitting and Underfitting, Correctness, The Bias-Variance Trade-off, Feature Extraction and Selection	05
	7. k-Nearest Neighbors: Model, Curse of Dimensionality	04
	8. Regression: Simple Linear Regression: Model, Using Gradient Descent, Maximum Likelihood Estimation Multiple Regression: Model, Assumptions of the Least Squares Model, Fitting the Model, Interpreting the Model, Goodness of Fit, Digression: The Bootstrap, Standard Errors of Regression Coefficients, Regularization Logistic Regression: The Logistic Function, Applying the Model, Goodness of Fit, Support Vector Machines	06
	9. Decision Trees: What Is a Decision Tree? Entropy, The Entropy of a Partition, Creating a Decision Tree, Random Forests	02
	10. Neural Networks: Perceptrons, Feed-Forward Neural Networks, Backpropagation	03
	11. Deep Learning: The Tensor, The Layer Abstraction, The Linear Layer, Neural Networks as a Sequence of Layers, Loss and Optimization, Other Activation Functions, Softmaxes and Cross-Entropy, Dropout	05
	12. Clustering The Idea, The Model, k-mean, Bottom-Up Hierarchical Clustering	04
	13. Data Science and Ethical Issues: Discussions on privacy, security, ethics,	02
Total		48
Pedagogy:	Lectures/Tutorials/Assignments/Self-Study/Presentation/Practical

Programming in Python, Dr. Pooja Sharma, First Edition, BPB Publications, India</p>	
<u>Learning Outcomes</u>	<p>At the end of the course students will be able to:</p> <p>1. Explain the fundamentals concepts of data science and categories of data.</p> <p>2. Develop the skills to analyze the data with python programming.</p> <p>3. Analyze the unstructured data using various methodologies to get meaningful information out of it.</p>	

SEMESTER III

Course Code: ELC 301

Title of the Course: Signals and Systems

Number of Credits: 4

<u>Prerequisites for the course:</u>	Should have studied first year of M.Sc electronics	
<u>Objective:</u>	The objectives of this course are to develop good understanding about signals, systems and their classification; to provide with necessary tools and techniques to analyze electrical networks and systems to develop expertise in time-domain and frequency domain approaches. Also discusses different types of Filters and Its design.	
<u>Content:</u>	<p>1. Signal And Signal Processing: Characterization and classification of signal, Typical signal Operations.</p> <p>2.Discrete time signal and Systems: Time Signal, Sequence representation, Sampling process, Simple Interconnection schemes, Correlation of Signal, Random Signal.</p> <p>3.Discrete Time Fourier Transform: Continuous Discrete-time FT, Energy Density Spectrum, Phase and Group Delays, Sampling of continuous tie signal, Low pass & Band pass Signal, Anti-Aliasing Filter design, Sample and Hold, A to D, D to A convertors, Effects of sample and hold.</p> <p>4.Digital Filter Structure: Block diagram representation, FIR, IIR filter, Allpass filter, Tunable IIR Digital filter, Digital Sin-Cosine generator. Computational complexity.</p> <p>5.FIR Digital Filter Design: Preliminary considerations, FIR Design based on windowed FS,</p>	<p>04</p> <p>08</p> <p>10</p> <p>08</p> <p>07</p>

	Design of minimum phase.	
	<p>2. DSP Algorithm implementation: Structure simulation, Computation of DFT, DFT & IDFT using MATAB, Sliding DFT, Number representation, Handling overflow, Tunable digital filters.</p> <p>3. Application of Digital Signal Processing: Dual tone multi frequency tone signal Detection, Musical sound processing, Signal compression, Trans multiplexers.</p> <p>Tutorials:</p> <ol style="list-style-type: none"> History of Fourier Transform. Understanding Speech Spectral Analysis Problem. Understanding FFT. Study of TMS Series of processors. MATLAB program for generation of complex exponential sequence. 	06 05
Total		48

Learning Outcomes	<p>Applying different signal processing algorithms to any given application.</p> <p>Learns about Different types FIR and IIR filters</p>	

Course Code: ELO 301
Number of Credits: 4

Title of the Course: Digital Signals Processing

Prerequisites for the course:	Basic knowledge in Numerical Methods and computation at graduate level or higher.	
Objective:	This course develops concepts in designing the experiment in Matlab and Simulink.	
Content:	<p>Students have to design the following experiments in Matlab and Simulink and plot the characteristics of the signal processing system under design.</p> <ol style="list-style-type: none"> Filters <ol style="list-style-type: none"> Lp norm Ensemble averaging Filters Exponential moving average systems Median filter FIR Understanding and implementation of aliasing effect. Oscillators <ol style="list-style-type: none"> Design using Van der Pol's equation 	12 05 07

	b. Lorentz oscillators systems c. Gaussian oscillators systems 4.FFT and DFT:design and implementation of DFT and FFT based algorithms, and their application in communication. 5. Image processing a. Interpolations b. Pattern recognition using PCA 6.Simulink a. Transfer function design and study for impulse and finite sequence. b. Convolution	05 05 09 05
Total		48
Pedagogy:	lectures/ self-study/presentation/lab courses	
Learning Outcomes	<ul style="list-style-type: none"> • Student learn how to use the advanced mathematical tools how to apply them for signal processing. • Student can plot the signals in both time domain and transform domains using MATLAB • Students also learns to uses SIMULINK tool to model his/her design • Learns Image processing algorithms PCA etc. 	

Course Code: ELO 302

Title of the Course: INSTRUMENTATION & CONTROL THEORY

Number of Credits: 4

Prerequisites for the course:	Graduate level knowledge in analog and digital electronics, Basics of differential equations.	
Objective:	<p>Various principles of transduction and actuator are discussed in this course. The important parameters used in instrument characterization are also explained. Types of error committed by a user and how to deal with them are explained with examples. Also, various standards followed for accurate measurement are discussed in depth. The techniques used to convert analog data into digital domain and its analysis and storage are also discussed in this course. How a PID controller is tuned for a given application is also discussed in this paper. Few important instruments such as Oscilloscope, spectrum analyzers, wave analyzers, Lock in amplifiers are described in depth</p>	
Content:	<p>Introduction: Basic Concepts of measurements, calibrations and standards. Transducers (Types and parameters) and Sensors: Displacement, strain, vibration, Pressure, Flow, Temperature, Force and Torque (linearity, accuracy, precision, bandwidth, repeatability)</p> <p>Amplification: Simple ended, Differential and</p>	7

	Instrumentation amplifier. Sampling: An Anti-aliasing, Multiplexers, Sample and Hold, Track and Hold. Computer Interfaces: Serial (RS-232), Parallel, GPIB (IEEE-488), Universal Serial Bus (USB) Display Devices: Review of LED, LCD, CRT devices, segmental and dot matrix displays. General purpose test equipments: CRO, Digital storage oscilloscope, Digital voltmeter, Wave Spectrum analysis, Lock-in-amplifiers, Pulse generators and waveform generators, Control System: Types of control system - open loop, closed loop, linear, non-linear, continuous, discrete, frequency and time response, open loop motor control, DC motor phase control, PD, PI, PID Tutorials: 1. Study of Open loops control System. 2. Electronics Chocks. 3. Design of On/Off temperature controller using thermistor sensor. 4. Study of SEM. 5. Study of Scanning Probe technique.	5 5 4 7 10 10

Carr, Prentice Hall India. 3. Modern Electronic Instrumentation and Measurement Techniques, Albert Helfnick, William Cooper, PHI 4. Instrumentation Measurement by Northrop CRC 2001	
<u>Learning Outcomes</u>	This course is appropriate for the students who would like to make his career in industries. The features of various networks taught in this course will enable him/her to guide an industry for choosing an appropriate instrumentation network and types of interfaces he can adopt for automation of sophisticated instruments used in quality control and analysis. The course empowers a student who is likely to go for higher studies in electronics and Instrumentation technology.	

Course Code: ELC302

Title of the Course: Electronics Practical III

Number of Credits: 4

<u>Prerequisites for the course:</u>	Should have knowledge in microcontroller and embedded systems	
---	---	--

<u>Objective:</u>	The course gives hands on experience on TMS 320 DSP, Altera NIOS II and National Instruments Platform	
<u>Content:</u>	<ol style="list-style-type: none"> 1. Design of S/C circuit for Strain gauge /Glucose strip @ 3.3V. 2. Design of S/C circuit for Thermistor sensor @ 3.3 V and interfacing with ARM. 3. FFT using TMS 320. 4. Convolution using TMS 320. 5. Analysis of frequency components using Spectrum Analyzer 6. VHDL implementation for the Multiplexer & Demultiplexer 7. VHDL Implementation for Encoder & Decoder 8. VHDL implementation for the Counter. 9. Verilog implementation for the Memory Module. 10. Verilog implementation for the Latch. 11. Display Hello world and blinking Led's using NiosII soft core 12. Matrix Manipulation on NIOSII Core (Multiplication, determinant, Inverse, Transpose) 13. Android (two experiments) 14. NI ELSVIS(two experiments) 15. Obstacle Avoidance using 89V52 based Robot 16. Obstacle detection for varying range using 89v52 based Robot 17. Line follower using 89v52 based Robot 	
<u>Total</u>		96
<u>Pedagogy:</u>	Assignment , Presentation and Laboratory work	
<u>Learning Outcomes</u>	<ul style="list-style-type: none"> • On completing this course they are in a position to design signal conditioning circuit, • also they are exposed to Altera FPGA by implementing various digital circuits using VHDL and Verilog. • Student themselves will be able to develop an android app. • Can handle a NI ELVIS board to implement and testing any circuit.

Hands on experience on altera development board by J.S.Parab,etal: Springer Netherland 2018(ISBN 978-81-322-3769-3)	
<u>Learning Outcomes</u>	The Student will be able to use different types of EDA tools and learn programming with these tools.	

Course Code: ELO 305 **Title of the Course:** Industrial Internship
Number of Credits: 1

<u>Prerequisites for the course:</u>	Should have graduate level knowledge of Electronics	
<u>Objective:</u>	This course develops concepts in industrial training, preparing seminars and working on short term projects	
<u>Content:</u>	Industrial training and Seminar: A student has to undergo Industrial training equivalent to one credit for the period of minimum 1 month in the respective Electronics industries / Research Laboratory anywhere in India. Each student has to give a power point presentation on the industrial internship which they had undergone	24
<u>Pedagogy:</u>	Self-study/presentation	
<u>Learning Outcomes</u>	1. The Student will be exposed to the different kinds of working environments in electronic industries. 2. Will be able to understand industrial flow and make a documentation.	

SEMESTER IV

Course Code: ELC 401

Title of the Course: Laser System Engineering

Number of Credits: 4

<u>Prerequisites for the course:</u>	Graduate level knowledge in Electronics/Physics	
<u>Objective:</u>	At the end of the course the student is expected to know the difference between ordinary light and light emitted by a laser device. Which are different method used for excitation of laser devices? Why four level lasers are more efficient as compared to three level? The theory to explain the generation of stimulated emissions. Actual laser systems used in industry and examples most powerful lasers in the world. Application of lasers in medical, civil and defense areas.	
<u>Content:</u>	<p>Optical Resonators: Energies in resonator, Febry-Perot Etalon , Febry-Perot Etalon as Optical Spectrum Analyzer, Mode Stability Criteria , Resonance Frequency of Optical Resonator, Unstable Resonator</p> <p>Interaction of Radiation with Atomic System: Spontaneous transmission between Atomic layer, Homogenous and In-Homogeneous broadening , Line shape functions, Stimulated transmission , Absorption and amplification , gain saturation in Homogenous media .</p> <p>Theory of Laser Oscillator: Febry Perot Laser , Three and Four Level Laser , Power in Laser Oscillator, Optimum Light coupling , Multimode Laser Oscillator and Mode Locking Methods of Mode locking , Pulse length Measurements , Q-Switching , methods of Q-Switching .</p> <p>Laser Systems: Pumping and laser Efficiency, Ruby Laser, Flash Pumping ,Nd-YAG Laser , Nd Glass Laser , Threshold for CW and Pulse operation , He-Ne Laser , CO₂ Laser , Ar-Ion Laser , Excimer Laser , Dye Laser.</p> <p>Non –Linear Optics: Origins of Non-Linear Polarization, relation between induced Polarization</p> <p>Interaction of Light and Sound: Scattering of Light by Sound, RamanNath and Bragg diffraction , Defraction of light by Sound , Intensity modulation .</p> <p>Optical Communication: Advances in optical Communication, Optical Network.</p> <p>Tutorials:</p> <ol style="list-style-type: none"> 1. Understanding Diffraction of Laser Light using grating 2. Comparison of resolving power of Prism and Grating. 3. Focusing of Laser Light. 	<p>9</p> <p>8</p> <p>8</p> <p>7</p> <p>4</p> <p>6</p> <p>6</p>

	4. Collimation of Laser Light. 5. Study of Raman Laser system.	
Total		48
Pedagogy:	Lectures/presentation/assignments	
References/Readings	1. Optical Electronics, 4 th Edition by A. Yariv, HRW publication, . 2. OptoElectronics , by Ghatak and Tyagarajan TMH Publication .	
Learning Outcomes	The student has sufficient knowledge of lasers for applications involving medical treatment as well as defense needs. They will have a full knowledge of classification of lasers and its usage. Now a days, most of the industries use high power lasers as a tool, the student with this knowledge will be handy in guiding the work force for safe use of laser.	

Course Code: ELC 402

Title of the Course: ELECTRONICS PRACTICALS - IV

Number of Credits: 4

Prerequisites for the course:	Should have studied EDA Tools .	
Objective:	<ul style="list-style-type: none"> The course is intended to introduce to the students with LabVIEW and SPEEDY 33 Boards and MYRio BThoard Also there are few labs on Altera DE2 Board using NIOS II soft core Processor. 	
Content:	<ol style="list-style-type: none"> Reading from flash using DE2 board LCD and 7 segment Interfacing using DE2 board PS/2 Mouse Interface on DE2 board UART Interface using DE2 board Blinking of LEDs using RTOS on DE2 Board. KEY pad and ADC interfacing using RTOS Echo implementation on speedy33 kit(lab view) Reverberation implementation on speedy33 kit(lab view) IOT (3 experiments) My RIO(3 experiments) 	
Total		96
Pedagogy:	Presentation and Laboratory works	
Learning Outcomes	After completion of this course on practical they will be able to develop and design some applications based on SPEEDY 33 using LABView , MYRio, Altera DE2 Board	

Course Code: ELO 401
Title of the Course: PROJECT
Number of Credits: 8

<u>Prerequisites for the course:</u>	Decided by DC at the beginning of the IIIrd semester based on the performance at M.Sc part-I	
<u>Objective:</u>	This course develops concepts design modules/ instrumentation as required by industry/ institution/ departments	
<u>Content:</u>	This course is basically to utilize the knowledge they have acquired during the course of study and apply them for designing a gadget/interface/module required for an electronic industry/ department/ Institution. The progress of the project is periodically monitored by an guide and department council.	192
<u>Pedagogy:</u>	Self-study/presentation	
<u>Learning Outcomes</u>	<ol style="list-style-type: none"> 1. The Student will be exposed to the different kinds of working environments in electronic industries. 2. Will be able to understand industrial flow and make a dissertation. 	

Course Code: ELO 481
Title of the Course: Swayam-IV
Prerequisite/objectives/learning outcomes as provided by course on SWAYAM website.
Number of Credits: 4

Course Code: ELO 402 **Title of the Course:** Nanoelectronics and Nanosystems
Number of Credits: 4

<u>Prerequisites for the course:</u>	The students should have a working knowledge of electronics and instrumentation at graduate level	
<u>Objective:</u>	This course develops concepts in Microelectronics, Biological Networks, Bio and Molecular Electronics and Nanoelectronics.	
<u>Content:</u>	Introduction: Development of microelectronics;	05
	Potentials of Silicon Technology; Basics of Nanoelectronics, some physical fundamentals, basics of information theory;	05
	Biology Inspired Concepts.- Biological networks, Biology Inspired Concepts;	05
	Bio-chemical and Quantum-Mechanical Computers.-	06

	<p>DNA computer ,Quantum computer;</p> <p>Parallel Architectures for Nanosystems. Architectural principles, Architectures for parallel processing;</p> <p>Softcomputing and Nano electronics.- methods of soft computing, characteristics of neural networks in nanoelectronics;</p> <p>Quantum Electronics; Bio and Molecular Electronics.- Bio electronics ,molecular electronics;</p> <p>Nanoelectronics with Tunneling Devices; Single Electron Transistor (SET); Nanoelectronics with Superconducting Devices; The Limits of Integrated Electronics</p> <p>Tutorials:</p> <ol style="list-style-type: none"> 1. Laser tweezers. 2. Study of AFM. 3. Study of STM. 	<p>06</p> <p>06</p> <p>08</p> <p>07</p>
Total		48
Pedagogy:	lectures/ tutorials/assignments/self-study/presentation/	
References/Readings	<ol style="list-style-type: none"> 1. Nanoelectronics And Nanosystem By K. Goser , P Glosekotter & J. Dienstuhl Springer 2. Introduction to Nanoelectronics Science, Nanotechnology, Engineering, and Applications By Vladimir V. Mitin etal ; From Cambridge 3. Handbook of Nanoscience, Engineering, and Technology, Second Edition by William A. Goddard CRC. 	
Learning Outcomes	At the end of this course students will be able to apply the concepts studied in this paper to practical reality .	

Course Code: ELO 403
Number of Credits: 4

Title of the Course: Pharmaceutical Instrumentation

Prerequisites for the course:	Should have graduate level knowledge of Instrumentation.	
Objective:	This course develops concepts in Spectrometric and Separative Methods and Electron Microscopy	
Content:	<p>Introduction to Chemical Instrumental Analysis: advantages over classical methods, classification, various units used in chemical analysis. Introduction to Electroanalytical methods, potentiometry, voltammetry, coulometry.</p>	<p>05</p> <p>09</p>

	<p>Spectrometric Methods-I: Laws of Photometry, Instrument components, UV-visible instrument component, photo colorimeters, single and double beam instruments, various types of UV-visible spectrophotometers. Atomic absorption spectrophotometer: Principle, working, hollow cathode lamp, atomizer, back-ground correction.</p> <p>Spectrometric Methods-II: IR spectroscopy: Principle, IR sources, IR detectors, dispersive and Fourier , Transform IR spectroscopy. Atomic Emission Spectroscopy: Principle, types, Flame photometer, DC arc and AC arc excitation, plasma excitation. X-ray spectrometry: Instrumentation for X-ray spectrometry, X-ray diffractometer: Bragg's law</p> <p>Spectrometric Methods-III: Fluorimeters and Phosphorimeters: Principle, spectrofluorimeters, spectrophosphorimeter, Raman effect, Raman spectrometer, Nuclear Magnetic Resonance (NMR) spectrometry: Chemical shift, principle, working of NMR, FT-NMR Miscellaneous Instruments: Gas analysers: CO, CO₂, Hydrocarbons, O₂, NO_x</p> <p>Separative Methods: Chromatography: Classification, Gas chromatography: principle, constructional details, GC detectors, High Performance Liquid Chromatography (HPLC): principle, constructional details, HPLC detectors</p> <p>Electron microscopy: TEM & SEM- principles, instrumentation and analysis, scanning tunneling microscopy, atomic force microscopy, principles, instrumentation and analysis- applications</p> <p>Tutorial: 1. Study of filter photometer. 2. Study of UV-visible spectrophotometer. 3. Study of ESR</p>	09 08 07 10
Total		48
Pedagogy:	lectures/ tutorials/assignments/presentation	
References/Readings	<ol style="list-style-type: none"> 1. Instrumental Methods of Analysis, Willard, Merritt, Dean, Settle, CBS Publishers & Distributors, New Delhi, Seventh edition. 2. Instrumental Methods of Chemical Analysis, Galen W. Ewing, McGraw-Hill Book Company, Fifth edition 3. Introduction to Instrumental Analysis, Robert D. Braun, McGraw-Hill Book Company. 4. Principles of Instrumental Analysis, Skoog, Holler, Nieman, Thomson brooks-cole publications, 5th edition 	
Learning Outcomes	A student crediting this course will be comfortable	

	with use of analytical instruments used in pharmaceutical industries and laboratories. They can join industries in Quality Control divisions.	
--	---	--

Course Code: ELO 404

Title of the Course: Communication and Technical Skills

Number of Credits: 4

<u>Prerequisites for the course:</u>	Should have graduation in any science stream	
<u>Objective:</u>	This course develops the ability to work in group, to face interviews and to give presentations	
<u>Content:</u>	<p>This course has self-study module where students will be assigned case studies. The students are supposed to gather the required subject materials by way of visiting the factories/ industries/ Institutions physically or through their website, and prepare a documentation, The documentation will be discussed in Group discussion wherein the skills of the student in Management & Communication will be evaluated by DC.</p> <p>The wattage of the evaluation is as follows</p> <ul style="list-style-type: none"> • Group discussion in topic related to electronics (25%) • Answer paper in the area of communication skills (25%) • Has to write /compile technical papers & present (25%) • Modelling of electronics systems (25%) 	
<u>Pedagogy:</u>	lectures/ tutorials/assignments/self-study	
<u>References/Readings</u>	<ol style="list-style-type: none"> 1. Essentials of Technical Communication Sunil Gokhale 2. Communication Skills By Leena, Sen, Prentice Hall of India. 3. http://owl.english.purdue.edu/; 4. http://owl.english.purdue.edu/workshops/hypertext/ 	
<u>Learning Outcomes</u>	The student will gain experience and confidence to present themselves fearlessly at interviews .The students will also be prepared to write technical papers and present them in the conferences.	

Syllabus of M.Sc. Mathematics Programme w.e.f. 2018-2019

List of Courses:

(I) CORE COURSES

MTC-101: Real Analysis
MTC-102: Linear Algebra
MTC -103: Basic Algebra
MTC -104: Differential Equations
MTC -105: Topology
MTC -201: Several Variable Calculus
MTC -202: Algebra
MTC -203: Functional Analysis

(II) OPTIONAL COURSES

MTO -106: Methods of Applied Mathematics
MTO -107: Graphs and Networks
MTO -108: Actuarial Science
MTO -204: Partial Differential Equations
MTO -205: Complex Analysis
MTO -206: Measure Theory
MTO -207: Number Theory
MTO -208: Lie Algebra
MTO -209: Special Functions
MTO -210: Difference Equations
MTO -301: Advanced Algebra
MTO -302: Combinatorics
MTO -303: Differential Geometry
MTO -304: Mathematical Modeling
MTO -305: Integral Equations
MTO -306: Sturm Liouville Problem
MTO -307: Mathematics for Finance
MTO -401: Advanced Linear Algebra
MTO -402: Commutative Algebra
MTD-500: Dissertation

Note: All the courses are of 4 credit

Scheme of Instructions (Semester system)
Choice Based Credit System

SEMESTER (I)		
Course Number and Name	No. Of Credits	L- T- P (hours per week)
MTC-101- Real Analysis	4	3-1-0
MTC-102 -Linear Algebra	4	3-1-0
MTC-103- Basic algebra	4	3-1-0
Optional Course	4	3-1-0
SEMESTER (II)		
MTC-104- Differential Equations	4	3-1-0
MTC-105 – Topology	4	3-1-0
MTC-201 – Several Variable Calculus	4	3-1-0
Optional Course	4	3-1-0
SEMESTER (III)		
MTC-202 –Algebra	4	3-1-0
MATH-203-Functional Analysis	4	3-1-0
Optional Course	4	3-1-0
Optional Course	4	3-1-0

Optional Course	4	3-1-0
Optional Course	4	3-1-0
Optional Course	4	3-1-0
Optional Course	4	3-1-0

Detail Syllabus

Programme: M. Sc. (Mathematics)

Course Code: MTC-101

Number of Credits: 4

Effective from AY: 2018-19

Title of the Course: REAL ANALYSIS

Prerequisites	Basic Mathematical Analysis	
Objective	This course will develop fundamental concepts in Real Analysis and make the student acquainted with tools of analysis which is essential for the study and appreciation of many related branches of mathematics and applications.	
Content	<p>1.Real and Complex Number Systems Peano's Axioms for Natural Numbers and Induction Principle, Integers and Rational numbers, Ordered sets and LUB Property, Ordered Field Axioms, Real Numbers and Completeness, Archimedean property, integral part of a real number, density of rationals, and irrationals, Existence of n^{th} roots of nonnegative reals and decimal representation of reals, Complex Number System, Countable sets, Uncountable sets, Countability of Rationals, Uncountability of Reals, Extended Real Number System.</p> <p>2.Elements of Point Set Toplogy Metric Spaces, Euclidean Spaces, Open balls and Open sets in \mathbb{R}^n, Structure of open sets in \mathbb{R}^1, Adherent points and Accumulation points, Closed sets, Perfect sets, Bolzano- Weierstrass Theorem, Cantor Intersection Theorem, Lindelöf Covering Theorem, The Heine-Borel Covering Theorem, Compactness in \mathbb{R}^n, Compactness in metric spaces, Connected sets in metric spaces, Connected subsets of \mathbb{R}, Cantor set.</p> <p>3.Limits and Continuity Convergent sequences in a Metric space, Cauchy sequences and Complete metric spaces, Limit inferior and Limit superior of a sequence, Limit of a Function- (Real valued, complex valued, vector valued functions), Continuous Functions, Continuity and Compactness, Continuity and Connectedness, Bolzano's Theorem and Intermediate value Theorem, Uniform Continuity, Uniform Continuity and Compactness, Discontinuities of Real valued Functions, Monotonic Functions, Infinite limits and Limits at infinity.</p> <p>4.Derivatives Derivatives and Continuity, Algebra of Derivatives and Chain rule (Statements only), One sided derivatives and Infinite Derivatives, Functions with non-zero derivatives, Zero derivatives and Local extrema, Rolle's Theorem, Mean value Theorems and consequences, Intermediate value Theorem for Derivatives, Taylor's Formula with Remainder, Derivatives of Vector valued Functions and Complex valued Functions, Derivatives of Higher Order and L'Hospital's Rules.</p>	<p>12 Hours</p> <p>12 Hours</p> <p>12 Hours</p> <p>12 Hours</p>
Pedagogy	Lectures/ Tutorials/Assignments/Self-study	
References/ Readings	<p>1. Mathematical Analysis, Tom M. Apostol, Narosa Publishing House, 1996.</p> <p>2. Principles of Mathematical Analysis, Walter Rudin, McGraw-Hill International Editions, 1976.</p> <p>3. A Basic Course in Real Analysis, Kumar and Kumaresan, CRC Press, 2015.</p> <p>4. Real Analysis, N.L. Carothers, Cambridge University Press, 2000.</p>	
Learning Outcomes	<p>On Completion of this course the student will be able to</p> <ul style="list-style-type: none"> Describe the difference between rational numbers and real numbers. Understand LUB property and apply it to proofs and solutions of problems. Calculate limit inferior and limit superior Understand and use concepts related to metric spaces such as continuity, compactness and connectedness Apply mean value theorem to problems in the context of Real Analysis 	

Programme: M.Sc. Mathematics

Course Code: MTC-102

Title of the Course: LINEAR ALGEBRA

Number of Credits: 04

Effective from: June, 2018.

Prerequisites	Should have passed B.Sc. with Linear Algebra as one of the subjects. Should be familiar with the notions of vector spaces, basis, dimension, Linear maps, matrix representation of linear maps and their algebra and Rank-Nullity theorem.		
Objectives	To prepare students to handle solving problems involving linear equations and determining the qualitative properties of the solution set.		
Contents	1. Basic Linear Algebra: Vectors Spaces, Examples, Linear combinations, Linear Span, Linear dependence and independence, basis and dimension. (Review)	4 Hours	
	2. Linear Maps: Linear maps, Matrix Representation, Algebra of Linear maps and Matrices, Rank Nullity theorem. (Review)	4 Hours	
	3. Linear functionals : Linear functional on a vector space, Dual of a vector space and properties, Transpose of a linear map and the matrix.	8 Hours	
	4. Diagonalisation: Characteristic values and characteristic vectors, Invariant subspaces, diagonalization. (Review).	4 Hours	
	5. Inner Product spaces: Inner product spaces , examples and basic properties, Parallelogram law, Orthonormalisation of a basis, Bessel's inequality, Linear functionals on inner-product spaces, dual, Riesz Representation theorem.	10Hours	
	6. Linear operators: Linear operators on inner-product spaces, adjoint of an operator, Unitary, self-adjoint and normal operators, Spectral theorem for self-adjoint and normal operators.	16Hours	
Pedagogy	Class room lectures and tutorials, assignments and library reference.		
References	1. Kenneth Hoffmann and Ray Kunze, Linear Algebra, PHI, 1997. 2. S. Kumaresan, Linear Algebra, PHI, 2000.		
Learning Outcomes	The students will be equipped to learn basic Functional analysis, Several Variable Calculus, Advanced Algebra, Differential Equations, etc.		

Programme: M. Sc. (Mathematics)

Course Code: MTC-103

Title of the Course: Basic Algebra

Number of Credits: 4

Effective from AY: 2018-19

<u>Prerequisites for the course:</u>	Basic group Theory. Basic set theory. Notion of function and relation.	
<u>Objective:</u>	This course is also prerequisite for courses such as Algebra, Commutative Algebra, Advanced Number Theory, Galois Theory.	
<u>Content:</u>	<ol style="list-style-type: none">1. Logic: Mathematical statements, Quantifiers, Conjunction and Disjunction, Negation, Implications and Converses, Equivalence of Statements.2. Set Theory: Familiarising Zermelo-Frankel Axioms, Expressing Sets, Set Operations, Ordered Pairs of Points, Product of sets.3. Relations: Equivalence Relations, Equivalence Classes and Quotient as a Set, Cross-sections.4. Functions: Function from Sets to Sets, Images, Pre-images and their Algebra, One-one and Onto Functions and Quotient Map, Schauder-Bernstein Theorem, Cardinality.5. Natural Number system: Partial Order, Well-ordered set, Well-ordering Principle, Axiom of Choice, Order Preserving Functions, Order Isomorphism, Peano's Axiom.6. Groups and subgroups: Definition and examples of groups, Cyclic groups, Permutations groups, Dihedral groups, Some matrix groups.7. Cosets and Direct Products: Group of Permutations, Orbits, cycles and Alternating groups. Subgroups, Cosets and Theorem of Lagrange's, Euler's Theorem, Wilson's Theorem, Direct products and Finitely generated abelian groups, class equations and p-groups.8. Homomorphism and Factor groups: Homomorphisms and Factor groups and Fundamental theorem of Group Homomorphisms. Isomorphism Theorems.	<p>3 hours</p> <p>5 hours</p> <p>5 hours</p> <p>5 hours</p> <p>5 hours</p> <p>9 hours</p> <p>9 hours</p> <p>7 hours</p>
<u>Pedagogy:</u>	lectures/ tutorials/assignments/self-study	
<u>References/Readings</u>	<ol style="list-style-type: none">1. J.B. Fraleigh, A First Course in Abstract Algebra, Seventh Edition, Pearson International, 2002.2. I. N. Herstein, Topics in Algebra, Second Edition, Wiley Student Edition, 2006.3. V. Kakkar, Set Theory, Narosa Publisher, 2016.4. A. Kumar, S. Kumaresan and B.K. Sarma, A Foundation Course in Mathematics, Narosa Publisher, 2018.	
<u>Learning Outcomes</u>	<ol style="list-style-type: none">1. Taking this course students get prepared to take more advanced courses such as Algebra, Advanced Algebra.2. Taking this course students can then read Galois theory and Rings and Field Theory.	

Programme: M.Sc. Mathematics

Course Code: MTC -104

Title of the Course: DIFFERENTIAL EQUATIONS

Number of Credits: 04

Effective from: June, 2018.

Prerequisites	Knowledge of basic Real Analysis and Linear Algebra.		
Objectives	This course develops the ability to solve ordinary differential equations by standard methods. It will help to understand some important properties of solution of differential equation		
Contents	1. Review of Basic concepts: Linear differential equations of the first order. Higher order Linear differential equations with constant coefficients.	12 hours	
	2. Linear Equations with variable coefficients. Standard methods and series solution. Legendre equation. Bessel's equation.	12 hours	
	3. Systems of Linear differential equations. Existence and uniqueness of solutions of first order equation and nth-order equation.	12 hours	
	4. Self adjoint second order differential equation. Sturm Liouville Problems. Greens functions. Zeros of solutions. Comparison Theorems. Linear oscillations. Oscillations of $x''(t) + a(t)x(t) = 0$.	12 hours	
Pedagogy	Lectures/ tutorials/assignments/self-study		
References	<p><u>Main Texts:</u></p> <p>1 . Deo S.G.; Raghvendra V.; Lakshmikantham V. : Text book of Ordinary Differential equations, 2nd edition, Tata McGraw Hill, New Delhi 1997.</p> <p>2 . E.A. Coddington; An introduction to Ordinary Differential Equations, Prentice Hall, India, 2003.</p> <p><u>Reference texts :</u></p> <p>3. Kelly W. Patterson A.C. : Theory of Differential equations, Springer.</p> <p>4. Simmons G. F. Differential equations with historical notes. Tata MH.</p> <p>5. Agarwal R. Essentials of Ordinary differential equations, Springer.</p>		
Learning Outcomes	Students will learn to solve ordinary differential equations and to analyse the properties of solution.		

Programme: M.Sc. Mathematics

Course Code: MTC -105

Title of the Course: TOPOLOGY

Number of Credits: 04

Effective from: June, 2018.

Prerequisites	Should have undergone a basic course in Real Analysis. Should be familiar with the notions of set theory. It is desirable to have familiarity with the metric topology.
Objectives	To prepare students to handle courses involving topology and geometry including complex analysis, functional analysis and several variable calculus.
Contents	<p>1. Topological Spaces and Continuous Functions: 12 hours Definition of Topological spaces, basis, subbasis, open sets, closed sets, limit points, closure, interior, subspaces, continuous functions, Product Topology and quotient topology.</p> <p>2. Countability Properties: First and second countable spaces, Separable spaces, Metric spaces and countability properties. 6 hours</p> <p>3. Separation Properties: Hausdorff spaces, Regular spaces and normal spaces, Product, subspace and continuous images of regular and normal spaces. 6 hours</p> <p>4. Connectedness: Connected spaces, connected subsets of \mathbb{R}, path connected spaces, Product and continuous images of connected spaces, locally connected spaces, components and path components. 10 hours</p> <p>5. Compactness: Compact subsets of topological spaces, Compact subsets of \mathbb{R}, Products and continuous images of compact subsets, Compact Hausdorff spaces, Limit point compactness, Sequential compactness, Compact metric spaces, Lebesgue number lemma, Locally compact spaces and one-point compactification. 14 hours</p>
Pedagogy	Class room lectures and tutorials, assignments and library reference.
References	<ol style="list-style-type: none">1. James Munkres, Topology and Introduction, Pearson Education, 2002.2. Stephen Willard, General Topology,3. M A Armstrong, Basic Topology, Springer Verlag, 1983.4. J. Dugunji, Topology
Learning Outcomes	Students will be prepared to undertake basic courses in Complex Analysis, Functional Analysis, Several Variable Calculus, Measure Theory etc. and advanced courses in Topology and Geometry.

Programme: M.Sc. Mathematics

Course Code: MTO-106
MATHEMATICS

Title of the Course: METHODS OF APPLIED

Number of Credits: 04

Effective from: June, 2018.

Prerequisites	Knowledge of basic Real Analysis, Linear Algebra, Differential Equations.		
Objectives	This course develops the ability to apply mathematics to some of the problems of Mathematics and Physics.		
Contents	1. Improper Integrals. Review , Properties and L^2 convergence.	6 hours	
	2. Fourier series: Generalized Fourier series, Fourier sine/cosine series. Point wise and uniform convergence. Differentiation and integration of Fourier series.	12 hours	
	3. Fourier Transforms and its properties: : Fourier Transform of $L^1(\mathbb{R})$ —functions. Basic properties related to translation, dilation and linearity. Computation of Fourier transform of simple functions. Fourier Inversion. Statement of Fourier inversion Theorem. Convolution. Convolution Theorem. Examples. Parseval's Identity.	10 hours	
	4. Variational problems: Variational problems with fixed boundaries. Euler-Lagrange equations, Brachistochrone problem, Elementary variational problems with moving boundaries. One-side variation, Isoperimetric problem, Canonical forms of Euler equations. Sufficient conditions for extremum.	20 hours	
Pedagogy	Lectures/ tutorials/assignments/self-study		
References	<p><u>Main Texts:</u></p> <ol style="list-style-type: none"> 1. J.W.Brown and R.V.Churchill, Fourier series and Boundary Value Problems, McGraw Hill. 2. Elsevier Publications. 5. R. Weinstock, Calculus of Variations, Dover Publication. 6. I.M.Gelfand and S.V.Fomin, Calculus of Variations. Dover Publication. 		
Learning Outcomes	<ol style="list-style-type: none"> 1. Theory and applications of Fourier Series 2. Learns techniques of applying Fourier Transform. 3. Understands basic concepts of variational problems 		

Programme: M.Sc. (Mathematics)

Course Code: MTO-107

Title of the Course: GRAPHS AND NETWORKS

Number of Credits: 4

Effective from AY: 2018-2019

Prerequisites	Basic set theory	
Objective	Course deals with the basics of graph theory, basic definition of simple graphs, types of graph, matrix representation of graphs, isomorphism in graphs, Euler & Hamiltonian graphs, trees & their properties, spanning trees, colouring of graphs, independence number and chromatic number of simple graphs, connectivity, cut-set, directed graphs, shortest paths & maximal flows in a network.	
Content	<ol style="list-style-type: none">1. Introduction to graphs Graphs, degree sequence, distance in graphs, digraphs and multidigraphs, Cut-vertices bridges and blocks.2. Trees and connectivity Elementary properties of trees, minimal spanning trees, Prim's algorithm, Kruskal's algorithm, connectivity and edge-connectivity, connectedness of digraphs.3. Eulerian and Hamiltonian graphs Eulerian graphs and digraphs, Hamiltonian graphs and digraphs, Fleury's algorithm and Hierholzer's algorithm.4. Planar graphs Euler's formula, characterizations of planar graphs, crossing number and thickness.5. Graph colorings Vertex colorings, edge colorings, map colourings.6. Matchings and domination in graphs Matchings and independence in graphs, domination number of a graph, independence domination number of a graph.7. Networks Relevance of maximum flow, Ford Fulkerson algorithm, Dijkstra's algorithm to find the shortest route.	<div>11 hours</div> <div>7 hours</div> <div>7 hours</div> <div>7 hours</div> <div>5 hours</div> <div>4 hours</div> <div>7 hours</div>
Pedagogy	Lectures/ Tutorials/Assignments/Self-study	
References/Readings:	<ol style="list-style-type: none">1. G. Agnarsson and R. Greenlaw, Graph Theory: Modeling, Applications and algorithms, Pearson , 2011.2. Gary Chartrand and Ping Zhang, Introduction to Graph Theory, Tata Mc-Graw-Hill Edition, 2006.3. F. Harary, Graph Theory, Narosa Publishing House, 2001.4. Gary Chartrand and O.R. Oellermann, Applied Algorithmic Graph Theory, McGraw-Hill Inc. 1993.5. L.R. Foulds, Graph Theory Applications, Springer Verlag, New York, 2009.	
Learning Outcomes:	Learner should be able to tell relevance of graphs in different context, ranging from puzzles & games to social science/engineering/computer science. Problem solving & learning algorithms is also an essential part of graph theory.	

Programme: M.Sc. Mathematics

Course Code: MTO-108

Title of the Course: Actuarial Science

Number of Credits: 04

Effective from: June, 2018.

Prerequisites	Basic Real Analysis	
Objectives	This course will prepare a student to understand the basics of insurance and related concepts.	
Contents	1. Basic concepts of actuarial science and insurance. Accumulated Value, Present Value. Principals of compound interest: Normal and effective rates of interest and discount, force of interest and discount. Compound interest, accumulation factor. Annuities certain. Deferred annuities, annuities due. Redemption of Loans. Sinking Funds and Capital redemption assurance.	16 hours
	2. Life insurance: Insurance payable at the moment's of death and at the end of the year of death-level benefit insurance, endowment insurance, differed insurance and varying benefit insurances, recursions, commutation functions. Life annuities : Single payment, continuous life annuities, discrete life annuities, life annuities with monthly payments, commutation functions, varying annuities, recursions, complete annuities-immediate and apportion able annuities -due.	18 hours
	3. The Mortality tables. Functions and laws of mortality tables. Select ultimate and aggregate mortality tables. Functions other than yearly policy Values. Surrender values and paid up Values. Bonus Special policies. Joint life and last survivor statuses.	14 hours
Pedagogy	Lectures/ tutorials/assignments/self-study

Learning Outcomes	Students will be able to understand various insurance schemes and will be prepared to take up career in Insurance industry.	

Programme: M.Sc. Mathematics

Course Code: MTC-201

Title of the Course: SEVERAL VARIABLE CALCULUS

Number of Credits: 04

Effective from: June, 2018.

Prerequisites	Knowledge of basic Real Analysis and Linear Algebra. Knowledge of Integration of real valued functions on a subset of \mathbb{R} is desirable	
Objectives	This course develops the ability to understand concepts of functions of severable variables.	
Contents	1. Derivative of Function of more than one Variable: Partial Derivative. Total derivative of function of more than one Variable. Jacobian. Sufficient Condition for differentiability. Mean Value Theorem. Higher order derivatives. Condition for Equality of Mixed Partial Derivatives. Taylor's Theorem. Critical Points. Maximum, Minimum. Second Derivative condition for Maximum/minimum. Conditional Optimum and Lagrange Multipliers.	16 hours
	2. Inverse Function Theorem: Regular and Singular Points. Open Mapping Theorem. Inverse Function Theorem. Implicit Function Theorem.	8 hours
	3. Riemann Integration: Rectangles in \mathbb{R}^n and Riemann sums over Rectangles. Upper and Lower Riemann Sums. Riemann Integral of a bounded Function. Algebra of Riemann Integrals. Sets of Jordan Measure Zero. Oscillation of a Function at a point, Integrability versus points of discontinuity of a Function. Fubini's Theorem. Mean value theorem for multiple integrals. Partitions of unity (Statement only). Change of variable formula.	24 hours
Pedagogy	Lectures/ tutorials/assignments/self-study	
References	<u>Main Texts:</u> 1. Tom M Apostol, Mathematical Analysis, Addison Wesley Publishing Company, 1996. 2. M. Spivak, Calculus on Manifolds, Benjamin Cummings, London. <u>Reference texts :</u> 3. Walter Rudin, Principles of Mathematical Analysis, International Student Edition. 4. B.V.Limaye & S.Ghorpade, A course in multivariable calculus, Springer	
Learning Outcomes	Learn to understand the concepts of functions of several variables. Compute maximum/minimum of functions of several variables and to evaluate multiple integrals.	

Programme: M. Sc. (Mathematics)

Course Code: MTC-202

Title of the Course: ALGEBRA

Number of Credits: 4

Effective from AY: 2018-19

Prerequisites	Basic Group Theory	
Objective	This course develops concepts in advanced Group Theory, Basics of Ring Theory and their applications., This course will also be a prerequisite for courses such as Field Theory and Galois Theory and Commutative Algebra.	
Content	1. Sylow Theorems Conjugacy Classes. The Class Equation. The probability that two elements commute. The Sylow Theorems. Applications of Sylow Theorems.	12 Hours
	2. Finite Simple Groups Non simplicity Tests. The simplicity of A_5	4 Hours
	3. Rings and Fields Rings. Fields. Integral Domains-definitions and Examples. Characteristic of Rings. Ideals and Factor Rings. Prime ideals and Maximal ideals. Ring Homomorphisms. Field of Quotients of an Integral Domain.	12 Hours
	4. Polynomial Rings and Factorization of Polynomials Polynomial Rings-Notations and Terminologies, The Division algorithm and Consequences, Reducibility Tests, Irreducibility Tests, Unique factorization in $\mathbb{Z}[x]$.	8 Hours
	5. Divisibility in Integral Domains Irreducibles. Primes. Unique Factorization Domains. Principal Ideal Domains. Euclidean Domains. Gaussian Integers and Fermat's $p = a^2 + b^2$ Theorem.	12 Hours
Pedagogy	Lectures/ Tutorials/Assignments/Self-study	
References/ Readings	1. Contemporary Abstract Algebra, Joseph A. Gallian, Narosa Publishing House,1999. 2. A First Course in Abstract Algebra, John B. Fraleigh, Pearson (India), 2014. 3. Topics in Algebra, I.N.Herstein, Wiley India Edition,2006. 4. Abstract Algebra, David S.Dummit and Richard M. Foote, Second Edition, John Wiley & Sons, 1999.	
Learning Outcomes	On completion of this course ,the student will be able to <ul style="list-style-type: none">• Explain Concepts in Algebra regarding Groups, Rings and related structures, and develop the ability to work with various algebraic structures.• Lay foundation for research topics in Algebra, Number Theory, Algebraic Geometry etc.	

Programme: M. Sc. (Mathematics)

Course Code: MTC-203

Title of the Course: FUNCTION ANALYSIS

Number of Credits: 4

Effective from AY: 2018-19

Prerequisites	A first course in Real Analysis, Linear Algebra and Metric Topology. Basic understanding of Lebesgue Integral Theory is desirable.	
Objective	Starting with the basics this course will cover the foundations of Functional Analysis such as normed spaces, inner product spaces, Banach spaces, Hilbert spaces, bounded linear operators and bounded functional, and the four fundamental theorems-Hahn-Banach Theorem. Uniform Boundedness Principle, Open Mapping Theorem and Closed Graph Theorem.	
Content	1.Normed Spaces, Banach Spaces Normed spaces- Properties and Banach spaces, Standard normed spaces – Sequence spaces, Function spaces and subspaces, Finite dimensional normed spaces and subspaces, Equivalence of norms, Compactness and finite dimension, Linear Operators-Boundedness and Continuity. Linear functional. Normed spaces of Operators, Dual space-Algebraic and Topological duals.	16 Hours
	2.Inner Product Spaces, Hilbert Spaces Inner Product Spaces- Properties and Hilbert spaces, Orthogonal Complement and Direct Sums, Orthonormal Sets and Sequences, Total Orthonormal Sets and Sequences, Representation of Functional on Hilbert Spaces, Hilbert -Adjoint Operator, Self Adjoint, Unitary and Normal Operators.	16 Hours
	3.Fundamental Theorems for Normed and Banach Spaces Hahn-Banach Theorem (Statements and idea of proof for the case of vector spaces, statement and proof for normed spaces), Applications to Existence of Functionals, Adjoint Operators, Reflexivity of Spaces, Baire Category Theorem (Statement only), Uniform Boundedness Theorem, Open Mapping Theorem, Closed Graph Theorem.	16 Hours
Pedagogy	Lectures/ Tutorials/Assignments/Self-study	
References/ Readings	1. Introductory Functional Analysis with Applications, Ervin Kreyszig, John Wiley & Sons, 1978. 2.Functional Analysis, Balmohan V. Limaye, III edition. 3. Functional Analysis: A First Course, M. Thamban Nair, PHI Learning, 2001. 4. Basic Operator Theory, Israyel Gohberg and Seymour Goldberg, Birkhäuser, 1981. 5. Linear Real analysis for Scientists and Engineers, B.V.Limaye, Springer.	
Learning Outcomes	On completion of the course the student will have <ul style="list-style-type: none">• Understanding of the basic concepts and fundamental theorems of Functional Analysis• Appreciation of Functional Analysis as an important field for application oriented Mathematics.• Ability to relate and apply the concepts learnt in the course to problems.• Foundation for higher courses in Functional analysis, Operator Theory, PDE etc.	

Programme: M.Sc. Mathematics

Course Code: MTO-204

Title of the Course: PARTIAL DIFFERENTIAL EQUATIONS

Number of Credits: 04

Effective from: June, 2018.

Prerequisites	Knowledge of Real Analysis, Calculus of Several Variables, Ordinary differential equations, Methods of Applied Mathematics.	
Objectives	This course develops the ability to solve partial differential equations of first and second order by standard methods.	
Contents	1. Simultaneous differential equations of the first and first degree in three variables: Methods of solutions of $dx/P = dy/Q = dz/R$. Pfaffian differential forms and equations. Solution of Pfaffian differential equations in three variables.	4 hours
	2. First order PDE's: Origin and classifications. Solution of Linear and Nonlinear First order PDE's. Methods of characteristics. Charpit's Methods. Jacobi's method.	12 hours
	3. Second Order Linear Partial Differential Equations: Origin. Linear equations with constant coefficients in two independence Variables. Linear equations with variable coefficients. Classification. Reduction to Canonical Form. (only for the case of two independent variables).	6 hours
	4. Methods of solving PDE : Method of Separation of variables. Use of Integral transforms (Laplace and Fourier).	8 hours
	5. Wave Equation. One dimensional Wave equation. D'Alembert's solution, Wave equation-Infinite string case. Laplace Equation : Harmonic function . Basic properties of harmonic functions. Laplace equation. Translational and rotational invariance of Laplace equation. Boundary value problems. Uniqueness of solutions of Dirichlet and Neumann problems. Mean value theorem for harmonic functions. Maximum and minimum principle for harmonic functions. Uniqueness and stability for Dirichlet problem. Heat equation- Infinite rod case. Non homogeneous equation.	18 hours
Pedagogy	Lectures/ tutorials/assignments/self-study	
References	Main Texts: 1. I. Sneddon, Elements of Partial Differential Equations, McGraw Hill. 2. T. Amarnath, An elementary course in Partial Differential Equations, Narosa Publishing company, 1997. Reference texts : 3. K. Sankara Rao, Introduction to Partial Differential Equations, Prentice Hall of India, 1995. 4. F. John, Partial Differential equations, Springer Verlag Ltd. 5. C.R. Chester, Techniques of Partial Differential Equations. 6. R. Dennemeyer, <i>Introduction to Partial Differential Equations and Boundary Value Problems</i> , McGraw Hill. 7. T.M. Hu, L. Debnath, Linear Partial differential equations for scientists and Engineers, Birkhauser.	
Learning Outcomes	Learns to solve partial differential equations of first and second order. Learns to model initial and boundary value problems. Analyses the properties of solution.	

Programme: M.Sc. Mathematics

Course Code: MTO-205

Title of the Course: COMPLEX ANALYSIS

Number of Credits: 04

Effective from: June, 2018.

Prerequisites	Algebra of complex numbers including polar representation, Basics in Real Analysis including convergence series, Topology of the Complex/Real plane, Basic Complex Analysis including Cauchy's theorem.
Objectives	This course will prepare a student to take up research in Complex Function Theory, Several Complex Variable Complex Analysis etc.
Contents	<p>1. Complex Differentiability: Analytic Functions and Power series, Radius of convergence, Continuity and differentiability of power series, Existence of power series expansion, Exponential and Trigonometric function. 12 hours</p> <p>2. Contour Integration: Recall Cauchy's theorem; Cauchy's integral formulae, Analyticity of Complex differentiable functions, Liouville's theorem, Fundamental theorem of Algebra, Mean value property and Maximum modulus principle. 10 hours</p> <p>3. Zeros and Poles: Zeros and Poles of holomorphic functions, Singularities, Laurent series, Residues, winding number, The Argument principle. 8 hours</p> <p>4. Evaluation of Definite Real integrals: Trigonometric integrals, Improper integrals, Bypassing a pole, Inverse Laplace transform, Branch cut and Key hole integrals. 10 hours</p> <p>5. Schwarz's lemma: Schwarz's lemma. 4 hours</p> <p>6. Conformal maps. 4 hours</p>
Pedagogy	Class room lectures and tutorials, assignments and library reference.
References	<ol style="list-style-type: none">1. Anant R Shastri, Basic Complex Analysis of one variable, MacMillan, 2011.II edition2. J B Conway, Complex Analysis, Springer Verlag.3. Churchill and Brown, Complex Analysis,4. E.B.Saff, A.D.Snider ; Fundamentals of Complex Analysis. Pearson
Learning Outcomes	Students will be prepared to take up advanced complex analysis, complex analysis of more than one variable and will be equipped to take research in Complex Analysis and related subjects.

Programme: M.Sc. Mathematics

Course Code: MTO -206

Title of the Course: MEASURE THEORY

Number of Credits: 04

Effective from: June, 2018.

Prerequisites	Should have undergone a course in Real Analysis that includes Riemann Integration in one variable. Should be familiar with set theory very well.	
Objectives	To prepare students to handle Functional Analysis, Fourier series and their convergence, Laplace and Fourier transforms Wavelets analysis and Continuous probability theory.	
Contents	1.Reimann-Stieltjes Integral: Weights and measures, The Riemann-Steiltjes integral, Space of integrable functions, Integrators of bounded variation, The Riemann integral. Shortcomings of Riemann integration.	8 hours
	2.Lebesgue Measure: Lebesgue outer measure, Riemann integrability, Measurable sets, The structure of measurable sets, A non-measurable sets.	10 hours
	3.Measurable Functions: Measurable functions, Extended real valued functions, Sequence of measurable functions, Approximation of measurable functions.	8 hours
	4.The Lebesgue Integral: Simple functions, Non-negative functions, The general case, Lebesgue Dominated convergence theorem, Approximation of integrable functions.	12 hours
	5.Applications: The L^p spaces, Approximation of L^p -functions, Fourier series. Convergence in mean of the Fourier Series.	10 hours
Pedagogy	Class room lectures and tutorials, assignments and library reference.	
References	1. N L Carothers, Real Analysis, Cambridge University Press, 2006. 2.H L Royden, Real Analysis, PHI, 1995. 3.Charalambos D Aliprantis, Owen Burkinshaw, Principles of Real Analysis, Academic Press/Elsevier, 2004. 4.Paul Halmos, Measure Theory.	
Learning Outcomes	The course will prepare the students to take courses in functional analysis, Partial Differential equations etc. This enables the students to study Abstract measure theory and Probability theory.	

Programme: M. Sc. (Mathematics)

Course Code: MTO -207

Title of the Course: Number Theory

Number of Credits: 4

Effective from AY: 2018-19

<u>Prerequisites for the course:</u>	Some basic Complex Analysis. Elementary number theory. Congruences.	
<u>Objective:</u>	This course will serve as Prerequisites to an advanced Course in Analytical Number Theory.	
<u>Content:</u>	1. Fundamental Theorem of Arithmetic. Divisibility. Fibonacci numbers.	10 hours
	2. Arithmetical functions and Dirichlet multiplication. Mobius function μ . Euler totient function ϕ . Relation connecting μ and ϕ . Product formula for $\phi(n)$. Dirichlet product of arithmetical functions. Dirichlet inverse and Mobius inversion formula. Mangoldt function. Multiplicative functions. Liouville function. Divisor functions. Generalized convolutions. Formal power series. Derivative of arithmetical functions.	10 hours
	3. Averages of arithmetical functions. Big oh notation. Euler summation formula. Some elementary asymptotic formulas. Average order of $d(n)$. Average order of $\sigma_a(n)$. Average order of $\phi(n)$. Average order of $\mu(n)$ and $\Lambda(n)$.	10 hours
	4. Some elementary theorems on distribution of prime numbers.	6 hours
	5. Characters of finite abelian groups.	4 hours
	6. Partition Theory. Partitions of numbers. Generating function of $p(n)$. Other generating functions. Theorems of Euler. Theorem of Jacobi. Special cases of Jacobi's identity.	6 hours
	7. Basic Cryptology.	2 hours
<u>Pedagogy:</u>	lectures/ tutorials/assignments/self-study.	
<u>References/Readings</u>	1. T. M Apostol, <i>Introduction to Analytic Number Theory</i> , Narosa Publishing House. 2. Thomas Koshy, <i>Elementary Number Theory with Applications</i> , Second Edition, Elsevier India Pvt. Ltd., 2005 . (Chapter 9) 3. G.H. Hardy and E.M. Wright, <i>Introduction to theory of numbers</i> . (Chapter XIX) 4. Heng Huat Chan, <i>Analytic Number Theory for Undergraduates</i> , (Monographs in Number Theory), World Scientific, 2009 . 5. I. Niven, H.S. Zuckerman and H.L. Montgomery, <i>An Introduction to the Theory of Numbers</i> , 5th edition, Wiley-India. 6. David Burton, <i>Elementary Number Theory</i> , Sixth edition, Tata McGraw-Hill Edition. 7. A. Baker, <i>A concise introduction to theory of numbers</i> , Cambridge University Press. 8. J. Stillwell, <i>Elements of Number Theory</i> , Springer.	
<u>Learning Outcomes</u>	1. This course prepares the student to learn advanced number theory, Cryptography and Partition theory. 3. Taking this course students can read more advanced Analytic Number Theory books.	

Programme: M. Sc. (Mathematics)

Course Code: MTO -208

Title of the Course: Lie Algebra

Number of Credits: 4

Effective from AY: 2018-19

<u>Prerequisites for the course:</u>	Basic Linear Algebra, basic group theory, basic analysis.	
<u>Objective:</u>	This course develops concepts in Matrix Groups and Lie algebras. It helps in understanding other concepts like Manifold, Lie groups etc.	
<u>Content:</u>	1. Matrix Groups. Matrices. Real and Complex Matrix Groups. Orthogonal Groups. Topology of Matrix Groups. Tangent space.	12 hours
	2. Lie algebras. Definition, Some Examples, subalgebras and Ideals. Homomorphisms. Algebras. Derivations. Structure Constants. Ideals and Homomorphisms. Constructions with Ideals. Quotient Algebras. Correspondence between Ideals. Low-Dimensional Lie Algebras.	10 hours
	2. Solvable Lie Algebras. Nilpotent Lie Algebras. Subalgebras of $\mathfrak{gl}(V)$. Nilpotent Maps. Weights. The Invariance Lemma. An Application of the Invariance Lemma.	8 hours
	3. Some Representation Theory. Modules for Lie Algebras. Submodules and Factor Modules. Irreducible and Indecomposable Modules. Homomorphisms. Schur's Lemma. Representations of $\mathfrak{sl}(2, \mathbb{C})$. The Modules V_d . Classifying the Irreducible $\mathfrak{sl}(2, \mathbb{C})$ -Modules.	8 hours
	4. Brief introduction to: Cartan's Criteria. Testing for Solvability. The Killing Form. Testing for Semisimplicity. Derivations of Semisimple Lie Algebras. The Root Space Decomposition. Cartan Subalgebras. Definition of the Root Space. Decomposition. Cartan Subalgebras as Inner-Product Spaces. Root Systems. Bases for Root Systems. Cartan Matrices and Dynkin Diagrams.	10 hours
<u>Pedagogy:</u>	lectures/ tutorials/assignments/self-study.	
<u>References/Readings</u>	1. Kristopher Tapp, <i>Matrix Groups for Undergraduates</i> , American Mathematical Society, 2005 . 2. Karin Erdmann and Mark J. Wildon, <i>Introduction to Lie Algebras</i> , Springer Undergraduate Mathematics Series, Springer-Verlag. 2006 . 3. J.E. Humphreys, <i>Introduction to Lie algebras and representation theory</i> , Graduate Text in Mathematics, Springer-Verlag. 4. N. Jacobson, <i>Lie Algebras</i> , Dover Publications. 5. J.-P. Serre, <i>Complex Semisimple Lie Algebras</i> , Springer.	
<u>Learning Outcomes</u>	1. Taking this course students get acquainted with Lie algebras and Matrix groups theory. 2. Taking this course student can read Lie groups theory.	

Programme: M. Sc. (Mathematics)

Course Code: MTO-209

Title of the Course: Special Functions

Number of Credits: 4

Effective from AY: 2018-19

<u>Prerequisites for the course:</u>	Some basic Complex Analysis and Differential Equations.	
<u>Objective:</u>	This course develops concepts in Gamma, Beta functions and also studies Legendre polynomials and Bessels functions.	
<u>Content:</u>	<ol style="list-style-type: none">1. Infinite products:- Introduction, definition of an infinite product, a necessary condition for convergence, the associated series of logarithms, absolute convergence, uniform convergence.2. The Gamma and Beta functions:- The Euler and Mascheroni constant, the Gamma function, a series for $\Gamma'(z)/\Gamma(z)$, evaluation of $\Gamma(1)$ and $\Gamma'(1)$, the Euler product for $\Gamma(z)$, the difference equation $\Gamma(z+1) = z\Gamma(z)$, evaluation of certain infinite products, Euler's integral for $\Gamma(z)$, the Beta function, the value of $\Gamma(z)\Gamma(1-z)$, the factorial function, Legendre's duplication formulae, Gauss' multiplication theorem, a summation formula due to Euler.3. The hypergeometric function:- The function $F(a,b;c;z)$, a simple integral form, $F(a,b,c,1)$ as a function of the parameters, evaluation of $F(a,b,c,1)$, the contiguous function relations, the hypergeometric differential equation, $F(a,b,c,z)$ as a function of its parameters, elementary series manipulations, simple transformations.4. Series solution of differential equations. Method of Frobenius.5. Legendre Polynomials and Functions. Legendre equation and its solution. Generating function. Legendre series. Associated legendre functions. Properties of associated Legendre functions.6. Bessel function, Bessel's equation and its solutions. Generating function. Integral representation. Recurrence relations. Hankel functions. Equations reducible to Bessel's equation. Modified Bessels functions. Recurrence relations for modified Bessels functions.	<div>6 hours</div> <div>10 hours</div> <div>8 hours</div> <div>8 hours</div> <div>8 hours</div> <div>8 hours</div>
<u>Pedagogy:</u>	lectures/ tutorials/assignments/self-study.	
<u>References/Readings</u>	<ol style="list-style-type: none">1. E.D. Rainville, Special functions, Chelsa Publishing Company, New York, 1960.2. W.W. Bell, Special Functions for scientists and engineers, Dover Publications, New York, 2004.3. G.E. Andrews, R. Askey, R. Roy, Special Functions, Encyclopedia of Mathematics and its Applications 71, Cambridge University Press, Cambridge.1999.	
<u>Learning Outcomes</u>	Taking this course students <ol style="list-style-type: none">(i) get acquainted with Gamma, Beta functions. Also they study Legendre and Bessel Functions.(ii) can study some Engineering Mathematics.	

Programme: M.Sc. Mathematics

Course Code: MTO -210

Title of the Course: DIFFERENCE EQUATIONS

Number of Credits: 04

Effective from: June, 2018.

Prerequisites	Knowledge of basic Real Analysis, Linear Algebra and Differential equations..		
Objectives	This course helps in understanding basic concepts of discrete calculus. It develops the ability to solve difference equations by standard methods. It will help students to take up further studies in discrete dynamical systems and numerical modeling.		
Contents	1. Calculus of finite differences: Review of basic concepts.	8 hours	
	2. Nonlinear Difference Equations. Equilibrium Points and their dynamics. Logistic equation.	8 hours	
	3. Linear difference equations. Basic theory. Method of Undetermined Coefficients and Variation of Parameters Formula. Higher Order equations. Behaviour of Solutions. Nonlinear equations transformable to linear equations	12 hours	
	4. Systems of linear Difference Equations. Basic Theory. Linear Periodic systems. Stability theory of Linear Systems.	12 hours	
	5. Z-Transforms and its applications. Volterra Difference Equation of Convolution Type.	8 hours	
Pedagogy	Lectures/ tutorials/assignments/self-study..		
References	<u>Main Texts:</u> 1 . S.N .Elaydi, An Introduction to Difference Equations, Springer Verlag. <u>Reference texts :</u> 2. S.Goldberg , Introduction to Difference equations, Wiley Publication. 3. V.Lakshmikantham and D.Trigiant, Theory of difference equations, Academic Press. 4. K.Miller, Linear Difference equations, W.A.Benjam.		
Learning Outcomes	1. Learn to solve difference equations. 2. Analyses the properties of solution. 3. Learns about discrete models and their stability		

Programme: M.Sc. Mathematics

Course Code: MTO -301

Title of the Course: ADVANCED ALGEBRA

Number of Credits: 04

Effective from: June, 2018.

Prerequisites	Knowledge of basic s in linear algebra and linear maps, group theory, ring theory including the polynomial rings over fields.
Objectives	This course will prepare a student to take up research in Field Theory, Number theory, Cryptography, etc.
Contents	<p>1.Extension of Fields: Field extensions, Field of rational functions, Finite extension and Product rule of degrees, Simple extension, Algebraic extension, Transcendental extension, Construction by straight edge and compass, Constructible numbers. 12 hours</p> <p>2.Splitting Field: Roots of polynomial, Splitting field, Existence and uniqueness of splitting field, Isomorphism extension theorem, Algebraic closure, Existence and uniqueness of Algebraic closure, Finite fields, Existence and uniqueness of finite fields, Derivative and multiple roots, Simple extension, primitive roots of unity, Cyclotomic extensions. 10 hours</p> <p>3.Automorphism group: Automorphisms of fields, Galois groups, Galois groups of finite fields, Galois group of Cyclotomic extensions. Galois group of a polynomial. 8 hours</p> <p>4.Galois Theory: Symmetric rational functions, Galois group of field of rational function in n variable, Normal Extension, Fundamental Theorem of Galois theory. 10 hours</p> <p>5.Solvability: Solvable groups, Insolvability of A_5, Solvability of polynomials, Insolvability of quintics, Examples of insolvable quintics over \mathbb{Q}. 8 hours</p>
Pedagogy	Class room lectures and tutorials, assignments and library reference.
References	1.I N Herstein, Topics in Algebra, Wiley Students Edition, 2006. 2.David S. Dummit and Richard M. Foote, Abstract Algebra, II Edition, John Wiley Sons Inc., 1999. 3.Thomas Gallian, Abstract Algebra,
Learning Outcomes	Students will be prepared to take up research in Algebra in general and Filed theory, Algebraic number theory and Cryptology in particular.

Programme: M. Sc. (Mathematics)

Course Code: MTO-302

Title of the Course: COMBINATORICS

Number of Credits: 4

Effective from AY: 2018-19

Prerequisites	Basics of - Set Theory , Algebra, Linear Algebra	
Objective	Starting from the basic principles of counting, this course aims to give an introductory exposition to different aspects of Combinatorics. The course will emphasise on the importance of enumeration tools and techniques in diverse branches of Mathematics and Applied fields.	
Content	<p>1.Basic Counting Principles and Techniques Review of basic Counting Principles-Addition Principle, Multiplication Principle, Method of two-way Counting, Method of Bijections, Permutations and Combinations, Circular Permutations, Counting Objects with Repetitions, Binomial and Multinomial Theorems (Combinatorial Proofs), Binomial and Multinomial Coefficients and Identities.</p> <p>2.The Fundamental Counting Problem Statement of the Problem-The Sixteen Cases, Partition Numbers $P(n,k)$ and $P(n)$, Stirling Numbers $S(n,k)$ and $s(n,k)$, Bell numbers $B(n)$.</p> <p>3.Recurrence Relations and Explicit Formulas The Inclusion-Exclusion Principle, Derangements and $D(n)$, Recurrence Relations and Explicit Formulas for $P(n,k)$, $P(n)$, $S(n,k)$, $s(n,k)$, $B(n)$, and $D(n)$. Idea of Generating Functions , Method of solving Linear Recurrence Relations Using Generating Functions, Generating Functions for $P(n,k)$, $P(n)$, $S(n,k)$, $s(n,k)$, $B(n)$ and $D(n)$.</p> <p>4.Pigeonhole Principle (PHP) The Pigeonhole Principle - its different formulations and examples, Applications of PHP to some standard Problems in Geometry, Number Theory , Graph Theory and Colouring of Plane.</p> <p>5.Sequences and Partial Orders Applications of PHP to Sequences and Partial Orders- The Erdős-Szekeres Theorem, Dilworth's Lemma, Dilworth's Theorem, Sperner's Theorem.</p> <p>6.Ramsey Theory Ramsey's Theorem –First version (for 2 colours) , Second version (for r colours), and Infinitary version, Ramsey Numbers and bounds, Computations of small Ramsey Numbers, Schur's Theorem, van der Waerden's Theorem (Statement and Discussion).</p>	<p>12 Hours</p> <p>2 Hours</p> <p>12 Hours</p> <p>6 Hours</p> <p>6 Hours</p> <p>10 Hours</p>
Pedagogy	Lectures/ Tutorials/Assignments/Self-study	
References/ Readings	<ol style="list-style-type: none">1. Introduction to Combinatorics, Martin J. Erickson, John Wiley, 1996.2. Combinatorial Techniques, Sharad S. Sane, Hindustan Book Agency, 2013.3. Introduction to Combinatorics, W.D. Wallis and J.C. George, 2011.4. A Walk Through Combinatorics, M. Bona, World Scientific Publishing Company, 2002.5. Combinatorics, V.K. Balakrishnan, Schaum Series, McGraw-Hill,	
Learning Outcomes	<p>Students ,on completion of this course,</p> <ul style="list-style-type: none">• Will be able to appreciate the importance of combinatorial techniques in diverse branches of Mathematics and Applied fields.• This course will teach the students how to understand and deal with enumerative problems and to apply combinatorial techniques to solve a range of application problems in Optimization, Graph Theory and Networking.	

Programme: M.Sc. Mathematics

Course Code: MTO -303

Title of the Course: DIFFERENTIAL GEOMETRY

Number of Credits: 04

Effective from: June, 2018.

Prerequisites	Should have undergone basic courses in Real Analysis, Calculus of Several Variables, Linear Algebra and Vector calculus. Knowledge of metric space theory, topology and Partial differential equations are desirable.												
Objectives	To prepare students to take up a research career in modern Geometry/Topology.												
Contents	<table><tr><td>1.Curves: Regular curves in space, arc-length, parameterization, arc-length parameterization.</td><td>6 hours</td></tr><tr><td>2.Curvature: Curvature and torsion of space curves, Serret-Frenet formula, Signed curvature of plane curves, Periodic curves, Simple closed curves, Isoperimetric inequality and Four-vertex theorem.</td><td>8 hours</td></tr><tr><td>3.Surfaces in 3-dimension: Regular surfaces in 3-dimension, Tangents space, Normal and Orientation, Quadric surfaces.</td><td>7 hours</td></tr><tr><td>4.First Fundamental Form: The First fundamental form of a regular surface, Length of arcs on surfaces, Area of surfaces, isometries and conformal mappings of surfaces.</td><td>9 hours</td></tr><tr><td>5.Second Fundamental Form: Second fundamental form of a surface, normal curvature of a surface and principal curvatures of a surface.</td><td>10 hours</td></tr><tr><td>6.Gaussian Curvature: Mean and Gaussian curvatures of a surface, Surfaces of constant curvatures, pseudo sphere, Gauss map.</td><td>8 hours</td></tr></table>	1.Curves: Regular curves in space, arc-length, parameterization, arc-length parameterization.	6 hours	2.Curvature: Curvature and torsion of space curves, Serret-Frenet formula, Signed curvature of plane curves, Periodic curves, Simple closed curves, Isoperimetric inequality and Four-vertex theorem.	8 hours	3.Surfaces in 3-dimension: Regular surfaces in 3-dimension, Tangents space, Normal and Orientation, Quadric surfaces.	7 hours	4.First Fundamental Form: The First fundamental form of a regular surface, Length of arcs on surfaces, Area of surfaces, isometries and conformal mappings of surfaces.	9 hours	5.Second Fundamental Form: Second fundamental form of a surface, normal curvature of a surface and principal curvatures of a surface.	10 hours	6.Gaussian Curvature: Mean and Gaussian curvatures of a surface, Surfaces of constant curvatures, pseudo sphere, Gauss map.	8 hours
1.Curves: Regular curves in space, arc-length, parameterization, arc-length parameterization.	6 hours												
2.Curvature: Curvature and torsion of space curves, Serret-Frenet formula, Signed curvature of plane curves, Periodic curves, Simple closed curves, Isoperimetric inequality and Four-vertex theorem.	8 hours												
3.Surfaces in 3-dimension: Regular surfaces in 3-dimension, Tangents space, Normal and Orientation, Quadric surfaces.	7 hours												
4.First Fundamental Form: The First fundamental form of a regular surface, Length of arcs on surfaces, Area of surfaces, isometries and conformal mappings of surfaces.	9 hours												
5.Second Fundamental Form: Second fundamental form of a surface, normal curvature of a surface and principal curvatures of a surface.	10 hours												
6.Gaussian Curvature: Mean and Gaussian curvatures of a surface, Surfaces of constant curvatures, pseudo sphere, Gauss map.	8 hours												
Pedagogy	Class room lectures and tutorials, assignments and library reference.												
References	1. Andrew Pressley, Differential Geometry, Springer Verlag,												
Learning Outcomes	Prepare the students to take up research in mathematics, in particular, in Geometry and Topology.												

Programme: M.Sc. Mathematics

Course Code: MTO -304

Title of the Course: Mathematical Modeling

Number of Credits: 04

Effective from: June, 2018.

Prerequisites	Knowledge of basic Real Analysis, Advanced Calculus, Ordinary and Partial Differential equations, Difference equation.		
Objectives	This course develops the understanding of purpose and importance of mathematical modeling.		
Contents	1. Introduction, Classification, Techniques and Examples of mathematical modeling. Modeling process with proportionality and geometric similarity.	16 hours	
	2. Mathematical Modeling through ordinary differential equations of first order and of second order. First order systems of ordinary differential equations.	16 hours	
	3. Modeling with discrete dynamical systems.	16 hours	
	4. Modeling through Partial differential equations.	16 hours	
Pedagogy	Lectures/ tutorials/assignments/self-study		
References	<p><u>Main Texts:</u></p> <ol style="list-style-type: none">1. J.N.Kapur, A Mathematical Modelling, Wiley Eastern ltd.2. F.R.Giordano, M.D.Weir, W.P.Fox, A first course in Mathematical modeling, Thomson Publications. <p><u>Reference texts :</u></p> <ol style="list-style-type: none">3. D.N.Burghes, Modelling with Differential Equations, Ellis Horwood and John Wiley.4. J. Sandefur, Elementary Mathematical Modeling, Thomson Publications.5. F.Chorlten, Differential and difference equations., Von Nostqand.		
Learning Outcomes	Students will learn to build up models using differential and difference equations and to analyse the behaviour of the given system analytically and numerically.		

Programme: M.Sc. Mathematics

Course Code MTO -305

Title of the Course: INTEGRAL EQUATIONS

Number of Credits: 04

Effective from: June, 2018.

Prerequisites	Knowledge of Real Analysis, Linear Algebra, Differential equations, Several variable calculus.		
Objectives	This course helps in understanding basic concepts of Integral Equations. It develops the ability to solve integral equations by standard methods.		
Contents	1. Basic concepts of Integral equations. Classification. Integral Equations with Separable Kernels. Method of Successive Approximations. Resolvent Kernel and its Properties. Decomposition methods.	16 hours	
	2. Applications to Ordinary Differential Equations, Initial Value Problems and Boundary Value Problems, Green's functions.	10 hours	
	3. Classical Fredholm Theory. Symmetric Kernels, Hilbert-Schmidt Theory.	12 hours	
	4. Singular Integral Equations, Abel and Cauchy Type and Hilbert Kernel. Integral Transform Methods (Laplace, Fourier and Hilbert).	10 hours	
Pedagogy	Lectures/ tutorials/assignments/self-study		
References	<p><u>Main Texts:</u></p> <p>1 . Ram P Kanwal, Linear Integral Equations, Theory and applications. Springer.</p> <p><u>Reference texts :</u></p> <p>2. Courant and Hilbertt, Methods of Mathematical Physics, Vol. I.</p> <p>3. S.G.Mikhilin, Integral Equations.</p> <p>4. I.G.Petrovsky, Lectures on the theory of Integral equations.</p> <p>5. K.Yoshida, Lectures on Differential and Integral Equations</p>		
Learning Outcomes	Students will learn to solve Integral equations by different methods.		

Programme: M.Sc. Mathematics

Course Code: MTO -306

Title of the Course: STURM LIOUVILLE PROBLEMS

Number of Credits: 04

Effective from: June, 2018.

Prerequisites	Knowledge of Real Analysis, Calculus of Several Variables, Complex analysis, Ordinary differential equations, Methods of Applied Mathematics		
Objectives	This course develops the ability to solve Sturm Liouville problems. These problems are encountered in mathematical Physics.		
Contents	1.Review of ordinary differential equations. Principle of Superposition, Boundary Conditions. Adjoint Equation. Green's Formulae. Vibrating String.	16 hours	
	2.Sturm Liouville problems. Singular Boundary Points. Asymptotic Behaviour.	14 hours	
	3.Eigen value problems with continuous spectra.	10 hours	
	4.Suspended Rope and Associated Integral equation.	8hours	
Pedagogy	Lectures/ tutorials/assignments/self-study		
References	<p><u>Main Texts:</u></p> <p>1. M.P.S. Estham, Theory of differential equations, Van Nostrand, 1970.</p> <p><u>Reference texts :</u></p> <p>1.R.Courant , D.Hilbert. Learning Outcomes	Learns to form and solve SLP..		

Programme: M.Sc. Mathematics

Course Code: MTO -307

Title of the Course: MATHEMATICS FOR FINANCE

Number of Credits: 04

Effective from: June, 2018.

Prerequisites	Knowledge of basic Real Analysis, Differential equations, Elementary Probability theory.	
Objectives	This course helps in understanding basic concepts of Financial mathematics and in understanding financial models.	
Contents	1.Introduction. A simple market model. Rates of interests. Present value. No Arbitrage Principle. Risk and Returns. Risk free assets.	12 hours
	2. Time value of money and money market. Risk assets. Dynamics of stock prices. Tree and other models. Binomial tree model. Discrete time market model.	12 hours
	3. Portfolio Management. Securities.	10 hours
	4. Contracts. Options. Types and bounds. Forward options. Call and put options. Variable interest rates.	14 hours
Pedagogy	Lectures/ tutorials/assignments/self-study.	
References	<p><u>Main Texts:</u></p> <p>1. Marek Capinski and T.Zastawnik , Mathematics For Finance, Springer Verlag, 2003. (Chap. 1-7; 10)</p> <p><u>Reference texts :</u></p> <p>2. Damiano Brigo, Fabio Mercurio Interest rates models Theory and Practice, Springer.</p> <p>3. Alexander Melnikov Risk Analysis in Finance and Insurance, Chapman & Hall.</p> <p>4. An elementary introduction to Mathematical Finance, Sheldon Ross</p>	
Learning Outcomes	<p>1. Learns the basics of Financial computations</p> <p>2. Understands the working of financial market.</p> <p>.</p>	

Programme: M.Sc. Mathematics

**Course Code: MTO-401
ALGEBRA**

Title of the Course: ADVANCED LINEAR

Number of Credits: 04

Effective from: June, 2018.

Prerequisites	Linear spaces, dimension, Linear maps, eigenvalue problem, Algebraically closed fields, Fundamental theorem of Algebra, Multivariable Calculus, Reimann Integration of multivariable functions.	
Objectives	To prepare students to handle solving problems involving linear equations and take up research in such areas.	
Contents	1.Elementary Decomposition: Characteristic values, Annihilating polynomials, Invariant subspaces, Simultaneous triangulation and diagonalization, Invariant Decompositions, Primary Decomposition.	14 hours
	2.Rational and Jordan forms: Cyclic subspaces and Annihilators, Cyclic decomposition and Rational forms, Jordan forms, Computation of Invariant factors.	16 hours
	3.Multi-linear Algebra: Multi-linear functions and forms and tensors, Alternating forms and alternating products, Determinant function, Permutations and uniqueness of determinant, Properties of determinant, Differential Forms, Integration on Chains, Poincare lemma and Stoke's theorem.	18 hours
Pedagogy	Class room lectures and tutorials, assignments and library reference.	
References	4.Kenneth Hoffman, Linear Algebra, PHI, 1997. 5. James Munkres, Calculus on Manifolds, 6. Spivak, Calculus on Manifolds,	
Learning Outcomes	Students will be equipped to study Differential geometry, Differential Topology, Representation theory of groups and also to take up research in various areas of mathematics and Statistics.	

Programme: M. Sc. (Mathematics)

Course Code: MTO-402

Course Title: COMMUTATIVE ALGEBRA

Number of Credits: 4

Effective from AY: 2018-19

Prerequisites	A first course in Algebra with Groups , Rings and Fields	
Objective	To introduce students to Commutative algebra and develop concepts in higher algebra with adequate examples and counter examples.	
Content	1.Modules Definition, Direct Sums, Free Modules and Vector Spaces, Quotient modules, Homomorphisms, Simple Modules, Modules over PID's.	16 Hours
	2.Modules with Chain Conditions Artinian Modules and Rings, Noetherian Rings and Modules, Modules of Finite Length, Nil Radicals and Jacobson Radicals, Radical of an Artinian Ring.	20 Hours
	3.Homological Algebra Chain Complexes, Exact Sequences, Five Lemma and Snake Lemma, homology Group of a Chain Complex, Long Exact Sequence associated with Exact Sequences of Chain Complexes	12 Hours
Pedagogy	Lectures/ Tutorials/Assignments/Self-study	
References/ Readings	1. Introduction to Rings and Modules, C. Musili, Narosa Publishing House, 1992. 2. Algebra, S. Lang, Addison Wesley, 1985. 3. Commutative Algebra, N. S. Gopalakrishnan, Universities Press, 2015. 4. A First Course in Abstract algebra, J.B.Fraleigh, Pearson, 2002.	
Learning Outcomes	A student completing this course will have <ul style="list-style-type: none">• Basic knowledge and understanding of Module Theory and Homological algebra• Ability to solve problems related to the content of the course• Foundation to take up further studies in Commutative Algebra and Algebraic Geometry	

M.Sc. Physics

Department of Physics, Goa University introduces specializations for its M.Sc. Physics programme from 2020 – 2021.

The three specializations are:

1. Solid State Physics
2. Computational Physics
3. Biophysics

Students being admitted for the academic year 2020 – 2021 will be offered first two specializations at the end of their first semester while Biophysics will be offered from 2021 – 2022.

The new course structure and syllabi of different compulsory (C) and optional (O) papers is given below.

Each course has unique course code PHXY-nnn where,

X = G/S/C/B – General (common for all specializations)/ Solid State Physics/Computational Physics/ Biophysics

Y = C/O – Compulsory/ Optional

nnn = three digit identification number also indicating level of a course.

Course Structure and List of papers

Semester I		
Course Code	Course Title	Number of credits
PHGC-100*	Bridge course in Mathematical Methods	2
PHGC-101	Mathematical Physics	4
PHGC-102	Classical Mechanics	4
PHGC-103	Electromagnetic Theory	4
Optional courses (any two)		
PHGO-110	Computer Programming in Fortran 95	2
PHGO-111	Computer Programming with C	2
PHGO-112	Electronics Practical	2
PHGO-113	Mini project	2
*Not included for the calculation of GPA, but should be completed successfully.		
Semester II		
Course Code	Course Title	Number of credits
PHGC-106	Quantum Mechanics	4
PHGC-107	Electronics	4
PHGC-108	Statistical Mechanics	4
Optional courses (any one)		
PHGO-119	General Physics Practical	4
PHGO-120	Methods of Experimental Physics	4
Semester III		
Course Code	Course Title	Number of credits
PHGO-301	Summer Fellowships	2
Solid State Physics		
PHSC-201	Structure, Lattice and Thermal Properties of Solids	3
PHSC-202	Band Theory and Electronic Properties of Solids	3
PHSC-203	Magnetic, Superconducting and Optical Properties of Solids	2
Optional courses (any two)		
PHGO-212	Nuclear physics and Elementary Particle Physics	4
PHGO-213	Laser Physics and its applications	4
PHSO-214	Solid State Physics Practical	4
Computational Physics		
PHCC-221	Advanced Quantum Mechanics	3
PHCC-222	Advanced Statistical Mechanics	3
PHCC-223	Numerical Techniques	2
Optional courses (any two)		
PHGO-212	Nuclear and Elementary Particle Physics	4
PHGO-213	Laser Physics and its applications	4
PHCO-234	Numerical Techniques Practical	4

Biophysics		
PHBC-200*	Introduction to Biology and Biophysics	4
PHBC-241	Molecular Biophysics	4
PHBC-242	Methods in Biophysics	4
Optional courses (any two)		
PHBO-251	Solid State and Biomaterials	4
PHGO-213	Laser Physics and its applications	4
PHBO-252	Biophysics Practical	4
*Not included for the calculation of GPA, but should be completed successfully.		
Semester IV		
Course Code	Course Title	Number of credits
PHGO-311	Dissertation	8
PHSO-302	Neutron Physics	4
PHSO-303	Superconductivity and Superfluidity	4
PHSO-304	X-ray spectroscopy	4
PHSO-310	Numerical methods and Fortran parallel programming using open mp	4
PHSO-311	Phase transitions and Critical Phenomena	4
PHSO-312	Spectroscopic techniques in Condensed Matter Physics	4
PHSO-313	Physics of Energy materials	4
PHSO-314	Documentation using Latex	2
PHSO-315	Nanoscience and Technology	4
PHSO-316	Magnetism in Condensed Matter Physics	4
PHSO-317	Introduction to Crystallography and X-ray Diffraction	4
PHBO-321	Neurobiology and Neurophysics	4
PHBO-322	Radiation Physics and its applications	4
PHCO-341		
PHCO-342		

Programme: M. Sc. (Physics)

Course Code: PHGC-100

Title of the Course: Bridge Course in Mathematical Methods

Number of Credits: 2

Effective from AY: 2021-22

<u>Prerequisites for the course:</u>	NIL	
<u>Objectives:</u>	This course develops problem solving capabilities of students. It also helps to revise and understand the concepts based on Integration, differentiation and such other basic topics of mathematics, which are useful in solving problems based on Physics.	
<u>Content:</u>	<p>1. Preliminary Calculus Differentiation from first principles; products; the chain rule; quotients; implicit differentiation; logarithmic differentiation; Leibnitz' theorem; special points of a function; theorems of differentiation, Integration from first principles; the inverse of differentiation; integration by inspection; sinusoidal functions; logarithmic integration; integration using partial fractions; substitution method; integration by parts; reduction formulae; infinite improper integrals; plane polar coordinates; integral inequalities; applications of integration</p> <p>2. Partial Differentiation Definition of partial derivative; the total differential and total derivative; Exact and inexact differentials; Useful theorems of partial differentiation; the chain rule; Change of variables; Taylor's theorem for many variable functions; Stationary values of many variable functions; Stationary variables under constraints; Thermodynamic relations; Differentiation of integrals</p> <p>3. Series and Limits Series; Summation of series (arithmetic, geometric); convergence of infinite series; Operations with series; Power series; Taylor series; Evaluation of limits.</p> <p>4. Vector Algebra Scalars and vectors; Addition and subtraction of vectors; Multiplication by a scalar; Basis vectors and components; Magnitude of a vector; Multiplication of vectors; Equation of lines and planes; Using vectors to find distances; Reciprocal vectors.</p> <p>5. Ordinary differential equations Linear equations with constant coefficients; Linear equations with variable coefficients; General ordinary differential equations.</p>	<p>8 hours</p> <p>4 hours</p> <p>4 hours</p> <p>4 hours</p> <p>4 hours</p>
<u>Pedagogy:</u>	lectures/ tutorials/assignments/self-study	
<u>References/Readings</u>	1. K.F. Riley, M.P. Hobson and S.J. Bence, Mathematical Methods for Physics and engineering, Cambridge University Press, Cambridge UK (Reprint 2002). 2. George B. Arfken and Hans J. Weber, Mathematical methods	

	for Physicists, 7/e Elsevier Inc., 2012. 3. Mathematics text books of XI and XII Science prescribed by NTSE/CBSE/Goa Board.	
<u>Learning Outcomes</u>	1. Conceptual understanding of the meaning of the differentiation, partial differentiation, integration, ODE (Ordinary differential equations) and its application to solve the problems based on physics. 2. Understand the vector algebra, series and its application in solving the problems in physics and day to day life.	

Programme: M.Sc. (Physics)

Course Code: PHGC – 101 **Title of the Course:** Mathematical Physics

Number of Credits: 4

Effective from AY: 2021-22

<u>Prerequisites for the course:</u>	Should have studied the courses in Physics at graduation level.	
<u>Objective:</u>	Students will get exposed to necessary mathematical skills that are essential to understand different phenomena in physics. The course also helps students to understand the theoretical background of other core courses in physics.	
<u>Content:</u>	<p>1. Ordinary Differential Equations Second order homogeneous and inhomogeneous equation, Wronskian, General Solutions, Ordinary and Singular points, Series Solutions. Polynomial solutions, Legendre's equation, Bessel's equation, Gamma function</p> <p>2. Functions of Complex Variable Limits, Continuity, Analyticity of Functions of a Complex Variable, Taylor and Laurent Series, Isolated and Essential Singularities, Branch Cuts, Cauchy Formula, Contour Integration, Application of Residue Theorem.</p> <p>3. Linear Vector Spaces Linear Operators, Matrices, Coordinate Transformations, Eigenvalue Problems, Diagonalization of Matrices, Infinite Dimensional Spaces, Elements of Group Theory.</p> <p>4. Integral Transforms Fourier Series, Fourier Transforms, Laplace Transforms, Applications of Integral Transforms.</p> <p>5. Boundary Value and Initial Value Problems Vibrating String in one Dimension, Heat Conduction, and Wave Equation.</p>	<p>11 hours</p> <p>12 hours</p> <p>7 hours</p> <p>10 hours</p> <p>8 hours</p>
<u>Pedagogy:</u>	Lectures/ tutorials or a combination of these. Sessions shall be interactive in nature to enable peer group learning.	
<u>References/Readings</u>	<ol style="list-style-type: none">1. George B. Arfken and Hans J. Weber, Mathematical methods for Physicists, 7/e Elsevier Inc., 2012.2. K.F. Riley, M.P. Hobson and S.J. Spiegel, Theory and problems of advanced Mathematics for Engineers and Scientists by (Schaum's	

	series) (1980).	
<u>Learning Outcomes</u>	<ol style="list-style-type: none"> 1. Develop sufficient mathematical skills and apply them in other courses of physics. 2. Develop understanding of the mathematical background of various concepts in physics. 	

Programme: M. Sc. (Physics)

Course Code: PHGC-102

Title of the Course: Classical Mechanics

Number of Credits: 4

Effective from AY: 2021-22

<u>Prerequisites for the course:</u>	Should have studied basic courses in mechanics in B.Sc. and Mathematics.	
<u>Objective:</u>	This course is aimed at understanding intermediate to advanced classical mechanics and to build the necessary framework for other topics that requires classical mechanics such as quantum mechanics, statistical mechanics and electromagnetism.	
<u>Content:</u>	1. Newton's Laws of Motion Mechanics of a single particle, Mechanics of a system particles, Constraints and their classification, Principle of virtual work, D'Alembert's principle.	6 hours
	2. Lagrangian Formulation Degrees of Freedom, Generalized Coordinates, Calculus of variations, Hamilton's principle, Euler-Lagrange's equations of motion, Application to non-holonomic systems, Advantages of a variational principle formulation, Conservation theorems and symmetry properties.	8 hours
	3. Rigid Body Dynamics Eulerian angles, Inertia tensor, Angular momentum of rigid body. Free motion of rigid body, Motion of symmetric top.	6 hours
	4. Hamilton's equation of motion Legendre transformation and the Hamilton equations of motion, cyclic coordinates and conservation theorems, Routh's procedure and oscillation about steady motion, Derivation of Hamilton's equations from a variational principle, Principle of least action.	8 hours
	5. Canonical Transformations Equations of canonical transformations, Examples of canonical transformations, Poisson brackets and other canonical invariants, Equations of motion, Infinitesimal canonical transformation theorems in Poisson bracket formulation, Angular momentum, Poisson brackets relations, Lagrange brackets.	6 hours
	6. Hamilton - Jacobi Theory H-J equation for Hamilton's principal function, Harmonic oscillator problems, H -J equation for characteristic function, Action angle, Kepler's problem.	4 hours
	7. Two-body Central Force Problem Equations of motion and first integrals, Classification of orbits, virial theorem, Differential equation and integrable power law potentials, Kepler's problem.	6 hours
	8. Small Oscillations Simple Harmonic Oscillations, Damped Oscillations, Forced Oscillations without and with damping, Coupled Oscillations.	4 hours

<u>Pedagogy:</u>	Lectures/ tutorials/ assignments. Sessions shall be interactive in nature to enable peer group learning.	
<u>References/Readings</u>	<ol style="list-style-type: none"> 1. H. Goldstein, Classical Mechanics; McMillan, Bombay.1998. 2. N. C. Rana, and P. S. Joag; Classical Mechanics, Tata McGraw-Hill;1991. 3. J. C. Upadhyaya, Classical Mechanics, Himalaya, Publishing House, Mumbai;1991. 4. P. V. Panat; Classical Mechanics; Alpha Science International Ltd; 2004. 5. M. G. Calkin, Lagrangian and Hamiltonian Mechanics, World Scientific, 1996. 	
<u>Learning Outcomes</u>	<ol style="list-style-type: none"> 1. Study basic principles of classical mechanics. 2. Apply different techniques to solve mechanical problems. 	

Programme: M. Sc. (Physics)

Course Code: PHGC-103

Title of the Course: Electromagnetic Theory

Number of Credits: 4

Effective from AY: 2021-22

<u>Prerequisites for the course:</u>	Should have studied electrostatics and magnetostatics at the graduation level.	
<u>Objective:</u>	The aim of this course is to develop understanding of time varying scalar and vector electromagnetic fields and relativity. To inculcate fundamental concepts related to electromagnetic waves, their transmission via wave guides, radiation and plasma.	
<u>Content:</u>	1. Maxwells Equations: Displacement current, Maxwell's equations, Vector and Scalar potentials, Gauge transformation, Lorentz and Coulomb gauge, Poynting's theorem, Conservation of energy and momentum for charged particles and fields.	8 hours
	2. Electromagnetic Waves Plane electromagnetic waves and their propagation in non- conducting and conducting media, Frequency dispersion in conductors	7 hours
	3. Electromagnetic Radiation Retarded Potentials, Fields and radiation by localized dipole, Lienerd Weichert potentials, Power radiated by an accelerated charge.	8 hours
	4. Physics of Plasmas Electrical neutrality in a plasma, Particle orbits and drift motion in a plasma, Magnetic mirrors, The hydro-magnetic equations, The pinch effect, Plasma oscillations and wave motion, Reflection from a plasma (ionosphere).	7 hours
	5. Wave Guides Propagation of Waves between conduction planes, Wave guides in arbitrary cross-section, Wave -guides in Rectangular Cross-section, Coaxial Wave guide, Resonant Cavities, Dielectric wave guides.	8 hours
	6. Relativistic Electrodynamics Lorentz transformation as four dimensional orthogonal transformation, Lorentz matrix, four vectors in mechanics and electrodynamics, Lorentz covariance of Maxwell equations, field tensor, transformation of fields, field due to a point charge in uniform motion.	10 hours
<u>Pedagogy:</u>	Lectures/ tutorials/ assignments. Sessions shall be interactive in nature to enable peer group learning.	
<u>References/Readings</u>	Text Books / References: 1. J. B. Marion, Classical Electromagnetic Radiation, Academic Press, New York (1980). 2. J. R. Reitz and F. J. Milford, Foundations of Electromagnetic theory, Addison – Welsey, Reading	

	<p>(1960).</p> <ol style="list-style-type: none"> 3. B. B. Laud, Electromagnetism, Wiley Eastern Ltd., New Delhi (1983). 4. S. P. Puri, Classical Electrodynamics, Tata McGraw-Hill Publishing Co. Ltd. New Delhi (1997). 5. David J. Griffiths, Introduction to Electrodynamics, Prentice - Hall of India Pvt. Ltd., New Delhi (1995). 6. J. D. Jackson, Classical Electrodynamics, Wiley, New York (1995). 7. W. H. Panofsky and M. Philips, Classical Electricity and Magnetism, Addison-Wesley Publication, 1962. 	
<u>Learning Outcomes</u>	<ol style="list-style-type: none"> 1. Apply Maxwell's equations and their application to time-harmonic fields, boundary conditions, wave equations, and Poynting's power-balance theorem. 2. Describe the properties of plane waves in unbounded space, and understand such concepts as wavelength, phase velocity, and attenuation. 	

Programme: M. Sc. (Physics)

Course Code: PHGO-110

Title of the Course: Computer Programming in Fortran 95

Number of Credits: 2

Effective from AY: 2021-22

<u>Prerequisites for the course:</u>	Nil	
<u>Objective:</u>	This course develops concepts of computer programming in general and introduces programming language FORTRAN 94.	
<u>Content:</u>	1. Fundamentals of Computer Programing Programming Languages, Fortran Evolution, Character Set, Intrinsic Types, Numeric Storage, Literal Constants, Names, Significance of Blanks, Implicit Typing, Numeric and Logical Type Declarations, Character Declarations, Initialisation, Constants (Parameters), Comments, Continuation lines, Expressions, Assignment, Intrinsic Numeric Operations, Relational and Intrinsic Logical Operators, Intrinsic Character Operations, Operator Precedence, Mixed Type Numeric Expressions, Mixed Type Assignment, Integer Division, Formatting input and output, WRITE Statement, READ Statement, Prompting for Input, Reading and writing to a file, How to Write a Computer Program, Statement Ordering, Compiling and Running the Program, Practical Exercise 1	12 hours
	2. Logical Operations and Control Constructs Relational Operators, Intrinsic Logical Operations, Operator Precedence, Control Flow, IF Statement, IF ... THEN ... ELSE Construct, IF ... THEN ELSEIF Construct, Nested and Named IF Constructs, SELECT CASE Construct, The DO construct, Conditional Exit Loop, Conditional Cycle Loops, Named and Nested Loops, Indexed DO Loops, Practical Exercise 2	12 hours
	3. Arrays Declarations, Array Element Ordering, Array Sections, Array Conformance, Array Syntax, Whole Array Expressions, WHERE statement and construct, COUNT, SUM, MOD, MINVAL, MAXVAL, MINLOC and MAXLOC functions, Array I/O, The TRANSPOSE Intrinsic Function, Array Constructors, The RESHAPE Intrinsic Function, Named Array Constants, Allocatable Arrays, Deallocating Arrays, Vector and Matrix Multiplication, Practical Exercise 3.	12 hours
	4. Procedures Program Units, Introduction to Procedures, Intrinsic	12 hours

	Procedures, Intrinsic statement Mathematical Intrinsic Function Summary, Numeric Intrinsic Function Summary, Character Intrinsic Function Summary, Main Program Syntax, Functions, Subroutine and Functions, Practical Exercise 4	
<u>Pedagogy:</u>	Lectures/ Laboratory work/self-study	
<u>References/Readings</u>	<ol style="list-style-type: none"> 1. V. Rajaraman, Computer Programming in FORTRAN 90 and 95, Prentice-Hall of India, New Delhi 1999. 2. Martin Counihan, Fortran 95, UCL Press Limited University College London (1996). 3. Stephen Chapman, Fortran 95/2003: for Scientists and Engineers, McGraw-Hill (2007). 	
<u>Learning Outcomes</u>	<ol style="list-style-type: none"> 1. Understand different programming languages in general; 2. Understand FORTRAN programming language; 3. Understanding how to write and run simple FORTRAN programs. 	

Programme: M. Sc. (Physics)

Course Code: PHGO-111

Title of the Course: Computer programming with C

Number of Credits: 2

Effective from AY: 2021-22

<u>Prerequisites for the course:</u>	Nil	
<u>Objective:</u>	This course develops concepts of computer programming in general and introduces programming language C.	
<u>Content:</u>	<p>1. Introductory Concepts Introduction to computers, Introduction to Linux OS, Linux basics, Introduction to C, Writing a C Program, Compiling and Executing the Program, Error Diagnostics, Some simple C Programs, Desirable Program Characteristics.</p> <p>2. C Fundamentals The C character set, Identifiers and Keywords, Data types, Constants, variable and Arrays, Declarations, Expressions, Statements, Symbolic Constants</p> <p>3. Operators and Expressions Arithmetic Operators, Unary Operators, Relational Logical Operators, Assignment Operators, the Conditional Operators, Library Functions.</p> <p>4. Data Input and Output Preliminaries, Single character input and output, entering Input data, writing output data, Opening and closing data file, format statements.</p> <p>5. Control Statements Preliminaries, Branching statements, Looping statements, nested control structure, switch, break, continue, go to statements.</p> <p>6. Functions Defining functions, accessing functions, Passing arguments to a function.</p> <p>7. Arrays Defining an array, processing an array, passing arrays to functions, multidimensional arrays.</p>	<p>6 hours</p> <p>8 hours</p> <p>8 hours</p> <p>6 hours</p> <p>8 hours</p> <p>6 hours</p> <p>6 hours</p>
<u>Pedagogy:</u>	Lectures/ Laboratory work/self-study	
<u>References/Readings</u>	1. Byron Gottfried, Programming with C, Tata McGraw- Hill (1996).	
<u>Learning Outcomes</u>	<p>1. Understand different programming languages in general; Understand C programming language;</p> <p>2. Understanding how to write and run simple C programs.</p>	

Programme: M. Sc. (Physics)

Course Code: PHGO-112

Title of the Course: Electronics Practical

Number of Credits: 2

Effective from AY: 2021-22

<u>Prerequisites for the course:</u>	Nil	
<u>Objective:</u>	This course provides laboratory training in designing, and constructing electronics circuits commonly used in a Physics laboratory.	
<u>Content:</u>	<p>Experiments are to be performed on following topics (minimum 8) with emphasis on designing and constructing the circuit on a bread board.</p> <ol style="list-style-type: none">1. Operational Amplifier parameters2. Design and Construction of Wien Bridge Oscillator3. Design and Construction of phase shift oscillator4. Design and Construction of Astable Multivibrator5. Design and Construction of Monostable Multivibrator6. Schmitt Trigger circuit and its use as a zero crossing detector and squaring circuit7. Voltage Regulator8. Constant Current Source9. Design and Construction of DC differential amplifier using op-amps10. Design and Construction of Function generator11. Design and construction of Negative nonlinear resistor12. J. K. flip-flop counter: Scale of 16 and 10 using IC13. Adder and Subtractor Circuits	48 hours
<u>Pedagogy:</u>	Laboratory Experiments	
<u>References/Readings</u>	<ol style="list-style-type: none">1. J. Millman and C. C. Halkias, Integrated Electronics: Analog and Digital Circuits and Systems, Mc Graw Hill International Student Ed. (1972).2. LM317 – 3 Terminal Adjustable Voltage regulator datasheet Rev. X, Texas Instruments3. Saha, Digital Principles and Applications, Tata Mc Graw Hill 7e (2011).	

<p><u>Learning Outcome</u></p>	<ol style="list-style-type: none"> 1. The student should be able to prepare for laboratory work, by reading from books / laboratory manual / datasheet. 2. Should be able to design and construct electronic circuits by identifying and fetching different components. 3. Should be able to record observations from different measuring instruments and record them neatly. 4. Plot graphs and analyse the results. 5. Demonstrate the ability to maintain a laboratory notebook. 6. Prepare lab reports in standard scientific format. 	
---------------------------------------	---	--

Programme: M. Sc. (Physics)

Course Code: PHGO-113

Title of the Course: Mini project

Number of Credits: 2

Effective from AY: 2021-22

<u>Prerequisites for the course:</u>	Interest in designing and building electronic circuits by soldering	
<u>Objective:</u>	This course develops skills for designing and building laboratory equipment commonly used in Physics Laboratory.	
<u>Content:</u>	Design and Construct any one of the following instruments on a printed circuit board, make it work and pack it in a box. 1. Constant current source 2. Function Generator 3. Lock-in Amplifier 4. DC differential amplifier 5. Laboratory Power supply	48 hours
<u>Pedagogy:</u>	Laboratory work and self-study	
<u>References/Readings</u>	1. R. Srinivasan, K. R. Priolkar and T. G. Ramesh Experiments in Physics - Laboratory Manual, Indian Academy of Sciences 2017. 2. J. Millman and C. C. Halkias, Integrated Electronics: Analog and Digital Circuits and Systems, Mc Graw Hill International Student Ed. (1972).	
<u>Learning Outcomes</u>	1. To design and build simple laboratory instruments and understand their working. 2. To carry out minor repairs necessary in a laboratory.	

Programme: M. Sc. (Physics)

Course Code: PHGC-106

Title of the Course: Quantum Mechanics

Number of Credits: 4

Effective from AY: 2021-22

<u>Prerequisites for the course:</u>	Studied Physics, including an introductory course on Quantum Mechanics at graduate level	
<u>Objective:</u>	<ol style="list-style-type: none">1. To develop basic formalisms of non-relativistic Quantum Mechanics.2. To illustrate the concepts for analyzation of simple quantum mechanical systems	
<u>Content:</u>	<p>Schrodinger's Equation and Hermitian operators</p> <p>(a) Time-dependent Schrodinger equation, continuity equation, expectation values, Ehrenfest's theorems, time-independent Schrodinger equation and stationary states.</p> <p>(b) Hermitian operators, eigenvalues and eigenstates of Hermitian operators, momentum eigenfunctions, orthogonality and completeness of wave functions, Computability and compatibility of observables, parity operation.</p> <p>The Schrodinger equation in three dimensions</p> <p>Separation of the Schrodinger equation in Cartesian coordinates, Central potential, separation of the Schrodinger equation in spherical polar coordinates, The free particle, The three-dimensional square well potential, The hydrogen atom, The three-dimensional isotropic oscillator.</p> <p>Vector space formulation of quantum mechanics</p> <p>Dirac Notation, representation of states and observables, bra and ket vectors, linear operators, relation with wave mechanics, algebra of Hermitian operators, matrix representation, unitary operators, Schrodinger and Heisenberg representations, linear harmonic oscillator problem by operator method.</p> <p>Angular Momentum theory</p> <p>Angular Rotations in Classical and Quantum Mechanics, Rotational Symmetry and conservation of angular momentum, Treatment of general angular momentum by operator method, eigenvalues and eigenvectors, Eigen values and eigenfunctions of L^2 and L_z operators, ladder operators L^+ and L^-, spin angular momentum, algebra of Pauli matrices, Pauli representation of angular momentum operators. Addition of two angular momenta, spin-orbit interaction, Clebsch Gordon coefficients.</p> <p>Approximation methods for stationary problems</p> <p>Time-independent perturbation theory for a non-degenerate energy level, Time-independent perturbation theory for a degenerate energy level, The variational method, The WKB approximation.</p> <p>Approximation methods for time-dependent problems</p>	<p>6 hours</p> <p>10 hours</p> <p>4 hours</p> <p>8 hours</p> <p>6 hours</p> <p>6 hours</p>

	<p>Time-dependent perturbation theory, General features, Time-independent perturbation, periodic perturbation, The adiabatic approximation, The sudden approximation</p> <p>Quantum Collision Theory</p> <p>Scattering experiments and cross-sections, potential scattering and general features, the method of partial waves, Application of the partial-wave method, the integral equation of potential scattering, The Born approximation, Collision between identical particles, Collision involving composite systems.</p>	8 hours
<u>Pedagogy:</u>	lectures/ tutorials/ assignments. Sessions shall be interactive in nature to enable peer group learning.	
<u>References/Readings</u>	<p>Text Books / References</p> <ol style="list-style-type: none"> 1. A. K. Ghatak and S. Lokanathan, Quantum Mechanics: Theory and Applications, Springer (2004) 2. P. M. <u>Learning Outcomes</u>	<ol style="list-style-type: none"> 1. Students will be able to solve wave equations for simple three dimensional system 2. Students will have the knowledge and skills to describe the structure of the hydrogen atom and show an understanding of quantisation of angular momentum and spin as well as the rules for quantisation and addition of these. 3. Students will learn the concepts of approximation methods for solving Schrodinger equations 4. Students will gain the knowledge about fundamental scattering of quantum particles. 	

Programme: M. Sc. (Physics)

Course Code: PHGC-107

Title of the Course: Electronics

Number of Credits: 4

Effective from AY: 2021-22

<u>Prerequisites for the course:</u>	Should have studied the Electronics courses in Physics at graduation level.	
<u>Objective:</u>	The aim of the course is to introduce students to wide range of electronic circuits and their applications in Physics such as OP-AMPS. They also get basic understanding of opto-electronic devices, modulation, signals, microprocessor and memories.	
<u>Content:</u>	1. OP-AMP Applications OP-AMPS with negative feedback, Voltage controlled voltage source (VCVS), Current controlled voltage source (ICVS), Voltage controlled current source (VCIS), Current controlled current source (ICIS), Inverting and noninverting amplifier circuits, Open-loop frequency and phase response, Closed-loop frequency response, Differential amplifier, Instrumentation amplifier, DC and AC amplifiers, Summing, scaling and averaging amplifier, Voltage to current converter, Current to voltage converter.	12 hours
	2. Opto-electronic devices Radiative and non-radiative transitions, Characteristics of LED, Photoconductor, Photo diode, Photo transistor, Photo detector, Solar cell, Semiconductor laser; Optical fiber, Optical fiber waveguides, Fundamentals of optical communication	12 hours
	3. Communication Electronics Analog and digital signals, Modulation, Types of modulation, Basic principles of amplitude, frequency and phase modulation, Simple circuits for amplitude modulation and demodulation, Digital modulation and demodulation, Microwave Oscillators, Cavity resonators, Standing wave detector.	12 hours
	4. Digital Electronics Types of signals, Digital signal processing (DSP) basics, A/D and D/A conversion methods, DSP applications; Introduction to Microprocessors, Elements of 8-bit Microprocessors (INTEL 8085); Memory and storage, RAM, ROM, PROM and EPROM, Flash memories, Magnetic and optical storage.	12 hours
<u>Pedagogy:</u>	Lectures/tutorials/assignments. Sessions shall be interactive in nature to enable peer group learning.	
<u>References/Readings</u> -	1. Millman, J. and Halkias, C. C., Integrated Electronics, Analog and Digital Circuits and Systems, McGraw – Hill Book Co. Tokyo (1997) 2. Boylestad, R. W., Digital Signal Processing, Elsevier India (2006). 	
<u>Learning Outcomes:</u>	<ol style="list-style-type: none"> 1. Understanding the principles and circuits in electronics and use them in various applications. 2. Students acquire knowledge about working principles of opto-electronic devices and communication electronics. 3. Students get exposure to microprocessor and memory devices. 	

Programme: M. Sc. (Physics)

Course Code: PHGC-108

Title of the Course: Statistical Mechanics

Number of Credits: 4

Effective from AY: 2021-22

<u>Prerequisites for the course:</u>	Should have studied Physics or Mathematics at graduation level. It is assumed that students have a basic working knowledge of classical and quantum mechanics, including Hamiltonian formulation and density matrices.	
<u>Objective:</u>	This course develops concepts in classical laws of thermodynamics and their application, postulates of statistical mechanics, statistical interpretation of thermodynamics, microcanonical, canonical and grand canonical ensembles; the methods of statistical mechanics are used to develop the statistics for Bose-Einstein, Fermi-Dirac and photon gases.	
<u>Content:</u>	1. Kinetic Theory and Equilibrium state of Dilute Gas Formulation of problem, binary collisions, Boltzmann transport equation, Boltzmann's H theorem, Maxwell-Boltzmann distribution, Method of the most probable distribution, analysis of the H theorem, recurrence and reversal paradoxes, Validity of the Boltzmann transport equation.	10 hours
	2. Classical Statistical Mechanics Review of laws of thermodynamics, Entropy, Thermodynamic Potentials, Postulate of Classical Statistical Mechanics, Microcanonical ensemble, derivation of thermodynamics, equipartition theorem, Classical ideal gas, Gibbs paradox.	10 hours
	3. Canonical and Grand Canonical Ensembles Canonical ensemble, energy fluctuations in canonical ensemble, grand canonical ensemble, density fluctuations in grand canonical ensembles, equivalence of canonical and grand canonical ensembles, behaviour of $W(N)$, meaning of Maxwell construction.	10 hours
	4. Quantum Statistical Mechanics Postulates of quantum statistical mechanics, density matrix, ensembles in quantum mechanics, third law of thermodynamics, ideal gases in microcanonical and grand canonical ensembles, foundations of statistical mechanics.	6 hours
	5. Ideal Fermi Gas Equation of state of Ideal Fermi Gas, theory of white dwarfs, Landau diamagnetism, deHass-Van Alphen effect, Pauli paramagnetism.	6 hours
	6. Ideal Bose Gas Photons, phonons, Bose-Einstein condensation.	6 hours
<u>Pedagogy:</u>	Lectures/ tutorials/assignments. Sessions shall be interactive in nature to enable peer group learning.	
<u>References/Readings</u>	1. Statistical Mechanics, Kerson Huang, 2/e, Wiley India 2008.	

	<ol style="list-style-type: none"> 2. Fundamentals of Statistical Mechanics, B. B. Laud, New Age International Ltd. New Delhi 1998. 3. Fundamentals of Statistical and Thermal Physics, F. Reif, Waveland Press 2009. 4. Statistical Mechanics L. D. Landau and E. M. Lifshitz, Pergamon Press 1969. 5. Statistical Physics, R. P. Feynmann, The Benjamin Cummings Publishing Co 1981. 6. Introduction to Statistical Physics, S. K. Sinha, Narosa Publishing House, New Delhi 2007. 7. Statistical Physics, Tony Guenault, New Age International Ltd. New Delhi 2007. 8. Francis W. Sears , Gerhard Salinger, Thermodynamics, Kinetic Theory, and Statistical Thermodynamics, Addison-Wesley Principles of Physics Series, 1975. 	
<u>Learning Outcomes</u>	<ol style="list-style-type: none"> 1. Explain statistical physics and thermodynamics as logical consequences of the postulates of statistical mechanics. 2. Apply the principles of statistical mechanics to selected problems. 3. Apply techniques from statistical mechanics to a range of situations. 	

Programme: M. Sc. (Physics)

Course Code: PHGO-119

Title of the Course: General Physics Practical

Number of Credits: 4

Effective from AY: 2021-22

<u>Prerequisites for the course:</u>	Nil	
<u>Objective:</u>	This course provides laboratory training in performing experiments that verify important physical laws and using modern and novel techniques of measurements.	
<u>Content:</u>	<p>Short Lecture Course on – Theory of errors, Treatment of Errors of observation, linear least squares fitting and Data analysis.</p> <p>The experiments on the following topics (any 12) are to be performed with emphasis on the estimation and calculation of errors.</p> <ol style="list-style-type: none">1. Types of Statistical Distributions2. Analysis of Sodium Spectrum – Quantum defect and Effective quantum number3. Michelson Interferometer/Fabry-Perot Interferometer4. Diffraction experiments using laser– single slit, double slit, grating5. Polarization experiments using laser –linearly and elliptically polarized light6. Statistical Distribution of radioactive decay7. Verification of Inverse Square Law using GM counter8. Linear Absorption Coefficient of Aluminium using GM counter9. Verification of Debye Relaxation Law and measurement of thermal relaxation of serial light bulb10. Thermal diffusivity of Brass11. Thermometry – measurement of thermoemf of Iron-Copper (Fe-Cu) thermocouple as a function of temperature and verification of law of intermediate metals12. Calibration of Lock-in Amplifier13. Measurement of mutual inductance of a coil using lock-in amplifier14. Measurement of low resistance using lock-in amplifier15. X-ray Emission – characteristics lines of a W target16. Experiments using Strain Gauge17. Ultrasonic Interferometer18. Nonlinear dynamics – Feigenbaum circuit19. Nonlinear dynamics – Chua’s circuit20. Verification of Percolation phenomena21. Measurement of electrical resistance of Ni wire to verify para to ferromagnetic phase transition22. Measurement of electrical resistance of NiTi based shape memory alloy23. Measurement of Young’s modulus of Brass by Flexural vibrations	<p>12 hours</p> <p>72 hours</p>

<u>Pedagogy:</u>	Lectures and Laboratory Experiments.	
<u>References/Readings</u>	<ol style="list-style-type: none"> 1. P. R. Bevington and D. K. Robinson, Data Reduction and Error Analysis for the Physical Sciences, McGraw Hill (Indian Edition) 2015. 2. R. Srinivasan, K. R. Priolkar and T. G. Ramesh, A Manual on Experiments in Physics, Indian Academy of Sciences, 2018. 	
<u>Learning Outcomes</u>	<ol style="list-style-type: none"> 1. Employ proper techniques when making scientific measurements 2. Demonstrate the ability to use selected pieces of measuring devices including the multimeter, oscilloscope, and AC and DC power supplies 3. Demonstrate the ability to use the computer as a data analysis tool 4. Demonstrate the ability to maintain a laboratory notebook 5. Apply the appropriate physics to the physical situation presented 6. Quantitatively analyze experimental data 7. Estimate and translate errors and report quantities up to last significant digit 8. Formulate and report scientific conclusions based on data analysis 9. Prepare lab reports in standard scientific format 	

Programme: M. Sc. (Physics)

Course Code: PHGO-120

Title of the Course: Methods of Experimental Physics

Number of Credits: 4

Effective from AY: 2021-22

<u>Prerequisites for the course:</u>	Nil	
<u>Objective:</u>	This course seeks to develop understanding of principles of measurement of various fundamental quantities in a Physics laboratory.	
<u>Content:</u>	1. Measurement of temperature Thermocouple, diode and semiconductor sensors, RTD, pyrometer, Langmuir probes,	8 hours
	2. Measurement of resistance Two probe measurement and four probe measurement using constant current source and constant voltage source, Lock-in amp, discharge of capacitance	8 hours
	3. Measurement of capacitance RC circuit, DC bridges, AC Bridges	8 hours
	4. Measurement of radiation GM counter, ionization chambers, scintillation detector, solid state detectors, CCD detectors	10 hours
	5. Measurement of magnetic flux Force methods, induction methods (including SQUID), Hall probe, indirect methods (MOKE)	10 hours
	6. Measurement of frequency Resonance methods	8 hours
	7. Estimation of errors in measurement. Precision and accuracy, estimation of errors, propagation of errors, general formula, least square fitting, non-linear least square	8 hours
<u>Pedagogy:</u>	Lectures and Laboratory Experiments.	
<u>References/Readings</u>	1. P. R. Bevington and D. K. Robinson, Data Reduction and Error Analysis for the Physical Sciences, McGraw Hill (Indian Edition) 2015. 2. R. Srinivasan, K. R. Priolkar and T. G. Ramesh, A Manual on Experiments in Physics, Indian Academy of Sciences, 2018.	
<u>Learning Outcomes</u>	1. Understand the advantages and disadvantages of using a technique or probe for making scientific measurements. 2. Demonstrate the ability to use selected pieces of measuring devices. 3. Estimate and translate errors and report quantities up to last significant digit	

Programme: M. Sc. (Physics)

Course Code: PHGO-212

Title of the Course: Nuclear and Elementary Particle Physics

Number of Credits: 4

Effective from AY: 2021-22

<u>Prerequisites for the course:</u>	PHGC-106	
<u>Objective:</u>	To introduce students to the fundamental principles and concepts governing nuclear and particle physics and have a working knowledge of their application to real-life problems.	
<u>Content:</u>	1. Basic Properties of Nuclei: Nuclear mass, charge and radius, Nuclear spin, Parity Statistics, magnetic and electric quadrupole moments	6 hours
	2. Nuclear Models: a. Liquid Drop model, Weizsacker's mass formula, mass parabolas b. Nuclear shell model. Energy levels in a three dimensional harmonic oscillator well potential, spin orbit interaction, prediction of magic numbers, ground state spins and parities, magnetic moments, Schmidt lines, Nuclear quadrupole moments c. Collective Model, Bohr-Mottelson theory of surface vibrations and rotations of nuclei, Excitation spectra of deformed nuclei, Nilsson model	11hours
	3. Nuclear Transformations: a. Alpha decay, Barrier penetration problem. Gamow's theory of Alpha decay, Geiger-Nuttal law, Alpha spectra and nuclear energy levels b. Gama transitions, multipole radiations, Quantum theory of the transition probability, selection rules, Angular correlation, Calculations of transition rates and comparison with experiments, internal conversion c. Beta Decay, Experiments in beta spectra, neutrino hypothesis, Fermi's theory of beta decay, Kurie plots, ft values, Allowed and forbidden transitions, selection rules, electron capture, parity violation in beta decay, experimental verification, measurement of neutrino helicity	10hours
	4. Two-Body Problem: Properties of deuteron Theory of the ground state of deuteron, Magnetic moment and electric quadrupole moment of deuteron, tensor force, theory of nucleon-nucleon scattering at low energy, phase shift and scattering length, effective range theory, experimental determination of low energy parameters, nature of nuclear forces, Wigner, Heisenberg and Majorana exchange forces, Meson theory of nuclear force	11hours
	5. Nuclear Reactions: Cross-sections, principles of detailed balance, Bohrs theory of compound nucleus, resonances and Breit-Wigner Single level formulation, optical model, Direct	5 hours

	reaction, Nuclear fission 6. Elementary Particles: Classification of elementary particles, Baryons, Mesons and Leptons, Strong, weak and electromagnetic interactions, Isobaric spin, strangeness and parity, elementary particles reactions and decays, Resonances, Eightfold way, Quark model	5 hours
<u>Pedagogy:</u>	Lectures / tutorials/assignments. Sessions shall be interactive in nature to enable peer group learning.	
<u>References/Readings</u>	1. H. Enge, Introduction to Nuclear Physics, Addison-Wesley (1974). 2. E. Segre, Experimental Nuclear Physics, John Wiley (1960). 3. V. Devanathan, Nuclear Physics, Alpha Science International Ltd, (2011). 4. S. N. Ghoshal, Nuclear Physics, S. Chand and Co. (2019)	
<u>Learning Outcomes</u>	Student will be able to 1. Apply the models describing the basic nucleon and nuclear properties. 2. Describe the properties of strong and weak interaction. 3. Explain the different forms of radioactivity and account for their occurrence. 4. Classify elementary particles and nuclear states in terms of their quantum numbers.	

Title of the Course: Laser Physics and its applications

Effective from AY: 2021-22

<u>Prerequisites for the course:</u>	Student should have basic knowledge of Atomic Physics and Lasers	
<u>Objective:</u>	<ol style="list-style-type: none"> 1. To develop understanding of construction and operation of different Laser systems. 2. To understand advances in laser physics and its applications 	
<u>Content:</u>	<p>Introduction to LASER: Definition, brief history of Lasers, Unique Properties of laser, Coherence, fundamental wave properties of light: interaction of light with materials and quantum properties of light: Particle nature of light, discrete energy levels, radiative transitions and emission line width, energy levels and radiative properties of molecules, liquids and solids, radiation and thermal equilibrium- absorption and stimulated emission, Laser Safety: Various hazards due to laser radiation-eye, skin, chemical etc., safety measures and standard ANSI</p> <p>Laser Amplifiers and Resonators: Conditions for producing a laser – population inversions, Gain and gain saturation, Development and growth of laser beam, Laser oscillation above threshold, Requirements for obtaining population inversion, laser pumping requirements and techniques. laser cavity modes: longitudinal and Transverse, Stable laser resonators and Gaussian beams, Special laser cavities and cavity effects: unstable resonators, Q switching, gain switching, mode- locking, pulse shortening techniques (self-phase modulation, using group velocity dispersion, with gratings or prisms), ultrashort - pulsed laser and amplifier system, Ring lasers, Cavities for producing spectral narrowing of laser output.</p> <p>Laser systems He -Ne laser, Ar ion laser, Molecular Gas lasers: CO₂ laser, Excimer lasers, Laser systems involving high-density gain media: Organic dye lasers, solid state lasers: Ruby laser, Nd-YAG and glass lasers.</p> <p>Applications of Laser: Engineering Applications of Lasers, Applications in communication, LIDAR, Medical Applications, Laser Cooling and Trapping of Atoms,</p>	<p>12 hours</p> <p>12 hours</p> <p>12 hours</p> <p>12 hours</p>
<u>Pedagogy:</u>	Lectures/ tutorials/assignments. Sessions will be interactive in nature to enable peer group learning.	
<u>References/Readings</u>	<ol style="list-style-type: none"> 1. Laser fundamentals, second edition William T. Silfvast, Cambridge publication, 2004 2. Laser electronics, third edition, Joseph T. Verdeyen, Prentice Hall series, 1994. 	

	<ol style="list-style-type: none"> 3. Basics of laser physics, second edition, Karl F. Renk, Springer, 2012. 4. Laser Physics and application, Tarasov. L, Mir Publication, 1987. 5. Laser application, William V. Smith, Artech House Publishers, 1970. 6. Lasers: Fundamentals and Applications (Graduate Texts in Physics), second edition, K. Thyagarajan, Ajoy Ghatak, Springer publication, 2012. 7. Principles of Lasers, O. Svelto, Springer 2004 8. Laser Physics, Simon Hooker and Colin Webb, Oxford, 2010. 	
<u>Learning Outcomes:</u>	<ol style="list-style-type: none"> 1. Student will understand the basic principle and operation of different types of Lasers. 2. Student will get exposure to applications of Lasers in different fields. 	

Programme: M. Sc. (Physics) (Solid State Physics)

Course Code: PHSC-201

Title of the Course: Structure, Lattice and Thermal Properties of Solids

Number of Credits: 3

Effective from AY: 2021-22

<u>Prerequisites for the course:</u>	Should have attended PHGC-101	
<u>Objective:</u>	<ol style="list-style-type: none">1. To introduce fundamental concepts of solids like crystalline order, symmetry in solids, simple crystal structures and their properties.2. To acquaint with the concept of reciprocal lattice and its importance in structure determination using x-rays.3. To introduce different types of crystal bindings and elastic properties of solids.4. To familiarize the concept of lattice vibration and their role in thermal properties of solids.	
<u>Content:</u>	<p>Crystal Structure Crystals - Lattice, Bravais lattice, primitive unit cell, symmetry of molecules and crystals, symmetry operations and symmetry elements, Lattices in one, two and three dimensions, Space groups, definitions of directions, coordinates and planes. Simple crystal structures: NaCl, CsCl, diamond, hexagonal close-packed structure, cubic ZnS structure and their properties, Non ideal crystal structures – random stacking and polytypism Reciprocal Lattice - Diffraction of waves by crystals, Bragg law, Scattered wave amplitude - Fourier analysis, reciprocal lattice vectors, diffraction conditions, Laue equations, Brillouin zones, Geometric structure factor, Atomic Structure factor Point Defects General Thermodynamic Features, Color centres, Line Defects: Dislocations</p> <p>Crystal Binding and Elastic Constants Crystals of inert gases - Van der Waals - London interaction, repulsive interaction, equilibrium lattice constants, cohesive energy, Ionic Crystals - Electrostatic or Madelung Energy, evaluation of Madelung constant, covalent crystals, bonding in metals and Hydrogen bonds, Atomic Radii, Analysis of elastic strains, elastic compliance and stiffness constants, elastic waves in cubic crystals</p> <p>Thermal Properties Vibrations of a one -dimensional monatomic lattice, first Brillouin zone, group velocity, long wavelength limit, derivation of force constant from experiment. Vibrations of a one dimensional diatomic lattice. Quantization of elastic waves, phonon momentum, Inelastic scattering by Phonons, Phonon Heat capacity, Planck distribution, normal mode enumeration, density of states in one dimension, density of states in three dimensions Debye model for density of states,</p>	<p>15 hours</p> <p>9 hours</p> <p>12 hours</p>

	Debye T^3 law, Einstein model of the density of states, Thermal conductivity - Thermal resistivity of phonon gas, Umklapp process	
<u>Pedagogy:</u>	Lectures/ tutorials/ assignments. Sessions will be interactive in nature to enable peer group learning.	
<u>References/Readings</u>	<ol style="list-style-type: none"> 1. Introduction to Solid State Physics, C. Kittel, Wiley India (2019) 2. Elementary Solid State Physics; Principles and Applications, M. A. Omar Addison Wesley (2000) 3. Solid State Physics, Niel W. Ashcroft, N. David Mermin, Harcourt Asia Pte Ltd. (2001) 4. Solid State Physics, G. Bums, Academic press, Inc. London (1985) 5. Solid State Physics, A. J. Dekker, McMillan, India (1985) 6. Solid State Physics, J. S. Blakemore, W. B. Saunders, Philadelphia (1969) 	
<u>Learning Outcomes:</u>	<ol style="list-style-type: none"> 1. Student will understand the fundamental aspects related to structure of solids, lattice symmetry, and structure determination. 2. Student will be exposed to various aspects of crystal binding and the elastic properties of solids 3. Student will recognize the idea of vibrating lattice, its quantization and the role of phonons in thermal properties of solid. 	

Programme: M. Sc. (Physics) (Solid State Physics)

Course Code: PHSC-202

Title of the Course: Band Theory and Electronic Properties of Solids

Number of Credits: 3

Effective from AY: 2021-22

<u>Prerequisites for the course:</u>	Should have attended PHGC-106 and PHGC-108	
<u>Objective:</u>	<ol style="list-style-type: none">1. To introduce the concept of formation of electronic bands in solids.2. To acquaint with techniques associated with measurement of band structure.3. To present the effect of band structure on electronic transport properties of solids.	
<u>Content:</u>	Metals: Drude and Sommerfeld models Free electron theory – Drude model - assumptions, failures of Drude model, Sommerfeld model, Successes and failures of the Sommerfeld model, Electrical conductivity, Experimental electrical resistivity of metals, Heat capacity of electron gas, Experimental heat capacity.	6 hours
	Nearly Free electron model Periodic potential, Born – von Karman boundary conditions, Schrodinger equation in a periodic potential, Bloch's theorem, Electronic band structure, single electron energy state, degenerate electron levels, Consequences of the nearly free electron model, Fermi surface.	6 hours
	Tight binding model Band arising from a single electronic level, electronic wavefunctions, General points about the formation of tight binding bands, Group I and II metals, Group IV elements, transition metals, comparison of tight binding and nearly free electron band structure, crystal momentum, effective mass, holes.	6 hours
	Semiconductors and Insulators Band structure of Si and Ge, Band structure of direct gap III-V and II-VI semiconductors, Optical absorption and excitons, Thermal population of bands in semiconductors, Intrinsic carrier density, Impurities and extrinsic carrier density, degenerate semiconductors.	6 hours
	Measurement of Band structure Lorentz force and orbits, Landau levels, electronic density of states in a magnetic field, quantum oscillatory phenomena, de Hass – van Alphen effect, Cyclotron resonance, interband magneto optics, electron spectroscopy – angle resolved photoelectron spectroscopy, Some case studies – Copper, Sr_2RuO_4 .	6 hours
	Transport Properties Thermal and electrical conductivity of metals, electron-electron scattering – Fermi liquid behaviour, Electrical conductivity of semiconductors, Disordered systems and hopping conduction, Hall effect, magnetoresistance in metals, magnetophonon effect, magnetoresistance in two	6 hours

	dimensional systems, quantum Hall effect, fractional quantum Hall effect.	
<u>Pedagogy:</u>	Lectures/ tutorials /assignments. Sessions will be interactive in nature to enable peer group learning.	
<u>References/Readings</u>	<ol style="list-style-type: none"> 1. Band theory and Eletronic Properties of Solids, J. Singleton, Oxford University Press, (2014) 2. Introduction to Solid State Physics, C. Kittel, Wiley India (2019) 3. Solid State Physics, Niel W. Ashcroft, N. David Mermin, Harcourt Asia Pte Ltd. (2001) 4. Elementary Solid State Physics; Principles and Applications, M. A. Omar Addison Wesley (2000) 	
<u>Learning Outcomes:</u>	<ol style="list-style-type: none"> 1. Student will understand formation of bands, their importance in classification of solids and theoretical models of calculation of band structure. 2. Student will get familiarized with some the techniques of band structure measurement. 3. Student will comprehend the effect of band structure on electronic transport properties of solids. 	

Programme: M. Sc. (Physics) (Solid State Physics)

Course Code: PHSC-203

Title of the Course: Magnetic, Superconducting and Optical

Properties of Solids

Number of Credits: 3

Effective from AY: 2021-22

<u>Prerequisites for the course:</u>	Should have attended PHGC-106 and PHGC-108	
<u>Objective:</u>	<ol style="list-style-type: none">1. To introduce students to different types of magnetic order in solids.2. To present to the students' fundamentals of superconductivity.3. To acquaint the students with optical and dielectric properties of solids.	
<u>Content:</u>	<p>Magnetic Properties Magnetic moments, Quantum mechanics of spin, Atom in magnetic field, Magnetic susceptibility, Diamagnetism, Paramagnetism, Semiclassical treatment, Quantum Theory of Paramagnetism, Hund's Rules, Crystal field, Paramagnetic Susceptibility of Conduction electrons, Van Vleck paramagnetism, Adiabatic demagnetization Ferromagnetism, The Weiss model of a ferromagnet, Origin of molecular field, Magnons, Domains, Antiferromagnetism, Neel's theory, Ferrimagnetism</p> <p>Superconductivity Experimental survey- Occurrence of Superconductivity, Destruction of superconductivity by magnetic fields, Meissner effect, Heat capacity, Energy gap, microwave and infrared properties, Isotope Effect Theoretical Survey - Thermodynamics of the transition, London equation, Coherence length, BCS theory, Flux quantization, Type II superconductors, Tunnelling, Josephson effects, High T_c superconductivity (introduction)</p> <p>Optical and Dielectric Properties Macroscopic electric field, local electric field at atom, dielectric constant and polarizability, Complex dielectric constant, Classical theory of electronic polarization and optical absorption, Structural Phase transitions, Ferroelectric Crystals and Displacive transitions Optical reflectance, Excitons, Raman effect in crystals. Luminescence and Luminescence centres</p>	<p>12 hours</p> <p>6 hours</p> <p>6 hours</p>
<u>Pedagogy:</u>	Lectures/ tutorials/assignments. Sessions will be interactive in nature to enable peer group learning.	
<u>References/Readings</u>	<ol style="list-style-type: none">1. Introduction to Solid State Physics, C. Kittel, Wiley India (2019)2. Elementary Solid State Physics; Principles and Applications, M. A. Omar Addison Wesley (2000)3. Solid State Physics, Niel W. Ashcroft, N. David Mermin, Harcourt Asia Pte Ltd. (2001)4. Solid State Physics, A. J. Dekker, McMillan, India (1985)5. Solid State Physics, J. S. Blakemore, W. B. Saunders,	

	Philadelphia (1969)	
<u>Learning Outcomes:</u>	<ol style="list-style-type: none"> 1. Student will recognize diverse types of magnetic orders in solids. 2. Students will be conversant with different contributions to the dielectric and optical properties of the lattice. 3. Student will be familiar with basics of superconductivity phenomenon and its theory. 	

Programme: M. Sc. (Physics)(Solid State Physics)

Course Code: PHSO-214

Title of the Course: Solid State Physics Practical

Number of Credits: 4

Effective from AY: 2021-22

<u>Prerequisites for the course:</u>	Should have attended PHGO-119/PHGO-120	
<u>Objective:</u>	This course aims at developing advanced level experimental skills and competence in the analysis of experimental data on structural, magnetic, transport and optical properties of solids and relate them to different physical concepts studied in the theory courses, PHSC-201, PHSC-202 and PHSC-203.	
<u>Content:</u>	<ol style="list-style-type: none">1. X-ray diffraction: Analysis of diffraction patterns of cubic crystal structures to determine their lattice constant, intensity ratios, and lattice type2. Measurement of dispersion relation of monoatomic and diatomic lattices using electrical equivalent circuits.3. Measurement of Resistivity of a metal and a Semiconductor by Four Probe Method4. Measurement of Thermoelectric Power of a metal5. Determination of Magnetic Susceptibility and Magnetic Moment of a Paramagnetic Material by Gouy's Method.6. Determination of Magnetic Susceptibility and Magnetic Moment of a Paramagnetic Liquid by Quinke's Method.7. Study of Hysteresis loop of magnetic materials.8. Determination of Lande's Splitting Factor, g, in an organic radical.9. Study of Elastic behaviour of solids using a composite piezoelectric oscillator10. Measurement as well as determination of Transition Temperature of a Ferroelectric Material Dielectric Constant and understanding failure of mean field theory11. Measurement of Activation Energy of F-Centres in Alkali Halide Crystals Thermo luminescence12. Determination of a Hall Coefficient and Nature of a Semiconductor and Mobility of Charge Carriers13. Analysis of frequency dependence of Dielectric constant of a material.14. Study of optical properties of a material - absorption, excitation and emission spectra.15. Measurement of thermal conductivity of a good and poor thermal conductor.16. Raman effect – demonstration applied to a particular material. <p>A minimum of 10 experiments are expected to be done by the students.</p>	96 hours
<u>Pedagogy:</u>	Laboratory experiments, self-study	

<u>References/Readings</u>	<ol style="list-style-type: none"> 1. Experimental Manuals assigned to each experiment. 2. C. Kittel, Introduction to Solid State Physics, 7th Edition, John Wiley & Son, Inc. New York (1997). 3. B.L. Worsnop & H.T. Flint, Advanced Practical Physics for Students, (1927). 4. A. J. Dekker, Solid State Physics, McMillan, India (1985). 5. Jerry D. Wilson, Physics Lab. Experiments 7/e, D. C. Heath and Company (2009). 	6.
<u>Learning Outcomes</u>	<ol style="list-style-type: none"> 1. Quantitative measurements and evaluation of various properties and constants introduced in the theory courses of Physics. 2. Verification of different laws and concepts learned in the theory courses of Physics 3. Development of fine and intensive experimental skills. 4. Interpreting results, error analysis, writing reports, analyzing data. 	5.

Programme: M. Sc. (Physics)(Computational Physics)

Course Code: PHCC-221

Title of the Course: Advanced Quantum Mechanics

Number of Credits: 3

Effective from AY: 2021-22

<u>Prerequisites for the course:</u>	Should have attended PHGC-106	
<u>Objective:</u>	To introduce advanced topics in the field of quantum mechanics such as many-body systems, relativistic wave equations and relativistic fields	
<u>Content:</u>	Second Quantization Identical Particles, Many-Particle States, and Permutation Symmetry, Completely Symmetric and Antisymmetric States, Bosons: States, Fock Space, Creation and Annihilation Operators, The Particle-Number Operator, General Single- and Many-Particle Operators, Fermions: States, Fock Space, Creation and Annihilation Operators, Single- and Many-Particle Operators, Field Operators: Transformations Between Different Basis Systems, Field Operators, Field Equations, Momentum Representation: Momentum Eigen functions and the Hamiltonian, Fourier Transformation of the Density, The Inclusion of Spin.	8 hours
	Spin-1/2 Fermions Noninteracting Fermions, The Fermi Sphere, Excitations, Single-Particle Correlation Function, Pair Distribution Function, Density Correlation Functions, and Structure Factor, Ground State Energy and Elementary Theory of the Electron Gas, Hamiltonian, Ground State Energy, in the Hartree–Fock Approximation, Modification of Electron Energy Levels due to the Coulomb Interaction, Hartree–Fock Equations for Atoms.	6 hours
	Bosons Free Bosons, Pair Distribution Function for Free Bosons, Two-Particle States of Bosons, Weakly Interacting, Dilute Bose Gas, Quantum Fluids and Bose–Einstein Condensation, Bogoliubov Theory of the Weakly Interacting Bose Gas, Superfluidity.	6 hours
	Relativistic Wave Equations Klein-Gordon equation, Plane wave solution, charge and current densities, hydrogen atom. Dirac equation, algebra of Dirac matrices, covariance of Dirac equation, plane wave solutions, equation in an electromagnetic field. Properties of Dirac electron. The spin of the Dirac particle, Magnetic dipole moment of electron, Velocity operator, Expectation value of the velocity. Parity, Charge conjugation and time reversal operations, Parity operation, Charge conjugation, a time reversal operation. Dirac’s hole theory, Feynmann’s theory of Positrons.	8 hours
	Quantization of Fields and Radiation Theory Wave equation for a field, Conjugate field momentum, Hamiltonian, density conservation laws, quantum condition	8 hours

	and quantization of scalar field, quantization of complex scalar and Schrodinger fields, Quantization of electromagnetic fields, Interaction of radiation with matter spontaneous and induced emission, Thomson scattering, cross-section for photoelectric effect, Heisenberg-Kramer formula, Rayleigh and Raman scattering. Quantization of Schrodinger field by anticommutator, Atomic level shift, Lamb shift.	
<u>Pedagogy:</u>	Lectures/ tutorials/assignments. Sessions will be interactive in nature to enable peer group learning.	
<u>References/Readings</u>	<ol style="list-style-type: none"> 1. Franz Schwabl, Advanced Quantum mechanics, Springer (2005) 2. J. J. Sakurai, Advanced Quantum mechanics, Addison-Wesley (1967) 3. B. H. Bransden and C. J. Joachain, Quantum Mechanics, Pearson (2004) 4. S. N. Biswas, Quantum Mechanics, Books and Allied Pvt. Ltd. (2015) 5. A. K. Ghatak and S. Lokanathan, Quantum Mechanics: Theory and Applications, Springer (2004) 	
<u>Learning Outcomes:</u>	<ol style="list-style-type: none"> 1. In the first unit students will learn the formalism of second quantization and its application to the most important problems of weakly interacting electron gas and Bose gases. 2. In the second unit students will learn about the Klein-Gordon and Dirac equation, and their important aspects. 3. In the third unit students will learn about quantization of Klein-Gordon, Dirac and radiation fields 	

Programme: M. Sc. (Physics) (Computational Physics)

Course Code: PHCC-222 **Title of the Course:** Advanced Statistical Mechanics

Number of Credits: 3

Effective from AY: 2021-22

<u>Prerequisites for the course:</u>	Should have attended PHGC-106 and PHGC-108	
<u>Objective:</u>	To introduce advanced statistical methods and phenomena in many-body systems.	
<u>Content:</u>	Phase Transition and Critical Phenomena First and second order transitions, critical phenomena, morphology, fluctuation and correlation and response, Critical exponents, scaling inequalities, how to study critical phenomena	7 hours
	Models and Universality Ising models and its ground state, Ising models and its applications, other models and their ground states, Universality in different models	4 hours
	Mean Field theory Mean field theory for fluids, critical exponent of a fluid system, Mean field theory for magnetic systems, Mean field equation of state and its solution, Mean field critical exponents, correlation length and correlation function, Bethe approximation, Bethe approximation for 2D Ising model, Landau theory of Phase transition, Critical exponents from Landau theory.	6 hours
	Transfer Matrix method Transfer matrix and 1D Ising model, Determination of magnetization, susceptibility, specific heat and correlation length. Spin-1 Ising model and potts model, 2D Ising model	3 hours
	Series expansion method (Perturbation method) High temperature expansion and 1D Ising model, High and low temperature expansions for 2D Ising model, Duality and critical temperature, approximation techniques	3 hours
	Monte Carlo method (Numerical method) Ensemble average in Monte Carlo method, Ergodicity, Detailed balance and Metropolis algorithm, Monte Carlo Simulation for 2D Ising model, Measurements and errors.	7 hours
	Scaling and renormalization Homogeneous function, Homogeneity of free energy and scaling, Renormalization group, Renormalization Group, Renormalization operation, Free energy function and correlation length, Critical exponents, fixed point and universality.	6 hours
<u>Pedagogy:</u>	Lectures/ tutorials/assignments. Sessions will be interactive in nature to enable peer group learning.	
<u>References/Readings</u>	1. R. K. Pathria and P. D. Beale, <i>Statistical Mechanics</i> , (Elsevier, London, 2011). 2. L. D. Landau and E. M. Lifshitz: <i>Statistical Physics</i> , Third Edition, Part 1: Volume 5 (Course of Theoretical Physics, Volume 5)	

	<ol style="list-style-type: none"> 3. J. M. Yeomans, Statistical Mechanics of Phase Transitions, (Oxford University Press, New York, 1994). 4. H. E. Stanley, Introduction to Phase Transitions and Critical Phenomena, (Oxford University Press, New York, 1987) 5. P. M. Chaikin and T. C. Ray, Statistical Mechanics and Critical Phenomena: A brief overview, in Computational Statistical Physics, edited by S. B. Santra and P. Ray, (Hindustan Book Agency, New Delhi, 2011). 	
<u>Learning Outcomes:</u>	Students will be able to learn Physics of phases and phase transitions, critical phenomena, elementary excitations, models, and Monte Carlo method etc.	

Programme: M. Sc. (Physics)(Computational Physics)

Course Code: PHCC-223

Title of the Course: Numerical Techniques for Physics

Number of Credits: 2

Effective from AY: 2021-22

<u>Prerequisites for the course:</u>	Should have attended PHGC-100, PHGC-101	
<u>Objective:</u>	To introduce the methods of solving mathematical problems that occur in physics using numerical techniques.	
<u>Content:</u>	Root Finding and Nonlinear Sets of Equations Introduction, Bracketing and Bisection, Secant Method, False Position Method, and Ridders' Method, Van Wijngaarden-Dekker-Brent Method, Newton-Raphson Method Using Derivative, Roots of Polynomials, Newton-Raphson Method for Nonlinear Systems of Equations, Globally Convergent Methods for Nonlinear Systems of Equations	4 hours
	Minimization or Maximization of Functions Introduction, Initially Bracketing a Minimum, Golden Section Search in One Dimension, Parabolic Interpolation and Brent's Method in One Dimension, One-Dimensional Search with First Derivatives, Downhill Simplex Method in Multidimensions, Line Methods in Multidimensions, Direction Set (Powell's) Methods in Multidimensions, Conjugate Gradient Methods in Multidimensions, Quasi-Newton or Variable Metric Methods in Multidimensions, Linear Programming: The Simplex Method, Linear Programming: Interior-Point Methods, Simulated Annealing Methods, Dynamic Programming	5 hours
	Modelling of Data Introduction, Least Squares as a Maximum Likelihood Estimator, Fitting Data to a Straight Line, Straight-Line Data with Errors in Both Coordinates, General Linear Least Squares Nonlinear Models, Confidence Limits on Estimated Model Parameters, Robust Estimation, Markov Chain Monte Carlo, Gaussian Process Regression	5 hours
	Interpolation and Numerical Differentiation Introduction, Polynomial Interpolation, Error in Polynomial Interpolation, Estimating derivatives and Richardson Extrapolation	5 hours
	Integration of Ordinary Differential Equations Introduction, Runge-Kutta Method, Adaptive Step size Control for Runge-Kutta, Richardson Extrapolation and the Bulirsch-Stoer Method, Second-Order Conservative Equations, Stiff Sets of Equations, Multistep, Multi value, and Predictor-Corrector Methods, Stochastic Simulation of Chemical Reaction Networks.	5 hours
<u>Pedagogy:</u>	Lectures/ tutorials/assignments. Sessions will be interactive in nature to enable peer group learning.	

<u>References/Readings</u>	1. W. H. Press, S. A. Teukolsky, W. T. Vetterling, B. P. Flannery, Numerical Recipes: The Art of Scientific Computing (Cambridge University Press) 2. W. Cheney, D. <u>Learning Outcomes:</u>	Students will learn basic algorithms, advanced, and cutting edge numerical techniques used in Computational Physics.	

Programme: M. Sc. (Physics)(Computational Physics)

Course Code: PHCO-234

Title of the Course: Numerical Techniques Practicals

Number of Credits: 4

Effective from AY: 2021-22

<u>Prerequisites for the course:</u>	Should have attended PHGO-110/PHGO-111	
<u>Objective:</u>	To apply numerical methods for solving mathematical problems that occur in physics	
<u>Content:</u>	<ol style="list-style-type: none">1. Finding Errors: its sources, propagation and analysis2. Find Roots of functions: bisection, Newton-Raphson, secant method, fixed-point iteration, applications3. Solution of Linear equations: Gauss and Gauss-Jordan elimination, Gauss-Seidel, LU decomposition;4. Eigenvalue Problems5. Least square fitting of functions6. Interpolation7. Numerical differentiation8. Numerical integration9. Solutions of ODE by initial value problems, Euler's method, second and fourth order Runge-Kutta methods10. Boundary value problems by finite difference method.11. Monte Carlo simulation	96 hours
<u>Pedagogy:</u>	Lectures/Laboratory practicals. Sessions shall be interactive in nature to enable peer group learning.	
<u>References/Readings</u>	<ol style="list-style-type: none">1. W. H. Press, S. A. Teukolsky, W. T. Vetterling, B. P. <u>Learning Outcomes:</u>	<ol style="list-style-type: none"> 1. The students will be familiarized with the basic concepts of molecular biophysics 2. The students will have gained sufficient knowledge in the structure and functioning of molecular processes 3. The students will be exposed to the recent developments in biomechanics and molecular motion. 	
---------------------------	---	--

Programme: M.Sc (Physics)(Biophysics)

Course Code: PHBC-241

Title of the Course: Molecular Biophysics

Number of Credits: 4

Effective from AY: 2020-21

<u>Prerequisites for the course:</u>	PHBC-200	
<u>Objective:</u>	This course is intended to enrich the students with the basics of molecular biophysics. The students will learn about the different physical process occurring in biological systems.	
<u>Content:</u>	<p>Cellular Biophysics General organization of the cell, Structure of biomolecules, cellular mechanics and transport, Chemical bonding, ionization energy, electron affinity, electron negativity, strong bonds and weak, bond energies in biomolecules, Interatomic potentials for strong and weak bonds, cellular mechanics, transport mechanism</p> <p>Structure of Proteins, DNA and Enzymes Kinetics Basics aspects of protein structure, Polypeptide chain geometrics, estimates of potential energy, results of potential energy calculations, hydrogen bonding, hydrophobic & hydrophilic interactions and water as universal solvent in biological systems, Primary structure sequencing of polypeptide, haemoglobin, homologies in proteins, Secondary structure alpha and beta conformation, collagen structure, stability of alpha helix, Ramchandran plot, Tertiary structure, structure of myoglobin and hemoglobin, Quaternary structure, symmetry consideration, Analysis of subunits and chain arrangement of subunits, stability of globular quaternary structure. Protein folding rules, pathways and kinetics</p> <p>Nucleic acids, purines and pyrimides, double helical structure of DNA, polymorphism of DNA, RNA structure, thermodynamics of DNA supercoiling, chromosome structure</p> <p>Enzymes, enzyme kinetics, Michaelis-Menten equation, Inhibitors, kinetics of competitive, non-competitive and uncompetitive inhibitors</p> <p>Membrane Biophysics Fundamental aspects of biological membrane, Various membrane models, Carbohydrate, Lipids & Proteins, Components of cell membrane, Composition of biological membranes- lipid molecules, proteins, glycoprotein, membrane, skeletons, forms of lipids and proteins, electrical properties of lipids and proteins, principles of membrane organization & stability, Biogenesis of cell membrane, Molecular motion in membrane & membrane fluidity, Protein lipid interactions, Electric properties of membranes: electric double layer, Poisson-Boltzmann theory of electric double layer, Gouy-Chapman model of electric double layer, free energy of</p>	<p>6 hours</p> <p>16 hours</p> <p>16 hours</p>

	<p>electric double layer, bonds and adhesion of electrified molecules on the surface of a membrane, Hodgkin Huxley equation, membrane impedance, Zeta, Stern & total electrochemical potential, Helmholtz-Smoluchowski equation; it's correction by Debye-Huckle theory, transmembrane potential & it's measurement by microelectrodes. Neurobiophysics</p> <p>Transport across membranes: diffusion and osmosis, Selectivity & ion specificity of biomembrane, Ion channel structure and gating function, Ion channel types and characterization, transport of macromolecules with & without vesiculation & by intermediate mechanism, Transport and communication between cells and organelles.</p> <p>Molecular biomechanics</p> <p>Biological motion, free energy transduction, chemochemical machines, pumps and motors as chemochemical machines, flux force dependence, molecular motors, mechanochemistry of molecular motors, biomolecular forces, biomechanics of muscle contraction and cardiovascular system.</p>	10 hours
<u>Pedagogy:</u>	<p>Lectures/ Tutorials/Assignments.</p> <p>Sessions shall be interactive in nature to enable peer group learning.</p>	
<u>References/Readings</u>	<ol style="list-style-type: none"> 1. Introduction to Molecular Biophysics, Jack A Tuszynski and Michal Kurzynski First Edition, CRC Press (2003). 2. Programme: M.Sc (Physics)(Biophysics)

Course Code: PHBC-242

Title of the Course: Methods in Biophysics

Number of Credits: 4

Effective from AY: 2020-21

Prerequisites for the course:	PHBC-200	
Objective:	The aim of course is introduced various experimental techniques used in biophysical systems. The student will learn about the basic and advanced characterization tools for biophysics.	
Content:	<p>Separation techniques I Electrokinetics methods: electrophoresis, electrophoretic mobility (EPM), factors affecting EPM, Paper, PAGE, SDS-PAGE, Disc gel, gradient gel, electrophoresis of nucleic acid and its application, Pulse field electrophoresis, single cell gel electrophoresis, Isoelectrophoresis, preparative electrophoresis, 2-D gel electrophoresis, Capillary, Iso-Electric focusing, applications in biology and medicine. Chromatography, TLC, adsorption, partition, ion exchange, gel filtration, affinity and FPLC, GLC,</p> <p>Separation techniques II HPLC: mobile phase systems, modes of operations, application, Hydrodynamics method: fundamental principles' Centrifugation: principle, preparative centrifuge, analytical, ultracentrifuge, sedimentation and diffusion, Ultracentrifugation and their applications in molecular weight, size determination. Viscosity and its application, dialysis, solvent fractionation, isoelectric precipitation,</p> <p>Spectroscopic methods Principles of spectroscopic techniques, Ultraviolet-visible spectroscopy, circular dichroism and optical rotatory dispersion, fluorescence spectroscopy, infrared spectroscopy, Raman spectroscopy, Atomic Absorption spectroscopy- Inductively coupled plasma atomic emission spectrophotometry. Electron spin resonance, Nuclear Spin resonance, X-ray spectroscopy</p> <p>Microscopic Techniques Principle, instrumentation and application of optical microscopy, image formation, magnification, resolving power. optimum resolution, image defects, different types of Microscopy: Dark field, Phase contrast, polarization microscopy, Interference microscopy, Fluorescence microscopy, Electron microscopy: Electron guns, Electron lens, electrostatic focusing, magnetic focusing, SEM, STEM, Atomic force microscopy.</p>	<p>12 hours</p> <p>12 hours</p> <p>12 hours</p> <p>12 hours</p>
Pedagogy:	Lectures/Tutorials/Assignments. Sessions shall be interactive in nature to enable peer group learning.

Essential Biophysics, Narayanan First Edition, New Age Publications (2000). 8. Handbook of Molecular Biophysics (Methods & Application) Henrik G Bohr, First Edition, Wiley (2009). 	
Learning Outcomes:	<ol style="list-style-type: none"> 1. The students will be familiarized with the basic experimental techniques used in biophysics. 2. The students will expand their knowledge on various spectroscopic and microscopic methods in characterization. 	

Programme: M.Sc (Physics)(Biophysics)

Course Code: PHBO-251

Title of the Course: Solid state and Biomaterials

Number of Credits: 4

Effective from AY: 2020-21

<u>Prerequisites for the course:</u>	PHBC-200	
<u>Objective:</u>	This course is intended to introduce the concepts in biomaterials. The students will have a good understanding of the different bio materials and their properties. A brief introduction to new and advanced materials for biological applications will also be covered in the course.	
<u>Content:</u>	Introduction to Solid State Types of bonds, Crystal structure, Phase changes, crystal imperfections, defects and dislocations, non-crystalline solids, surface energy, contact angle, surface tension, Types of materials-ceramics, metals, semiconductors, polymers, composites, Impact of biomaterials	12 hours
	Properties of Materials Mechanical properties-elasticity, stress, strain, tensile strength, plastic deformation, hardness, thermal properties, optical properties,	12 hours
	Biomaterials I Introduction to biomaterials, property requirements for biomaterials, concept of biocompatibility, structure of cells and biological tissues, cell material interaction and response to foreign bodies, histocompatibility, genotoxicity.	12 hours
	Biomaterials II Important biometallic alloys: Ti-based, stainless steels, Co-Cr-Mo alloys, Nitinol, Tantalum and magnesium, Bioinert, Bioactive and bioresorbable ceramics, Processing and properties of different bioceramic materials silicates, aluminates, Zirconia, hydroxyapatite tricalcium phosphatecalcium sulfate, bioactive glasses, Synthesis of biocompatible coatings on structural implant materials, Microstructure and properties of glass-ceramics, common biocompatible polymers and their properties, biodegradable polymers, Natural biomaterials, design concept of developing new materials for bioimplant applications, Nanobiomaterials	12 hours
<u>Pedagogy:</u>	Lectures/Tutorials/Assignments Sessions shall be interactive in nature to enable peer group learning.	
<u>References/Readings</u>	1. Biomaterials Science: An introduction to Materials in Medicine, Edited by Ratner, Hoffman, Schoet and Lemons, Third Edition, Elsevier Academic Press (2012). 2. Ramalingam, X. Kong L. Zhao, First Edition, Wiley (2018). 6. Nanobiomaterials, Roger Narayan, First Edition, Elsevier (2017). 	
<u>Learning Outcomes:</u>	<ol style="list-style-type: none"> 1. The students will be familiarized with the basic types of materials and their properties. 2. The students will have gained sufficient knowledge in the biomaterials and their applications. 3. The students will be exposed to the recent developments in biomaterial engineering and nanobiomaterials. 	

Programme: M.Sc (Physics)

Course Code: PHBO-252

Title of the Course: Biophysics Practical

Number of Credits: 4

Effective from AY: 2020-21

<u>Prerequisites for the course:</u>	PHBC-200, basic knowledge in experimental techniques in chemistry and biology	
<u>Objective:</u>	This laboratory course is intended to provide basic laboratory training in the experiments in biophysics. Important biophysical phenomena will be tested and studied. The experiments will start from familiarization of basic characterization tools and protocols followed by advanced experiments.	
<u>Content:</u>	<p>Short lectures on general protocols of biophysics experiments.</p> <p>The following experiments are to be performed/demonstrated:</p> <p>Experiments to be performed</p> <ol style="list-style-type: none">1. Microscopic techniques: The study of biological samples/cells using fluorescence /DIC microscopy2. Protein-protein interactions using spectroscopy (fluorescence/UV visible) techniques3. Study of DNA-Protein interaction using fluorimetry4. Study of fluorescence sensitivity and quenching, fluorescence recovery after photobleaching (FRAP)5. PAGE and SDS PAGE <p>Demonstrations</p> <ol style="list-style-type: none">6. Classification of gram –ve & +ve organisms, observe cell growth/ survival by colony forming assay, estimation of cell viability by dye exclusion and colony formation assay, observe cell death by physical and chemical agents7. Preparation of buffers and pH analysis8. Determination of the titration curve of Proteins, amino acids & calculation of the pKa values9. Isolation of Proteins- Casein from milk, Hb from RBC.10. Study of interaction of acridine orange with DNA11. Enzyme Assays (LKH, beta galactosidase, acid phosphatase, arginase, Succinic De –hydrogenase): Time, Temp, enzyme concentration, cofactors. LKH: Km & Vmax <p>Demonstrations via online videos (to be discussed)</p> <ol style="list-style-type: none">12. Gel filtrations chromatography13. DEAE cellulose chromatography of DNA	

	14. Study of phase transition of membrane phospholipids and Study of the membrane potential using fluorescence spectroscopy. 15. To study the charge characteristics of cells through micro Electrophoresis 16. Osmolarity: Determination of osmotic pressure of salts. 17. Study of diffusion of biomolecules/ions (Fick's Law)	
<u>Pedagogy:</u>	Laboratory work, Presentations, demonstrations.	
<u>References/Readings</u>	1. Introduction to Experimental Biophysics: Biological Methods for Physical Scientists, Jay Nadeau, CRC Press (2012). 2. Introduction to Practical Biochemistry, Plummer, D. T. 3rd edition. McGraw-Hill Publishing Co. (1987). 3. Basic Methods for the Biochemical Lab, Holtzhauer, M. 1st English edition. Springer (2006). 4. Experimental techniques in bacterial genetics, Stanley R. Maloy, John and Bartlett (1989).	
<u>Learning Outcomes:</u>	1. The students will be familiarized with the basic experimental methods in biophysics. 2. The students will have gained sufficient knowledge in the various characterization and spectroscopic tools. 3. This course will also enable the students to have an understanding of some of the advanced techniques in experimental biophysics	

Programme: M. Sc. (Physics)

Course Code: PHSO-302

Title of the Course: Neutron Physics

Number of Credits: 4

Effective from AY: 2021-22

<u>Prerequisites for the course:</u>	Should have basic knowledge of electrodynamics, thermodynamics and quantum mechanics, and solid state physics	
<u>Objective:</u>	To develop the equations that describe the neutron population in a critical nuclear reactor; calculation of critical size with and without a reflector blanket; kinetics of the reactor including all factors affecting criticality during operation; description of reactor types; radiation dose units; reactor economics; fuel reprocessing and radioactive waste disposal.	
<u>Content:</u>	<p>I. Interaction of Neutrons with Matter: Interaction of neutrons with matter, cross-section and variation with neutron energy. Neutron flux. Maxwellian distribution. Fissile and fertile materials. Chain reaction and neutron life cycle. Fermi four factor formula keff.</p> <p>II. Neutron Diffusion: Diffusion theory approximation, derivation of diffusion equation. Neutron balance and critical equation. Boundary conditions and extrapolation distance. Diffusion length and its measurement.</p> <p>III. Slowing down of Neutrons: Slowing down length, lethargy, slowing down in a mixture. Moderations. Slowing down models.</p> <p>IV. Calculation of Critical Size of Reactors: Critical equation. One group model, four factor formula and calculation of parameters. Critical size of sphere and cylinder. Effect of reflector.</p> <p>V. Power Operation: Reactor kinetics, mean neutron lifetime. The "In-Hour" equation and stable reactor period. Reactivity changes due to temperature. Fission product poisoning. Fuel burn-up. Measurement of reactor power and period.</p> <p>VI. Reactor Types and Economics: Descriptions of MAGNOX, CANDU, fast reactor. Calculation of total generation cost. Comparison with economics of oil fired plant. Influence of economics on nuclear plant design.</p> <p>VII. Radiological Protection: Units of radiation and radioactivity. Concept and derivation of safe working levels. Monitoring instruments and methods.</p> <p>VIII. Reactor Fuels and Materials: Uranium resources and requirements. Isotope separation. (one method). Fuel reprocessing. Storage and disposal of</p>	<p>5 hours</p> <p>6 hours</p> <p>8 hours</p> <p>5 hours</p> <p>11 hours</p> <p>5 hours</p> <p>3 hours</p> <p>3 hours</p>

	<p>nuclear waste – consideration of different methods.</p> <p>IX. Nuclear Policy: Elements of India's Nuclear Policy. Examples of Policy of other countries.</p> <p>X. Field trip to a nuclear establishment such as the Dhruva Reactor, Bhabha Atomic Research Centre, Mumbai or Kaiga Nuclear Plant, Karwar or any other nuclear reactor establishment which gives permission for the visit of students accompanied by the teacher(s) of the course. The visit is to be organized with the aim of helping students better understand and appreciate the layout and complexity of a nuclear reactor. The assessment of the student's understanding is to be done through an essay on a choice of topics relevant to the particular nuclear establishment that is visited. It shall be considered as a compulsory Intra Semester Assessment of the course.</p>	
<u>Pedagogy:</u>	Lectures, Tutorials, Field trip	
<u>References/Readings</u>	<ol style="list-style-type: none"> 1. S. Glasstone and A. Sesonske, Nuclear Reactor Engineering , Van Nostrand Reinhold Co., (1963). 2. E. E. <u>Learning Outcomes</u>	Familiarity with the main features of a nuclear reactor and conditions that determine its criticality. Awareness of the many uses of neutrons and radioactive materials.	

Programme: M. Sc. (Physics)

Course Code: PHSO-303

Title of the Course: Superconductivity & Superfluidity

Number of Credits: 4

Effective from AY: 2021-22

<u>Prerequisites for the course:</u>	Should have basic knowledge of electrodynamics, thermodynamics and quantum mechanics, and solid state physics	
<u>Objective:</u>	To introduce an up-to-date experimental progresses and theories of superconductivity and superfluidity	
<u>Content:</u>	<p>SUPERCONDUCTIVITY:</p> <p>1. Basic Experimental Aspects Introduction, Conduction in metals, Zero-resistivity, Meissner- Ochsenfeld effect, Perfect diamagnetism, Type-I and type-II superconductors, Application of low and high temperature superconductors.</p> <p>2. Superconducting Materials Classical Superconductors: Elemental superconductors, superconducting compounds and alloys, A15 compounds, Chevrel phase compounds and their crystal structure, experimental studies on these materials, Phase diagrams. High-temperature Superconductors: La-Ba-Cu-0 systems, Y-Ba- Cu-0 systems, Bi-Sr-Ca-Cu-0 systems, Ti-Sr-Ca-Cu-0 systems, superconductivity in rare-earth and actinide compounds, organic superconductors, MgB₂ and Iron Arsenide systems, their crystal structure, experimental studies on these materials, Phase diagrams.</p> <p>3. Theoretical Aspects Phenomenological theories: Thermodynamics of superconducting transition, expressions for critical temperature T_c, critical field H_c London's theory, Pippard non-local theory, Ginzburg-Landau Theory. Microscopic theory: BCS theory, the electron-phonon interaction, the Cooper pair formation, BCS ground state, Consequences of the BCS theory and comparison with experimental results, Coherence of the BCS ground state and the Meissner-Ochsenfeld effect. Possible Mechanisms of high T_c Superconductors: Hubbard- Model, the Resonating valence Bond (RVB) model, Spin fluctuation model.</p> <p>SUPERFLUIDITY:</p> <p>1. Superfluid Helium-4 Introduction, Classical and quantum fluids, the macroscopic wave function, Superfluid properties of He II, Flow quantization and vortices, the momentum distribution, quasiparticle excitations.</p> <p>2. Superfluid Helium-3 Introduction, The Fermi liquid normal state of ^3He, the pairing interaction in liquid ^3He, Superfluid phases of ^3He.</p> <p>3. Bose-Einstein Condensates Introduction, Bose-Einstein Statistics, Bose-Einstein condensation, BEC in ultra-cold atomic gases.</p>	<p>2 hours</p> <p>6 hours</p> <p>22 hours</p> <p>6 hours</p> <p>6 hours</p> <p>6 hours</p>

<u>Pedagogy:</u>	lectures/ tutorials/ seminars/ assignments/ presentations/ etc. or a combination of some of these.	
<u>References/Readings</u>	<ol style="list-style-type: none"> 1. James F. Annett, "Superconductivity, Superfluids and Condensates", Oxford Series in Condensed Matter Physics (2004). 2. J.B. Kittel, "Introduction to Solid State Physics", Wiley, Eight Ed. (1997). 5. H. Ibach and H. Luth, "Solid State Physics", Springer (2012). 	
<u>Learning Outcomes</u>	<p>Student will be experienced with</p> <ol style="list-style-type: none"> 1. All superconducting materials. 2. theories on conventional superconductors 3. Possible mechanism of unconventional superconductors 4. BEC and superfluidity 	

Programme: M. Sc. (Physics)

Course Code: PHSO-304

Title of the Course: X-ray Spectroscopy

Number of Credits: 4

Effective from AY: 2021-22

<u>Prerequisites for the course:</u>	Basic knowledge of Solid State Physics/Chemistry and Electromagnetic waves	
<u>Objective:</u>	To introduce to students various techniques in x-ray spectroscopy using synchrotron radiation and its applications to condensed matter physics, chemistry and material science.	
<u>Content:</u>	1. X-rays: Sources and Interaction with matter X-rays: Waves and photons, Scattering, Absorption, Refraction and Reflection. X-ray tubes, Synchrotron radiation, Bending magnet sources, Undulator radiation, Wiggler radiation. X-ray detection	12 hours
	2. Scattering of X-Rays Scattering from an electron, scattering from an atom, scattering from a molecule, scattering from liquids and glasses, Small angle X-ray scattering, scattering from a crystal, Debye-Waller factor, measured intensity from a crystallite	12 hours
	3. X-ray Absorption Absorption coefficient, absorption edge, Definition: x-ray absorption fine structure (XAFS), x-ray absorption near edge structure (XANES), extended x-ray absorption fine structure (EXAFS), History, Theory of XAFS, XAFS Experiment, Beamline and optics, Data acquisition, treatment and modelling, XANES as fingerprint technique, x-ray magnetic circular dichroism.	12 hours
	4. Photoelectron Spectroscopy Photoelectric Effect, History of x-ray photoelectron spectroscopy (XPS), Theoretical model – three step model, Instrumentation, The electron mean free path, Auger electrons, Core level binding energies in atoms, molecules and solids, Final state effects, Valence band in solids, Band structure, Angle resolved photoelectron spectroscopy (ARPES), Inverse photoelectron spectroscopy.	12 hours
<u>Pedagogy:</u>	lectures/ tutorials/ seminars/ assignments/ presentations/ etc. or a combination of some of these.	
<u>References/Readings</u>	Jens Als-Nielsen and Des Mc Morrow, Elements of Modern X-ray Physics, 2 nd Edition, Wiley 2011. B. D. Cullity, Elements of X-ray Diffraction, Addison Wesley Publishing Company Inc. Grant Bunker, Introduction to XAFS, Cambridge University Press, 2010.	

	Stefan Hufner, Photoelectron Spectroscopy, Principles and Applications, Springer 2003	
<u>Learning Outcomes</u>	<ol style="list-style-type: none"> 1. Students are expected to learn the principles of interaction of X-rays with matter; 2. Gain knowledge about characteristics of most important X-ray sources (x-ray tubes, synchrotron radiation sources); 3. Understand the principles of X-ray diffraction (XRD), X-ray photoemission and X-ray absorption spectroscopy, know the necessary experimental equipment, 4. Understand basic methods for analysis and interpretation of measured spectra, 5. Understand the kind of structural information about the investigated material can be obtained by individual spectroscopic methods. 	

Programme: M. Sc. (Physics)

Course Code: PHSO-310 **Title of the Course:** Numerical Methods and Fortran
Parallel Programming using open MP

Number of Credits: 4

Effective from AY: 2021-22

<u>Prerequisites for the course:</u>	Basic knowledge of FORTRAN Programming Language	
<u>Objective:</u>	This course is designed to familiarize students with numerical methods and parallel programming.	
<u>Content:</u>	<ol style="list-style-type: none">1. Computations and basics of open MP Introduction to scientific computations and FORTRAN parallel Programming using Open MP.2. Introduction to numerical methods Round-off and truncation errors.3. Solving nonlinear algebraic equations, Bisection method; Regula Falsi method Newton-Raphson and Secant methods.4. Solving systems of linear algebraic equations Gaussian elimination method; Gaussian elimination with pivoting, LU Decomposition method, Inverse matrix algebra. Eigenvalues and eigenvectors.5. Curve fitting and interpolation Linear least-squares regression; Linearized nonlinear regression models. Interpolation techniques.6. Numerical integration and differentiation, Trapezoidal and Simpson's rules, Gauss quadrature Multiple integrals. Finite differences, difference formulas Differentiation using Lagrange polynomials.7. Ordinary differential equations, Euler's Method, Modified Euler's method. Runge-Kutta methods Multiple-step methods; Predictor-corrector methods. Systems of first-order equations	<div>24 hours</div> <div>2 hours</div> <div>4 hours</div> <div>4 hours</div> <div>4 hours</div> <div>5 hours</div> <div>5 hours</div>
<u>Pedagogy:</u>	Lectures / laboratory/tutorials/assignments. Sessions shall be interactive in nature to enable peer group learning.	
<u>References/Readings</u>	<ol style="list-style-type: none">1. V. Rajaraman, Computer Programming in FORTRAN 90 and 95, Prentice-Hall of India, New Delhi 1999.2. <u>Learning Outcomes</u>	<ol style="list-style-type: none">1. Understanding of numerical methods to solve linear and non-linear algebraic equations;2. Understanding of eigenvalue problems;3. Understanding of Parallel computing	

Programme: M. Sc. (Physics)

Course Code: PHSO-311 **Title of the Course:** Phase Transitions and Critical Phenomena

Number of Credits: 4

Effective from AY: 2021-22

<u>Prerequisites for the course:</u>	Basic knowledge of Thermodynamics and Statistical Mechanics	
<u>Objective:</u>	This course is designed to familiarize students with general and specific aspects of phase transitions, teach them the concept of symmetry and spontaneous breaking thereof and theoretical understanding within the realm of Landau's mean field theory.	
<u>Content:</u>	1. Phenomenology of phase transitions The role of symmetry and the onset of order, switching of the degree of order, Example of atomic site ordering, Ferroelectric phase transitions, how to observe a phase transition, Order of a phase transition, General aspects of the thermodynamics of a phase transition, Seeds of a theoretical model, Examples	4 hours
	2. Magnetic phase transitions Macroscopic and microscopic views of magnetism, Non-interacting atoms in a magnetic field: paramagnetism, interacting atoms in a magnetic field: ferromagnetism, Critical exponents revisited, Successes and failures of the mean-field model	4 hours
	3. Landau theory Introduction, Quantification of the free energy, Results for second-order phase transitions, Field-dependence of the order parameter at the transition temperature, Taking account of spatial variations, Validity of Landau theory, Ferromagnetism, the mean-field approximation, and Landau theory, First-order phase transitions, The case when the free energy is allowed to have odd-order terms, Tricritical phase transitions. Examples like phase transitions and elastic strain, ferroelectric phase transition, superfluid Mott insulator phase transition.	12hours
	4. The role of symmetry Introduction to Symmetry, Point group symmetry operations, Space group symmetry operations, Groups and their representations, Symmetry of the order parameter, Symmetry of the spontaneous strain, Group-subgroup relationships across phase transitions	12hours
	5. Soft modes and displacive phase transitions Displacive phase transitions, Phenomenology of the soft mode model of displacive phase transitions, Lattice dynamics theory of the soft mode, Lattice dynamical theory of the low-temperature phase, Phase transitions, soft modes, and structure flexibility: the Rigid Unit Mode model	4 hours
	6. Order-disorder phase transitions	4 hours

	<p>Order–disorder phenomenology, Mean-field theory of order–disorder phase transitions: Bragg–Williams model, Computational methods, Beyond Bragg– Williams theory: the Cluster Variation Method</p> <p>7. Critical point phenomena The Widom scaling hypothesis: relationships between critical exponents, Introduction to the renormalisation group, Deriving the Widom scaling hypothesis, A sketched example: the 1D Ising model</p> <p>8. Reconstructive Phase transitions Introduction and definition, Examples, Thermodynamics of reconstructive Phase transitions</p>	<p>4 hours</p> <p>4 hours</p>
<u>Pedagogy:</u>	lectures/ tutorials/ seminars/ assignments/ presentations/ etc. or a combination of some of these.	
<u>References/Readings</u>	<ol style="list-style-type: none"> 1. Binney, J. J., N. J. Dowrick, A. J. Fisher, and M. E. J. Newman, The theory of critical phenomena: An introduction to the renormalisation group. Oxford: Clarendon Press, (1992). 2. Blundell, S., Magnetism in condensed matter. Tol'edano, The Landau theory of phase transitions. Singapore: World Scientific, (1987). 10. Yeomans, J. M. Statistical mechanics of phase transitions. Oxford: Clarendon Press, (1992). 	
<u>Learning Outcome</u>	The student is expected to obtain considerable insight into various types of phase transitions, and their classification; identify phase transition and how these can be described theoretically using Landau mean field theory	

Programme: M. Sc. (Physics)

Course Code: PHSO-312 **Title of the Course:** Spectroscopic Techniques in Condensed Matter Physics

Number of Credits:4

Effective from AY: 2021-22

<u>Prerequisites for the course:</u>	Should have studied courses in classical mechanics, electromagnetism, elementary quantum mechanics and nuclear physics.	
<u>Objective:</u>	To introduce different spectroscopic techniques that can be used for characterization of materials, especially in condensed matter.	
<u>Content:</u>	<p>1. Electronic Spectroscopy Electromagnetic radiation, Absorption and Emission of radiation, Line width and its broadening mechanisms, One- electron and two-electron atoms: spectrum of hydrogen, helium and alkali atoms; Many electron atoms: Hund's rule, L-S and j-j coupling, Spectroscopic terms, Lande interval rule; Interaction with Electromagnetic fields: Zeeman, Paschen Back and Stark effects, electron spin resonance spectroscopy, Hyperfine structure and isotope shift, selection rules; Lamb shift, Spontaneous and stimulated emissions, Einstein coefficients, Introduction to lasers and laser spectroscopy</p> <p>2. Molecular Spectroscopy Microwave spectroscopy, Infrared spectroscopy, the vibrating diatomic molecule – simple harmonic oscillator, the anharmonic oscillator, the diatomic vibrating rotator, Interaction of rotation and vibrations, the vibrations of polyatomic molecules, Raman spectroscopy– Electronic spectra of diatomic molecules – Born-Oppenheimer approximation, vibrational coarse structure – progressions. Intensity of vibrational transitions – the Franck-Condon principle. Optical absorption: Free carrier absorption-optical transition between bands-direct, and indirect-excitons, Luminescence in crystal - excitation and emission - decay mechanism, Fluorescence, Phosphorescence, Crystal Field Theory, Spectroscopy of transition metals complexes.</p> <p>3. X-rays: Sources and Interaction with matter X-rays: Waves and photons, Scattering, Absorption, Refraction and Reflection. X-ray tubes, Synchrotron radiation, Bending magnet sources, Undulator radiation, Wiggler radiation. X-ray detection</p> <p>4. Nuclear Spectroscopy Nuclear Magnetic Resonance:Principles, Classical treatment of NMR (Bloch equations), experimental methods, Chemical shift, Knight shift in metals, spin-lattice relaxation, Applications</p>	<p>10 hours</p> <p>14 hours</p> <p>12 hours</p> <p>12 hours</p>

	Mossbauer Spectroscopy: Principles, The Debye-Waller Factor, Mossbauer Sources and Experimental Apparatus, Isomer Shifts, Electric quadrupole interaction, Magnetic Dipole Interaction, Quadratic Doppler effect, Results of Mossbauer spectroscopy.	
<u>Pedagogy:</u>	lectures/ tutorials/ seminars/ assignments/ presentations/ etc. or a combination of some of these.	
<u>References/Readings</u>	<ol style="list-style-type: none"> 1. B. H. Bransden and C. J. Joachain; Physics of Atoms and Molecules; Pearson; 2008/2nd Ed.. 2. C. N. Banwell and E. M. <u>Learning Outcomes:</u>	<p>Student will understand how to synthesis different energy materials (nanomaterials and bulk) and how to make use of them for diverse energy applications</p> <p>Student will understand the basic principle of operation of all energy extraction devices and manipulate it to get better efficiency.</p>	

Programme: M. Sc. (Physics)

Course Code:PHO-314

Title of the Course: Documentation using LaTeX

Number of Credits: 2

Effective from AY: 2021-22

<u>Prerequisites for the course:</u>	Nil	
<u>Objective:</u>	<p>LaTeX is a high-quality typesetting system; it includes features designed for the production of technical and scientific documentation. LaTeX is the de facto standard for the communication and publication of scientific documents. LaTeX is available as free software.</p> <p>Objective of this course is to introduce the basics of how LaTeX works, how to install LaTeX and Tex editor TeXstudio, explain how to get started, and go through lots of examples.</p>	
<u>Content:</u>	<p>Course Contents:</p> <p>In this course we will cover:</p> <ul style="list-style-type: none">● Setting up a LaTeX Document● Typesetting Text● Handling LaTeX Errors● Typesetting Equations● Using LaTeX Packages● Structured Documents● Sections, Labels and Cross-References● Figures and Tables in LaTeX● Automatic Bibliographies with BibTeX● Useful LaTeX Packages and Online Resource● LaTeX Presentations with Beamer	24 hours
<u>Pedagogy:</u>	<p>Lectures/ self-study/ assignments.</p> <p>Sessions shall be interactive in nature to enable peer group learning.</p>	
<u>References/Readings</u>	<ol style="list-style-type: none">1. Leslie Lamport, LaTeX: A document preparation system, User's guide and reference manual, Addison Wesley, 1994.2. Frank Mittelbach, Michel Goossens, Johannes Braams, David Carlisle, Chris Rowley, The LaTeX Companion, 2nd edition (TTCT series), Addison-Wesley Professional, 2004.	
<u>Learning Outcomes</u>	Students are expected to learn how to write a scientific document, presentation, scientific report, dissertation etc. in LaTeX.	

Programme: M. Sc. (Physics)

Course Code:PHO-315

Title of the Course: Nanoscience and Technology

Number of Credits: 4

Effective from AY: 2021-22

<u>Prerequisites for the course:</u>	Basic knowledge of Solid State Physics / Solid State Chemistry	
<u>Objective:</u>	This course is designed to familiarize students with general and specific aspects of magnetic interaction in condensed matter and methods of magnetic measurements.	
<u>Content:</u>	1. Nanostructures and Nanomaterials Introduction to Nanoscience, Physics and Chemistry of solid surfaces, Size effect on thermal, electrical, electronic, mechanical, optical and magnetic properties of nanomaterials- surface area and aspect ratio- band gap energy- quantum confinement size, Fick's Law-mechanisms of diffusion - Kirkendall effect - surface defects in nanomaterials - effect of microstructure on surface defects - interfacial energy, Classifications of nanomaterials Nanoparticles through homogeneous and heterogeneous nucleation-Growth controlled by surface and diffusion process- Oswald ripening process - influence of reducing agents-solid state phase segregation- Mechanisms of phase transformation- grain growth and sintering precipitation in solid solution- Hume Rothery rule.	12hours
	2. Synthesis and Applications of Nanomaterials Top down and bottom up approaches–Mechanical alloying and mechanical ball milling Mechanical and chemical process, Inert gas condensation technique – Arc plasma and laser ablation. Sol gel processing-Solvothermal, hydrothermal, precipitation, Spray pyrolysis, Electro spraying and spin coating routes, Self-assembly, self-assembled monolayers (SAMs). Langmuir-Blodgett (LB) films, micro emulsion polymerization- templated synthesis, pulsed electrochemical deposition Vapor deposition and different types of epitaxial growth techniques (CVD,MOCVD, MBE,ALD)- pulsed laser deposition, Magnetron sputtering - lithography :Photo/UV/EB/FIB techniques, Dip pen nanolithography, Etching process :Dry and Wet etching, micro contact printing , Application of nanomaterials in physics, chemistry and biological sciences	14hours
	3. Characterization Techniques in Nanotechnology Optical microscopy: Use of polarized light microscopy – Phase contrast microcopy – Interference Microscopy – hot stage microscopy – surface morphology – Introduction toconfocal microscopy.	12 hours

	<p>Scanning Electron Microscopy (SEM), Transmission Electron Microscopy (TEM), Atomic Force Microscopy (AFM), Scanning Tunneling Microscopy</p> <p>4. <u>Applications of Nanoscience</u></p> <p>Nanomaterials for energy applications, Nanoelectronics, Nanomagnetism and devices, Nanophotonics, Surface plasmons, Nanobio applications, Environmental issues</p>	10 hours
<u>Pedagogy:</u>	lectures/ tutorials/ seminars/ assignments/ presentations/ etc. or a combination of some of these.

Effective from AY: 2021-22

<u>Prerequisites for the course:</u>	Basic knowledge of Solid State Physics / Solid State Chemistry	
<u>Objective:</u>	This course is designed to familiarize students with general and specific aspects of magnetic interaction in condensed matter and methods of magnetic measurements.	
<u>Content:</u>	1. Magnetic Moments Magnetic moments and angular momentum, Precessional motion, Bohr Magneton, Magnetization and field, Classical Mechanics and magnetic moments, Quantum mechanical treatment, Spin	4 hours
	2. Isolated magnetic moments An atom in magnetic field, Magnetic susceptibility, Diamagnetism, Paramagnetism – semiclassical treatment, Brillouin function, van-Vleck paramagnetism, The ground state of an ion, Hund's rules, Adiabatic demagnetization, Nuclear spin, hyperfine structure, Origin of crystal field, orbital quenching, Jahn-Teller effect	6 hours
	3. Magnetic Interactions Dipolar interactions, Exchange interactions – origin, direct and indirect exchange, Indirect exchange in ionic solids, indirect exchange in metals, Double exchange, Anisotropic exchange, Continuum approximation	8 hours
	4. Order and Magnetic Structures Ferromagnetism – Weiss model, Magnetic susceptibility, The effect of magnetic field, Origin of the molecular field Antiferromagnetism – Weiss model, Magnetic susceptibility, magnetic field effects, types of antiferromagnetic order Ferrimagnetism, Helical order, Spin glasses, Nuclear ordering Measurement of magnetic order – magnetization and magnetic susceptibility, Neutron scattering, other techniques	8 hours
	5. Order and broken symmetry Broken symmetry, Landau theory of ferromagnetism, Heisenberg and Ising models (1D and 2D), Consequences of broken symmetry, Phase transitions, Rigidity, Excitations – magnons, Domains, Domain walls, Magnetocrystalline anisotropy, Domain wall width, Magnetization process, Observation of domain wall, small magnetic particles, Stoner-Wohlfarth model, Soft and hard materials	6 hours

	6. Magnetism in metals Pauli paramagnetism, spontaneously spin-split bands, spin-density functional theory, Landau levels, Landau diamagnetism, Magnetism of electron gas – paramagnetic response, diamagnetic response, RKKY interactions, Excitations in the electron gas, Spin-density waves, Kondo effect.	6 hours
	7. Competing interactions and low dimensionality Frustration, Spin glasses, Superparamagnetism, One dimensional and two dimensional magnets – spin chains, Spinons, Haldane chains, Spin-Peierls transitions, spin ladders, Magnetoresistance, Magneto-optics	4 hours
	8. Experimental Methods Magnetic fields, Atomic scale magnetism, Domain scale measurements, Bulk magnetism measurements, Magnetic resonance techniques – ESR, NMR, Mossbauer, X-rays and magnetism.	6 hours
<u>Pedagogy:</u>	lectures/ tutorials/ seminars/ assignments/ presentations/ etc. or a combination of some of these.	
<u>References/Readings</u>	1. Stephen Blundell, Magnetism in Condensed Matter, Oxford University Press 2001. 2. J. M. D. Coey, Magnetism and magnetic materials, Cambridge University Press, 2010. 3. D. C. Mattis, Theory of Magnetism, Springer Verlag, 1981.	
<u>Learning Outcomes</u>	The student is expected to acquire basic understanding of Magnetism and magnetic interactions in solids. Distinguish between different types of magnetic order and magnetically frustrated states. Have basic knowledge of different experimental methods of measuring magnetization at bulk, domain size and atomic level.	

Programme: M. Sc. (Physics)

Course Code: PHSO317 **Title of the Course:** Introduction to Crystallography and X-ray Diffraction

Number of Credits: 4

Effective from AY: 2019-20

<u>Prerequisites for the course:</u>	Basic knowledge of Solid State Physics / Solid State Chemistry	
<u>Objective:</u>	This course is designed to familiarize students with general aspects of crystal symmetry and X-ray scattering methods. Students also get an exposure to solving crystal structure from single crystal and powder X-ray data and use them in characterization of materials.	
<u>Content:</u>	1. Introduction to Symmetry and Crystal Structures Unit cell, Symmetry elements and their operations, Screw axes and glide planes, Crystal systems, 1D, 2D and 3D lattices, Bravais lattice, Point groups and their representations, Crystal classes, Hermann-Mauguin and Schoenflies nomenclature of point groups, Group-subgroup-supergroup relationships, Stereographic projections, Laue symmetry, Space groups, Equivalent points, General and special positions, Deriving general positions of space groups, Wyckoff notations, Shifting of origin in lattice, Miller indices, Crystal directions and planes, Real space vs reciprocal lattice, Close packed structures, Octahedral and tetrahedral sites, Linear density and planar density, Miller-Bravais indices for hexagonal systems, Asymmetric unit, Concept of Z and Z', Metric matrix, Deriving bond length and bond angles, Crystal density, Quasicrystals and their importance	12 hours
	2. X-ray Scattering and Structure Factors Generation of X-rays, White and Characteristic X-rays, Laboratory and synchrotron X-ray sources and their properties, Coherent and incoherent scattering, Scattering of X-rays by an electron, atom and crystal, Atomic scattering factor, Structure factor, Fourier transform, Electron density, Laue's equations, Bragg's law, Ewald's sphere, Limiting sphere and reflecting sphere, Bragg's law in reciprocal space, Systematic absences, Deriving conditions for systematic absences, X-ray detectors, Laue method, L-P corrections, Temperature factors, Absorption and extinction of X-rays, Friedel's law, Anomalous scattering, Absolute configuration determination, Phase problem in crystallography, Solution to the phase problem, Direct method, Patterson method, ∇F synthesis	12 hours
	3. Single Crystal X-ray Diffraction (SCXRD) Method Pros and cons of single crystal and powder X-ray diffraction, Single crystal growth and selection, Indexing of crystals, Data collection, Data reduction, Space group determination, Structure solution and refinement, Parameters/constraints/restraints, Anisotropic displacement	8 hours

	<p>parameters (ADPs), Reliable (R) factor, Twinning, Treatment of disordered structures, Introduction structure refinement software: OLEX2 and WinGX, Crystal structure analysis, CIF preparation, Validation of structures, Example: X-ray data of aspirin and KHSO₄</p> <p>4. Powder X-ray Diffraction (PXRD) Method Importance of PXRD method, Background of methodology, Geometrical basis of PXRD, Indexing powder pattern, Rietveld refinement using FullProf, Identification of unknown/new phases, Applications: Particle size and strain determination, Example: PXRD of CeO₂</p> <p>5. Total X-ray Scattering and Pair Distribution Function (PDF) Analysis Short and long range order, Structure of non-crystalline, disordered solids and nanocrystals, Local structure, Bragg and diffuse scattering concepts, atomic scattering amplitude, Debye's scattering intensity, Total scattering structure function, atomic PDF, Structure and reaction mechanism, Examples: Pt and WO₃ nanoparticles</p>	<p>8 hours</p> <p>8 hours</p>
<u>Pedagogy:</u>	lectures/ tutorials/ seminars/ assignments/ presentations/ etc. or a combination of some of these.	
<u>References/Readings</u>	<ol style="list-style-type: none"> 1. Fundamentals of Crystallography, C. Giacovazzo, Oxford Science Publications, 2011. 2. X-ray Structure Determination: A Practical Guide, G. H. Stout and L. H. Jensen, John Wiley and Sons, New York, 1989. 3. Elements of X-ray Diffraction, B.D.Cullity and S. R. Stock, 3rd edition, Pearson Education, 2014. 4. The Basics of Crystallography and Diffraction, C. Hammond, Oxford Science Publications, 2015. 5. Crystal Structure Determination, W. Massa, Springer, 2000. 6. The Rietveld Method, R. A. Young, Oxford University Press, 1993. 7. Structure Determination from Powder Diffraction Data, W. I. F. David, Oxford Science Publications, 2006. 8. Underneath the Bragg Peaks: Structural Analysis of Complex Materials, T. Egami and S. J. L. Billinge, Pergamon Materials Series, Volume 16, 2012 	
<u>Learning Outcomes:</u>	<ol style="list-style-type: none"> 1. The student acquires a basic understanding of crystallography and X-ray scattering methods in the solid state. 2. Have basic knowledge of single crystal, powder X-ray diffraction and PDF methods. 3. Able to use X-ray scattering methods as an experimental tool for materials characterization.

CORE COURSES

Programme: M. A. (Philosophy)

Course Code: PYC- 111

Title of the Course: History of Western Philosophy

Number of Credits: 4

Effective from AY: 2018-19

<u>Prerequisites for the course:</u>	NIL	
<u>Objective:</u>	To inculcate in the student a critical appreciation of the history of Western Philosophical ideas from its origin in Greek Philosophy to modern times.	
<u>Content:</u>	<p>1. A brief survey of Early Greek Philosophy Pre- Socratic; Socratic and Post – Socratic Thought.</p> <p>2. Rationalism: Descartes: Method of understanding; method of doubt – the cogito as intuition and inference. The role of God – Descartes proofs for the existence of God. Body – mind problem Spinoza: Substance, Attitude and Mode. Body – mind problem – parallelism. Leibniz : Substance as the centre of activity, monadology, the distinction between truths of reason and truths of fact ; the principles of non – contradiction and sufficient reason, The Doctrine of pre – established harmony</p> <p>3. Empiricism: Locke: Origin and validity of knowledge, representative theory of knowledge, ideas and their classification, primary and secondary qualities. Berkeley: Rejection of materialism, esse est percipi; Berkeley's idealism and the problem of intersubjectivity; the centrality of notion of God. Hume: distinction between ideas and impressions; distinction between statements of relation of ideas and statements of matters of fact – rejection of metaphysics; skepticism regarding the external world and the self; Hume's critique of causality.</p> <p>4. Kant: The Critical Philosophy: Classification of judgment, how are synthetic a priori judgments possible? Copernican Revolution ; forms of intuition (space & time) categories of understanding ; ideals of metaphysics ; ideas of Practical Reason ; Soul ; God ; Freedom ; Immortality</p> <p>5. Hegel: The points of departure from Kant; his conception of Geist (Spirit): dialectic; method, thesis; antithesis and synthesis; his conceptions of Being non – being and Becoming Absolute</p>	<p>12 hours</p> <p>12 hours</p> <p>12 hours</p> <p>8 hours</p> <p>4 hours</p>

	Idealism.	
<u>Pedagogy:</u>	Lectures and tutorials	
<u>Readings/References</u>	<ol style="list-style-type: none"> 1. D.J.O. 'Connor, <i>A Critical History of Western Philosophy</i>, New York, The Free Press, 1964. 2. W. Windelband, <i>History of Philosophy I and II</i>, New York, Harper Torch books, 1958. 3. Bertrand. Russel, <i>History of Western Philosophy</i>, London, George Allen and Unwin Limited, 1971. 4. Wiener, Philip, <i>Dictionary of the History of Ideas</i>, (Relevant articles) New York, Charles Scribner and Sons, 1973. 5. Parkinson (Ed.), <i>An Encyclopedia of Philosophy</i>, (Relevant Articles), London, Rouledge, 1988. 10. Jonathan, Bennett; Locke, Berkeley, and Hume, <i>Central Themes</i>, Oxford Clarendon Press, 1971. 	
<u>Learning Outcomes</u>	<ol style="list-style-type: none"> 1. Enhanced abilities of analytic thinking. 2. A critical appreciation of the tradition of Western philosophical ideas. 	

Programme: M. A. (Philosophy)

Course Code: PYC 112

Title of the Course: Classical Indian Philosophy

Number of Credits: 4

Effective from AY: 2018-19

<u>Prerequisites for the course:</u>	NIL	
<u>Objective:</u>	To have an understanding of the philosophical tradition of India from the ancient to the classical period	
<u>Content:</u>	<p>1. Carvaka : Epistemology- <i>Pratyaksa</i> as the only <i>pramana</i>, critique of <i>anumana</i> and <i>sabda</i>. Metaphysics – The concept of the world, Non existence of soul, non-existence of God</p> <p>2. Jainism – Jaina Theory of Knowledge, <i>Dravya</i>, <i>guna</i>, <i>paryaya</i>, <i>Jiva</i> and <i>Ajiva</i>, <i>Anekantvada</i>, <i>Syadvada</i>, <i>Nayavada</i></p> <p>3. Buddhism : Four Noble truths - <i>Astangamarga</i>, <i>Nirvana</i>. <i>Pratityasamutpada</i>, <i>Ksanika-vada</i>, <i>Anatmavada</i> Schools of Buddhism - Vaibhasika, Sautrantika, Yogacara, Madhyamika</p> <p>4. Nyaya: Definition and classification of knowledge. <i>Pramanas: Pratyaksa, Anumana, Upamana, Sabda</i> Individual self and its liberation, Concept of God & arguments for the existence of God</p> <p>5. Vaisesika: Concept of <i>Padarthas</i> (Categories)-<i>Dravya</i>, <i>Guna</i>, <i>Karma</i>, <i>Samanya</i>, <i>Samavaya</i>, <i>Visesa</i>, <i>AbhavaParamanuvada</i> or Atomic Theory, <i>Asatkaryavada</i> – theory of causation</p> <p>6. Samkhya : Theory of knowledge <i>Satkaryavada</i> – Theory of causation. <i>Prakrti</i>, <i>Purusa</i>, arguments for plurality of <i>purusa</i> , Evolution of the world. The Doctrine of Liberation The Problem of God</p> <p>7. Yoga: Psychology - <i>citta&citta-vrtti</i> , Eight fold path of</p>	<p>3 hours</p> <p>4 hours</p> <p>6 hours</p> <p>8 hours</p> <p>5 hours</p> <p>5 hours</p> <p>4 hours</p>

	<p>yoga. Place of God in yoga</p> <p>8. PurvaMimamsa: The nature and sources of knowledge Metaphysics – Theory of Potential energy – <i>Sakti</i> and <i>Apurva</i> Concept of soul. Religion and Ethics - The place of Vedas, The Conception of duty, The Highest good, Atheism of PurvaMimamsa.</p> <p>9. Vedanta: Sankara – Concept of <i>Brahman</i> , God and World. Ramanuja - Concept of <i>Brahman</i> , God and World. Madhva – Concept of God and World</p>	<p>5 hours</p> <p>8 hours</p>

<u>Learning Outcomes</u>	Familiarity with the problems and approaches of various schools of thought in Indian Philosophy.	

Programme: M. A. (Philosophy)

Course Code: PYC-213

Title of the Course: Logic & Epistemology

Number of Credits: 4

Effective from AY: 2018-19

<u>Prerequisites for the course:</u>	Basic knowledge of logic .	
<u>Objective:</u>	To develop an understanding of the various methods namely truth tables, shorter truth tables and formal proofs. It also aims at understanding the epistemological concepts of knowledge, truth and justification.	
<u>Content:</u>	<p style="text-align: center;">Logic:</p> <ol style="list-style-type: none">1. Truth tables2. Shorter Truth tables3. Formal proof of validity <p style="text-align: center;">Epistemology</p> <ol style="list-style-type: none">4. Nature and definition of knowledge<ol style="list-style-type: none">i) Propositional knowledge and non-propositional knowledge.ii) Knowledge and beliefiii) Sources of knowledge5. Theories of Truth<ol style="list-style-type: none">i) Correspondence theory.ii) Coherence theoryiii) Pragmatic theory6. Justification of knowledge<ol style="list-style-type: none">i) Evidence and justificationii) Theories of justificationiii) Justification, knowledge and truth	<p>6 hours</p> <p>6 hours</p> <p>18 hours</p> <p>6 hours</p> <p>6 hours</p> <p>6 hours</p>
<u>Pedagogy:</u>	Lectures/ tutorials/ assignments /self-study.	
<u>References/ Readings</u>	<ol style="list-style-type: none">1. I. M Copi, <i>Symbolic Logic</i>, New Jersey, U.S.A , Pearson Publications, 20052. William Gustafson and Dolph E Ulrich, <i>Elementary Symbolic Logic</i>,U.S.A., Waveland Press, 1989.3. I.M.Copi , C.Cohen & McMahon, <i>Introduction to Logic</i>, New York, Macmillan, 20124. Rodrick M Chisholm, <i>Theory of Knowledge</i>, New Delhi, Prentice Hall India Pvt. Ltd, 1977.5. A.J.Ayer, <i>Problems of Knowledge</i>, London, Macmillan,

<u>Learning Outcomes</u>	1. Apply the methods of truth table and shorter truth table for testing arguments and statements 2. Application of formal proofs for testing arguments.	

Programme: M. A. (Philosophy)

Course Code: PYC 214

Title of the Course: Introduction to Analytic Philosophy

Number of Credits: 4

Effective from AY: 2018-19

<u>Prerequisites for the course:</u>	Should have completed the paper on the History of Western Philosophy	
<u>Objective:</u>	To understand the developments in the 20 th Century Analytic Philosophy as espoused by the pioneers of Contemporary Western Philosophy like G.E.Moore and Bertrand Russell to present day analytic philosophers like Quine and Kripke.	
<u>Content:</u>	<div><div>1. General Introduction to Linguistic Analytic Philosophy, Language as the window to metaphysics; Levels of language phonological, syntax, semantics, Philosophy as semantics.</div><div>2. G.E. Moore : Defense of Common Sense</div><div>3. B. Russel: Logical Atomism.</div><div>4. Early Wittgenstein: Logical Atomism; The picture theory.</div><div>5. Later Wittgenstein: attack on essentialism ; the family resemblance theory of meaning ; language games, meaning as use, forms of life</div><div>6. A.J. Ayer: Rejection of Metaphysics, Principle of Verification.</div><div>7. J.L. Austin: Performative Utterances, Locutionary, Illocutionary and Perlocutionary acts.</div><div>8. G. Ryle: Systematically Misleading Expressions.</div><div>9. W.V.O. Quine : Two Dogmas of Empiricism</div><div>10. S.A. Kripke: Identity and Necessity</div></div> <div><div>4 Hours</div><div>4 Hours</div><div>5 Hours</div><div>5 Hours</div><div>6 Hours</div><div>4 Hours</div><div>5 Hours</div><div>5 Hours</div><div>5 Hours</div><div>5 Hours</div></div>	
<u>Pedagogy:</u>	Lectures/Discussions, Tutorials	

<p><u>References/ Readings</u></p>	<ol style="list-style-type: none"> 1. Milton K. Munitz, <i>Contemporary Analytic Philosophy</i>, London: Macmillan, 1981. 2. G.E. OPTIONAL

COURSES

Programme: M. A. (Philosophy)

Course Code: PYO- 111

Title of the Course: A.J.Ayer

Number of Credits: 4

Effective from AY: 2018-19

<u>Prerequisites for the course:</u>	NIL	
<u>Objective:</u>	To attain a succinct contemporary perspective on the central questions of philosophy	
<u>Content:</u>	1. General Background: Logical positivism as a reaction to metaphysical negativism; The beginnings of a formal philosophy of science.	4 hours
	2. Function of philosophy as conceptual analysis;	8 hours
	3. The Verifiability Principle; elimination of metaphysics; Falsifiability; the Kantian perspective.	16 hours
	4. Theory of perception and sense – data.	4 hours
	5. Ayer's philosophy of mind – concept of person, knowledge of other minds.	8 hours
	6. Emotive Theory of Values	4 hours
	7. Critique of Theology	4 hours
<u>Pedagogy:</u>	Lectures and tutorials	
<u>References/Readings</u>	1. A. J. Ayer, <i>Language, Truth and Logic</i> , 2nd Edition, London, Victor Gollancz Limited, 1967. 2. A.J. Ayer, <i>Central Questions of Philosophy</i> , New York, Holt Rinehart and Winston, 1974. 3. A.J. Ayer, <i>Philosophical Essays</i> , (Relevant Chapters), London, Macmillan and Company Limited, 1969. 4. A.J. Ayer, <i>The Concept of Person and other Essays</i> , (Relevant Chapters), London, MacMillan and Company Limited, 1964. 5. A.J. Ayer, <i>The Problem of Knowledge</i> , England, Penguin Books, 1986.	
<u>Learning Outcomes</u>	A succinct contemporary understanding of the central questions of philosophy	

Programme:M.A. Philosophy

Course Code: PYO-112

Title of the Course: Martin Buber and the Philosophies of Dialogue

Number of Credits: 2

Effective from AY: 2019-2020

Prerequisites:	NIL	
Objectives:	This course will focus on the philosophy of Martin Buber as the centerpiece for research and analysis. The course aims to introduce students to some of the most significant philosophical explorations of Dialogue as the essence of human existence, in both the West and the East.	
Content:	<ol style="list-style-type: none">1. Introduction to Martin Buber's Dialogical Philosophy.2. The origin of the questions of Being-in-Dialogue in Western and Eastern philosophies.3. Dialogue, Being and existence in selected Hindu and Buddhist texts.4. Classical interpretations of Dialogue, Being and Existence in European Philosophy. Hegel, Kant and Spinoza.5. The challenges of Existentialism: Kierkegaard, Nietzsche, Heidegger, Sartre, Unamuno, Ambedkar.6. Buber's new Dialogical Philosophy in comparison with other philosophers of Dialogue: Emmanuel Levinas, David Bohm, Gabriel Marcel.7. Dialogue in the traditions of Zen Buddhism, Ambedkar's Navayana and in the Western Liberation Theology.	<div>4 hours</div> <div>2 hours</div> <div>3 hours</div> <div>3 hours</div> <div>5 hours</div> <div>4 hours</div> <div>3 hours</div>
Pedagogy:	Lectures, class discussions, tutorials and text analysis.	

Text Books / Reference Books	1.Buber, Martin: <i>I and Thou</i> . ((Tr.) Walter Kaufman, New York: Free Press, 1971. 2. Margulies, Hune: <i>Will and Grace: Mediations on the Dialogical Philosophy of Martin Buber</i> . Rotterdam: Sense/Springer, 2017. 3. Ambedkar, B.R.: <i>The Buddha and his Dhamma</i> . Delhi: Kalpaz Publications, 2017 4. Hosle, Vittorio: <i>The Philosophical Dialogue: A Poetics and A Hermeneutics</i> . Notre Dame: University of Notre Dame Press, 2012	
Learning Outcomes	1.Understanding of Martin Buber’s studies on Dialogue, Philosophy of Religion, Theology and Social Philosophy. 2. A comprehension of the Dialogical traditions in ancient and modern philosophies, both in the West and in the East.	

Programme: M. A. (Philosophy)

Course Code: PYO-113

Title of the Course: Philosophy of Religion

Number of Credits: 4

Effective from AY: 2018-19

<u>Prerequisites for the course:</u>	NIL	
<u>Objective:</u>	To clarify the concept of 'religion' and gain a critical appreciation of the nature, issues and problems which arise in world religions; with special reference to Christianity, Hinduism and Islam.	
<u>Content:</u>	1. Nature and scope of Philosophy of Religion.	4 hours
	2. Religion and God: Meaning, nature and attributes of God.	8 hours
	3. Religious language.	4 hours
	4. Proofs for God's existence; Ontological, Teleological, Cosmological, and Moral. Proof against existence of God; Freudian, sociological, and scientific.	12 hours
	5. The Problem of Evil; origin, nature and kinds of evils; Theories of Evil and possible solutions – Augustinian, Irenian, process theory, and Advaitic (theory of Karma).	12 hours
	6. Religion as cultural 'forms of life'. Origin in mystic experience. Analysis of religious phenomena, religious practices, evaluation of mystic experience.	4 hours
	7. The problem of Religious pluralism and possible solutions.	4 hours
<u>Pedagogy:</u>	Lectures and tutorials	
<u>References/Readings</u>	1. John Hick, <i>Philosophy of Religion</i> , New Delhi, Prentice Hall of India, 1987. 2. R.B. <u>Learning Outcomes</u>	To achieve the perspective of a plethora of scientific traditions/ practices, vying and complementing each other in their problem solving abilities.	

Programme: M. A. Philosophy

Course Code: PYO-120

Title of the Course: Introduction to Contemporary Art

Number of Credits: 2
2020

Effective from AY: 2019-

Prerequisites:	NIL	
Objectives:	To facilitate nuanced appreciation of art and to familiarise the students with the philosophy of art-making.	
Content:	<p>1.Thinking Through Art -I: These lectures will consist of presentation of selected works of art (paintings, sculptures and installations) from around the world. The presentations will deal with the themes, inspirations, processes and the techniques behind the creation of the works.</p> <p>2.Thinking Through Art -II: These lectures will consist of presentation of selected works of art (paintings, sculptures and installations) from around the world. The presentations will deal with the themes, inspirations, processes and the techniques behind the creation of the works.</p> <p>3.Art: A Philosophical Perspective: The idea of art has been interpreted in different ways. This lecture will explore the meaning of art and its functions in human societies.</p> <p>4.History of Indian Art: This lecture will explore the trajectory of development of art in India from the Harappan Civilization to the present times.</p> <p>5.History of World art: This lecture will explore the trajectory of world art from Renaissance to installation art.</p> <p>6.Experiential learning and Practice: Experiential learning at MOG and at the Morjim beach</p>	<p>3 hours</p> <p>3 hours</p> <p>2 hours</p> <p>3 hours</p> <p>3 hours</p> <p>10 hours</p>

Pedagogy:	Lectures, class discussions, tutorials, text analysis and hands on experience.	
Text Books / Reference Books	1.Berger, John: <i>Ways of Seeing</i> . London: Penguin Books, 1972. 2.Craven, Roy C: <i>Indian Art: A Concise History</i> . London: Thames & Hudson, 1976. 3. Read, Herbert: <i>Modern Sculpture: A Concise History</i> . London: Thames & Hudson, 1964. 4 Read, Herbert: <i>Modern Painting: A Concise History</i> . London: Thames & Hudson, 1985.	
Learning Outcomes	The students will learn to judge the artistic merits of works and understand the process of artistic thinking.	

Programme: M. A. (Philosophy)

Course Code: PYO 121

Title of the Course: Philosophy of Gandhi

Number of Credits: 4

Effective from AY:

Course description- Mahatma Gandhi has contributed largely to the intellectual as well as spiritual richness. His ethical discourse has given way for the overall development of the society. In a world tormented with intolerance, chaos, terrorism, and disharmony; Gandhi's inclination towards ethical practices especially emphasizing the core principles of non-violence, Satyagraha, Sarvodaya and peace awakens one's conscience. For Gandhi, religion is to be understood from the follower's perspective. Gandhi's perception on religion contributes to the knowledge and understanding of the religious harmony and tolerance as well exposes the underlying universal truth in them.

Mahatma Gandhi is not just a name but a symbol for truth and justice. This paper is designed to impart the ethical insights, religious views and his contributions towards his nation and his people. It also attempts to study various sources of Gandhi's philosophical thought.

Prerequisites for the course:	NIL	
<u>Objectives:</u>	<ol style="list-style-type: none">1. To introduce students to the philosophical background of Gandhian thought.2. To study the ethical approach of Mahatma Gandhi and inculcate values in the students.3. To find the relevance of his principles in the modern life-style.	
<u>Content:</u>	<ol style="list-style-type: none">1.Gandhi And Religion – Indic religions, Semitic religions.2.Gandhi and other thinkers- Ruskin, Tolstoy and Thoreau, Swami Vivekanada, Dr. B.R Ambedkar.3.Gandhi and ethics- Concept of Satyagraha, Sarvodaya, Swadeshi, Swaraj, Ahimsa and peace4.Philosophy and Gandhi- Vedanta Philosophy, Anasakti yoga, Bhagvad geeta5.Gandhi on caste system, Women, children and environment. Gandhi and the modern world.	<div>15 hours</div> <div>15 hours</div> <div>6 hours</div> <div>6 hours</div> <div>6 hours</div>

<u>Pedagogy:</u>	Lectures/Discussions and tutorials	
<u>References/Readings:</u>	<ol style="list-style-type: none"> 1. Mahatma Gandhi, In search of the supreme- vol III (edt- V.B. Kher), Ahmedabad, Navajivan Publishing House, 1962. 2. <u>Learning outcomes:</u>	<ol style="list-style-type: none"> 1. To understand the key concepts and principles of Gandhian Philosophy. 2. To understand the influence of the ancient traditions on Gandhi and appreciate religious harmony. 3. To analyse and compare the ideals of Gandhi and its contemporary thinkers. 4. To have a practical insight of Gandhi's principles. 	

Programme: M.A. Philosophy

Course Code: PYO-122

Title of the Course: Historical Epistemology of the Sciences

Number of Credits: 1 (14 Contacts Hrs)

Effective from AY: 2020-2021

Prerequisites:	NIL	
Objectives:	Both the history of science and philosophy of science have been preoccupied with the dynamics of historical and scientific change, each addressing these issues in their respective disciplinary formats. The history of science has been preoccupied with the grounding and transformation of scientific knowledge within social and cultural contexts over time. The philosophers of science have been concerned with questions about the structure of scientific theories, the nature of evidence and the larger questions of epistemology and conceptual change. French history and philosophy of science since the 1930s was organized around what Foucault called the “Bachelard-Canguilhem network” which collapsed this distinction in thinking about models of scientific change. In recent decades there has been a renewed interest in the problem that has brought to bear the reflections of a number of historians and philosophers of science such as Loraine Daston, Peter Galison, Ian Hacking, Hans-Jörg Rheinberger and others. The present concern is to explore the conditions of emergence and the wider historical context of scientific change in history. In discussing these developments studies have tried to examine the paradigmatic shifts in the sciences over the last three centuries by situating the conceptual tool-box of concepts and frameworks that historians and philosophers of science employ. This is a Reading Course for students of history, philosophy and even the sciences. Students are expected to read two papers and come to each class where they will be discussed at the end of the course there will be a discussion around a book.	
Content:	Introduction to the Idea of Historical Epistemology	2 Hrs
	Disciplinary histories, history of science, philosophy of science	2 Hrs
	Perspectives on the history of sciences: approaches, frameworks and concerns	2 Hrs
	Bachelard- Canguilhem: The archaeology of scientific reason	2 Hrs
	The archaeology of knowledge: a history	2 Hrs
	The historical epistemology of scientific concepts and narrative forms	2 Hrs
	Situating concepts and research traditions	2 Hrs

Pedagogy:	Lectures, class discussions, tutorials and text analysis.

APPENDIX A : CERTIFICATE OF PROFICIENCY IN FRENCH LANGUAGE 1

Course Title: Certificate of Proficiency in French Language 1		Level: 1 (A1)
Intake : Max. 25		Hours : 120
Pre-requisite(s): Nil Eligibility : 12 th Std Certificate		
Aims: This course introduces students to General French. It aims, firstly, at developing <ul style="list-style-type: none"> • an ability to understand and communicate (read, write, speak and understand) in elementary French in basic situations Secondly, it aims at laying the foundation and developing <ul style="list-style-type: none"> • personal learning skills and strategies in foreign language learning • use of different media for course related tasks (dictionaries, internet) 		
Learning Outcomes: At the end of the course, students will be expected to demonstrate their ability to use basic French structure and vocabulary, in particular <ul style="list-style-type: none"> • understand and produce simple texts in French (postcards, basic compositions on self and environment) • communicate in basic situations of communication • understand and answer simple questions • understand and respond to simple instructions PRESCRIBED TEXT BOOK : A PROPOS A1/ VERSION ORIGINALE -1 <ul style="list-style-type: none"> • Teaching Methodology: Teaching methods and syllabus are based on the introduction of students to principles of autonomous and self-directed learning and LSP methodologies. This module will contain LSP in various media and forms of presentation (oral: lectures; audio-visual: TV, video; ICT: Internet, CD-ROMs). Independent work (group and individual).Exercises in task setting and fulfilling • Assessment Continuous Assessment: 4 tests x 1 hour (Written and Oral Comprehension and Expression) for 40% Final Examination: 2 hours written Examination (comprehension, expression and grammar exercises) for 40% marks and one hour duration Oral examination (aural comprehension / oral expression) for 20% marks . Total 60% 		
Proposed duration		
Lectures + Tests/ Tutorials:	6 x 18 weeks = 108 hours / 4 x 27 = 108 hours	
Independent Learning and home assignments:	6 x 2 = 12 hours	
TOTAL:	120	

APPENDIX B: CERTIFICATE OF PROFICIENCY IN FRENCH LANGUAGE 2

Course Title: Certificate of Proficiency in French Language 2		Level: 2 (A2)
Intake : Max. 25		Hours : 120
Pre-requisite(s): Certificate of Proficiency -1 or Entrance Test		
Eligibility : 12 th Std Certificate + Entrance Test		
<p>Aims:</p> <p>This module introduces students to and expands on French language communication and French language. It aims, firstly, at developing the following:</p> <ul style="list-style-type: none"> • intermediate competency in understanding simple exchange of information on familiar topics , oral and in writing • intermediate competency in expressing effectively in routine tasks and social exchanges , orally and in writing • awareness of differences in cultural representations in source and target cultures; <p>Secondly, it aims at consolidating and enhancing the skills previously acquired. More specifically it aims at further developing:</p> <ul style="list-style-type: none"> • strategies for successful collaborative learning; • skills for successful group work, initiative; • Elementary creativity. 		
<p>Learning Outcomes:</p> <p>At the end of the course, students will be expected to demonstrate a marked ability to communicate in the target language, in particular to</p> <ul style="list-style-type: none"> • understand and produce texts related to personal interests and experiences (announcements, advertisements etc) • understand and communicate opinions on everyday objects and situations • understand and respond to simple correspondence (letters, emails etc) • contribute effectively and constructively to group learning activities; <p>Furthermore, students will be able to</p> <p>Use generic IT applications and tools for language learning (e.g. internet learning and interactive tools.).</p> <p>PRESCRIBED TEXT BOOK : A PROPOS A2/ VERSION ORIGINALE -2</p> <ul style="list-style-type: none"> • Teaching Methodology: Teaching methods and syllabus are based on the introduction of students to principles of autonomous and self-directed learning and LSP methodologies. This module will contain LSP in various media and forms of presentation (oral: lectures; audio-visual: TV, video; ICT: Internet, CD-ROMs). Independent work (group and individual) .Exercises in task setting and fulfilling • Assessment Continuous Assessment : 4 tests x 1 hour (Written and Oral Comprehension and Expression) for 40% Final Examination : 2 hours written Examination (comprehension, expression and grammar exercises) for 40% marks and one hour duration Oral examination (aural comprehension / oral expression) for 20% marks . Total 60% 		
Proposed duration		
Lectures + Tests/ Tutorials:		6 x 18 weeks = 108 hours / 4 x 27 = 108 hours

TOTAL:		120

GOA UNIVERSITY
DEPARTMENT OF PORTUGUESE

CERTIFICATE OF PROFICIENCY IN PORTUGUESE
Level A1 (Basic User I)

2013-2014

<u>Course Title</u>	CERTIFICATE OF PROFICIENCY IN PORTUGUESE – level A1 (Basic User I)
<u>Course Duration</u>	100 class room contact hours, spread over one/two terms or even in reduced time but not never less than a minimum of six weeks.
<u>Pre-requisites</u>	XII standard
<u>Post-requisites</u>	<input type="checkbox"/> Students must score at least 50% of the marks, accordingly to the OB-15.11

<p><u>Aims and Description of the Course</u></p>	<ul style="list-style-type: none"> ❑ This Course is compatible the CEF (Common European Framework of reference levels for languages: learning, teaching, assessment) and it is scaled at the broad level A1 Basic User I (<i>Breakthrough</i>). ❑ At this level the student: <p>Can understand and use familiar everyday expressions and very basic phrases aimed at the satisfaction of needs of a concrete type; can introduce him/herself and others and can ask and answer questions about personal details such as where he/she lives, people he/she knows and things he/she has; can interact in a simple way provided the other person talks slowly and clearly and is prepared to help.</p> ❑ Each act of language use is set in the context of a particular situation within one of the <i>domains</i> (spheres of action or areas of concern) in which social life is organized: <ul style="list-style-type: none"> ➤ Personal domain ➤ Public domain ➤ Occupational domain ➤ Educational domain <p>The choice of the domains in which learners are being prepared to operate has far reaching implications for the selection of situations, purposes, tasks, themes and texts for teaching and testing materials and activities.</p> ❑ This Course may be divided in module 1 (A1.1) and module 2 (A1.2). However the end examination will be concluding after completing all the programme of this Course, i.e., module 2 (A.1.2) <u>at a minimum of 100 hours</u> of class room contact hours. ❑ This Course may be divided in units, specifying the topics and grammar contents of the syllabus in each one, according to the planning of the teacher concerned who will conducted and assess also the continuous evaluation and the end examination. ❑ The Department Council may recommend to the approval of the Vice-Chancellor to incorporate and implement minor changes in the Syllabi/Contents/Contact hours and specific vocabulary and themes, etc., to tailor the Course contents to the requirements of the corporate sector/industry as necessary from time to time.
---	--

Objectives

At the end of this Course the student will be able to:

- ☐ produce simple mainly isolated phrases about people and places.
- ☐ describe him/herself, what he/she does and where he/she lives.
- ☐ read a very short, rehearsed statement – e.g. to introduce a speaker, propose a toast.
- ☐ write simple isolated phrases and sentences.
- ☐ write simple phrases and sentences about themselves and imaginary people, where they live and what they do.
- ☐ follow speech which is very slow and carefully articulated, with long pauses for him/her to assimilate meaning.
- ☐ understand instructions addressed carefully and slowly to him/her and follow short, simple directions.
- ☐ understand very short, simple texts a single phrase at a time, picking up familiar names, word and basic phrases and rereading as required.
- ☐ understand short, simple messages on postcards.
- ☐ write a short simple postcard.
- ☐ recognise familiar names, words and very basic phrases on simple notices in the most common everyday situations.
- ☐ get an idea of the content of simpler informational material and short simple descriptions, especially if there is visual support.
- ☐ follow short, simple written directions (e.g. to go from X to Y).
- ☐ interact in a simple way but communication is totally dependent on repetition at a slower rate of speech, rephrasing and repair.
- ☐ ask and answer simple questions, initiate and respond to simple statements in areas of immediate need or on very familiar topics.
- ☐ understand everyday expressions aimed at the satisfaction of simple needs of a concrete type, delivered directly to him/her in clear, slow and repeated speech by a sympathetic speaker.
- ☐ understand questions and instructions addressed carefully and slowly to him/her and follow short, simple directions.
- ☐ make an introduction and use basic greeting and leave-taking expressions.
- ☐ ask how people are and react to news.
- ☐ understand everyday expressions aimed at the satisfaction of simple needs of a concrete type, delivered directly to him/her in clear, slow and repeated speech by a sympathetic speaker.
- ☐ understand questions and instructions addressed carefully and slowly to him/her and follow short, simple directions.
- ☐ ask people for things, and give people things.
- ☐ ask people for things and give people things.

<u>Objectives</u>	<ul style="list-style-type: none"> ❑ handle numbers, quantities, cost and time. ❑ understand questions and instructions addressed carefully and slowly to him/her and follow short, simple directions of simple expressions about personal details and needs of a concrete type. ❑ ask and answer simple questions, initiate and respond to simple statements in areas of immediate need or on very familiar topics. ❑ ask and answer questions about themselves and other people, where they live, people they know, things they have. ❑ indicate time by such phrases as next week, last Friday, in November, three o'clock. ❑ reply in an interview to simple direct questions spoken very slowly and clearly in direct non-idiomatic speech about personal details. ❑ ask for or pass on personal details in written form. ❑ write numbers and dates, own name, nationality, address, age, date of birth or arrival in the country, etc. such as on a hotel registration form. ❑ copy out single words and short texts presented in standard printed format. ❑ establish basic social contact by using the simplest everyday polite forms of: greetings and farewells; introductions; saying please, thank you, sorry, etc. use a very basic range. ❑ use a basic vocabulary repertoire of isolated words and phrases related to particular concrete situations. ❑ show only limited control of a few simple grammatical structures and sentence patterns in a learnt repertoire. ❑ pronounce of a very limited repertoire of learnt words and phrases can be understood with some effort by native speakers used to dealing with speakers of his/her language group. ❑ manage very short, isolated, mainly pre-packaged utterances, with much pausing to search for expressions, to articulate less familiar words, and to repair communication.
<u>Teaching & Learning Methods</u>	<p>Communicative approach and teaching-learning process based on classroom tasks. The emphasis in a communicative task is on successful task completion and consequently the primary focus is on meaning as learners realise their communicative intentions. However, in the case of tasks designed for language learning or teaching purposes, performance is concerned both with meaning and the way meanings are comprehended, expressed and negotiated.</p>

Scheme of Evaluation & Assessment

As per OB-15 the evaluation of this Course will consist of Continuous Evaluation in a form of 4 assessments of one hour each with a total of 40% of the marks assigned to this Course and an end assessment in a form of one Final Examination of three hours, two hours for written exam (40% marks) and one hour for oral exam (20 % marks)), together with a total of 60% of the marks assigned to this Course.

Each assessment of the Continuous Evaluation will consist of a test with 10% of the marks, comprising reading comprehension (2.5 marks), written expression (2.5 marks), aural comprehension (2.5 marks) and oral expression (2.5 marks); The Final Examination will consist of a written test (two hours), comprising reading comprehension (20 marks), written expression (10 marks) and grammar (10 marks) and an oral exam, comprising aural comprehension (10 marks) and oral expression (10 marks).

Continuous Evaluation (40 marks) and Final Examination (60 marks) = 100 marks

Reading Comprehension – 30 marks

Written Expression – 20 marks

Grammar – 10 marks

Aural Comprehension – 20 marks

Oral Expression – 20 marks

Syllabus

Within the various domains we may distinguish *themes*, the topics which are the subjects of discourse, conversation, reflection or composition, as the focus of attention in particular communicative acts.

THEMES:

1. Identidade (*Personal Identification*)

- ▮ Nome próprio; apelido; diminutivo
- ▮ Lugar e data de nascimento / idade
- ▮ Nacionalidade
- ▮ Endereço

2. Pessoas (*People*)

- ▮ Caracterização física / partes do corpo (olhos, cabelos...)
- ▮ Vestuário; calçado
- ▮ Características da personalidade (simpático, alegre, tímido...)
- ▮ Ações (realizadas com o corpo: levantar-se...)
- ▮ Objetos pessoais

3. Vida familiar e social (*Relations with relatives and friends*)

- ▮ Relações familiares e sociais (pai... amigo)
- ▮ Festas (celebrações)
- ▮ Saúde e higiene
- ▮ Refeições
 - o Alimentos e bebidas
 - o Objetos / utensílios
 - o Espaços
 - o Hábitos familiares (comidas típicas, horários...)

4. Educação (*School and Education*)

- ▮ Escola / espaços
- ▮ Agentes educativos
- ▮ Horários e matérias curriculares
- ▮ Linguagem própria do funcionamento da aula
- ▮ Mobiliário e material escolar

5. Lazer (*Leisure*)

- ▮ No quotidiano (brincar (como; com quem), ler, ver televisão, ir ao cinema, ouvir música ... desportos, jogos...)
- ▮ Nas férias (praia, campo, viagem ...)

6. Informação e diversão (*Media and Entertainment*)

- ▮ Meios de comunicação social
- ▮ Tecnologia (internet...)

7. Lugares que se conhecem / se frequentam (*Places and Locations*)

- ▮ Do país em que se vive (geografia e espaços urbanos ou rústicos) a Portugal
- ▮ Casa de habitação (divisões, mobiliário)
- ▮ Da livraria à farmácia, da cantina ao supermercado

8. Deslocações e meios de transporte (*Travel and Means of Transports*)

- ▮ No dia-a-dia
- ▮ Nas férias

9. Ambiente (*Environment*)

- ▮ Estações do ano e tempo atmosférico
- ▮ Fauna e flora
- ▮ Proteção da natureza

10. Países de língua portuguesa (*Portuguese Speaking Countries*)

- ▮ Identificação
- ▮ Localização

GRAMMAR CONTENTS:

- ▮ Os sons da língua e a sua representação gráfica
 - o Vogais orais, nasais e consoantes
 - o Ditongos orais e nasais

- ▮ A estruturação das palavras
 - o Do monossílabo ao polissílabo

- ▮ As regras gerais de acentuação gráfica e o hífen (uso na translineação e em enclíticos)
 - o Sílabas tónicas e átonas
 - o Acentos gráficos: agudo, grave e circunflexo

- ▮ As regras de translineação nos casos simples

- ▮ Sinais de pontuação: ponto (final); ponto de interrogação; ponto de exclamação; vírgula; dois pontos; travessão

- ▮ Palavras homónimas e homófonas
- ▮ Relações de semelhança / oposição entre palavras: sinonímia; antonímia
- ▮ Palavras da mesma família
- ▮ Valores semânticos da frase: afirmativa e negativa
- ▮ Palavras variáveis e invariáveis
- ▮ Nomes [Substantivos]
 - o Próprios (seres vivos / designações geográficas); comuns (contáveis)
 - o Flexão:
 - ▮ Género – por meio morfológico / lexical
 - ▮ Número – por adição do morfema -s (-es)
- ▮ Adjetivos
 - o Qualificativos; relacionais
 - o Flexão
 - ▮ Género: por substituição do -o por -a; por adição de -a; por palavras diferentes
 - ▮ Número – por adição do morfema -s (-es)
 - ▮ Grau – superlativo
- ▮ Pronomes pessoais
 - o Formas tónicas: pessoa; género; número: referência do enunciador / do interlocutor – formas de tratamento
 - o Formas átonas marcadoras de reflexividade
- ▮ Determinantes
 - o Artigos
 - ▮ Definido / indefinido – género e número
 - ▮ Valores determinados por “conhecido / desconhecido”; “identificado / não identificado”
 - ▮ Contrações com preposições
 - o Possessivos – pessoa; género; número
 - o Demonstrativos
 - o Interrogativo (que)
- ▮ Pronomes possessivos e demonstrativos
- ▮ Quantificadores
 - o Numerais
 - o Interrogativos
- ▮ Verbos
 - o Conjugação (v. regulares); pessoa; número
 - o Formas / Tempos (verbaux):
 - ▮ Presente e pretérito perfeito do indicativo;
 - ▮ Infinitivo
 - o Valores semânticos:
 - ▮ de estado – *ser* vs *estar*, *ter*, *haver* (presente e pretérito perfeito do indicativo)
 - ▮ de ação: *pró-verbo* – *fazer* / verbos frequentes (presente e pretérito perfeito do indicativo)

- ▮ locativos – *estar (em), morar / viver (em)*
- ▮ direcionais – *chegar (a), entrar (em), sair (de), ir (a / para), partir (de...para), vir (de)*
- ▮ declarativos – *concordar, dizer* (presente e pretérito perfeito do indicativo)
- ▮ declarativos de ordem – *dizer*
- ▮ avaliativos – *achar (bem / mal), gostar (de)*
- ▮ volitivos – *querer* (presente do indicativo)
- ▮ auxiliares
- ▮ modais: *poder* (presente do indicativo), *dever* (presente do indicativo), *ter de / que*
- ▮ temporais: *ir + “fazer...”*

▮ Advérbios:

- o Valores semânticos: tempo, lugar, afirmação, modo, negação, interrogação
- o Deitização

▮ Preposições

- o Valores semânticos: localização, movimento, tempo, meio

▮ Conjunções

- o Copulativas
- o Causais, temporais

▮ Interjeições: advertência, encorajamento

A frase e os seus constituintes:

- a. Constituintes: grupo nominal / verbal
- b. Ordem dos grupos na frase
- c. Processos sintáticos: concordâncias básicas dos grupos; elipse
- d. Tipos de frases (funções comunicativas / entoação): declarativa, interrogativa e exclamativa
- e. Articulação frásica: simples; complexa:
 - ▮ Coordenação copulativa
 - ▮ Subordinação causal e temporal
 - ▮ Temporais – *então, depois*
 - ▮ Aditivos; enumerativos

GOA UNIVERSITY
DEPARTMENT OF PORTUGUESE

CERTIFICATE OF PROFICIENCY IN PORTUGUESE
Level A2 (Basic User II)

2013-2014

<u>Course Title</u>	CERTIFICATE OF PROFICIENCY IN PORTUGUESE – level A2 (Basic User II)
<u>Course Duration</u>	100 class room contact hours, spread over one/two terms or even in reduced time but not never less than a minimum of six weeks.
<u>Pre-requisites</u>	XII standard. The student can be enrolled in this Course level if he/she has successfully completed Certificate of Proficiency level A1 conducted by Goa University or an examination recognized as its equivalent.
<u>Post-requisites</u>	<input type="checkbox"/> Students must score at least 50% of the marks, accordingly to the OB-15.11

**Aims and
Description of the
Course**

- ❑ This **Course** is compatible the CEF (Common European Framework of reference levels for languages: learning, teaching, assessment) and it is scaled at the broad **level A2** Basic User II (*Waystage*).

- ❑ At this level the student:

Can understand sentences and frequently used expressions related to areas of most immediate relevance (e.g. very basic personal and family information, shopping, local geography, employment). Can communicate in simple and routine tasks requiring a simple and direct exchange of information on familiar and routine matters. Can describe in simple terms aspects of his/her background, immediate environment and matters in areas of immediate need.

- ❑ Each act of language use is set in the context of a particular situation within one of the *domains* (spheres of action or areas of concern) in which social life is organized:

- Personal domain
- Public domain
- Occupational domain
- Educational domain

The choice of the domains in which learners are being prepared to operate has far reaching implications for the selection of situations, purposes, tasks, themes and texts for teaching and testing materials and activities.

- ❑ This **Course** may be divided in module 1 (A 2.1) and module 2 (A 2.2). However the end examination will be concluding after completing all the programme of this Course, i.e., module 2 (A 2.2) at a minimum of 100 hours of class room contact hours.
- ❑ This **Course** may be divided in units, specifying the topics and grammar contents of the syllabus in each one, according to the planning of the teacher concerned who will conducted and assess also the continuous evaluation and the end examination.
- ❑ The Department Council may recommend to the approval of the Vice-Chancellor to incorporate and implement minor changes in the Syllabi/Contents/Contact hours and specific vocabulary and themes, etc., to tailor the **Course** contents to the requirements of the corporate sector/industry as necessary from time to time.

<p><u>Objectives</u></p>	<p>At the end of this Course the student will be able to:</p> <ul style="list-style-type: none"> ❑ give a simple description or presentation of people, living or working conditions, daily routines, likes/dislikes, etc. as a short series of simple phrases and sentences linked into a list. ❑ tell a story or describe something in a simple list of points. ❑ describe everyday aspects of his/her environment e.g. people, places, a job or study experience. ❑ give short, basic descriptions of events and activities. ❑ describe plans and arrangements, habits and routines, past activities and personal experiences. ❑ use simple descriptive language to make brief statements about and compare objects and possessions. ❑ explain what he/she likes or dislikes about something. ❑ describe his/her family, living conditions, educational background, present or most recent job. ❑ describe people, places and possessions in simple terms. ❑ give a short, rehearsed presentation on a topic pertinent to his/her everyday life, briefly give reasons and explanations for opinions, plans and actions. ❑ cope with a limited number of straightforward follow up questions. ❑ give a short, rehearsed, basic presentation on a familiar subject. ❑ answer straightforward follow up questions if he/she can ask for repetition and if some help with the formulation of his/her reply is possible. ❑ write a series of simple phrases and sentences linked with simple connectors like “e” (and), “mas” (but) and “porque” (because). ❑ write about everyday aspects of his/her environment, e.g. people, places, a job or study experience in linked sentences. ❑ write very short, basic descriptions of events, past activities and personal experiences. ❑ write a series of simple phrases and sentences about their family, living conditions, educational background, present or most recent job. ❑ write short, simple imaginary biographies and simple poems about people. ❑ recall and rehearse an appropriate set of phrases from his/her repertoire. ❑ use an inadequate word from his/her repertoire and use gesture to clarify what he/she wants to say. ❑ identify what he/she means by pointing to it, e.g. “<i>Eu queria isto, por favor</i>”(I’d like this, please’). ❑ understand enough to be able to meet needs of a concrete type provided speech is clearly and slowly articulated. ❑ understand phrases and expressions related to areas of most immediate priority (e.g. very basic personal and family information, shopping, local geography, employment) provided speech is clearly and slowly articulated. ❑ generally identify the topic of discussion around him/her, when it is conducted slowly and clearly between native speakers. ❑ catch the main point in short, clear, simple messages and announcements. ❑ understand simple directions relating to how to get from X to Y, by foot or public transport. ❑ understand and extract the essential information from short, recorded passages dealing with predictable everyday matters which are delivered slowly and clearly.
---------------------------------	--

Objectives

- ❑ understand short, simple texts on familiar matters of a concrete type which consist of high frequency everyday or job-related language.
- ❑ understand short, simple texts containing the highest frequency vocabulary, including a proportion of shared international vocabulary items.
- ❑ understand basic types of standard routine letters and faxes (enquiries, orders, letters of confirmation etc.) on familiar topics.
- ❑ understand short simple personal letters.
- ❑ find specific, predictable information in simple everyday material such as advertisements, prospectuses, menus, reference lists and timetables.
- ❑ locate specific information in lists and isolate the information required (e.g. use the 'Yellow Pages' to find a service or tradesman).
- ❑ understand everyday signs and notices: in public places, such as streets, restaurants, railway stations; in workplaces, such as directions, instructions, hazard warnings.
- ❑ identify specific information in simpler written material he/she encounters such as letters, brochures and short newspaper articles describing events.
- ❑ understand regulations, for example safety, when expressed in simple language.
- ❑ understand simple instructions on equipment encountered in everyday life – such as a public telephone.
- ❑ identify the main point of TV news items reporting events, accidents etc. where the visual supports the commentary.
- ❑ follow changes of topic of factual TV news items, and form an idea of the main content.
- ❑ use an idea of the overall meaning of short texts and utterances on everyday topics of a concrete type to derive the probable meaning of unknown words from the context.
- ❑ interact with reasonable ease in structured situations and short conversations, provided the other person helps if necessary.
- ❑ manage simple, routine exchanges without undue effort; ask and answer questions and exchange ideas and information on familiar topics in predictable everyday situations.
- ❑ communicate in simple and routine tasks requiring a simple and direct exchange of information on familiar and routine matters to do with work and free time.
- ❑ handle very short social exchanges but is rarely able to understand enough to keep conversation going of his/her own accord.
- ❑ understand enough to manage simple, routine exchanges without undue effort.
- ❑ generally understand clear, standard speech on familiar matters directed at him/her, provided he/she can ask for repetition or reformulation from time to time.
- ❑ understand what is said clearly, slowly and directly to him/her in simple everyday conversation.
- ❑ establish social contact: greetings and farewells; introductions; giving thanks.
- ❑ participate in short conversations in routine contexts on topics of interest.
- ❑ express how he/she feels in simple terms, and express thanks.
- ❑ use simple everyday polite forms of greeting and address.
- ❑ make and respond to invitations, suggestions and apologies.
- ❑ say what he/she likes and dislikes.
- ❑ discuss what to do in the evening, at the weekend.
- ❑ make and respond to suggestions.
- ❑ agree and disagree with others.

- ❑ discuss everyday practical issues in a simple way when addressed clearly, slowly and directly.
- ❑ discuss what to do, where to go and make arrangements to meet.
- ❑ exchange relevant information and give his/her opinion on practical problems when asked directly, provided he/she receives some help with formulation and can ask for repetition of key points if necessary.
- ❑ say what he/she thinks about things when addressed directly in a formal meeting, provided he/she ask for repetition of key points if necessary.
- ❑ deal with common aspects of everyday living such as travel, lodgings, eating and shopping.
- ❑ get all the information needed from a tourist office, as long as it is of a straightforward, non specialized nature.
- ❑ ask for and provide everyday goods and services.
- ❑ get simple information about travel, use public transport: buses, trains, and taxis, ask and give directions, and buy tickets.
- ❑ ask about things and make simple transactions in shops, post offices or banks.
- ❑ give and receive information about quantities, numbers, prices, etc.
- ❑ make simple purchases by stating what is wanted and asking the price.
- ❑ order a meal.
- ❑ understand enough to manage simple, routine exchanges without undue effort.
- ❑ deal with practical everyday demands: finding out and passing on straightforward factual information.
- ❑ ask and answer questions about habits and routines.
- ❑ ask and answer questions about pastimes and past activities.
- ❑ give and follow simple directions and instructions, e.g. explain how to get somewhere.
- ❑ communicate in simple and routine tasks requiring a simple and direct exchange of information.
- ❑ exchange limited information on familiar and routine operational matters.
- ❑ ask and answer questions about what they do at work and in free time.
- ❑ ask for and give directions referring to a map or plan.
- ❑ ask for and provide personal information.
- ❑ make him/herself understood in an interview and communicate ideas and information on familiar topics, provided he/she can ask for clarification occasionally, and is given some help to express what he/she wants to.
- ❑ answer simple questions and respond to simple statements in an interview.
- ❑ write short, simple formulaic notes relating to matters in areas of immediate need.
- ❑ write very simple personal letters expressing thanks and apology.
- ❑ use simple techniques to start, maintain, or end a short conversation.
- ❑ initiate, maintain and close simple, face-to-face conversation.

Teaching & Learning Methods

Communicative approach and teaching-learning process based on classroom tasks. The emphasis in a communicative task is on successful task completion and consequently the primary focus is on meaning as learners realise their communicative intentions. However, in the case of tasks designed for language learning or teaching purposes, performance is concerned both with meaning and the way meanings are comprehended, expressed and negotiated.

Scheme of Evaluation & Assessment

As per OB-15 the evaluation of this Course will consist of Continuous Evaluation in a form of 4 assessments of one hour each with a total of 40% of the marks assigned to this Course and an end assessment in a form of one Final Examination of three hours, two hours for written exam (40% marks) and one hour for oral exam (20 % marks)), together with a total of 60% of the marks assigned to this Course.

Each assessment of the Continuous Evaluation will consist of a test with 10% of the marks, comprising reading comprehension (2.5 marks), written expression (2.5 marks), aural comprehension (2.5 marks) and oral expression (2.5 marks); The Final Examination will consist of a written test (two hours), comprising reading comprehension (20 marks), written expression (10 marks) and grammar (10 marks) and an oral exam, comprising aural comprehension (10 marks) and oral expression (10 marks).

Continuous Evaluation (40 marks) and Final Examination (60 marks) = 100 marks

Reading Comprehension – 30 marks

Written Expression – 20 marks

Grammar – 10 marks

Aural Comprehension – 20 marks

Oral Expression – 20 marks

Syllabus

Within the various domains we distinguish *themes*, as the topics which are the subjects of discourse, conversation, reflection or composition, as the focus of attention in particular communicative acts.

THEMES:

New themes should be added to the communicative topics introduced at the level A1, extending the vocabulary and the subjects of discourse.

1. Modo de vida nas grandes cidades (*The life in the city*)

- Hábitos, costumes, atividades de diversão
- Espaços de habitação
- Espaços de compras
- Meios de deslocação e transporte

2. **Ambiente** (*Environment*)

- Proteção da natureza
- Consciência ecológica

3. **Portugal vs o país de residência** (*Portugal vs. your Country*)

- Manifestações culturais
 - Feriados laicos e feriados religiosos
 - Significado
 - Eventos celebrativos
 - Outras festas e eventos celebrativos
- Gastronomia
 - Comida típica de várias regiões de Portugal
- Arte
 - Receitas e confeção
 - Monumentos
 - Música, cinema, dança
 - Literatura
 - Outras manifestações artísticas

4. **Outros países de língua portuguesa** (*Other Portuguese Speaking Countries*)

- Manifestações culturais
 - Feriados laicos
- Gastronomia
 - Arte
- Significado
- Eventos celebrativos

GRAMMAR CONTENTS:

Phonetics and Orthography

- Os sons da língua e a sua representação gráfica
- A estrutura silábica
- As regras gerais de acentuação gráfica e o hífen (uso na translineação, em enclíticos e palavras compostas)
 - Palavras agudas, graves e esdrúxulas
- As regras de translineação em palavras com consoantes duplas
- Sinais de pontuação: reticências; ponto e vírgula
- Sinais auxiliares de escrita: parênteses curvos; aspas
- Palavras homógrafas

Semantics

- Uso denotativo e conotativo de palavras
- Polissemia
- Relações de semelhança / oposição entre palavras: sinonímia; antonímia
- Palavras da mesma família
- Valores semânticos da frase: afirmativa e negativa

Morphology (Noun, Adjective & Verbs)

- Processos de formação de palavras: palavra simples e complexa
 - Prefixos e sufixos
- Palavras variáveis e invariáveis
- Nomes [Substantivos]
 - Próprios
 - Comuns: coletivos; contáveis / não contáveis
 - Flexão:
 - Género - derivacional / sintático; feminino em *-ão* / *-ona* / *-oa*
- Adjetivos
 - Número - palavras terminadas em: *-al* / *-el* / *-il* [átono e tónico] / *-ol* / *-ul*; *-ão*; *-s*
- Qualificativos; relacionais; numerais
- Flexão
 - Género: nomes terminados em *-ão* (*-ã*, *-ao*, *-ona*); outros casos: europeu, *-eia...*
 - Número - de palavras terminadas em *-al* / *-el* / *-il* [átono e tónico] / *-ol* / *-ul*; *-ão*
 - Grau
 - ✓ Absoluto, por adição de elementos de quantificação
 - ✓ Superlativo de superioridade e de inferioridade
- Pronomes pessoais - Flexão
 - Formas tónicas: pessoa; género; número: referência do enunciador / do interlocutor - formas de tratamento
 - Formas átonas
 - Marcadoras de reflexividade
 - [Casos] Complemento indireto / colocação na frase
- Determinantes - Flexão
 - Artigos
 - Valores determinados pela expressão de generalizante vs individualizante
 - Contrações com preposições
 - Possessivos - pessoa; género; número
 - Nas seguintes sequências: demonstrativo + nome + verbo + possessivo
 - Desambiguação do contexto - *dele*, *deles*, *do senhor(a)*
 - Demonstrativos (*outro...*)
 - Deitização situacional
 - Interrogativos
- Pronomes possessivos e demonstrativos
 - Valor anafórico; deitização

Quantificadores

- Numerais
- Interrogativos
- Relativos

Verbos

- Conjugação (v. regulares e irregulares); pessoa; número
- Formas / Tempos verbais:
 - Presente e pretérito perfeito e imperfeito do indicativo
 - Infinitivo; gerúndio
 - Imperativo
- Valores semânticos:
 - de estado / de ação
 - locativos / direcionais
 - declarativos / declarativos de ordem / de atividade mental (*pensar, refletir*) / avaliativos
 - volitivos
 - De comunicação que especificam a realização fônica do discurso (*gritar, falar, sussurrar...*)
 - Auxiliares
- Advérbios:
 - ✓ Modais
 - ✓ Aspetuais: *começar a* + infinitivo, *estar a* + infinitivo, *continuar a* + infinitivo
- Valores semânticos: tempo, lugar, afirmação, dúvida, intensificação, modo, negação, interrogação, inclusão, e exclusão
- Deitização
- Preposições
- Valores semânticos: localização, movimento, tempo, causa
- Exigidas por verbos ou adjetivos
- Conjunções
- Copulativas; adversativas; explicativas; conclusivas
- Causais, temporais; completivas, relativas restritivas e explicativas
- Interjeições: advertência, alegria, desejo, dor, encorajamento, entusiasmo, desgosto, chamamento

Syntaxe: sentences elements

- Constituintes: grupo nominal / verbal / adverbial
- Ordem dos grupos na frase
- Processos sintáticos: concordâncias básicas dos grupos; elipse
- Tipos de frases:
- Funções comunicativas: declarativa, interrogativa (de confirmação / certificação), imperativa e exclamativa
- Caracterização da marcação dos diferentes tipos de frases
- Sinais gráficos / entoação
- Ausência / presença de “expressões estereotipadas”

▪ Articulação frásica: simples; complexa:

- Coordenação copulativa, adversativa, explicativa e conclusiva
- Subordinação: causal, temporal e relativa

APPENDIX C: DIPLOMA OF PROFICIENCY IN FRENCH LANGUAGE

Course Title: Diploma of Proficiency in French Language Intake : Max. 20		Level: 3/B 1 Hours : 100 hours
Pre-requisite(s): Certificate of Proficiency 1 and 2 or Entrance Test Eligibility : 12 th std Certificate + Entrance Test		
Aims: <p>This course aims at consolidating and enhancing the skills previously acquired. More specifically it aims at further developing the ability to:</p> <ul style="list-style-type: none"> • communicate orally and in writing in social and professional situations, • reflect on and talk about own experiences and cultural background; • read and analyse documents in the target language (press, short stories etc) • write compositions on subjects of personal interest <p>Secondly, it introduces students to intercultural awareness and skills. It aims, firstly, at enabling them to rapidly integrate a multicultural social or academic environment in a French speaking country:</p> <ul style="list-style-type: none"> • socially position themselves in relation to the French culture • use multimedia and internet tools for language learning, information retrieval and communication in French; 		
Learning Outcomes: <p>At the end of the course, students will be expected to demonstrate their ability:</p> <ul style="list-style-type: none"> • to initiate and to respond to requests in a variety of contexts, • to express themselves in a manner appropriate to the situation in which they find themselves, <p>PRESCRIBED TEXT BOOK : A PROPOS B1-B2/ VERSION ORIGINALE -3</p> <ul style="list-style-type: none"> • Teaching Methodology: Teaching methods and syllabus are based on the introduction of students to principles of autonomous and self-directed learning and LSP methodologies. This module will contain LSP in various media and forms of presentation (oral: lectures; audio-visual: TV, video; ICT: Internet, CD-ROMs) .Introduction to "Intellectual styles" in home and target academic community . Independent work (group and individual) .Exercises in task setting and fulfilling • Assesment Continuous Assesment : 4 tests x 1 hour (Written and Oral Comprehension and Expression) for 40% Final Examination: 3 hours written Examination (comprehension, expression, grammar, translation) - 40% marks and 1 hour duration Oral examination (aural comprehension / oral expression) for 20% marks. Total 60% 		
Proposed duration <div style="text-align: right;">Lectures + Tests/ Tutorials:</div> <div style="text-align: right;">Independent Learning and home assignments:</div> <div style="text-align: right;">TOTAL</div>		6 x 18 weeks = 108 hours / 4 x 27 = 108 hours 6 x 2 = 12 hours 120 hours

GOA UNIVERSITY
DEPARTMENT OF PORTUGUESE

DIPLOMA OF PROFICIENCY IN PORTUGUESE
Level B1 (Basic User II)

2013-2014

<u>Course Title</u>	DIPLOMA OF PROFICIENCY IN PORTUGUESE – level B1 (Independent User I)
<u>Course Duration</u>	100 class room contact hours, spread over one/two terms or even in reduced time but not never less than a minimum of six weeks.
<u>Pre-requisites</u>	XII standard. The student can be enrolled in this Course level if he/she has successfully completed Certificate of Proficiency level A2 conducted by Goa University or an examination recognized as its equivalent.
<u>Post-requisites</u>	<input type="checkbox"/> Students must score at least 50% of the marks, accordingly to the OB-15.11

**Aims and
Description of the
Course**

- ❑ This **Course** is compatible the CEF (Common European Framework of reference levels for languages: learning, teaching, assessment) and it is scaled at the broad **level B1** Independent User I (*Threshold*).

- ❑ At this level the student:

Can understand the main points of clear standard input on familiar matters regularly encountered in work, school, leisure, etc. Can deal with most situations likely to arise whilst travelling in an area where the language is spoken. Can produce simple connected text on topics which are familiar or of personal interest. Can describe experiences and events, dreams, hopes and ambitions and briefly give reasons and explanations for opinions and plans.

- ❑ Each act of language use is set in the context of a particular situation within one of the *domains* (spheres of action or areas of concern) in which social life is organized:

- Personal domain
- Public domain
- Occupational domain
- Educational domain

The choice of the domains in which learners are being prepared to operate has far reaching implications for the selection of situations, purposes, tasks, themes and texts for teaching and testing materials and activities.

- ❑ This **Course** may be divided in module 1 (B 1.1) and module 2 (B 1.2). However the end examination will be concluding after completing all the programme of this Course, i.e., module 2 (B 1.2) at a minimum of 100 hours of class room contact hours.
- ❑ This **Course** may be divided in units, specifying the topics and grammar contents of the syllabus in each one, according to the planning of the teacher concerned who will conducted and assess also the continuous evaluation and the end examination.
- ❑ The Department Council may recommend to the approval of the Vice-Chancellor to incorporate and implement minor changes in the Syllabi/Contents/Contact hours and specific vocabulary and themes, etc., to tailor the **Course** contents to the requirements of the corporate sector/industry as necessary from time to time.

Objectives

At the end of this Course the student will be able to:

- ❑ sustain reasonably and fluently a straightforward description of one of a variety of subjects within his/her field of interest, presenting it as a linear sequence of points.
- ❑ give straightforward descriptions on a variety of familiar subjects within his/her field of interest.
- ❑ relate reasonably and fluently a straightforward narrative or description as a linear sequence of points.
- ❑ give detailed accounts of experiences, describing feelings and reactions.
- ❑ relate details of unpredictable occurrences, e.g. an accident.
- ❑ relate the plot of a book or film and describe his/her reactions.
- ❑ describe dreams, hopes and ambitions.
- ❑ describe events, real or imagined.
- ❑ narrate a story orally.
- ❑ develop an argument well enough to be followed without difficulty most of the time.
- ❑ briefly give reasons and explanations for opinions, plans and actions.
- ❑ deliver short, rehearsed announcements on a topic pertinent to everyday occurrences in his/her field.
- ❑ despite possibly very foreign stress and intonation, are nevertheless clearly intelligible.
- ❑ give a prepared straightforward presentation on a familiar topic within his/her field which is clear enough to be followed without difficulty most of the time, and in which the main points are explained with reasonable precision.
- ❑ take follow up questions, but may have to ask for repetition if the speech was rapid.
- ❑ write straightforward connected texts on a range of familiar subjects within his field of interest, by linking a series of shorter discrete elements into a linear sequence.
- ❑ write straightforward, detailed descriptions on a range of familiar subjects within his/her field of interest.
- ❑ write accounts of experiences, describing feelings and reactions in simple connected text.
- ❑ write a description of an event, a recent trip – real or imagined.
- ❑ narrate a story in writing.
- ❑ Can write short, simple essays on topics of interest.
- ❑ summarize, report and give his/her opinion about accumulated factual information on familiar routine and non-routine matters within his/her field with some confidence.
- ❑ write very brief reports to a standard conventionalized format, which pass on routine factual information and state reasons for actions.
- ❑ rehearse and try out new combinations and expressions, inviting feedback.
- ❑ work out how to communicate the main point(s) he/she wants to get across, exploiting any resources available and limiting the message to what he/she can recall or find the means to express.
- ❑ define the features of something concrete for which he/she can't remember the word.
- ❑ convey meaning by qualifying a word meaning something similar (e.g. a truck for people = bus).
- ❑ use a simple word meaning something similar to the concept he/she wants to convey and invites 'correction'.
- ❑ understand straightforward factual information about common everyday or job related topics, identifying both general messages and specific details, provided

Objectives

- ❑ understand the main points of clear standard speech on familiar matters regularly encountered in work, school, leisure etc., including short narratives.
- ❑ generally follow the main points of extended discussion between two natives, around him/her, provided speech is clearly articulated in standard dialect.
- ❑ understand simple technical information, such as operating instructions for everyday equipment.
- ❑ follow detailed directions.
- ❑ understand the information content of the majority of recorded or broadcast audio material on topics of personal interest delivered in clear standard speech.
- ❑ understand the main points of radio news bulletins and simpler recorded material about familiar subjects delivered relatively slowly and clearly.
- ❑ read straightforward factual texts on subjects related to his/her field and interest with a satisfactory level of comprehension.
- ❑ understand the description of events, feelings and wishes in personal letters well enough to correspond regularly with a pen friend.
- ❑ scan longer texts in order to locate desired information, and gather information from different parts of a text, or from different texts in order to fulfill a specific task.
- ❑ find and understand relevant information in everyday material, such as letters, brochures and short official documents.
- ❑ identify the main conclusions in clearly signaled argumentative texts.
- ❑ recognize the line of argument in the treatment of the issue presented, though not necessarily in detail.
- ❑ recognize significant points in straightforward newspaper articles on familiar subjects.
- ❑ understand clearly written, straightforward instructions for a piece of equipment.
- ❑ understand a large part of many TV programmes on topics of personal interest such as interviews, short lectures, and news reports when the delivery is relatively slow and clear.
- ❑ follow many films in which visuals and action carry much of the storyline, and which are delivered clearly in straightforward language.
- ❑ catch the main points in TV programmes on familiar topics when the delivery is relatively slow and clear.
- ❑ identify unfamiliar words from the context on topics related to his/her field and interests.
- ❑ extrapolate the meaning of occasional unknown words from the context and deduce sentence meaning provided the topic discussed is familiar.
- ❑ communicate with some confidence on familiar routine and non-routine matters related to his/her interests and professional field.
- ❑ exchange, check and confirm information, deal with less routine situations and explain why something is a problem.
- ❑ express thoughts on more abstract, cultural topics such as films, books, music etc.
- ❑ exploit a wide range of simple language to deal with most situations likely to arise whilst travelling.
- ❑ enter unprepared into conversation on familiar topics, express personal opinions and exchange information on topics that are familiar, of personal interest or pertinent to everyday life (e.g. family, hobbies, work, travel and current events).
- ❑ follow clearly articulated speech directed at him/her in everyday conversation by a native speaker, though will sometimes have to ask for repetition of particular words and phrases.
- ❑ maintain a conversation or discussion but may sometimes be difficult to follow when trying to say exactly what he/she would like to.

- ❑ follow much of what is said around him/her on general topics provided interlocutors avoid very idiomatic usage and articulate clearly.
- ❑ express his/her thoughts about abstract or cultural topics such as music, films. Can explain why something is a problem.
- ❑ give brief comments on the views of others.
- ❑ compare and contrast alternatives, discussing what to do, where to go, who or which to choose, etc.
- ❑ generally follow the main points in an informal discussion with friends provided speech is clearly articulated in standard dialect.
- ❑ give or seek personal views and opinions in discussing topics of interest.
- ❑ make his/her opinions and reactions understood as regards solutions to problems or practical questions of where to go, what to do, how to organize an event (e.g. an outing).
- ❑ express belief, opinion, agreement and disagreement politely.
- ❑ put over a point of view clearly, but has difficulty engaging in debate.
- ❑ take part in routine formal discussion of familiar subjects which is conducted in clearly articulated speech in the standard dialect and which involves the exchange of factual information, receiving instructions or the discussion of solutions to practical problems.
- ❑ deal with most transactions likely to arise whilst travelling, arranging travel or accommodation, or dealing with authorities during a foreign visit.
- ❑ cope with less routine situations in shops, post offices, banks, e.g. returning an unsatisfactory purchase.
- ❑ make a complaint.
- ❑ deal with most situations likely to arise when making travel arrangements through an agent or when actually travelling, e.g. asking passenger where to get off for an unfamiliar destination.
- ❑ exchange, check and confirm accumulated factual information on familiar routine and non-routine matters within his/her field with some confidence.
- ❑ describe how to do something, giving detailed instructions.
- ❑ summarise and give his or her opinion about a short story, article, talk, discussion, interview, or documentary and answer further questions of detail.
- ❑ find out and pass on straightforward factual information.
- ❑ ask for and follow detailed directions.
- ❑ obtain more detailed information.
- ❑ provide concrete information required in an interview/consultation (e.g. describe symptoms to a doctor) but does so with limited precision.
- ❑ carry out a prepared interview, checking and confirming information, though he/she may occasionally have to ask for repetition if the other person's response is rapid or extended.
- ❑ take some initiatives in an interview/consultation (e.g. to bring up a new subject) but is very dependent on interviewer in the interaction.
- ❑ use a prepared questionnaire to carry out a structured interview, with some spontaneous follow up questions.
- ❑ convey information and ideas on abstract as well as concrete topics, check information and ask about or explain problems with reasonable precision.
- ❑ write personal letters and notes asking for or conveying simple information of immediate relevance, getting across the point he/she feels to be important.
- ❑ write personal letters giving news and expressing thoughts about abstract or cultural topics such as music, films.
- ❑ write personal letters describing experiences, feelings and events in some detail.

<p><u>Teaching & Learning Methods</u></p>	<p>Communicative approach and teaching-learning process based on classroom tasks. The emphasis in a communicative task is on successful task completion and consequently the primary focus is on meaning as learners realise their communicative intentions. However, in the case of tasks designed for language learning or teaching purposes, performance is concerned both with meaning and the way meanings are comprehended, expressed and negotiated.</p>
--	---

Scheme of Evaluation & Assessment

As per OB-15 the evaluation of this Course will consist of Continuous Evaluation in a form of 4 assessments of one hour each with a total of **40%** of the marks assigned to this Course and an end assessment in a form of one Final Examination of four hours, three hours for written exam (40% marks) and one hour for oral exam (20 % marks)), together with a total of **60%** of the marks assigned to this Course.

Each assessment of the Continuous Evaluation will consist of a test with 10% of the marks, comprising reading comprehension (2.5 marks), written expression (2.5 marks), aural comprehension (2.5 marks) and oral expression (2.5 marks); The Final Examination will consist of a written test (two hours), comprising reading comprehension (20 marks), written expression (10 marks) and grammar (10 marks) and an oral exam, comprising aural comprehension (10 marks) and oral expression (10 marks).

Continuous Evaluation (40 marks) and Final Examination (60 marks) = 100 marks

Reading Comprehension – 30 marks

Written Expression – 20 marks

Grammar – 10 marks

Aural Comprehension – 20 marks

Oral Expression – 20 marks

Syllabus

Within the various domains we distinguish *themes*, as the topics which are the subjects of discourse, conversation, reflection or composition, as the focus of attention in particular communicative acts.

THEMES:

New themes should be added to the communicative topics introduced at the level A2, extending the vocabulary and the subjects of discourse.

1. Serviços (*Services*)

- ☐ Correios
- ☐ Banca
- ☐ Saúde
- ☐ Ensino

2. Juventude (*Youth*)

3. Hábitos sociais (*Social Behavior*)

4. Interculturalidade (*Intercultural exchanges*)
5. Problemas sociais (pobreza, dependências, desigualdades, preconceitos...) (*Social Issues*)
6. Projetos do futuro (cursos, profissões...) (*Future Projects*)
7. Meios de comunicação social (*Mass Media*)
8. Tecnologias de Informação e Comunicação (*IT and Communication*)
9. Aquecimento global / fenómenos naturais (*Global Warming/Natural Disasters*)
10. Portugal vs o país de residência (*Portugal vs. your country*)

- ☐ Diversidade paisagística e arquitetónica
 - ☐ Factos históricos
 - ☐ Figuras do mundo social e político atual
 - ☐ Figuras do mundo desportivo atual
 - ☐ Figuras do mundo cultural atual
- o Literatura, música, cinema, dança, arquitetura e outras áreas

11. Outros países de língua portuguesa (*Other Portuguese Speaking Countries*)

- ☐ Principais regiões e características paisagísticas
- ☐ Figuras do mundo cultural e desportivo atual

GRAMMAR CONTENTS:

Phonetics and Ortography

- ☐ As regras gerais de acentuação gráfica e o hífen (uso na translineação, em enclíticos e palavras compostas)
- o Palavras agudas, graves e esdrúxulas
- ☐ As regras de translineação
- ☐ Sinais de pontuação
- ☐ Palavras homógrafas

Semantics

- ☐ Uso denotativo e conotativo de palavras
- ☐ Polissemia
- ☐ Relações de hierarquia entre as palavras: hiperonímia / hiponímia
- ☐ Palavras da mesma família
- ☐ Palavras do mesmo campo lexical

Morphology (Nouns, Adjectives & Verbs)

- ☐ Processos morfológicos de formação de palavras: derivação por prefixação e sufixação (nominalização)
- ☐ Processos irregulares de formação de palavras: onomatopeias
- ☐ Neologismos

- ☐ Palavras variáveis e invariáveis
- ☐ Nomes
- o Flexão:
 - ☐ Adjetivos
 - ☐ Género
 - ☐ Número
 - o Qualificativos; relacionais; numerais
 - o Flexão
 - ☐ Género
 - ☐ Número
 - ☐ Grau: normal
 - ☐ Comparativo de superioridade, de igualdade e de inferioridade
 - ☐ Superlativo absoluto analítico
 - ☐ Superlativo de superioridade e de inferioridade
 - ☐ Pronomes pessoais – Flexão
 - o Formas tónicas: pessoa; género; número: referência do enunciador / do interlocutor – formas de tratamento
 - o Formas átonas
- ☐ Determinantes
- ☐ Marcadoras de reflexividade
 - ☐ [Casos] Complemento direto e indireto / colocação na frase
 - o Artigos
 - ☐ Valores determinados pelo contexto: genericidade; afetividade
 - o Possessivos e demonstrativos: valores determinados pelo contexto
 - o Indefinidos
- ☐ Pronomes possessivos, demonstrativos, indefinidos e relativos
 - o Valor anafórico; deitização
 - o Colocação dos pronomes demonstrativos átonos
 - ☐ Quantificadores (numerais, existenciais, universais)
 - o Numerais fracionários
 - o Interrogativos
 - o Relativos
- ☐ Verbos
 - o Regulares e irregulares (1ª, 2ª e 3ª conjugações)
 - o Defetivos impessoais
 - o Transitivos, intransitivos e predicativos; copulativos
 - o Modos / tempos verbais:
 - ☐ Indicativo: eixo do presente vs eixo do passado vs eixo do futuro (presente, pretérito perfeito simples e composto, pretérito imperfeito e futuro / condicional [perífrases])
 - ☐ Valor aspetual: anterioridade / simultaneidade / posterioridade
 - ☐ Futuro do indicativo em atos de fala compromissivos (promessas, juramentos)
 - ☐ Imperativo

- ☐ Conjuntivo: presente – uso conforme expressão de:
 - ☐ possibilidade (*é possível que, talvez...*)
 - ☐ desejo (*oxalá, espero que...*)
 - ☐ Formas não finitas: infinitivo pessoal / impessoal; gerúndio; particípio passado
- o Valores semânticos
 - ☐ Verbos de comunicação que:
 - ☐ Especificam a realização fónica do discurso (*gritar, sussurrar...*)
 - ☐ Referem a atividade mental (*pensar, imaginar...*)
 - ☐ Situam o discurso reportado na cronologia discursiva (*começar por dizer, continuar, acabar por...*)
 - ☐ Inscrevem o discurso reportado numa tipologia discursiva (*contar, descrever...*)
 - ☐ Explicitam a força elocutória (*pedir, suplicar, ordenar ...*)
 - ☐ Explicitam os efeitos sobre o interlocutor (*ficar interessado em, alarmar-se...*)
- o Auxiliares de
 - ☐ Tempo composto
 - ☐ Passiva
 - ☐ Aspeto
- ☐ Advérbios e locuções adverbiais:
 - o Relativos; de quantidade e grau
 - o Valores semânticos: tempo, lugar, afirmação, dúvida, intensificação, modo, negação, interrogação, inclusão, exclusão
- o Preposições e locuções prepositivas
 - o Exigidas por verbos, advérbios, nomes ou adjetivos
 - o Valores semânticos: localização, movimento, tempo, causa
- ☐ Interjeições: registo corrente e familiar

Syntaxe: sentences elements

1. Constituintes: grupo nominal / verbal; grupo adverbial; grupo preposicional
2. Ordem dos grupos na frase
3. Processos sintáticos: concordâncias básicas dos grupos; elipse; transformação da ativa/passiva
4. Tipos de frases
 - ☐ Intenções comunicativas: declarativa, interrogativa (parcial / total), imperativa e exclamativa
5. Articulação entre frase: simples; complexa
 - ☐ Coordenação: copulativa, adversativa, disjuntiva, explicativa e conclusiva
 - ☐ Subordinação:
 - o Temporal, causal, comparativa, consecutiva, final, condicional
 - o Completiva
 - o Relativa restritiva e explicativa
6. Organização do texto no plano interdiscursivo:
 - ☐ Do título aos parágrafos e à pontuação

7. Organização, sequencialização e estruturação da informação:

- ☐ Conversacionais
- ☐ Temporais
- ☐ Aditivos / Enumerativos
- ☐ Adversativos
- ☐ Explicativos / Conclusivos

APPENDIX D-ADVANCED DIPLOMA IN FRENCH LANGUAGE

Course Title: Advanced Diploma in French Language	Level: 4/B2
Intake : Max. 20	Hours: 120
Pre-requisite(s): Certificate of Proficiency in French language 1 and 2 and Diploma of Proficiency in French language Or Entrance Test Eligibility : 12 th Std + Entrance Test	
Aims: This course aims, firstly, at developing <ul style="list-style-type: none"> • Effective communication in academic and professional environments • put to good use personal learning skills and strategies • an ability to appreciate form and functions of different subject-typical text types • basic translation techniques Secondly, it aims at developing the ability to <ul style="list-style-type: none"> • use different media for academic and professional tasks (ranging from dictionaries to Internet and multimedia tools) 	
Learning Outcomes: At the end of the course, students will be able <ul style="list-style-type: none"> • to demonstrate ability to understand (written and audio-visual) subject related material and to produce subject related texts in writing and/or orally. • Translate general and basic technico-commercial texts (press articles, business correspondence, extracts of instruction manuals etc) Furthermore, students will be able to <ul style="list-style-type: none"> • read and understand specialised texts • express opinions on a wide variety of subjects • interpret others' positions, opinions and needs in a wide range of academic and professional situations 	
PRESCRIBED TEXT BOOK: PRESCRIBED TEXT BOOK : A PROPOS B1-B2/ VERSION ORIGINALE -4 <ul style="list-style-type: none"> • Teaching Methodology: Teaching methods and syllabus are based on the introduction of students to principles of autonomous and self-directed learning and LSP methodologies. This module will contain LSP in various media and forms of presentation (oral: lectures; audio-visual: TV, video; ICT: Internet, CD-ROMs) Introduction to "Intellectual styles" in home and target academic community . Independent work (group and individual) .Exercises in task setting and fulfilling • Assesment Continuous Assesment : 4 tests x 1 hour (Written and Oral Comprehension and Expression) for 40% Final Examination : 3 hours written Examination (comprehension, expression grammar, translation) - 40% marks and 1 hour duration Oral examination (Expression : aural comprehension / oral expression) for 20% marks. Total 60% 	

Proposed duration	
Lectures + Tests/ Tutorials:	6 x 18 weeks = 108 hours / 4 x 27 = 108 hours
Independent Learning and home assignments:	6 x 2 = 12 hours
TOTAL:	120

APPENDIX E: ADVANCED DIPLOMA IN TRANSLATION (FRENCH-ENGLISH)

Module Title: Advanced Diploma in Translation Studies	
Intake : Max. 10	Hours: 200 / 1 year
Pre-requisite(s): Advanced Diploma of Proficiency in French language / MA French/BA French / Level B2 of the Alliance Française / Entrance Test	
<p>Aims:</p> <p>This course aims, at building a foundation in translation theories and imparting translation techniques through</p> <p>A) THREE FOUNDATION/THEORETICAL MODULES</p> <ol style="list-style-type: none"> 1. Introduction to Linguistics (5 lessons x 3 hours) A introduction to linguistics: This module introduces the structures and functions of languages. (Characteristics of Human Language, Language and Communication, Language Functions and Language and Culture) 2. Translation Theory and Practice (5 lessons x 3 hours) This module introduces the different schools of translation theories and their applications to help students achieve a systematic understanding of translation. It reveals to students the fundamental workings of translation through analysis and interpretation of cases drawn from daily life. 3. Comparative Stylistics (5 lessons x 3 hours) This module presents students with a systematic comparison of the English and French languages from the macro to the micro points of view, so as to deepen their understanding of the nature of the two languages and enable them to handle problems encountered in the process of translation more competently. <p>B) THREE APPLICATION MODULES</p> <ol style="list-style-type: none"> 1. Translation Skills for Different Genres (20 lessons x 3 hours) This module analyzes texts of different genres and their translations, to demonstrate their stylistic and linguistic features and recommends strategies to translate them. It covers genres such as business documents, technical writings, news reports and literature, to raise students' awareness of styles and improve the quality of translations. 2. Integrated Translation Skills (5 lessons x 3 hours) This module identifies common problems in translation and offers solutions. It helps students to make effective use of translation resources in the information age and provides them with the latest technologies and trend in the field, to synergize their integrated translation skills. 3. Interpretation Theory and Practice (10 lessons x 3 hours) This module introduces the basic thinking modes and procedures in interpretation and develops students in various interpretation skills to enable them to utilize their bilingual competence to meet the needs of different interpretation tasks. 	

Learning Outcomes:

At the end of the course, students will be able

- * to interpret and translate different types of professional documents from and into French
- * to understand structures and functions of languages in general
- * to appreciate and apply different approaches and strategies to translation
- * to understand the differences between the source and target languages and cultures
- * to understand the limits and effectively use modern technology as a translation tool

Furthermore, students will be able to

- * read and understand specialised texts
- * produce a glossary of specialised terms
- * produce a mini-corpus of parallel or comparable texts

PRESCRIBED TEXT BOOKS : Selected bibliography included – Books are available in the library or the Department

- **Assesment**

Continuous Assesment : 4 tests x 2 hour for 40% marks

Final Examination: 4 hours written Examination (theory questions : 20% and 2 short texts of 200 -250 words for translation : 40% marks) . Total 60%

Duration: 1 year	
Lectures + Tutorials :	6 x 25 weeks = 150 hours
Independent Learning and home assignments	10 x 3 = 30 hours
2 Mini-projects	2 x 10 hours = 20 hours
TOTAL	200 hours

Programme: F.Y. B. A. (French)

Course Code: UFFC 101

Title of the Course: French Phonetics and Oral Expression 1

Number of Credits: 4

Effective from AY: 2018-19

<u>Prerequisites for the course:</u>	Any student pursuing First year undergraduate programme in French at Goa University is eligible to take the course as a core paper.	
<u>Objective:</u>	<p>The main aim of this introductory course is to improve students' pronunciation of Standard French through systematic description and practice of the sound system. Students will learn the articulatory features of speech production and techniques for improving their own pronunciation. The course is designed for students who need to improve their pronunciation, auditory discrimination, oral expression and aural comprehension in order to continue developing their French skills.</p> <p>They will gradually be introduced to the basic linguistic terminology of articulatory phonetics and to the workings of the International Phonetic Alphabet.</p> <p>Theoretical material is reinforced through practical oral, listening, and written exercises.</p>	
<u>Content:</u>	<p>Basic linguistic material to be learned includes relevant symbols of the International Phonetic Alphabet, speech organs, place and manner of articulation, and syllabification. Treated elements of the French sound system include intonation, rhythmic patterns, stress, liaison, oral and nasal vowels, the e muet, semi-vowels, and consonants.</p> <p>Module 1- Introduction- Phonetics and Phonology, phonetic alphabet, International Phonetic Alphabet (IPA) Articulation phonetics: the organs of speech and their functions</p> <p>Module 2- Presentation of vowels, Basic rules of pronunciation, Articulating vowels</p> <ul style="list-style-type: none"> ▪ [ə/e/ɛ] & [ɛ/a/ɑ] ▪ [ø/œ] & [o/ɔ] ▪ [i/y/u] & semi-vowels ▪ nasal vowels <p>Module 3 - Presentation of consonants, Basic rules of pronunciation, silent final consonants, liaisons & syllabification, silent "e", Articulating consonants,</p> <ul style="list-style-type: none"> ▪ [ʁ/l] ▪ other consonants <p>Module 4 - Prosody: stress, vowels' duration, fluency, rhythm and intonation</p>	<p>15hours</p> <p>15hours</p> <p>15hours</p> <p>15hours</p>
<u>Pedagogy:</u>	The course will feature a strong audio media component. In addition to written work students will record pronunciation exercises and turn in the audio files they create as part of their homework credit. Class time will be spent reinforcing concepts introduced in readings and applying this knowledge through pronunciation exercises in collective and small group settings. Course taught in French

Programme: T.Y. B. A. (French)

Course Code: UFFC 109

Title of the Course: Introduction to Translation Studies

Number of Credits: 4

Effective from AY: 2018-2019

<u>Prerequisites for the course:</u>	Any student pursuing Third year undergraduate programme in French at Goa University is eligible to take the course as a core paper.	
<u>Objective:</u>	The course is designed to introduce students to basic concepts of translation theory, Linguistics and comparative stylistics. It is focused on the history, theory, and practice of translation. It has been designed to ensure that theoretical knowledge goes hand in hand with a practical understanding. The main goal of this course is to <ul style="list-style-type: none"> ● initiate students to basic translation techniques ● introduce students to translation studies as separate discipline of knowledge ● enable them to link theory and practice ● develop students' contrastive knowledge and their critical thinking skills ● and improve students' writing skills and language fluency through the practice of translation. 	

<u>Content:</u>	<p>Module 1.Introduction to Linguistics A introduction to linguistics: This module introduces the structures and functions of languages. (Characteristics of Human Language, Language and Communication, Language Functions and relation between Language and Culture)</p> <p>Module 2.Translation Theory This module introduces the different schools of translation and their applications to help students achieve a systematic understanding of translation. It reveals to students the fundamental workings of translation through analysis and interpretation of cases drawn from daily life.</p> <p>Module 3.Contrastive Stylistics This module presents students with a systematic comparison of the English and French languages from the macro to the micro points of view, so as to deepen their understanding of the nature of the two languages and enable them to handle problems encountered in the process of translation more competently.</p> <p>Module 4.Use of Translation resources and Translation Practice -Types of texts and their translations, to demonstrate their stylistic and linguistic features and recommends strategies to translate them. It covers genres such as basic business documents, news reports and texts from elementary literary works to raise students' awareness of styles and techniques. -Use of translation resources Identification of common problems in translation and their solutions. It helps students to make effective use of translation resources in the information age.</p>	<p>15hours</p> <p>15hours</p> <p>15hours</p> <p>15hours</p>

Programme: T.Y. B. A. (French)

Course Code: UFFD 101

Title of the Course: Study of Cultural Objects

Number of Credits: 4

Effective from AY: 2018-2019

<u>Prerequisites for the course:</u>	Any student pursuing Third year undergraduate programme in French at Goa University is eligible to take the course as an elective paper.	
<u>Objective:</u>	This course aims at strengthening the base in French language by exploring contemporary Francophone societies through their cultural objects. Cultural objects (people, artefacts, signs, objects, rituals, historical events, etc.) are symbolic figures that play an essential role in constructing and maintaining national and social imagination, as well as establishing a collective identity. This course investigates a range of cultural objects shared by the francophones in the areas of history and culture, work and education, celebrities, daily life, food. Participants will reflect critically on these iconic figures and assess the way they interrelate with each other so as to form a cultural grammar. Simultaneously, participants will be led to conduct a critical appraisal of their own iconic figures. All the materials used in this course will be in French.	
<u>Content:</u>	<p>Module 1-Studying French cultural objects through selected texts and images and the interrelation between them.</p> <p>Module 2-Initiation to selected cultural objects of Francophone countries (two countries)</p> <p>Module 3-Identification and appraisal of Indian cultural icons. Production of texts describing and analysing Indian cultural objects using creative writing techniques</p>	<p>15hours</p> <p>30hours</p> <p>15hours</p>
<u>Pedagogy:</u>	Teaching methods and syllabus are based on the introduction of students to principles of autonomous and self-directed learning and LSP methodologies. This module will contain LSP in various media and forms of presentation (oral: lectures; audio-visual: TV, video; ICT: Internet, CD-ROMs). Independent work (group and individual). Exercises in task setting and fulfilling Course taught in French

Programme: T.Y. B. A. (French)

Course Code: UFFD 102

Title of the Course: Business
Communication in French

Number of Credits: 4

Effective from AY: 2018-2019

<u>Prerequisites for the course:</u>	Any student pursuing Third year undergraduate programme in French at Goa University is eligible to take the course as an elective paper.	
<u>Objective:</u>	<p>This course introduces students to a specialized business language in order to help them to work and succeed in an international French-speaking environment. It lays emphasis on oral and written communication, as well as the acquisition of a business and commercial vocabulary dealing with the varied activities of a commercial firm. It aims, at</p> <ul style="list-style-type: none"> • introducing students to the cultural and commercial etiquettes in Francophone societies. • developing student's linguistic skills and working knowledge of the vocabulary and expressions used in business transactions • helping students imagine and construct a letter of interest for a position in a French-speaking company and also plan a strategy for responding to a French interview and determine its efficiency by participating in a job interview in French. • Analysing a product, its potential success and devise a marketing campaign in French. <p>Furthermore, the course will engage students with the working world through practice in the job search process, CV preparation, interviewing, interacting and performing in a French-speaking working environment. In doing so, students will draw on valuable crossover skills from their own culture and their native language.</p>	
<u>Content:</u>	<p>Module 1- Apply for a Job -Job search, Job application: Cover letter and CV, -the fundamentals of a formal job interview: Prepare for an Interview, Do's and Don't during an interview. Simulation: Job Interview</p> <p>Module 2-Oral business communication: - receiving calls & leaving voicemails - exchanging information on the phone - checking & clarifying facts & figures - making polite requests & enquiries - talking about professional experiences - delivering a presentation</p> <p>Module 3-Written business communication</p>	<p>15hours</p> <p>15hours</p> <p>15hours</p>

	<ul style="list-style-type: none"> -Business Letter and email -Writing letters following up sales -Taking notes for a presentation -Report writing <p>Module 4- Marketing</p> <ul style="list-style-type: none"> -Introducing one's own company and product description -Placing an order, making a payment -study of advertisements and publicity material 	15hours
<u>Pedagogy:</u>	<p>The general methodological principles adopted for this course are based on integrating all four skills (reading, writing, speaking and listening) into highly motivational activities where the student is the protagonist, and in doing so reflects real life. Teaching methods and syllabus are based on the introduction of students to principles of autonomous and self-directed learning and LSP methodologies. This module will contain LSP in various media and forms of presentation (oral: lectures; audio-visual: TV, video; ICT: Internet, CD-ROMs). Independent work (group and individual) .Exercises in task setting and fulfilling. Role-plays will be used to reinforce the content learnt. Course taught in French</p>	
<u>References/Readings</u>	<p>PRESCRIBED TEXT BOOK : Selected bibliography and recommended websites included</p> <p>BIBLIOGRAPHY</p> <ol style="list-style-type: none"> 1. Programme: T.Y. B. A. (French)

Course Code: UFFD 105

Title of the Course: Study of French Cinema

Number of Credits: 4

Effective from AY: 2018-2019

<u>Prerequisites for the course:</u>	Any student pursuing Third year undergraduate programme in French at Goa University is eligible to take the course as an elective paper.	
<u>Objective:</u>	In this course, students will watch, discuss and analyze a dozen landmark French films through the lens of style and culture. Students will study film genres and movements in relation to social, cultural and aesthetic trends. Since French film, as in all national cinemas, is deeply tied to its country's history and culture, we will also discuss the socio-historical backgrounds in which these films were made. This course focuses on movies not primarily for their entertainment value but for their contributions to cinema as an art form and a means of commentary upon human society.	
<u>Content:</u>	<p>Module1- Appreciating French Cinema</p> <p>- Masterpieces of French cinema</p> <p>- Characteristics of New wave Cinema.</p> <p>Module 2- Diversity in French cinema</p>	<p>30 hours</p> <p>30 hours</p>

	-Film festivals and awards -Les cahiers du cinema, Journals and websites - Film reviews	
<u>Pedagogy:</u>	Introductory lectures by instructor, accompanied by films and followed by class discussions. Class presentations by individuals or team of students on various directors and aspects of French society. Viewing of feature films in French with subtitles, class discussions. Writing papers on major films and creation of youtube videos Course in French

<u>Learning Outcomes</u>	At the end of the course, students will be able to <ul style="list-style-type: none"> • understand the evolution and diversity of French cinema 	

	<ul style="list-style-type: none"> • develop critical thinking in analysing the films and comparing with Hollywood/Bollywood movies. • experience the art of cinema itself and how it represents French society and culture • identify France's principal directors, movements, and actors 	
--	---	--

Programme: T.Y. B. A. (French)

Course Code: UFFP

Title of the Course: Project

Number of Credits: 4

Effective from AY: 2018-2019

<u>Prerequisites for the course:</u>	<p>All students undertake an independent research project which culminates in a dissertation. The project can be carried out individually or in a group on any topic related to the program under the supervision of the Project guide.</p> <p>Students can begin working on their dissertation after semester 4 and need to submit the final copy in the prescribed format before the end of semester 6, on a date decided by the Department of French and Francophone studies.</p>	
<u>Objective:</u>	<p>Aims: The aims of the dissertation are to:</p> <ul style="list-style-type: none"> • put into practice theories and concepts learned in the programme; • provide an opportunity to study a particular topic in depth; • show evidence of independent investigation; • enable interaction with practitioners (where appropriate to the chosen topic); • show evidence of ability to plan and manage a project within deadlines 	
<u>Content:</u>	<p>Dissertations need to demonstrate knowledge and understanding of a given topic and should also reach a level of scope and depth beyond that taught in class. All dissertations must be presented according to the guidelines laid down by Goa University and in an appropriate academic style and format to ensure that the precise aims of the dissertation are met.</p>	60hours
<u>Assessment:</u>	<p>The dissertation is assessed on the basis of the content of the submitted document and a viva voce examination. All dissertations will be read by two internal examiners including the project guide. In addition, some dissertations may be read by an External Examiner to ensure a uniform standard is maintained.</p> <p>The dissertation will be written in French</p>	
<u>Learning Outcomes</u>	<p>After completion of the dissertation students should be able to:</p> <ul style="list-style-type: none"> • define, design and deliver an academically rigorous piece of research; • understand the relationships between the theoretical concepts 	

	<p>taught in class</p> <p>and their application in specific situations;</p> <ul style="list-style-type: none"> • show evidence of a critical and holistic knowledge and have a deeper understanding of their chosen subject area; • appreciate practical implications and constraints of the specialist subject; • Understand the process and decisions to be made in managing a project within strict deadlines

Programme: S.Y. B. A. (French)

Course Code: UWOC 105

Title of the Course: Women's writings from India and Francophone World.

Number of Credits: 4

Effective from AY: 2019-2020

<u>Prerequisites for the course:</u>	Any student pursuing his/her undergraduate programme at Goa University is eligible to take the course as a core paper.	
<u>Objective:</u>	<p>Women writers have influenced thinking around the world, but this was not always recognized until recently. This course in feminist fiction introduces the students to works by and about women from social and literary perspectives as it seeks to inform about gendered identities. More specifically, in this course students will learn how gender roles develop and change and how women's views of themselves are reflected in their writing.</p> <p>Students will study a selection of novels and/or short stories that focus on women's lives and reflect on what it means to be a woman and a feminist from various perspectives. The course will acquaint students with the culture of India, Goa, and Francophone region through the particular perspective of women.</p> <p>Discussion of readings will enable students to understand how women's literary expression has been shaped by history, culture, and their experiences, as well as see how they are addressing issues of gender in their respective societies.</p>	
<u>Content:</u>	<p>Module 1- Feminist Literary Theory</p> <p>History: First wave feminism, Second wave feminism, Third wave feminism, Fourth wave feminism, Post feminism.</p> <p>Ideologies and Movements: Anarchist, Socialist and Marxist, Radical, Liberal, Black, Third World, South Asian, Libertarian, Ecofeminism, Post structural and Post modern, Riot Grrrl, Contemporary Movements</p>	<p>15 hours</p> <p>15</p>

	<p>Module 2- Readings from ONE text by an Indian author</p> <ol style="list-style-type: none"> 1. <i>A River Sutra</i> by Gita Mehta 2. <i>Interpreter of Maladies</i> by Jhumpa Lahiri 3. <i>Women Writing in India 600 B.C. to the Present</i> by Susie Tharu, and K. Lalita. (selected short stories) <p>Module 3- Readings from ONE text by a Goan author</p> <ol style="list-style-type: none"> 1. <i>Skin</i> by Margaret Mascarenhas 2. <i>Monsoon</i> by Vimala Devi 3. <i>The Salt of the Earth: Stories from Rustic Goa</i> by Jayanthi Naik. <p>Module 3- Readings from ONE text by a Francophone author (In translation)</p> <ol style="list-style-type: none"> 1. <i>A Frozen Woman</i> by Annie Ernaux 2. <i>The First Garden</i> by Anne Hebert 3. <i>Pelagie: The Return to Acadie</i> by Antonine Maillet 	<p>hours</p> <p>15 hours</p> <p>15 hours</p>
Pedagogy:	Lectures, readings, discussions and class presentations with ICT tools.

Approach the social habits of the Portuguese. 7. write various types of short texts (to expose, narrate, describe). 8. use vocabulary and grammar efficiently.

Programme: B.A. (Portuguese)

Course Code: PRG 101 **Title of the Course:** PORTUGUESE LANGUAGE I

Number of Credits: 4

Effective from AY: 2017-18

<u>Prerequisites:</u>	Any student pursuing his/her undergraduate programme at Goa University is eligible to take the course as a core paper.	
<u>Objectives:</u>	In consonance with the overall aims of the degrees offered in the U.G., these modules will focus on developing the students' written and aural/oral communicative competence in the foreign language (including fluency, grammatical and lexical accuracy and range), facilitate students' ability to establish and maintain effective social and working relations with speakers of the foreign language.	
<u>Content:</u>	Module 1: ORAL COMPREHENSION / ORAL PRODUCTION AND INTERACTION Reading, conversation skills and interaction. Interaction in a simple way. Questions in areas of immediate need or on very familiar topics. Sentences to describe where I live and people I know. Familiar words and very basic phrases concerning myself, my family and immediate concrete surroundings.	15 hours
	Module 2: READING COMPREHENSION Familiar names, words, and very simple, sentences, for example on notices and posters, or in catalogues. Short, simple messages on postcards.	15 hours
	Module 3: WRITING SKILLS Personal details in written form Simple postcard. Numbers and dates, own name, nationality, address, age, date of birth. Filling a hotel registration form or other forms. Copy out single words or short texts presented in standard printed form.	15 hours
	Module 4: GRAMMAR AND VOCABULARY - Basic vocabulary repertoire of isolated words and phrases related to particular concrete situations. - Pronunciation: alphabet; explanation of Portuguese pronunciation going into all the nuances and varying sounds involved (vowels, consonants and nasal sounds);	15 hours

- Introduction to the basic rules of sentences structure;
- Articles; Nouns: Gender and plural endings of nouns;
- Pronouns: Personal pronouns / Subject pronouns;
- Adjectives: Agreement of adjectives with Nouns / Plural of Adjectives;
- Negative and Interrogative forms;
- Verbs: Paradigm of three regular conjugations / Irregular Verbs; Present Tense and Past Definite; Imperative.
- Introduction to the use of Prepositions
- Vocabulary: acquisition of day to day practical vocabulary concerning social life, transportation and nature.

TEMAS/THEMES:

1. Identidade (*Personal Identification*)

- Nome próprio; apelido; diminutivo
- Lugar e data de nascimento / idade
- Nacionalidade
- Endereço

2. Pessoas (*People*)

- Caracterização física / partes do corpo (olhos, cabelos...)
- Vestuário; calçado
- Características da personalidade (simpático, alegre, tímido...)
- Ações (realizadas com o corpo: levantar-se...)
- Objetos pessoais

3. Vida familiar e social (Relations with relatives and friends)

- Relações familiares e sociais (pai... amigo)
- Festas (celebrações)
- Saúde e higiene
- Refeições
- Alimentos e bebidas
- Objetos / utensílios
- Espaços
- Hábitos familiares (comidas típicas, horários...)

4. Educação (School and *Education*)

- Escola / espaços
- Agentes educativos
- Horários e matérias curriculares
- Linguagem própria do funcionamento da aula
- Mobiliário e material escolar

5. Lazer (*Leisure*)

- No quotidiano (brincar (como; com quem), ler, ver televisão, ir ao cinema, ouvir música ... desportos, jogos...)
- Nas férias (praia, campo, viagem ...)

	<p><i>Note: The acquisition of these grammar skills will depend on simple and practical examples followed by intense experimental self-testing.</i></p> <p><u>Work Requirements</u> Weekly aural, oral and written exercises; once a week the Language Laboratory facilities will be used.</p>	
<u>Pedagogy:</u>	Communicative approach and teaching-learning process based on classroom tasks. The emphasis in a communicative task is on successful task completion and consequently the primary focus is on meaning as learners realise their communicative intentions. However, in the case of tasks designed for language learning or teaching purposes, performance is concerned both with meaning and the way meanings are comprehended, expressed and negotiated.	
<u>Text Books / Reference Books:</u>	<p><u>Required books:</u></p> <ul style="list-style-type: none"> - Português XXI Nível 1 (book and CD), by Ana Tavares (Coord. By Renato Borges de Sousa), edited by LIDEL, Lisboa-Portugal; - Português XXI Nível 1 - Caderno de Exercícios (Livro segundo o novo Acordo Ortográfico) by Ana Tavares, edited by LIDEL, Lisboa-Portugal. <p><u>Recommended books:</u></p> <ul style="list-style-type: none"> - <i>Portuguese in three Months</i>, by Maria Fernanda Allen, Hugo's Language Books; - <i>Essential Portuguese Grammar</i>, by Alexander da R. Prista, New York, Dover Publications - <i>Compêndio de Gramática Portuguesa</i>, by J.M.Nunes Figueiredo & A.Gomes Ferreira, Porto, Porto Editora; - <i>Guia Prático dos Verbos Portugueses</i>, by Deolinda Monteiro & B. Pessoa, LIDEL, Lisboa; - <i>The New Michaelis Dictionary(English-Portuguese/Portuguese-English)</i>, Melhoramentos, São Paulo; <p><i>Other suitable books and materials will be recommended at the beginning of the course.</i></p>	
<u>Learning Outcomes:</u>	<p>At the end of these modules students will have gained knowledge of:</p> <ul style="list-style-type: none"> • the basic lexical and grammatical structures and their uses in written and oral communication <p>In addition they will have gained experience in:</p> <ul style="list-style-type: none"> • reading for information using material of appropriate complexity and length • listening for information • developing study skills: using audio and video aids. <p>Can understand and use familiar everyday expressions and very basic phrases aimed at the satisfaction of needs of a concrete type. Can introduce him/herself and others and can ask and answer questions about personal details such as where he/she lives, people he/she knows and things he/she has. Can interact in a simple way provided the other person talks slowly and clearly and is prepared to help.</p>

PRCCH-01 Writing Skills and Technique I (DSC 3A)

F.Y.B.A. (Honours)

Semester I

Level: A 2.2 (following the *Common European Framework of Reference for Languages: learning, teaching, assessment*)

Number of Hours: 60

4 credits

OBJECTIVES:

- To develop written skills on various type of texts: academic texts, legal and multipurpose texts, journalistic, diary and personal writing.
- To strength and deepen the knowledge of the student in writing, following the sentence structure and its main parts (word, accentuation, punctuation and paragraph), the grammatical and linguistic rules, keeping in view the stylistics and functional pragmatic aspects of the language.
- To develop language knowledge of grammatical, discursive and lexical structures and social and cultural competences in order to interact in specific social and professional contexts.

LEARNING OUTCOMES:

At the end of this Course the students will be able to:

- fill forms and responding to simple questionnaires.
- produce biographical texts.
- write texts reporting events and personal experiences with descriptions.
- produce fiction and non-fiction narratives incorporating detailed descriptions.
- Present, by writing, ideas clearly and concisely, avoiding ambiguity or redundancy.

SYLLABUS

Module 1

1 credit

- Textos narrativos curtos (relatos de ações, atividades, experiências).
- Textos descritivos curtos (descrições de pessoas, lugares, reações, hábitos, planos e preparativos); banda desenhada, legendagens.

Module 2

1 credit

- Biografias (breves)
- O género epistográfico e diarístico.
- Postais de férias, mensagens eletrónicas, convites

Module 3

1 credit

- Notícias e outros textos informativos (entrevistas, reportagens e artigos de opinião)

- Ementas, receitas, livros de instruções
- Relatórios, esquemas, tabelas

Module 4

1 credit

- Sumários, atas de reuniões, convocatórias, avisos, notas e mensagens
- Cartas de registo formal, requerimentos, formulários.

ACTIVITIES AND PRACTICE:

1. Escrever tendo em conta:

- Especificidade do texto
- Tema e intencionalidade comunicativa
- Destinatário
- Tipo de texto
- Planificação da escrita: Plano prévio, Tópico(s), Expansão, Redação, Revisão: deteção de erros; correção / substituição; reescrita
- Regras ortográfica
- Do fonema ao grafema; acentuação e diacrítico (hífen); formas convencionais básicas da escrita; maiúsculas e minúsculas
- Pontuação
- Paragrafação
- Mecanismos de coesão
- Reiteração do grupo nominal; substituição lexical (sinonímia); definição/ determinação; pronominalização; elipse
- Ligação frásica / transfrásica: pontuação, conectores de adição, oposição, causalidade, consequência, temporalidade

2. Responder a questionários sobre:

- Si próprio (identificação, saúde, rotinas...)
- Atividades escolares
- Atividades de tempos livres (desporto, leitura, televisão, música...)

3. Produzir enunciados originais de sequências dialogais, narrativas, descritivas, injuntivas ou expositivas.

4. Escrever textos de formato específico:

- Correspondência familiar
- Convites; avisos
- Convocatórias
- Sumários
- Notícias
- Biografias (breves)
- Histórias (inserindo breves diálogos)

5. **Resumir** textos - percepção de que é necessário (i) selecionar a informação principal e (ii) construir um novo texto.

6. Construir um autodicionário

- Vocabulário aprendido na aula
- Vocabulário aprendido extra-aula
- Vocabulário científico ou técnico, em interação com as matérias curriculares

METHOD(S) AND TIMING OF ASSESSMENT

Intra-Semester Assessment (2 ISAs) 20% (20 marks) and **Semester End Examination** (SEE) 80% (80 marks)

SEE: The final exam will consist of a written test – duration 2 hours; 80 marks

PRCCH-02 Writing Skills and Technique II (DSC 3B)

F.Y.B.A. (honours)

Semester II

Level: B 1.1 (following the *Common European Framework of Reference for Languages: learning, teaching, assessment*)

Number of Hours: 60

4 credits

OBJECTIVES:

- To develop written skills on various type of texts: academic texts, legal and multipurpose texts, journalistic, diary and personal writing.
- To strength and deepen the knowledge of the student in writing, following the sentence structure and its main parts (word, accentuation, punctuation and paragraph), the grammatical and linguistic rules, keeping in view the stylistics and functional pragmatic aspects of the language.
- To develop language knowledge of grammatical, discursive and lexical structures and social and cultural competences in order to interact in specific social and professional contexts.

LEARNING OUTCOMES:

At the end of this Course the students will be able to:

- respond to questionnaires making a good interpretation of texts based on their world knowledge.
- rewrite texts following texts pattern, expressing different points of view.
- have the ability to summarise texts.
- write texts with narrative, descriptive, argumentative and explicative structures.
- write texts of various type (summaries, convocations, minutes and technical or scientific reports)
- present, by writing, ideas clearly and concisely, avoiding ambiguity or redundancy.

SYLLABUS

Module 1

1 credit

- A estrutura narrativa e as sequências dialogais.
- Entrevistas, as falas do texto dramático
- Notícias, reportagens, relatórios
- Biografias (excertos), diários, cartas de registo informal (consolidação)

Module 2

1 credit

- A estrutura descritiva; formulários, fichas escolares, enciclopédias, mapas, sumários, relatórios, diários, biografias.
- A estrutura injuntiva; avisos, circulares, convocatórias, instruções de uso (em etiquetas e embalagens de produtos)

Module 3

1 credit

- A estrutura argumentativa; textos publicitários, artigos de opinião (assuntos da atualidade e temas do seu interesse: desporto, viagens / lazer, eventos culturais...)
- A estrutura expositiva; textos informativos / expositivos de fontes diversas (manuais de matérias, curriculares, revistas sobre temas da atualidade), artigos científicos e técnicos (excertos).

Module 4

1 credit

- O texto literário (breves noções); prosa, poesia e teatro.
- Aspetos formais de géneros literários: contos, biografias, texto dramático, texto lírico

ACTIVITIES AND PRACTICE:

1. Escrever, tendo em conta:

- A especificidade do texto, tema e finalidade, destinatário, tipo de texto
- A planificação da escrita: plano prévio, o tópico(s), a expansão, a redação e a revisão: (detecção de erros; correção / substituição; reescrita), a imagem final: dos jogos das margens, espaços brancos aos jogos tipográficos (negrito, sublinhado, itálico).
- As regras ortográficas e as formas convencionais básicas da escrita.
- Os mecanismos de coerência e coesão (processos de construção da informatividade textual):
- A ordenação e hierarquização da informação, tendo em conta (i) a continuidade de sentido e (ii) a progressão temática.
- A reiteração do grupo nominal; processos de substituição: determinação, pronominalização, elipse; sinonímia, hiperonímia, hiponímia
- A ligação frásica / transfrásica: pontuação e conectores de adição; ordenação; relação contrária; comparação; temporalidade; causalidade / consequência; finalidade
- Os marcadores discursivos

2. Produzir enunciados originais de sequências dialogais, narrativas, descritivas, expositivas ou expositivas.

3. Reelaborar um texto (narrativo ou descritivo) sobre o mesmo tema com outro ponto de vista.

4. Escrever textos de formato específico: atas, relatórios (breves), avisos, convocatórias, correspondência formal, texto jornalístico: notícias, reportagens, entrevistas (breves), artigos de opinião (breves).

5. **Tomar notas** (registar e organizar informação ouvida ou lida).

6. **Resumir** textos – perceção de que é necessário (i) seleccionar a informação principal, (ii) suprimir informação conforme o grau de condensação (nº de caracteres) do resumo e (iii) construir um novo texto.

Goa University

Department of English

Syllabus for the M. A. English Programme

(Choice-Based Credit Courses implemented from the Academic Year 2010-2011)

Programme Objectives:

The two-year post-graduate programme, Master of Arts (M. A.) in English, offered by the Department of English, Goa University, aims at generating qualified, competent and articulate learners capable of contributing to relevant domains of knowledge, and serving society in meaningful ways.

Programme Outcomes:

1. Learners will acquire knowledge of English language, literary theories, and texts.
2. Learners will have the knowledge of the canonical, as well as, contemporary texts, in terms of chronological development and regional criteria.
3. Students will be made familiar with tools of literary analysis, criticism, and research methodology.
4. Students will be acquainted with the use of ICT in languages and literature.
5. Students will be able to relate texts to social systems, folk studies, environment and ecology, through Culture Studies.
6. Students will adhere to ethical principles in academic research.
7. Learners will develop skills in undertaking translation, editing, journalism, and creative writing.
8. Students will be able to work in a team and share skills to foster a sense of community.
9. Students will communicate effectively in terms of writing reports and making presentations.
10. Learners will be groomed into well-adjusted and socially conscientious individuals.

Description of the Programme:

The programme offers various Compulsory Courses that provide:

- training in Linguistics and the English language
- a grounding in the genres, eras, and movements in Literatures in English
- a hands-on acquaintance with Literary Criticism as well as Literary and Critical Theories

The programme offers various Optional Courses that involve:

- application of literary theories to texts
- related field-work
- practical components

This programme adopts a comparative, contextualized and inter-disciplinary perspective drawn from contemporary views of literatures and cultures.

Eligibility: The pre-requisite for admission to this M. A. programme is Bachelor of Arts (B. A.) preferably in English or an equivalent degree of any recognized University/Institution.

Credits: The courses offered for M. A. (English) programme are of 01 to 04 credits each. A candidate registered for this programme shall be required to complete the requisite number of credits stipulated in the relevant ordinance to qualify for the Degree.

Dissertation: A candidate offering this programme is permitted to write a dissertation in lieu of Optional Courses of a total of 08 credits.

List of Courses

In the following tables, L refers to lectures, T to tutorials and P to practicals. Description of a course appears on the page number listed in the tables.

Core Courses

Course Code	Course Title	L-T-P (hours/week)	Credits
EGC-101	Linguistics	4-0-0	4

EGO-102 Study of a Major Poet

[4 credits, 48 hours]

Objectives:

1. This course attempts to introduce students to the nuances of poetry and the factors that influence and direct its manifestation as well as growth, with the help of the work of a major poet (either the modernist T. S. Eliot or the romanticist P. B. Shelley).
2. It also aims at analyzing the mutual relationship of the historical developments and the evolution of certain movements of poetry.

Learning Outcome:

In exposing the students to the cross-section of the selected poet's oeuvre, students will be able to identify the formative influences and the temperamental propensities in an individual poet and his contribution to literature and life.

Course Content (T. S. Eliot):

- Background [8 contact hours]
1. English poetry during the relevant age.
 2. Formative influences on the poet.

3. Salient features of the school of poetry under study (modern or romantic).
4. Characteristics of the poet's mind and art.
5. Poet's view of poetry vis-à-vis tradition and contemporaneity.
6. Study of the poet's early poetry: themes, techniques and features.
7. Poet's dramatic art in relation to his poetry: approach, focus and vision.
8. Major poems: impact, reactions, and influences.
9. Assessment of the poet's contribution to poetry, society and life.

Prescribed texts:

1. "The Waste Land" [8 contact hours]
2. "Ash Wednesday" [8 contact hours]
3. Selected Shorter Poems [8 contact hours]
4. *Murder in the Cathedral* [8 contact hours]
5. "Tradition and Individual Talent" [8 contact hours]

EGO-111 Cultural Studies in the Post-Colonial World

[4 credits, 48 hours]

Objectives:

1. To emphasize pluralism and the accompanying focus on cultural relativism in the Post -Colonial World.
2. To introduce Cultural Studies in the Globalized scenario as a developing discipline.

Learning Outcome:

The students will be able to relate Cultural Studies equally to Language, Literature and Literary/Critical Thought.

Course Content:

Background [8 contact hours]

1. Culture: definition and salient features of the term.
2. The concept of cultural studies and its relevance to present times and needs.
3. The relativity of culture and its significance.
4. Scope and theoretical basis of the study.
5. Notions of the post-colonial and post-colonialism.
6. Cultural texts and their production in the societal milieu.
7. Race, gender, language, class, caste, nationality, region as basic issues in cultural studies.
8. History, ecology, space and economy as major parameters of study.
9. The significance of period, context, ideology and genre to cultural studies.

Prescribed Texts:

1. Golding, William. *The Inheritors* (1955). [8 contact hours]
2. Paton, Alan. *Cry the Beloved Country* (1948). [8 contact hours]
3. Karnad, Girish. *Nagamandala* (1972). [6 contact hours]

4. Grady, Wayne, editor. Selections from *The Penguin Book of Modern Canadian Short Stories* (1982). [6 contact hours]
5. Narasimhaiah, C. D., editor. Selections from *An Anthology of Commonwealth Poetry* (1990). [6 contact hours]
6. Nasreen, Taslima. *Lajja* (1995). [6 contact hours]

EGO-112 Reading in Contemporary Theory

[4 credits, 48 hours]

Objective:

The Principal objective of the course is to familiarise the students with a few trend-setting original essays which significantly contribute in shaping the contours of contemporary theory.

Learning Outcome:

The course will enable the students to have first-hand knowledge of the various articles written by critics/thinkers associated with contemporary theory.

Course Content:

The following ten essays have been prescribed for the study: (Selections from *Modern Criticism and Theory: A Reader* Edited by David Lodge)

1. de Saussure, Ferdinand. "The Object of Study." [5 contact hours]
2. Derrida, Jacques. "Structure Sign and Play in the Discourse of the Human Sciences." [5 contact hours]
3. Barthes, Roland. "The Death of the Author." [4 contact hours]
4. Foucault, Michel. "What is an Author?" [4 contact hours]
5. Abrams, M. H. "The Deconstructive Angle." [5 contact hours]

- | | |
|--|-------------------|
| 6. Jameson, Fredric. "The Politics of Theory." | [5 contact hours] |
| 7. Eagleton, Terry. "Capitalism, Modernism and Post Modernism." | [5 contact hours] |
| 8. Michell, Juliet. "Femininity, Narrative and Psychoanalysis." | [5 contact hours] |
| 9. Said, Edward. "Crisis in Orientalism." | [5 contact hours] |
| 10. Chakravorty-Spivak, Gayatri. "Feminism and Critical Theory." | [5 contact hours] |

EGO-113 A Reading in Postcolonial Theories and Literatures

[4 credit, 48 hours]

Objective:

This course introduces students to the ongoing dialogues on Postcolonial literatures and theories. Postcolonial studies re-examines the legacy of colonialism and considers the way in which literary practices address and negotiate following issues:

- Imperial Ideology
- Postcolonial discourse of Oppositionality.
- Postcolonialism and Postmodernism
- Nationalism and Identity
- Centrality and marginality
- Cultural Representation
- Hybridity

Learning Outcome:

The students will be sensitized to Post-colonial issues as reflected in literature.

Course Content:

Background [8 contact hours]

Prescribed Texts:

1. Achebe, Chinua. *Things Fall Apart*. Or Wa Thiongo, Ngugi. *Petals of Blood*. [8 contact hours]
2. Narasimhaiah, C. D. *An Anthology of Commonwealth Poetry*. [8 contact hours]
3. Dangle, Arjun. *The Poisoned Bread*. [8 contact hours]
4. Mosionier, Beatrice. *In Search of April Raintree*. [8 contact hours]
5. Mascarenhas, Margaret. *Skin*. [8 contact hours]

References:

Ashcroft, Bill, Gareth Griffiths and Helen Tiffin, editors. *The Empire Writes Back: Theory and Practice in Postcolonial Literature*. Routledge, 1989.

Bhabha, Homi K. *The Location of Culture*. Routledge, 1990.

EGO-114 Cultural Studies: Theory and Practice

[4 credits, 48 hours]

Objectives:

1. To challenge the hierarchies of traditional literary theories.
2. To attempt a dialogue between margin and centre by foregrounding the cultural objects of mass culture.
3. This course explores the evolution of cultural studies through the models evolved by thinkers like Matthew Arnold, F.R. Leavis, Adorno, etc.
4. To offer students a series of social, political and cultural ideas or questions that key historic movements and generic tendencies of cinema have triggered and enable them to apply the culture studies approach to cinema.

Learning Outcome:

This course encourages the student to respond to cultural products in order to understand the ideas propounded by the thinkers of cultural studies. It will enable students to review films in a critical and analytical manner.

Course Content:

I. Evolution, Concepts and Methodologies [8 contact hours]

- i) Matthew Arnold
- ii) F. R. Leavis
- iii) Raymond Williams
- iv) Roland Barthes
- v) Theodore Adorno
- vi) Gayatri Chakravorty-Spivak

- II. Transformation and Transgression [8 contact hours]
 Films to be screened and analysed:
 i) Family and Female Sexuality: *Kya Kehna*
 ii) Politics and Marginality: *Mr. and Mrs. Iyer*
- III. Cultural Hybridity and Indian Diasporas. [8 contact hours]
 Films to be screened and analysed:
 i) *Monsoon Wedding*
 ii) *Bend It Like Beckham*
- IV. Nation, Nationhood and Cultural Otherness. [8 contact hours]
 Films to be screened and analysed:
 i) *The Legend of Bhagat Singh*
 ii) *Border*
- V. Globalization, Market Economy and the Third World [8 contact hours]
 Postcolonialism, Multiculturalism and the rise of ethnocentric identities
- VI. Ecological Issues and Environment [8 contact hours]
 Current problems and Perspectives
 i) Sustainable Development–Mhadei Project
 ii) Eco-Tourism and alternate lifestyles
 iii) Sharing of Resources–Local and Global

EGO-115 Goa: Cultural Perspectives

[4 credits, 48 hours]

Objective:

This course introduces students to the complex cultural fabric of Goa. The more complex the historiography of a state, the more complex is its identity construction. The superimposition of 450 years of Portuguese colonialism over the essentially Pan-Indian social base comprising Hindus, Buddhists, Jains and Muslims has rendered the small state of Goa a unique cultural fabric which is well reflected in many of its folk practices. The Post-Liberation scenario faced major issues such as the Opinion poll, Statehood, Language and Goan Identity.

Learning Outcome:

The outcome of the paper would be the sensitization of students to the cultural history of Goa. The students would be encouraged in conducting independent and interdisciplinary research on various cultural aspects of Goa. They would also be introduced to contemporary issues of Goa, as well as, thoughts about the future of the State.

Course Content:

I. Pre and Post Liberation Goa – Socio-cultural perspectives [10 contact hours]
 Shyam Benegal's film *Trikal*
 Lambert Mascarenhas' *Sorrowing Lies My Land*
 The Role of the Press in Pre-Liberation Goa
 Survey of select journalistic writings.

II. Cultural Syncretism [10 contact hours]
 Folkloristic Practices of Goa: Study of Jagor, Sontreo and Mussoll Khell.
 Study of Goan Folk/Popular theatre: Tiatr

III. Contemporary Issues: [10 contact hours]
 Problems of Tourism industry.
 Opinion Poll and Statehood
 Language and Identity

IV. Contemporary Goan Writing [8 contact hours]
 Selected poems of Manoharai Sardessai
 Selected poems of Armando Menezes
 Selected short stories of Pundalik Naik
 Selected short stories of Damodar Mauzo

V. Goan Transcultural Experience: [10 contact hours]
 Nazareth, Peter. *In the Brown Mantle*.
 Rangel-Rebeiro, Victor. *Tivolem*.

EGO-116 Contemporary Indian English Fiction

[4 credits, 48 hours]

Objectives:

1. To inform the student and situate him/her within the area of contemporary writing in English.
2. To encourage the debate regarding India's cross cultural identity and to address issues related to the intellectual tradition associated with English studies in India.
3. To use postcolonial discourses and evolve new critical practices and indigenous critical discourse.

Learning Outcome:

This course will enable the student to locate herself/himself by responding to the interrogation of local issues within a globalized scenario.

Course Content:

EGO-117 Regional Sensibilities in Indian Writing

[4 credits, 48 hours]

Objective:

This course intends to develop the students' tastes for indigenous writing from the various regions of India. Folk traditions, the Bhakti Cult and the history of women's writing will form the basis of developing an overall understanding of the forms and practices associated with creative writing from diverse areas of our country.

Learning Outcome:

This course will introduce the student to a variety of indigenous forms of writing. It is an introduction to the rich cultural and folk heritage of India. The course will make an attempt to inculcate a comparative thinking through its diverse forms.

Course Content:

1. Bhakti Tradition:
Tukaram – *Says Tuka*. Dilip Chitre, translator. [12 contact hours]
2. Dalit Writing:
Dangle, Arjun. *Poisoned Bread*. [12 contact hours]
3. Women's Writing:
Selections from Susie Tharu and K. Lalita. [12 contact hours]
4. Fiction:
Ananthamurthy, U. R. *Samskara*. [12 contact hours]

EGO-118 Cross-Currents in Modern European Drama

[4 credits, 48 hours]

Objective:

To acquaint the student with modern theories of drama and to initiate new readings with a view to a better understanding of theatrical practice and contemporary forms of theatre.

Learning Outcome:

This course will enable the student to trace the dramatic discourse from Ibsen to Genet thereby laying the foundation for a better understanding of contemporary trends in drama.

Course Content:

- I. Theory: Selected Readings [24 contact hours]
 - i) Strindberg, August. "Preface to Lady Julie".
 - ii) Stanislavski, Constantin. "An Actor Prepares".
 - iii) Artaud, Antonin. "Theatre of Cruelty".
 - iv) Brecht, Bertolt. "Epic Theatre".
 - v) Brooke, Peter. "The Empty Space".
- II. Plays [24 contact hours]
 - i) Strindberg, August. *Lady Julie*.
 - ii) Pirandello, Luigi. *Six Characters in Search of an Author*.
 - iii) Ionesco, Eugène. *The Chairs*.

iv) Genet, Jean. *The Maids*.

EGO-119 Canadian Cultural Studies

[4 credits, 48 hours]

Objectives:

1. The course attempts to capture the rich cultural diversity of Canadian Writing. Reading through a variety of genres, it proposes to examine works by authors from different geographical and ethnic backgrounds.
2. To acquire a fuller appreciation of contemporary Canadian cultural and literary history.
3. To introduce students to the challenges of Canadian culture and it changes overtime.
4. To enable students to appreciate the benefits of an interdisciplinary approach to understanding of Canadian culture and literature.

Learning Outcomes:

Students will be familiarised with the Canadian National Identity, First Nations, Visible Immigrants and Minority Women in Canada, Theories of Hybrid Identity and Postmodernity, Identity Politics, Cultural Appropriation and Goan Transcultural Experience.

Course Content:

Background [8 contact hours]

1. Understanding Canadian Cultural History.
2. Nation Building and The Canadian Identity
3. Canadian Mosaic: Mapping the “First World”
4. Multiculturalism and Multicultural Literature
5. Transculturalism: The Goan-Canadian Experience

Prescribed Texts:

1. Grady, Wayne. *The Penguin Book of Modern Canadian Short Stories*. [6 contact hours]
2. Reaney, James. *The Donnelly's*. [8 contact hours]
3. Lawrence, Margaret. *A Bird in the House*. [6 contact hours]
4. Atwood, Margaret. Selected poems. [6 contact hours]
5. Mosionier, Beatrice. *In Search of April Raintree*. [8 contact hours]
6. McGifford, Dianne. *Shakti's Words*. [6 contact hours]

EGO-120 Translation Studies: Theory and Praxis

[4 credits, 48 hours]

Objectives:

1. To equip the students with the art and science of translation as a valuable asset for self navigation in multi-cultural situation.
2. To unfold the significance of translation as a supplementary tool for a mono-lingual individual to acquire knowledge and information from other language domains.
3. To demonstrate the potential of translation to enrich or extend knowledge domains through mutual transfer of information and data across languages.
4. To reveal the latent power of translation as an influence-exertion source in literary cultural political and allied fields.
5. To tap its present-day importance in the areas of transmutation, transcription, tele-translation, interpretation, journalism and media studies among others.

Learning Outcome:

The students will be able to perceive the importance of interlingual communication in the pluralistic climate of the globalized world. The course will enhance the bi-lingual and if possible multilingual-communication process to which a large majority of Indian students are exposed.

Course Content:

1. The notion of translation: meaning and definition; nature and characteristics; and functions of translation. [8 contact hours]
2. Various critical positions on translation; the western and the Indian view of translation; types of translation as per these views with special references to concept such as “transliteration, transcreation, transmutation, chaaya, bhashantar, anuvaad, anusarjan, rupantar, prakarantar” etc. [8 contact hours]
4. Specimen translation and practice sessions: notion of Equivalence: translating prose and poetry; fiction and non-fiction, critical and scientific, literary and non-literary material. [8 contact hours]
4. Relationship of translation with literature and culture: role of language in translation studies within literary and nonliterary domains. [8 contact hours]
5. Translation, trancreation and transmutation: the boundaries of demarcation and areas of contact. [8 contact hours]
6. Contribution to a selected literary-non literary field by way of assignment. (Period, genre, form, language to be determined from time to time.) [8 contact hours]

EGO-121 Approaches to Journalism from Language and Literature

[4 credits, 48 hours]

Objectives:

1. To provide a reasonable exposure to the students of literature to the basics of journalism.
2. To generate a climate of interest among students to adopt journalism as a part-time activity, hobby, allied profession or a subject for specialized future study.
3. To introduce the students to conventional as well as unorthodox journalism and sensitize them to the value of responsibility, service and commitment involved in this activity
4. To make the students aware of the ethical and legal aspect of journalism, should they choose to work as campus- reporters or amateur journalists.
5. To reveal to them the allied employment avenue available to a student of literature in the domain to journalism.

Learning Outcome:

This course shall expand the students' scope of opportunities and apprise them of the challenges in this field. The students will be sensitised to the trends and tendencies of journalism and also at tapping their nascent interest in this area, if any.

Course Content:

1. Introduction to Journalism: History of Press in India. [6 contact hours]
2. Print and allied mass media; the new face of journalism. [6 contact hours]
3. Concept of News: definition, purpose, significance and kind of news; qualities of news; six basic keys to news gathering; assorting and writing. [6 contact hours]
4. Basic writing, use of language, its function and relevance to writing of news reports and features; importance of linguistic, semantic and structural linkages within sentences and paragraphs (practical sessions); use of locus, quotation, notes & narrative techniques. [6 contact hours]
5. Organizational structure of editorial department (practical sessions): office layout, division of work, deployment of shift, co-ordination, editing and planning. [6 contact hours]
6. Categories of news coverage techniques of new coverage; an introduction to photo-journalism; the visual text-its impact, range limitation and compulsions Interviews: techniques, types, research planning and execution, and interviewer's skill and present ability. [6 contact hours]
7. Comparative analysis of radio, electronic and print media; ethical and legal aspects of journalism

via-a viz print and other media; efficacy and objective of coverage (practical session using politics, sports, art and culture, literature and science domains). [6 contact hours]

8. Acquaintance with the multi-layered contexts: (for amateur as well as professional journalists): local, national, international; historical, socio-political economic and ideological; literary and cultural dimension of social reality. (Practical session using event or institution-related, specific-domain related and general stories). [6 contact hours]

EGO-122 D. H. Lawrence

[4 credits, 48 hours]

Objective:

The principal objective of the course is to familiarise the students with the fiction of D. H. Lawrence.

Learning Outcome:

To enable the students to read the fiction by D. H. Lawrence independently.

Course Content:

Background [16 contact hours]

1. Lawrence and the English fictional tradition.
2. Lawrence and his time – the social and cultural milieu.
3. A survey of Lawrence's writing – thrusts and developments.

4. Lawrence and the theme of sex/love.
5. Lawrence and the theme of human relationship.
6. Lawrence's "worldview".
7. Lawrence as a critic of the values of industrial capitalistic society.
8. Lawrence and his critics from Middleton Murray to the present period.

Prescribed Texts:

- | | |
|-----------------------------------|-------------------|
| 1. <i>Sons and Lovers</i> | [8 contact hours] |
| 2. <i>The Rainbow</i> | [8 contact hours] |
| 3. <i>Women in Love</i> | [8 contact hours] |

EGO-123 Multimedia in Cultural Literacies: A Study of Australia

[4 credits, 48 hours]

Objective:

The objective of the paper is to utilize Multimedia in Cultural Literacies focusing on Australia as a case example. Since it aims to exploit audio-visual in addition to the print media, it will also include virtual tours of museums of Australia as one of the best sites for telling stories of Australia and Australians and also as the site for an ongoing debate on Australia's National Identity.

Learning Outcome:

Students will be able to appreciate how multimedia can be fruitfully used in cultural literacies by using Australia as a case example. They will be familiarised with the material processes of Australia as carrying certain semiotic functions in more than one sign system.

Course Content:

- | | |
|--------------------------|-------------------|
| I. Theory | [6 contact hours] |
| 1. Theorizing Multimedia | |

2. Cultural History of Australia
3. Legends of Australia
4. Aboriginality
5. Transcultural Identities
6. Critiquing Multiculturalism

II. Films to be screened and analysed: [12 contact hours]

1. First Australians
2. Samson and Delilah
3. Crocodile Dundee
4. Immigration
5. Hybrid Identities
6. Footy Legends

III. Virtual tour of the following museums: [6 contact hours]

1. National Museum of Australia
2. Immigration Museum
3. National Maritime Museum

IV. Art and Culture [3 contact hours]

1. Comedy Shows: Study in Popular Culture
2. Art as Insignia: Dreamings of the Aborigines
3. Study of Goan Associations in Australia

V. Literature [12 contact hours]

1. Carey, Peter. *Oscar and Lucinda*.
2. Morgan, Sally. *My Place*.
3. Nandan, Satendra. *Requiem for a Rainbow*.

VI. Practical Session on how to make a short film using any appropriate software such as Adobe Premiere Pro or Open Broadcaster Software. [9 contact hours]

EGO-124 Comparative Studies in Literature and in Translation

[4 credits, 48 hours]

Objective:

To introduce the discipline of Comparative Studies in order to enlarge the literary perception of students by concepts of interdisciplinary studies and to initiate research programmes related to English Studies.

Learning Outcome:

Students will be able to appreciate the global diversity of literary forms and genres while being acquainted with the methods of comparative literary study.

Course Content:

1. Definition, Function and Principles of literary comparison. Nature and Scope of Comparative Studies. Its history and evolution to date. [6 contact hours]
2. Literary theory and Comparative Literary Approaches: history and literature; politics and literature; sociology of literature; literature and other arts. [4 contact hours]
3. Analogies : genetic, shared literary culture; thematology; geneology. [4 contact hours]
4. Literary periods and movements. [4 contact hours]
5. Classicism; romanticism, realism; surrealism; symbolism; modernism; structuralism; and other related cults and doctrines. [4 contact hours]
6. Styles and Techniques: linguistic and cultural. [4 contact hours]
7. Sources: folklore, myths; archetypes; imitation and pre-figuration, sources related to the milieu. [4 contact hours]
8. Influences: characteristics of literary influence, intermediaries; contact types of influences; reception process of influence; bi-lingualism, borrowing, interference, change and standardization of alien elements. [6 contact hours]
9. Indian literature: regional and national. [6 contact hours]
10. Translation; linguistic, literary and cultural; theory and types; role of translation in comparative studies; process involved in translation; the principle of equivalents; limits of translatability; Problems of translation. [6 contact hours]

Practical translation will be a part of the course/dissertation.

EGO-125 Compressing the world: Reading and Writing Short Fiction [1 credit, 12 hours]

Objective:

The course will give the student a thorough overview of the creative reading and writing of short fiction. A vital link will be established between reading and writing: "creative" reading – i.e. the imaginative and analytical reading of specific texts – will provide multiple perspectives on praxis and serve as the foundation for actual writing exercises.

Course Content:

The course will consist of a combination of lectures, discussion and reading and writing exercises.
(All readings will be provided)

1. Adichie, Chimamanda Ngozi. "The Danger of a Single Story"
2. Manguel, Alberto. "Notes towards a Definition of the Ideal Reader"
3. Manto, Sadaat Hasan, "Toba Tek Singh"
4. ---. "Khol Do"
5. ---. "Mishtake" and "Socialism"
6. Lankesh, P. "The Classmate"
7. Devi, Mahasweta. "Breast-Giver"
8. ---. "Draupadi"
9. Madhavan, N. S. "Mumbai"
10. Calvino, Italo. "The Man Who Shouted Teresa"
11. Namjoshi, Suniti. "The One-Eyed Monkey Goes into Print"
12. Ramanujan, A. K. "A Story and a Song"
13. Writers on writing:
 - Paretzky, Sara. "A Storyteller Stands Where Justice Confronts Basic Human Needs"
 - Tan, Amy. "Writers on Writing: Family Ghosts Hoard Secrets That Bewitch the Living"
 - Sontag, Susan. "Directions: Write, Read, Rewrite. Repeat Steps 2 and 3 as Needed"
14. "Writers on Rewriting: Quotations from Writers on Revising and Rewriting"

EGO-126 The Gender of Literatures and the Literatures of Gender

[1 credit, 12 hours]

Objectives:

1. This course would look at canonical “texts” and representations of women across cultures to examine to what extent gender perceptions are universal, have impacted women’s lives, and how cultural contexts have reinvented or indigenized global manifestations.
2. It would touch on the shifting concerns of women’s movements to try and define the complexities inherent in the milestones of so-called “achievements”.
3. The course would also review the changing meanings of terms like “sexuality” and “alternate sexuality” which are now generally accepted as inherent attributes of gender.
4. The course would work at deconstructing some of this writing, using its universal and contextual priorities to formulate an understanding of the culture/gender dialectic.
5. Since “representations” cannot be looked at in a vacuum, it will view and analyse ways in which other mediums (notably cinema and documentaries) have re-imagined gender and women’s lives, relating these to texts and thereby locating gender and literature within their larger socio-cultural contexts.

Course Content:

1. Woolf, Virginia. *A Room of One’s Own* (Chapter3).
2. de Beauvoir, Simone. *The Second Sex* – Introduction; Part III: Dreams, Fears, Idols; The Myth of Woman in Five Authors (section on D H Lawrence).
3. Gandhi, Nandita, and Nandita Shah. *The Issues at Stake: Theory and Practice in the Contemporary Women’s Movement in India* (Chapter2).
4. Kannabiran, Kalpana, and Ritu Menon, editors. *From Mathura to Manorama: Resisting Violence Against Women in India* - Chapter 3 Alternative Forms of Protest (War & Peace: Ideology and the Architecture of Performance).
5. SnowWhite
6. Sidhwa, Bapsy. *Ice Candy Man*.
7. Sant, Indira. Selections from *Snake-Skin and Other Poems*.
8. Purohit, Anjali. *Ragi-Ragini: Chronicles from Aji’s Kitchen* (Pages 5-9, 38-42, 56-67, 85-91).
9. Selections from Volga: *The Liberation of Sita*.
10. Vanita, Ruth, and Saleem Kidwai, editors. *Same-Sex Love in India: A Literary History*.
11. Pattanaik, Devdutt. *The Man Who Was A Woman and Other Queer Tales From Hindu Folk Lore*.

EGO-127 Reading and Writing Conflict

[1 credit, 12 hours]

Objectives:

This course is focused on investigating some of the following questions.

1. What are some of the major challenges of reading and writing about conflict-be it the more obvious examples of war or riots, or the more covert day-to-day experience of prejudice and discrimination?
2. What are some of the research and narrative strategies involved in writing about fear and grief

hatred and despair?

Course Content:

The course will give the student an overview of the creative reading and writing of both prose and poetry selections on various sources of conflict, including class, caste, community, gender and colonization, war and violence. A vital link will be established between reading and writing: "creative" reading-i.e. the imaginative and analytical reading of specific texts-will provide multiple perspectives on praxis and serve as the foundation for actual writing exercises.

EGO-128 Imagining Women: Representations in Literature and Cinema

[1 credit, 12 hours]

Objectives:

1. This course would take into account current global trends with respect to the interdisciplinary aspects of literary studies and introduce students to the diverse ways in which literary classics are being re-examined and re-interpreted.
2. The course would aim at a rewarding expansion of both imaginary and critical horizons.

Course Content:

Since cinema is a principal medium of such re-interpretation, it would take up known and not so well known (even unknown to most students) novels and their cinema versions, and critique the two individually and in conjunction. The emphasis would remain on Literature (i.e. the written text) but the study would encourage students to relate it to contemporary critical developments and the ways in which emergent ideologies can make one reassess what seems known and familiar.

EGO-129 The Anxieties of Orientalism: India and the Diaspora

[1 credit, 12 hours]

Objectives:

The course would cover concepts like Orientalism and Colonial/Postcolonial. Students would be introduced to the more recent debates on these themes and some of their key concerns. They would be encouraged to understand the problematics of how "Orientalism" (or neo-Orientalism) functions in the present world by studying select Diaspora writing alongside writing from India (in English and in English translation). The course will also include representations in Indian and Diaspora cinema.

Course Content:

1. Said, Edward. *Orientalism: Western Conceptions of the Orient*(Introduction)
2. Loomba, Ania. *Colonialism-Postcolonialism*.
3. Nabar, Vrinda. "Writing India Right: Indian Writing in English and the Global Literary Market" in Dwivedi, Om, and Lisa Lau, editors, *Indian Writing in English and the Global Literary Market*, Palgrave Macmillan.
4. Tiffin, Chris, and Alan Lawson, editors. *De-Scribing Empire: Post-colonialism and textuality*.
5. Mukherjee, Bharati. *Desirable Daughters* Book 1, Chapter 1.
6. Banerji Divakaruni, Chitra. *Palace of Illusions*.

7. Lahiri, Jhumpa. *The Namesake*.
8. Ananthamurthy, U. R. "The Initiation" (*Contemporary Indian Short Stories* ed. Ka Naa Subramanyam).
9. Devi, Mahasweta. "Draupadi" (*Breast Stories*).
10. Sharma, Bulbul. "Rites of Passage" (*In Other Words: New Writing by Indian Women*).

EGO-130 Writing Lives: An Interactive Literary Series

[1 credit, 12 hours]

Objectives:

This course carries forward some of the themes covered in the earlier course on "The Gender of Literatures and the Literatures of Gender" and combines the study of course material with the actual classroom exercise of writing lives. The course would focus on the recommended readings, but would encourage students to additionally study documentaries and cinema related to the theme. It will analyse various literary genres (fiction, nonfiction, poetry) which have used the autobiographical/biography in unusual ways, and attempt to write responses based on the insights gained through interactive discussions. The syllabus would extend beyond the mere ambit of "Gender Studies" and critique the different ways in which women and men have written lives.

Course Content:

(Tentative List, may be expanded/modified). Selections from:

1. de Beauvoir, Simone. *Memoirs of a Dutiful Daughter*.
2. Das, Kamala. *The Old Playhouse and Other Poems; My Story*.
3. Sant, Indira. *Snake-Skin and Other Poems*.
4. Sobel, Dava. *Galileo's Daughter*.
5. Collins, Billy. *Sailing Around the Room*.
6. MacNeice, Louis. Selected Poems.
7. Updike, John. selections.
8. Purohit, Anjali. *Ragi-Ragini: Chronicles from Aji's Kitchen*.
9. Doniger, Wendy. *The Ring of Truth: Myths of Sex and Jewelry*.
10. Kalia, Mamta. *Tribute to Papa and Other Poems*.
11. McCourt, Frank. *Angela's Ashes: A Memoir*.

EGO-131 Book Publishing

[2 credits, 24 hours]

Objectives:

This course will introduce students to the practices of book publishing, including the information that could help those completing the course to enter the profession, if they so choose. The focus will be on offering an introduction to book publishing, including the definition of a book, and the history and culture of book publishing in different parts of the globe, with special reference to India. Other forms of publishing, including electronic publishing and e-books, will also be focused on.

Learning Outcome:

Students will be able to convert manuscripts into e-books and/or books.

Course Content:

1. Book publishing as a profession. [1 contact hours]
2. Software for publishing. [2 contact hours]
3. The business of publishing: economics, finances and understanding models of financial sustainability, especially at smaller scales. [2 contact hours]
4. From thesis to book: converting academic writing into marketable form. [2 contact hours]
5. Preparing manuscripts for publication (querying, formatting). [2 contact hours]
6. The non-fiction process. [2 contact hours]
7. Publishing houses, big and small. [1 contact hours]
8. Literary agents, their role and purpose. [2 contact hours]
9. ISBN and barcoding. [2 contact hours]
10. Publishing laws and ethics. [1 contact hours]
11. Intellectual property rights, piracy, plagiarism. [1 contact hours]
12. Contracts with authors, royalties. [1 contact hours]
13. Blurbs. [1 contact hours]
14. Printing processes overview. [2 contact hours]
15. The making of a book: pre-production (market study, subject and author selection, editorial proposals, developing a manuscript, paper, design, producing and printing issues). [2 contact hours]

EGO-132 The Art and Craft of Editing

[2 credits, 24 hours]

Objectives:

1. This course is designed to impart practical skills and build theoretical knowledge in the field of editing. Editing is intricately linked to the process of literary creation; every written work needs its editor. Effective editors are expected to produce good and clean writing, or fix the mistakes made by others.
2. The emphasis will be on enhancing abilities in correction, condensation, organisation, and other modifications performed with an intention of producing a correct, consistent, accurate and complete fiction or non-fiction work.
3. Online or real-world interaction with experienced book editors will be encouraged.

Learning Outcome:

The course will enable students to edit and significantly improve the quality of written text. Students will be given hands-on practice in editing text in English and also will be familiarised with the theory behind the editing process. Practical projects will be emphasised.

Course Content:

- | | | |
|-----|--|-------------------|
| 1. | What do editors do and why? | [2 contact hours] |
| 2. | Editing in various fields of work – academic, journalistic, literary, etc. | [3 contact hours] |
| 3. | The writer-editor-reader relationship. | [2 contact hours] |
| 4. | Editing for tone; space; consistency; and linguistic accuracy. | [3 contact hours] |
| 5. | Fact-checking and proofreading. | [3 contact hours] |
| 6. | Understanding style. | [2 contact hours] |
| 7. | Developmental editing. | [2 contact hours] |
| 8. | Communicating with authors. | [2 contact hours] |
| 9. | Cultural sensitivity and political correctness. | [3 contact hours] |
| 10. | The editing checklist. | [2 contact hours] |

EGO-133 Faces of Theatre: Theory, Practice and Performance

[2 credits, 24 hours]

Theatre is intrinsically a multi-level collaborative art: playwright, director, actor, lights and sound designers, make-up artiste, costume designer and producer, all these together take the play from the page to the stage for a performance. Still further, a performance often demands collaboration with musicians, singers, dancers, and visual artistes. Thus, a student of theatre gains immense exposure to, and insights into, creative collaborative experiences, a very significant mode of existence in the present over-competitive world.

Objectives:

1. The primary objective of this 2 credit course is to create a space whereby learners can begin to experience the multi-level nature of the theatre as a form of art.
2. The course aims at clarifying the relationship between the page of the written script and the stage of performance.
3. The course will introduce learners to various theoretical aspects of drama and theatre, including elements, genres, playwrights, as well as practical considerations such as use of space, voice, body movement, emotional memory, inter-personal relationships.
4. The course is designed to achieve a balance between theory, practice and performance.

Learning Outcome:

It is expected that, by the end of the semester the learner will:

- a. Be conversant with a historical overview of theatre
- b. Pick up basic theatre skills like acting, play writing and production
- c. Discover the demanding and healing nature of collaboration that theatre thrives on

Course Content:

1. Theatre as Art [4 contact hours]
 - a. A brief introduction to theatre. A brief history: ancient India, ancient Greece, European, Medieval drama, the Renaissance, Modern, Absurdist, Postmodern. Types: Classical, Folk, Popular, Street, Proscenium, Eastern theatre.
 - b. Styles of acting in theatre: Stylized movement and dance; Naturalism, Realism, Stanislavsky and the Method School; Mime; Opera; Commedia dell'arte; Grotowsky's Poor Theatre; Physical Theatre, Total Theatre.
 - c. Important aspects of performance: Use of Space. Body Movement, Voice, Audience.
2. Theatre as Reflection [4 contact hours]
 - a. The written text. The elements of a play: character, plot, dialogue, theme.
 - b. A brief introduction to some playwrights: William Shakespeare, Henrik Ibsen, Bertolt Brecht, G.B. Shaw, Oscar Wilde, Arthur Miller, Edward Albee, Mahasweta Devi, Mahesh Dattani, Vijay Tendulkar, Girish Karnad.
 - c. Writing a play: a workshop on working with theme, characters, plot.
3. Theatre as Disguise [4 contact hours]
 - a. What do costumes and masks disguise and reveal?
 - b. Creating characters: driving motives, emotional life, conflict, external manner.
 - c. Acting. Costumes. Masks. Make-up.
4. Theatre as Collaboration [4 contact hours]
 - a. Collaboration rather than competition among all participants.
 - b. Collaboration with other arts: Music, Song, Dance, Painting, Photography, Video.
5. Theatre as Craft [4 contact hours]

Sound, Lights, Stage Setting, Stage Management.
6. Theatre as Performance [4 contact hours]
 - a. From page to stage: rehearsals.
 - b. Direction: casting, interpretation, awareness.
 - c. Relationships on stage: Director, Actors, Technicians, Production Personnel, Audience.
7. Theatre Skills for Life [4 contact hours]
 - a. Preparation and Performance
 - b. The 'we-dentity' of theatre, a counter-cultural attitude to work, art and life.
8. A Concluding Performance [2 contact hours]

EGO-134 The Graphic Novel

[4 credits, 48 hours]

Objectives:

1. To understand various modes of human expression and communication in art, media, etc.
2. To explore how graphic novels are constructed.
3. To analyze this genre of literature – making connections to self, others, and the world.
4. To compare graphic and other forms of literature.
5. To compare the cinematic adaptations of the prescribed texts to their source.

Learning Outcome:

At the end of the course students will be able to appreciate the graphic novel as a medium of storytelling. They shall understand the way the verbal and the non-verbal illustrations work together. In addition, they will learn to critically analyse them.

Course Content:

Background: [6 contact hours]

1. Genesis of the Graphic Novel
2. Sequential Art
3. Difference between Graphic Novels and Comics
4. Autobiography and Travelogue through Graphic Novels.
5. Manga
6. Retelling history through illustrations

Prescribed Texts:

- | | |
|--|-------------------|
| 1. Spielgman, Art. <i>Maus: A Survivor's Tale</i> . | [8 contact hours] |
| 2. Satrapi, Marjane. <i>Persepolis: The Story of a Childhood</i> . | [6 contact hours] |
| 3. Moore, Alan. <i>From Hell</i> . | [8 contact hours] |
| 4. Cloves, Daniel. <i>Ghost World</i> . | [4 contact hours] |
| 5. Tatsumi, Yoshihiro. <i>A Drifting Life</i> . | [8 contact hours] |
| 6. Sajad, Malik. <i>Munnu: A Boy From Kashmir</i> . | [8 contact hours] |

[Films relevant to the texts will be screened]

EGO-135 Roads Not Taken: Decoding Gender, Understanding Feminism

[1 credit, 12 hours]

Objectives:

1. This course would use academic scholarship and popular writing to look at the ways in which words like gender and feminism are commonly perceived.
2. It would highlight the misconceptions and prejudices that unfortunately continue to shape attitudes both within academia and outside it.
3. Beginning with a brief historical survey of the different ways in which both gender and feminism were written about from the earliest times, this interactive course would additionally use literary texts and cinema to draw attention to the multiple efforts at articulating and recasting issues of gender and feminism.
4. It would study the validity and significance of terms like “Histories” and “Herstories” and encourage participants to formulate these concepts.
5. It would try to analyse whether terms like Gender Studies and Women’s/Feminist Studies have helped to legitimize such efforts or worked towards their ghettoization within the accepted canon.

Learning Outcome:

First-time participants would learn to rethink concepts they have taken for granted, while participants from earlier similar courses would discover that the journey never really ends.

Course Content:

The following texts will be introduced and form the core focus of the course content and discussion during the course. Students will be introduced to their significance and asked to discuss the ideas they generate:

1. Giffin, Frank C. (ed). *Woman as Revolutionary*.
2. de Beauvoir, Simone. *The Second Sex*.
3. Greer, Germaine. *The Female Eunuch*.
4. Friedan, Betty. *The Feminine Mystique*.
5. Davis, Elizabeth G. *The First Sex*.
6. Rowbotham, Sheila. *Woman's Consciousness, Man's World*.
7. Stanley, Liz. (ed). *Knowing Feminisms*.
8. Steinem, Gloria. *Outrageous Acts and Everyday Rebellions*.
9. Friedan, Betty. *The Second Stage*.

EGO-136 Perform and Transform (Theatre Performance and Change)

[2 credits, 24 hours]

Theatre is a rich form of art as it embraces the dimensions of both literary text and performance. These aspects can be deeply empowering to the performer and transformative of the society that encounters it. Students of theatre, then, gain immense exposure to, and insights into, their own innate creative talents, processes of communication and how individual and social transformation can be set in motion.

Objectives:

1. The primary objective of this 2 credit course is to offer learners an understanding and experience of theatre, especially in its performance mode, so as to precipitate change, in the individual and society.
2. The course aims at exploring how performance involves mental processes, bodily actions and inter-personal relationships that empower the performer.
3. The course aims at tapping creativity, collaboration, confidence and communication, which are transferrable skills that one can transpose to any field of action.
4. The course will introduce learners to basic aspects of drama and theatre, and some forms of theatre such as proscenium theatre, musical theatre, street theatre and theatre of the oppressed, their diverse interactions with the audience and expected outcomes.

Learning Outcomes:

It is expected that, by the end of the semester the learner will:

- a. Be conversant with the basics of theatre performance.

- b. Discover the process of individual empowerment that theatre offers.
- c. Experience the demanding and healing nature of collaboration that theatre thrives on.
- d. Learn to plan and execute theatre performances with social transformation as an important goal.

Course Content:

1. Theatre as a Performance Art [4 contact hours]
 - a. A brief introduction to theatre. A brief history: ancient India, ancient and revolutionary Chinese, ancient Greece, European, Medieval drama, the Renaissance, Modern, Absurdist, Postmodern. Types: Classical, Folk, Popular, Street, Proscenium, Eastern theatre.
 - b. The performer as an artist: Stylized movement and dance; Naturalism, Realism, Stanislavsky and the Method School; Mime; Opera; Grotowsky's Poor Theatre; Physical Theatre, Total Theatre.
 - c. Important aspects of performance: Use of Space. Body Movement, Voice, Audience.
2. Theatre as Written Text [4 contact hours]
 - a. The written text. The elements of a play: character, plot, dialogue, theme.
 - b. Writing for an audience: Understanding the audience. Rasa. Catharsis.
 - c. The author's intent: Reflection. Social critique. Propaganda.
 - d. Writing a play: a workshop on working with theme, characters, plot.
3. Theatre as Social Critique [4 contact hours]
 - a. Theme to start a conversation: *Tara* by Mahesh Dattani.
 - b. Playwright as social activist: *Water* by Mahasweta Devi.
 - c. Performance and the Political scene: Chinese Revolutionary theatre. *The White-Haired Girl*.
4. New Audiences, New Spaces [2 contact hours]
 - a. The playwright, the director, the performer, the audience.
 - b. Wooing new audiences: the Third Theatre, Theatre of the Oppressed, Theatre in Education (TIE).
 - c. Exploring new spaces.
5. Street Theatre [2 contact hours]
 - a. Theme
 - b. Body language
 - c. Sound
 - d. Interaction.
6. Theatre of the Oppressed [2 contact hours]
 - a. Augusto Boal in Brazil.
 - b. Jana Sanskriti in India.
 - c. The philosophy of performance on level ground.
7. Performance and Transformation [2 contact hours]
 - a. Individual transformation: Self-confidence, imagination, empathy, co-operation, communication, concentration, playfulness, theatre as therapy.
 - b. The 'we-identity' of theatre, a counter-cultural attitude to work, art and life.
8. Preparation and Performance [2 contact hours]
 - a. Preparation and Performance.
 - b. Sowing seeds of change.
 - c. Feedback.
9. A Concluding Performance [2 contact hours]

EGO-138 Academic Writing in English
(adapted from UGC-MOOCs)

[4 credits, 48 hours]

Objectives:

1. To refine the writing skills of students.
2. To discourage plagiarism and inculcate research ethics.
3. To introduce tools beneficial while conducting research.

Learning Outcome:

The students will be able to write in a professional and academic manner, having learnt to use the MLA style and to cite sources appropriately.

Course Content:

1. Academic and Research Writing – Introduction, Importance and Basic Rules [6 contact hours]
2. Importance of the English language in Academic Writing [4 contact hours]
3. MLA Style – Referencing and Citation [6 contact hours]
4. Research Ethics – Types of Plagiarism, Detection tools and how to avoid Plagiarism [4 contact hours]
5. Journal and Author Metrics [4 contact hours]
6. Literature Review – Process, Online databases, Tools, Review Paper Writing [4 contact hours]
7. Research Proposal and Thesis Writing – Process, Empirical and Non-Empirical Studies [6 contact hours]
8. Abstract, Conference/Research Paper, Book Chapter – Process, Team and Time Management [6 contact hours]
9. Challenges in Indian Research Writing [4 contact hours]
10. Open Educational Resources [4 contact hours]

EGO-201 Traditions/Conventions, Change and Conflict.

[4 credits, 48 hours]

Objective:

The course is designed to enable students to evaluate texts and analyse them in the light of existing traditions / conventions and develop insights into the nature of conflicts that arise when change or challenges come up. Students would also have to examine the nature of the resolution of the conflict.

Learning Outcome:

Participants will be able to analyse texts and evaluate components that contribute to making the text impactful. They will develop skills of examining various types of conflicts and their resolution.

Course Content:

Since it is a second level course students are expected to be familiar with concepts of Colonisation, contemporary traditions / conventions relevant to the prescribed and associated texts/ films. The texts shall be from diverse genres and categories. Prior knowledge should include Achebe's *Things Fall Apart*; Paton's *Cry, the Beloved Country*; Conrad's *Heart of Darkness*; Coppola's *Apocalypse Now*.

Areas and Texts prescribed for study:

1. Background, concepts and discussion of essential references [10 contact hours]
2. Barrett, William Edmund. *A Woman in the House*. Doubleday, 1971. [10 contact hours]
3. Peltz, Larry David. *The King of Liars*. Alfa Moon Press, 2011. [10 contact hours]
4. Toon, Vita. *The Torn Veil*. Marshall Pickering/Harper Collins, 1984, London. [10 contact hours]
5. Turteltaub, Jon [Dir.] *Instinct*. Buena Vista Pictures, 1999; [DVD 2002]. [8 contact hours]

EGO-SW1 Postmodernism in Literature

[2 credits, 8 weeks]

Objectives:

This is an eight-week course pitched at the Postgraduate level to provide an overview of a theoretical understanding of the fundamentals of Postmodernism in Literature. Through a discussion of seminal texts, key ideas and critical events in the 20th century, the course maps the dominant socio-cultural and literary practices usually labelled as Postmodernism. Ranging from popular culture to particular theories, from literary events to ideological debates, this course attempts to cover a wide variety of topics and frameworks, to enable a critical understanding of Postmodernism in Literature. The course includes the discussion of selected literary texts and engages with various literary critical approaches from different paradigms including Feminism and Postcolonialism.

Course Content:

WEEK 1: Introducing Postmodernism -Definitions, Concepts, General Online background
WEEK 2: Reading the seminal texts and events which define Postmodernism-Online
Lyotard, Barthes
WEEK 3: Locating the Postmodern in the contemporary
WEEK 4: Postmodernism in literature and historical survey
WEEK 5: Postmodernism as a literary critical approach
WEEK 6: Detailed study of selected texts - Prose
WEEK 7: Detailed study of selected texts, Poetry and drama
WEEK 8: Detailed study of selected texts – miscellaneous

EGO-SW2 The Essence of Leadership: Explorations from Literature.

[2 credits, 8 weeks]

Objectives:

The course consists of interpreting literature and drawing lessons for leadership and effective management. While you are at your desk, writing reports and crunching numbers, do you often daydream of packing your bags and going on an adventure like Don Quixote? Or do you see yourself starting a revolution and changing the world like Saint Joan? Do you find yourself pushing boundaries and exploring questions about the universe like Galileo?

This course reads between the lines of some of the greatest works of literature and draws out lessons

to help you transform from being an effective manager to a motivational leader.

Characters in literature represent more than what they seem to be and are often allegories of moral transformation. The course creates parallels with select works of literature and the multi-dimensional world of management while exploring these worlds with unique attributes of leadership that each character brings to the story.

Characters in literature represent more than what they seem to be and are often allegories of moral to Delve into the exciting world of complex and compelling stories with us. As you learn more about Quixote's crazy quirks and Galileo's societal responsibilities, we hope you reflect and learn more about yourself as a leader.

Discover your own unique brand of leadership from among chapters from classic literature.

Course Content:

Week 0: Welcome to the Course

- Navigating the platform
- Pre-course Survey

Week 1: Introduction to the Course

- Leadership and Literature
- Managers and Leaders
- Reading and Appreciating Literature
- Recap

Week 2: Vision, Dreams and Imagination: Don Quixote by Miguel de Cervantes

- Why is this Considered to be one of the Greatest Novels?
- Summary of the Story
- Why is Don Quixote an Interesting Leader?
- Dreams and Imagination: Leadership Starts with a Dream
- Reality: Do Dreams End Here?
- Courage: Fulfilling One's Duty
- "I Know Who I Am": Self Awareness in Leadership
- Commitment: Playing One's Role with all One's Heart
- Recap

Week 3: Inspiration, Heroism and Martyrdom: Saint Joan by George Bernard Shaw

- Discussing one of Shaw's Best Works
- Summary of the Story
- Saint Joan's Contribution to the World
- How did Joan Inspire a Nation?
- The Courage of Conviction
- Her Martyrdom: Why did she have to Die?
- Leadership and it's Contradictions

Week 4: Vision Gone Wrong: Role of Authenticity. Tughlaq by Girish Karnad

- Summary of the Story
- The Rise and Fall of an Emperor in Thirteen Scenes
- The Puzzle: A Visionary who Failed
- Role of Trust and Authenticity in Leadership
- Aziz and Aazam: The Cynical Exploiters in Organizations
- Does the End Justify the Means in Leadership?
- Analysis and Conclusion: Why did Tughlaq fail to Realise his Vision?

Week 5: Leaders' responsibility to society. Life of Galileo by Bertolt Brecht

- Why is this book considered as Brecht's greatest work?
- Summary of the Story
- Galileo's (self assumed) role as a teacher and a thought leader

- Recanting by Galileo: Why is it a subject for debate?
- Special responsibilities of a leader
- Creating faith in leadership: Faith as a double edged sword

Week 6: Real vs. idealism: An existentialist view of leadership. Yuganta by Irawati Karve

- A fresh perspective of Mahabharata's characters by Karve
- Bhishma: Is selflessness enough? The role of expectations
- Karna: Are talents and skills enough? Knowledge of one's own identity
- Draupati and Kunti: Shaping the story through focus and character
- Why did Kauravas lose: The role of strategic leadership
- Dhritarashtra: Blind by chance as well as choice
- Leadership and its contradictions

Week 7: Summary

Course conclusion

Programme: M. A. (French)

Course Code: FRC 101

Title of the Course: Language Skills
(Cours de langue de niveau avancé)

Number of Credits: 4

Effective from AY: 2018-19

<u>Prerequisites for the course:</u>	Bonne connaissance du français (Niveau A2-B1).	
<u>Objective:</u>	Ce cours de langue française a pour but d'améliorer les compétences linguistiques en français. Ce niveau correspond au niveau B2-C1 du Cadre Européen Commun de Référence pour les Langues (CECRL).	
<u>Content:</u>	1. Compréhension écrite- Les textes sur la culture, la civilisation, et la littérature. Les types de textes-journalistiques et littéraires - narratifs, argumentatifs et descriptifs. Dictées et résumés.	12hours
	Pratique de la compréhension orale- des exercices pour s'entraîner à la compréhension orale- documents audio et vidéo, extraits d'émissions de radio / télévision, interviews, et conversations dans un milieu francophone.	12hours
	2. Composition- Production des textes écrits sur la culture and la civilisation (sujets – situations réelles et imaginaires, compositions argumentatives, narratives, expressives and explicatives).	12hours
	3. Grammaire avancée- Analyse et usage des temps, modes, voix et discours. Expression de la cause, la conséquence, l'opposition, la concession et le but. Identification et usage des expressions idiomatiques, des expressions imagées, des proverbes and des clichés (expressions sur la nature, les animaux et les parties du corps.).	12hours
	4. Pratique de l'expression orale- expression libre, dialogue guidés, simulations, présentations orales, débats.	
<u>Pedagogy:</u>	Teaching methods and syllabus are based on the introduction of students to principles of autonomous and self-directed learning and LSP methodologies. This module will contain LSP in various media and forms of presentation (oral: lectures; audio-visual: TV, video; ICT: Internet, CD-ROMs). Independent work (group and individual). Exercises in task setting and fulfilling.	
<u>References/</u>	1. Gevisse, Le Bon Usage, Ed. Duculot (régulièrement mis à jour)	

<u>Readings</u>	2. Petit Larousse illustré, édition annuelle 3. Petit Robert , édition annuelle 4. Le Robert. Dictionnaire des expressions et locutions 5. Title of the Course: Women's
writings (Écriture féminine)

<u>Prerequisites for the course:</u>	Bonne connaissance du français	
<u>Objective:</u>	L'écriture féminine et ' Gender Studies ' est un programme qui prépare les étudiants à penser de façon critique et créative en utilisant le genre comme catégorie d'analyse de base. L'objectif est de revenir sur la question du genre, d'intérêt particulier pour les femmes et de l'intérêt général à des chercheurs des 'gender studies' à travers une variété de différents contextes culturels et historiques.	
<u>Content:</u>	1. La théorie féministe 2. « Points de vue » féministes et l'inégalité entre les sexes 3. La critique littéraire 4. Examen de textes littéraires par des français / francophones et les femmes écrivains dans d'autres littératures. Textes : au choix	12hours 12hours 12hours 12hours
<u>Pedagogy:</u>	Teaching methods and syllabus are based on the introduction of students to principles of autonomous and self-directed learning and LSP methodologies. This module will contain LSP in various media and forms of presentation (oral: lectures; audio-visual: TV, video; ICT: Internet, CD-ROMs). Independent work (group and individual). Exercises in task setting and fulfilling.	
<u>References/ Readings</u>	1. Dybikowski, Anne, In the Feminine- Women & words / Les femmes et les mots 2. Didier, Béatrice, L'écriture-Femme 3. Godard, Barbara, (dir .) , Gynocritics / la Gynocritique : 4. Démarches féministes à l'écriture des Canadiennes et Québécoises.	
<u>Learning Outcomes</u>	A la fin de ce cours, l'étudiant sera capable de réfléchir sur la nature de l'écriture féminine, ses marques, ses traces, la place des femmes dans le champ littéraire.	

Programme: M. A. (French)

Course Code: FRO-104

Title of the Course: Semantics and Lexicology (Sémantique et Lexicologie)

Number of Credits: 4

Effective from AY: 2018-19

<u>Prerequisites for the course:</u>	Bonne connaissance du français	
<u>Objective:</u>	Ce cours a pour objectif d'introduire les étudiants aux domaines de la sémantique et de la lexicologie	
<u>Content:</u>	<p>1. LA SEMANTIQUE</p> <ol style="list-style-type: none"> 1. Sémantique lexicale- champs lexical /champs sémantique 2. Analyse structurale et componentielle 3. Synonymie et antonymie 4. Métonymie 5. Les suffixes et les préfixes 6. Les figures de style- métaphore, métonymie, synecdoque, hyperbole, 7. La dénotation et la connotation 8. La polysémie et l'homonymie 9. Hyperonyme, hyponyme 10. La présupposition et l'implication 11. Variation lexicale <p>2. LA LEXICOLOGIE</p> <ol style="list-style-type: none"> 1. Introduction à la lexicologie 2. La créativité lexicale en français : néologie, néologisme et emprunt 3. Le sens propre et le sens figuré 4. Les gallicismes 5. Le vocabulaire politique, moral, psychologique, scientifique, religieux, mythologique et contemporain. <p>Textes au choix</p>	<p>24 hours</p> <p>24 hours</p>
<u>Pedagogy:</u>	Teaching methods and syllabus are based on the introduction of students to principles of autonomous and self-directed learning and LSP methodologies. This module will contain LSP in various media and forms of presentation (oral: lectures; audio-visual: TV, video; ICT: Internet, CD-ROMs). Independent work (group and individual). Exercises in task setting and fulfilling.

<u>Learning Outcomes</u>	<p>Les étudiants devront:</p> <ul style="list-style-type: none"> - développer une connaissance des perspectives explicatives en sémantique et lexicologie, - plus particulièrement développer l'aptitude à appliquer des concepts théoriques à des situations langagières concrètes, - avoir acquis une bonne connaissance des différentes approches contemporaines en sémantique et lexicologie. 	

Programme: M. A. (French)

Course Code: FRO-105

Number of Credits: 4

Title of the Course: Foreign
Language Acquisition Studies
(Didactique des Langues Étrangères)

Effective from AY: 2018-19

<u>Prerequisites for the course:</u>	Bonne connaissance du français	
<u>Objective:</u>	Ce cours consiste en une incitation aux bases théoriques, pédagogiques et techniques de l'enseignement et de l'apprentissage du français.	
<u>Content:</u>	<p>1. Notions de base- La définition de la Didactique et les choix pédagogiques. Les différents types d'apprenants. Les attitudes et les stratégies d'apprentissage.</p> <p>2. L'histoire de la méthodologie de l'antiquité jusqu'à nos jours- L'antiquité- la méthode traditionnelle- la méthode traduction-la méthode directe- la méthode structuro-globale- la méthode communicative- l'approche actionnelle dans l'enseignement du français - la situation de l'enseignement d'une langue étrangère aujourd'hui. Les méthodes non-conventionnelles Caractéristiques de la langue française- la diversité du vocabulaire français- les caractéristiques du français du point de vue de son phonétisme, son accent et son écriture</p> <p>3. Les pratiques de classe- La fiche pédagogique -l'approche communicative et la compétence communicative- les documents authentiques- ? Donnez des exemples. Selon vous, quels sont les avantages et les inconvénients d'utiliser des documents authentiques dans une classe de langue?</p>	<p>12hours</p> <p>24hours</p> <p>12hours</p>
<u>Pedagogy:</u>	Teaching methods and syllabus are based on the introduction of students to principles of autonomous and self-directed learning and LSP methodologies. This module will contain LSP in various media and forms of presentation (oral: lectures; audio-visual: TV, video; ICT: Internet, CD-ROMs). Independent work (group and individual). Exercises in task setting and fulfilling.

<u>Learning Outcomes</u>	<p>A la fin de ce cours l'étudiant sera capable</p> <ul style="list-style-type: none"> -d'identifier différents stratégies d'apprentissage de l'antiquité jusqu'à nos jours -de créer des fiches pédagogiques -de répondre aux besoins d'apprentissage individuels de leurs étudiants - d'adapter leur enseignement au contexte local - d'être un observateur sensible et réfléchi de ce qui se passe en salle de classe. 	
---------------------------------	--	--

Programme: M.A.

Course Code: FRO - 106 **Title of the Course:** Research Methodology (Méthodologie de recherche)

Number of Credits: 4

<u>Prerequisites</u>	Good knowledge of French	
-----------------------------	--------------------------	--

<u>for the course:</u>		
<u>Objective:</u>	This course introduces students to foundational methods and techniques of academic research.	
<u>Content:</u>	<p>1. Planning the project: Reviewing the literature/Data. Keeping records and making notes</p> <p>2. Selecting methods for Data collection: The analysis of Documentary evidence and Data, Designing and Administering questionnaires, Planning and conducting interviews, Observation studies</p> <p>3. Analysing and presentation of information: Analysis and presentation of information, writing the thesis/dissertation.</p>	<p>12 hrs</p> <p>12 hrs</p> <p>24 hrs</p>
<u>Pedagogy:</u>	Students will be introduced to the content through a series of interactive lectures, presentations, videos, and discussions. Teaching methods and syllabus are based on the introduction of students to principles of autonomous and self-directed learning. Independent work (group and individual). Exercises in task setting and fulfilling.	
<u>References/Readings</u>	<ol style="list-style-type: none"> 1. <u>Learning Outcomes</u>	A la fin de ce cours l'étudiant développera une expertise et un niveau élevé de compétence dans le domaine de la traduction littéraire.	

Programme: M. A. (French)

Course Code: FRO- 116

Number of Credits: 4

Effective from AY: 2018-19

Title of the Course: - French

Language Level 1 (Français Niveau 1)

<u>Prerequisites for the course:</u>	None	
<u>Objective:</u>	This course prepares students to the A1 level of the Common European framework of Reference for Languages. This course is offered to students who are complete beginners in French.	
<u>Content:</u>	The course builds the following communicative skills in French Students abilities at the end of the course, Listening: I can recognise familiar words and very basic phrases concerning myself, my family and immediate concrete surroundings when people speak slowly and clearly.	12hours
	Reading: I can understand familiar names, words and very simple sentences, for example on notices and posters or in catalogues.	12hours
	Spoken interaction: I can interact in a simple way provided the other person is prepared to repeat or rephrase things at a slower rate of speech and help me formulate what I'm trying to say. I can ask and answer simple questions in areas of immediate need or on very familiar topics. Spoken production: I can use simple phrases and sentences to describe where I live and people I know.	12hours
	Writing: I can write a short, simple postcard, for example sending holiday greetings. I can fill in forms with personal details, for example entering my name, nationality and address on a hotel registration form.	12hours
<u>Pedagogy:</u>	Teaching methods and syllabus are based on the introduction of students to principles of autonomous and self-directed learning and LSP methodologies. This module will contain LSP in various media and forms of presentation (oral: lectures; audio-visual: TV, video; ICT: Internet, CD-ROMs). Independent work (group and individual). Exercises in task setting and fulfilling.

Title of the Course : सोद प्रकल्प

Dissertation

Number of Credits : 08

Effective From AY : 2018- 2019

GOA UNIVERSITY
DEPARTMENT OF MARATHI
TALEIGAON PLATEAU, TISWADI, GOA-403206
2018-2019

M. A. Marathi Programme

The thrust areas of the Department include Grammar and Linguistics, Theory of Literature and Translation Studies, Medieval Literature, Christian Marathi Tradition of the 17th Century in Goa, Modern Forms of Literature, Marathi Literature in Goa, Dalit and Folk Literature and Science Fiction in Marathi.

Scheme of Instruction (Semester System)
Choice Based Credit System

Course Code	CORE COURSE	No. of Credits
Semester I		
MRC 201-	मराठी व्याकरणाचा पुनर्विचार A Review of Marathi Grammar	4
MRC202-	आधुनिक मराठी साहित्याचा इतिहास (१८१८ – १९४७) History of Marathi Literature(1818-1947)	4
Semester II		
MRC203-	भाषाविज्ञान आणि मराठी भाषा Linguistics and Marathi Language	4
MRC - 204	आधुनिक मराठी साहित्याचा इतिहास (१९४७-२०१५) History of Marathi Literature (1947- 2015)	4
Semester III		
MRC - 205	साहित्य सिध्दांत Theory of Literature	4
MRC - 206	विशिष्ट साहित्यप्रकाराचा अभ्यास A Form of Literature (Autobiographies)	4
Semester IV		
MRC -207	दोन मध्ययुगीन मराठी लेखकांचा अभ्यास A Study of Two Marathi Text Representing the Medieval Period	4
MRC- 208	एका आधुनिक मराठी साहित्यिकाचा अभ्यास A Study of Morden Marathi Author	4
OPTIONAL COURSES		
MRO-201	लोकसाहित्याचा अभ्यास A Study of FolkLiterature	4
MRO-202	गोमंतकीय मराठी साहित्य Goan Marathi Literature	4
MRO-203	भाषांतरविद्या: सिध्दांत व उपयोजन Translation: Theory and Application	4

MRO-204	१९६०नंतरचे मराठी गद्य व पद्य पाठ्यपुस्तके Marathi Prose and Poetry: Post 1960 period	4
MRO-205	१७व्या शतकातील गोमंतकीय ख्रिस्ती मराठी साहित्याचा अभ्यास A Study of 17 th Century Goan Christian Marathi Literature	4
MRO-206	साहित्याचा समाजशास्त्रीय अंगाने अभ्यास Sociological Study of Literature	4
MRO-207	संशोधन पद्धती व तंत्र Research Methodologies and Techniques	4
MRO-208	विज्ञानसाहित्य Science Fiction in Marathi	4
MRO-209	स्त्रियांची मराठीतील आत्मचरित्रे Autobiographies of Women in Marathi	4
MRO-210	दलित साहित्याचा अभ्यास A Study of Dalit Literature	4
MRO-211	व्यावसायिक मराठी Professional Marathi	4
MRO-212	मराठी साहित्याचे प्रकारांतर व माध्यमांतर Marathi Literature: Transform & Trans-media	4
MRO-213	विश्वसाहित्य : मराठी अनुवाद World Literature in Marathi Translation	4
MRO-214	भारतीय साहित्य : मराठी अनुवाद Indian Literature in Marathi Translation	4
MRO-215	प्राचीन भारतीय साहित्य : मराठी अनुवाद Ancient Indian Literature in Marathi Translation	4
MRO-216	मराठीतील पौराणिक साहित्याचा अभ्यास Mythological Literature in Marathi	4
MRO-217	मराठीतील ऐतिहासिक साहित्याचा अभ्यास Historical Literature in Marathi	4
MRO-218	उपयोजित समीक्षा Applied Criticism	4
MRO-219	सर्जनशील लेखन Creative writing	4
MRO-220	वैचारिक साहित्याचा अभ्यास Ideological Literature in Marathi	4
MRO-221	मराठी विनोदी साहित्याचा अभ्यास Marathi Comedy Literature	4
MRO-222	मोडी : भाषिक व साहित्य परंपरा Moaddi : Linguistic and Literary Tradition	4
MRO -223	मराठीतील नियतकालिके(१९६० ते १८३२) Periodicals in Marathi-1832-1960	4
MRD-224	Dissertation (optional) against any two optional papers	8
