<u>Objectives:</u>	The Indian Ocean has been connecting people, integrating regions and the movement of commodities, objects, skills, people, ideas and religions across the sea and has profoundly shaped many empires, cultures, ideologies, countries and the development of the modern world. This course focuses on history from the perspective of the sea. It looks at the vast Indian Ocean, both as a heuristic concept and as a physical space. It aims to present a complex picture of the historical forces and dynamics through ocean as a framework of analysis, both in the past and the present, from an early history of biological, cultural, commercial and ideological exchanges to contemporary strategic geo-political interests.	
<u>Content:</u>	<ol style="list-style-type: none"> 1. Methodology and its application <i>Longue durée.</i> 2. The Early Maritime Contacts Fishing and Sailing communities; Maritime networks: Mesopotamia, Indus ports, Persian Gulf. Greco–Roman contacts. 3. Shared Faith and Empires Buddhism and maritime activity. Rise of Islam. Impact of Islamic and Chinese Empires. Developments in early Southeast Asia. East Africa. Monastery and Guild. 4. Seafaring, Ships and Technology Navigational methods; Ports; Craft production and trading commodities. 5. Europeans in an Indian Ocean World The Portuguese Impact. The Dutch Enterprise. The British Impact. The French Ports. Merchant communities. 6. The Indian Ocean Rim: Geopolitics and Development Geo-political, Economic and Strategic significance of the Indian Ocean; India's strategic, economic and maritime interests in the Indian Ocean; Global power dynamics and Regional powers in Indian Ocean. 	<p>3</p> <p>8</p> <p>9</p> <p>7</p> <p>9</p> <p>12</p>

<u>Pedagogy:</u>	Lectures (traditional, problem-based, discussion-based); tutorials; assignment-based; seminars; problem solving-based discussions; insight-based peer reviews; cooperative learning; self-study.

Programme: M. A. (History)

Course Code: HSO-166

Title of the Course: Environmental History of India

Number of Credits: 4

Effective from AY: 2018-19

<u>Prerequisites for the course:</u>	It is required that the student be interested in the subject of History, and be ready to put in sincere efforts to acquire knowledge in this area.	
<u>Objective:</u>	<p>Environmental History of India is a course on a recently emerged topic of great significance in the subject of History. This course has the following objectives:</p> <p>To cover in a systematic, comprehensive and critical way the nature, issues, problems and movements related to environmental history in India.</p> <p>To discuss various problems, issues and debates relating to pollution of environment, changes in resource use, developmental needs and impact on environment from the beginning till the contemporary period.</p> <p>To enable the students to comprehend the urgent need for environmental conservation, and appreciate the policy of sustainable development.</p> <p>To encourage an interdisciplinary approach to environmental history.</p> <p>To inculcate the spirit of environmental ethics.</p>	
<u>Content:</u>	<p>I. Introduction: Definition of Environmental History – Historiography - Sources.</p> <p>II. Habitats in Human History: Modes of Production and Modes of Resource Use – Gathering Stage to Industrial Stage.</p> <p>III. Man and Nature in Pre-Modern India: Hunter-Gatherer Societies to Agricultural Societies – the Eclectic Belief Systems and Cultural Ecology – Sacred Groves - Conservation from Above – Conservation from Below.</p>	<p>4</p> <p>4</p> <p>7</p>

	<p>IV. Environmental Change and Conflict in Modern India: Colonial Interests on Forests, Forest Acts (1865, 1878 and 1927) and Policies – Systematic Conservation vs. Exploitation Debate – Issue of Shifting Cultivation - Settled Cultivators and the State – Decline of Artisanal Industry – Deforestation – Protests Against the British Forest Acts and Policies.</p> <p>V. Independent India: Policies towards Forestry - Forest Policy Resolutions and Acts (1952, 1980 and 1988) - Policies towards Environment - Role of NGOs - Environmental Movements: Chipko Movement - Appiko Movement – Scientific Conservation of Environment - Environmental Ethics - Major International Environmental Conventions and Protocols.</p> <p>VI. Economic Development and its Impact on Environment: Agriculture - Industry - Urbanisation and problem of Environmental Degradation – Issue of Sustainable Development - Rational use of Natural Resources – Other Alternatives - Conflict Between Socio-Economic Developments and Sustainable Development - Environmental Pollution and Methods of Control - Wild Life Conservation: Animals vs. Humans.</p> <p>Note: Field work/Study tour and presentations related to environmental issues and problems in Goa/Western Ghats shall be a part of this paper.</p>	<p>11</p> <p>11</p> <p>11</p>
<u>Pedagogy:</u>	Lectures/ tutorials/assignments/self-study/seminars/field work based write up.

<u>Learning Outcomes</u>	<ul style="list-style-type: none"> ● Understand the environmental history of India through the ages, from the ancient to the modern. ● Comprehend the policy of restraint in ancient and medieval India and profligacy in Colonial and Independent India. ● Appreciate Cultural Ecology and its significance. ● Comprehend Environmental Ethics. ● Understand sustainable development, rational use of natural resources, renewable sources of energy, and methods of controlling pollution. 	

Programme: M. A. (History)

Course Code: HSO 167

Title of the Course: Construction and Representation of Goan Identity

Number of Credits: 4

Effective from AY: 2018-19

<u>Prerequisites for the course:</u>	No prerequisites for the course.	
<u>Objective:</u>	The course aims to take an interdisciplinary approach to gain an understanding of the complex processes involved in the making of Goan identity. It introduces key theoretical frameworks to questions of Goan identity and focuses on the social, cultural and political processes that produce a sense of the identity. It will consider the significance of 'identity' and 'identification' for everyday life by investigating how history, myths, cultural perceptions, images, symbols and memories are drawn upon to construct the identity. The course also enables the investigation of representations of identity in diverse forms and media. It also aims to provide an overview of complex connection between Goan identity and politics in contemporary political life and public policy debates.	
<u>Content:</u>	<ol style="list-style-type: none"> Questions of Identity: Primordialist. Constructivism. Social Identity Theory. Cultural Memory Colonialisms– Portuguese and British. Freedom Movement. Little Traditions. Deities. 'Folk' culture. Syncretism. <i>Kuds</i>. Diaspora. Identity and Polity Elections. Governments and policies. Contesting Signs and Symbols Opinion Poll. Konkani Language Movement. Statehood. Movement for Special Status. Transformation and Loss Migration. Demography. Tourism. Land. Rivers. Commodification of Culture. Consuming Identities Films. Literature. Media. Identity as a Resource Globalisation. Ecology. Growth Infrastructures. Civil Society. 	<p>4</p> <p>8</p> <p>8</p> <p>8</p> <p>8</p> <p>6</p> <p>6</p>
<u>Pedagogy:</u>	Lectures (traditional, problem-based, discussion-based); tutorials; assignment-based; seminars; problem solving-based discussions; insight-based peer reviews; visual culture and media; cooperative learning and self-study.

Programme: M. A. (History)

Course Code: HSO-173

Title of the Course: A History of Portuguese Colonialism (1415-1974)

Number of Credits: 4

Effective from AY: 2018-19

<u>Prerequisites for the course:</u>	There are no prerequisites for this course.	
<u>Objectives:</u>	<p>The course aims at providing the students with detailed and up-to-date knowledge of the several periods of Portuguese colonialism in Asia, Africa and South America between 1415 and 1974, as well as the ability to compare it with other colonial empires.</p> <p>This course intends to:</p> <ul style="list-style-type: none"> ➤ examine the motives that made Portugal take to the seas in the 15th century; ➤ discuss the process of the establishment of a colonial empire and the mechanisms of its governance under the Portuguese Absolute and Constitutional Monarchies, Republic and the <i>Estado Novo</i>; ➤ evaluate the assimilative and discriminatory aspects of Portuguese colonialism with a special emphasis on race relations and gender; and ➤ discuss the nature of local resistance to Portuguese rule in the colonies. 	
<u>Content:</u>	<p>I. Portugal Takes to the Seas Historical Background. Motives. Voyages of Exploration. Sea-route to India and Brazil.</p> <p>II. Laying the Foundations Initial Acquisitions, Later Expansion: South Atlantic, Indian Ocean and beyond. Contrasting Models of the 'Empire;' Formal and Informal empire. The foundation of the <i>Estado da Índia</i> and its expansion and dynamics until 1580. Brazil: Portuguese Settlement, 1500-1580. The Atlantic: sugar production and the trade of enslaved Africans.</p> <p>III. The Political and Economic Structures of Portugal</p>	<p>6</p> <p>10</p> <p>8</p>

	<p>Ultramar, 1580-1750 The Iberian Dynastic Union. Global war with the Dutch. Decline in the East. Revival in the West. The Braganza dynasty and its overseas policy.</p> <p>IV. Portuguese colonialism from the Age of Revolutions to the <i>Estado Novo</i> Pombaline Era and its aftermath. Late Colonial Brazil, 1750-1808. Nineteenth century Politics of Limited Franchise in Goa and the Rose-coloured Map in Africa. Republican Promises of Provincial Autonomy. <i>Estado Novo: Acto Colonial</i>. Denial of Civil Liberties. <i>Concordat</i>.</p> <p>V. Loss of Empire Early Resistance: Nature and Forms. Independence of Brazil. Liberation of <i>Estado da Índia</i>. Decolonisation of Portuguese Africa, Timor and Macau.</p> <p>VI. The Development of Portuguese Colonial Societies: Identities and Creolization Race and ethnic relations across the Portuguese empire. Gender and the Portuguese colonial state. Cultural transfers in a globalized world.</p>	<p>8</p> <p>8</p> <p>8</p>

	46. Yow, Valerie. <i>Recording Oral History: A Practical Guide for Social Scientists</i> . 2 nd Ed. Lanham, MD: Rowman & Littlefield, AltaMira, 2005.	
<u>Learning Outcomes</u>	<p>Upon the successful completion of this course, the student will be able to:</p> <ul style="list-style-type: none"> • obtain competency with oral history as a method of historical research; • acquire experience of interviewing, transcribing, indexing, archiving, analysing and curating oral history interviews; • engage with ethical concerns and issues and creative opportunities of using oral histories as source material; • learn about the importance of the integration of oral history with other more traditional kinds of research and explore the ways in which oral history can complement, supplement, and even contradict written, pictorial, and other records; • acquire practical skills on how to record, understand the theoretical issues involved in conducting and interpreting oral history interviews and be able to address the dynamics of the interview and fieldwork situation through theoretical analysis of the historic context in which the interview takes place; • obtain competencies in analysing the strengths and weaknesses of interviewing methods as they apply to existing disciplinary paradigms; and • understand oral history as academic method, data-source and creative story-form. 	

NOTE: This course will be offered to MA Part II for the Semester IV (2018-19) (Old Ordinance)

Programme: M. A. (History)

Course Code: HSO 200

Title of the Course: History and the Disciplines

Number of Credits: 1

Effective from AY: 2018-19

<u>Prerequisites for the course:</u>	A careful reading of the core text that shall be indicated for each session shall be essential. The course is aimed at Masters and Ph.D. students from the departments of history, literature, sociology, and other related ones in the humanities and social sciences. Participants will be assessed on the basis of participation in class and a final examination/short paper at the end of the course.	
<u>Objective:</u>	This course extends the spirit of DD Kosambi's scholarship, particularly its pioneering of a multi-disciplinary approach to the study of history in India. Our effort will be to explore some of the ways in which the recent rethinking and recasting of history-writing has emerged out of critical conversations with key disciplines in the social sciences and critical humanities. Against a wider backdrop of changes in history writing, the course shall consider the interplay of the historical discipline with literature and sociology, anthropology and politics, including the making of historical anthropology in these terrains. Such discussions will be taken sustained by focussing on the substantive themes of gender and identities, subalterns and communities, nations and nationalisms, temporalities and traditions, myth and historical-consciousness, and colonialism, Christianity, and conversion.	
<u>Content:</u>	1. Introduction: History, Literature, Disciplines	3
	2.. Recasting History: Questions of Gender	3

	<p>3. Rewriting History: Subalterns and Nation(s) 2</p> <p>4. History and Anthropology/Sociology: Time and Tradition 2</p> <p>5. Historical Anthropology: Colonialism and Conversion 2</p>	
<u>Pedagogy:</u>	Lectures/ Tutorials/Assignments/Self-study

Programme: MA (History)

Course Code: HSO 203

Title of the Course: From Living Rock: Caves and Rock-Temples of India

Number of Credits: 1 (VRPP Course)

Effective from AY: 2019-20

Prerequisites for the course:	All students are requested to be familiar with the readings listed under each class prior to the class so that they may effectively participate in class discussions.	
Objective:	<p>For a period of over one thousand years, the favored mode for sacred architecture across India was to create monuments by excavating into the living rock of the mountainside. Many of these caves and rock-temples are cut into the hills of the Western Ghats, but others were also created from granite in south India, and even from friable laterite.</p> <p>This course examines key examples of the rock-cut mode of architecture, adopted by Buddhists, Hindus, and Jains, that remained popular right up to the tenth century when it finally gave way to structures built by the conventional method of placing stone upon stone.</p>	
Content:	<p>Introduction to Rock-cut Architecture & Process of creating space from Living Rock And Early Beginnings in Eastern India: Ashokan Barabar caves: 2nd century BCE</p> <p>Readings</p> <p>Vidya Dehejia & Peter Rockwell, The Unfinished. Stone Carvers at Work in the Indian Subcontinent, ch.2, "Unfinish to Finish: A Continuum," pp. 29-61</p> <p>&</p> <p>Ch 6: "Stone, Tools, Technique & Teams," pp. 116-129</p> <p>[Not for students: This book is heavily illustrated to explain the text]</p> <p>Early Buddhist Caves of Western India: ca. 100 BCE – 200 CE</p> <p>Readings:</p> <p>Vidya Dehejia, "The Collective and Popular Basis of</p>	<p>2</p> <p>2</p>

Programme: M.A. (History)

Course code: HSO 204

Title of the course: Archaeology: Principles and Methods

Number of credits: 4

<u>Prerequisites for the course</u>	The student should be interested in the subject of Archaeology and should sincerely put in efforts to acquire knowledge in this field.	
<u>Objective:</u>	This course aims to introduce the students to key concepts and approaches in archaeology, highlighting their applications in interpreting the human past. The definition, aims and scope of archaeology and its development as a discipline is introduced to the students. Legislation related to archaeology and the role of archaeology in heritage management is also discussed in this course.	
<u>Content:</u>	<p>I: Introduction to Archaeology Archaeology as the study of the past: Definition, Aims and methods, Scope of archaeology, its relationship with History and Anthropology, History of Development of Archaeology from 19th century till the present, A Review of Indian Archaeology, Archaeology of Post Independence India: contribution of institutions and individuals.</p> <p>II: Archaeological Methods General methods of archaeological field work</p> <ol style="list-style-type: none"> Methods of data retrieval: Exploration & Excavations. Field discoveries: Traditional methods of explorations and site discoveries using textual sources, chance discoveries, map and satellite image studies and village to village surveys. Understanding dating in Archaeology/Chronology and dating methods. Relative and absolute dating methods Importance of excavated remains for historical reconstruction. Sources used in the study of Archaeology Key Archaeological Findings and their significance <p>III: Theories in Archaeology</p> <ol style="list-style-type: none"> Antiquarian period to Traditional Archaeology New Archaeology/ Processual Archaeology Post Processual Archaeology <p>IV: Archaeology of Goa</p>	<p>8</p> <p>14</p> <p>6</p>

<u>Learning Outcomes:</u>	<ol style="list-style-type: none"> 1. Students will be accustomed with numismatic methodologies and will be able to identify and decipher the coins. 2. They will also be able to understand the socio-political background that accure through the coinage of that time; thus getting holistic picture of that economic system prevalent in ancient India. 	

Programme: M. A. History

Course Code: HSO 206

Title of the Course: An Environmental History of the World

Number of Credits: 04

Effective from AY: 2021-2022

<u>Prerequisites for the course:</u>	No prerequisites for the course.	
<u>Objectives:</u>	An Environmental History of the World is focusing on the interactions that humans have with nature. It examines natural world as active, rather than passive; how nature influences humans, how humans intervene in nature and how is nature shaped by human action. In addition to this the course is not confined to the material world, for it is also concerned with humans' ideas about the planet and their place on it.	
<u>Content:</u>	<ol style="list-style-type: none"> Ecology as destiny? Humans and nature in a time-dimension: Ibn Khaldun; Montesquieu; George Perkins Marsh; Fernand Braudel. Early Human Condition: Ecological process Historicizing climate; Early humans; Early Agriculture; the Metal Ages. The Columbian exchange Biological and cultural consequences. Second Iron Age Industrial world, Environmental Relationships. Nations and nature Environment and empire—Imperialism and environmental change; Significance of <i>Silent Spring</i>; science and the discourse of ecological crisis; the ideology of scientific conservation, the environmental debate, green capitalists, environmental justice. Climate Science and Climate politics Energy, population, urbanisation, 'world hunt'—commodification of animals, environmentalism and political economy, shape of the future. 	<p>06</p> <p>08</p> <p>06</p> <p>08</p> <p>10</p> <p>10</p>
<u>Pedagogy:</u>	Lectures (traditional, problem-based, discussion-based); tutorials; assignment-based; seminars; cooperative learning and self-study.	
<u>References/Readings</u>	<ol style="list-style-type: none"> Anker, P. (2002) <i>Imperial Ecology</i>. Cambridge, MA. Arnold, D. and R. Guha (1995). <i>Nature, Culture, and Imperialism: Essays on the Environmental History of South Asia</i>. Delhi.

<u>Learning Outcomes</u>	<ol style="list-style-type: none"> 4. To introduce students to the developments (political & economic) taken place in the post-liberation period. 5. To help students understanding development planning. 6. To enhance their knowledge about contemporary issues concerning Goa. 	

<p><u>Prerequisites for the course:</u></p>	<p>Open to all students who have a B.A. in social sciences or related disciplines. A basic understanding of the major foreign policy issues is expected.</p>	
<p><u>Objective:</u></p>	<p>The course seeks to acquaint students with the historical evolution of India's foreign policy since independence, both in terms of the conceptual underpinnings and philosophical moorings on the one hand, as also the vent of diplomatic practice, on the other. The object of the Course is to introduce students to the traditions in Indian Foreign Policy, which have defined the nation's strategic approaches to myriad themes and shaped and conditioned its perspectives, in terms of national interest, referenced to the extant. Emphasis would be on comprehending the changing contours of Indian Foreign Policy through the 21st century, amidst the broader pattern of continuity that underpins it, spanning Non Alignment 2.0 to the incorporation of the whole gamut of Maritime Affairs, in the nation's strategic calculus. Particular emphasis would be laid on the foundation aspects of foreign policy as also shedding light on the mechanics and dynamics of foreign policy making and implementation. Emerging aspects embodying India's interface with global and regional players and multilateral organizations and forums shall also be dealt with.</p>	
<p><u>Content:</u></p>	<p>1. Making of India's Foreign Policy: Historical Overview; Conceptual Underpinnings (Principles, Philosophical Traditions, Determinants – Domestic and International); Dynamics-Mechanics (Structure, Institutions, Processes); External Change-Agents (Role of Think Tanks, Public Diplomacy).</p> <p>2. National Security and Strategic Autonomy in India's Foreign Policy: Genesis, Doctrines, Trends and Patterns, Changing Dimensions, in Indian Security Framework (External/Internal, Continental vis-à-vis Nautical) and Nuclear Construct (PNE to Minimum Nuclear Deterrent).</p> <p>3. India's Interface with its Neighbours: 'Neighbourhood-First' Doctrine (Blending Balanced Strategic Engagement of Geographical Neighbourhood (South Asian littorals), Geopolitical and Civilizational Neighbourhood (Continental South East Asia);</p>	<p>08 urs</p> <p>08 Hours</p>

	<p>Disaggregated Relationships in Himalayan South-Asia (Bhutan and Nepal), Maritime South-Asia (Sri Lanka and Maldives), Peninsular South-Asia (Bangladesh), Beachhead South Asia (Afghanistan and Myanmar).</p> <p>4. India's Relations with Strategic Regions and Regional and Global Powers: Strategic Regional Engagements in South East Asia (Look East to Act-East); Persian Gulf and West Asia (Link-West); Europe (Think-West); India-Africa Summit and India-LAC Relations (Renew South-South)</p> <p>5. Economic Diplomacy and National Development Impulses in India's Regional and Global Engagements: Strategic Partnerships with Global Powers (United States, China; Japan, France, Germany, Russian Federation, Israel); Interaction with Global and Regional Institutions and Groupings (UN, G20, BRICS, EAS, BIMSTEC, IORA)</p> <p>6. Continuity and Change in 21st Century Indian Foreign Policy and Diplomacy: Non-Alignment to Multi-Alignment (Balance-of-Power to Power-of-Balance), Counter-Terrorism, Energy Security and Independence, Diaspora; Strategic Maritime and other Geographies ('SAGAR' in the IOR to 'QUAD' in the Indo-Pacific); Strategic Infrastructure Development (AIIB, NDB, ADB, AAGC); Global and Regional Trade and Economic Communities (WTO to RCEP).</p>	<p>08 Hours</p> <p>08 Hours</p> <p>08 Hours</p> <p>08 Hours</p>

SYLLABUS OF THE M. A. SOCIOLOGY PROGRAMME

COMPULSORY COURSES

Programme: M. A. (Sociology)

Course Code: SOC 101

Title of the Course: Classical
Sociological Theories

Number of Credits: 4

Effective from AY: 2018-2019

Prerequisites for the course:	As the advanced studies in Sociology begin with this course there are no prerequisites.	
Objectives:	The main focus of this course is to introduce students to the theories and perspectives of the major founders of sociological thought: Karl Marx, Max Weber, and Emile Durkheim. The course will invite students to engage with theory through examining its application to contemporary concerns, and issues they may be familiar with. The attempt is to make the discussion relevant and inviting students to re-examine their perception that sociological theory is overly abstract and difficult.	
Content:	1. Introduction - Background of Sociology, Organicism of Herbert Spencer, Positivism of Saint Simon and August Comte	12 hours
	2. Karl Marx - Marx's Conception of Society: Historical and Dialectical Materialism, Alienation of Labour, Class Conflict	12 hours
	3. Max Weber - Verstehen, Protestant Ethics and the Spirit of Capitalism, Authority, Bureaucracy	12 hours
	4. Emile Durkheim - The Division of Labour, Rules of Sociological Method, Typology of Suicide, Elementary Forms of Religious Life	12 hours
Pedagogy:	Lectures, discussions, tutorials, student presentations	
References/Readings:	1. Aron, Raymond. 1967 (1982 reprint). <i>Main Currents in Sociological thought, (Two Vols.)</i> . Middlesex: Penguin Books.	

	<ol style="list-style-type: none"> 2. Coser, Lewis, A. 1977. <i>Masters of Sociological Thought</i>. Harcourt: Brace Jovanovich. 3. Craib, Ian. 1997. <i>Classical Sociological Theory</i>. U.K.: Oxford University Press. 4. Giddens, Anthony. 2006. <i>Capitalism and Modern Social Theory</i>. U.K: Polity Press, (1971). 5. Johannes, Fabian. 1983. <i>Time and the Other: How Anthropology Makes Its Object</i>. New York: Columbia University Press. 6. John, Hughes. 1995. <i>Understanding Classical Sociology</i>. London: Sage Publications Publication. 7. Kimmel, Michael S. 2007. <i>Classical Sociological Theory</i>. New York: Oxford University Press. 8. Marx, Karl and Engels, Frederick. 1982. <i>Selected Works</i>. Moscow: Progress Publishers. 9. Morrison, Ken. 1995. <i>Marx, Durkheim, Weber: Formations of Modern Social Thought</i>. London: Sage Publications. 10. Ritzer, George. 1992. <i>Sociological Theory</i>. New York: McGraw-Hill. 11. Said, Edward. 1979. <i>Orientalism</i>. New York: Vintage Books. 	
Learning outcomes:	<ol style="list-style-type: none"> 1. Students will identify sociology as the discipline that emerged to make sense of modernity. 2. Will have a critical and comparative understanding of the methodological preferences and empirical concerns of the founders of sociology as a distinctive discipline. 	

Programme: M. A. (Sociology)

Course Code: SOC 102

Title of the Course: Sociology of Indian Society

Number of Credits: 4

Effective from AY: 2018-2019

Prerequisites for the course:	No prerequisites are identified as this is an invitation to sociologically approaching Indian society.	
Objectives:	This course is an introduction to the sociology of Indian society. It traces the origin of sociological tradition in India, examines the concerns and contributions of the pioneers. It illustratively reviews the works of scholars presenting the field-view (as contrasted from the book-view) of Indian society.	
Content:	1. Emergence and growth of Sociology in India: Institutions and approaches, Ambedkar's contribution to Indian Sociology.	12 hours
	2. Contribution of pioneers: D. P. Mukerjee, D. N. Majumdar, Radhakamal Mukherjee	12 hours
	3. Field view of caste: Nature and form of caste, Caste in modern India.	12 hours
	4. Field view of Indian village: Nature of village community, Changes in Village Community, Village, Region and Civilization.	12 hours
Pedagogy:	Lectures, discussion, field- based assignments and presentations

'Tribes in India', in Veena, Das. <i>Oxford India Companion to Sociology and Social Anthropology (Volume I)</i>. New Delhi: Oxford University Press. 	
Learning outcomes:	Students will get disciplinary and interdisciplinary ideas on the Sociology of Indian Society as a preparation to discern the perspectives on Indian society and culture later.	

Programme: M. A. (Sociology)

Course Code: SOC 103

Title of the Course: Contemporary
Sociological Theories

Number of Credits: 4

Effective from AY: 2018-2019

Prerequisites for the course:	An understanding of Classical Sociology is a prerequisite to study this course.	
Objectives:	This course is intended to introduce students to the schools of thought that have dominated sociology in the latter half of the 20th century. The course will examine the theoretical relevance and analytical utility of the premises, methodology, and conclusions of these diverse theoretical schools in understanding social structure and change.	
Content:	1. Nature of sociological theory	2 hours
	2. Functional theory in sociology: Parsons, Merton, Neo-Functionalism	6 hours
	3. Conflict theory and Critical theory	10 hours
	4. Symbolic interactionism	10 hours
	5. Phenomenology and Ethnomethodology	10 hours
	6. Neo-Marxism	10 hours
Pedagogy:	Lectures, discussions and presentations	
References/Readings:	<ol style="list-style-type: none"> 1. Alexander, Jeffrey C. 1987. <i>Twenty Lectures: Sociological Theory since World War II</i>. New York: Columbia University Press. 2. Uberoi, Patricia, Sunder, Nandini, and Deshpande, Satish. 2007. <i>Anthropology in the East: Founders of Indian Sociology and Anthropology</i>, Delhi: Permanent Black. 	
Learning outcomes:	Students get a critical understanding of attempts at bridging the gap between theoretical dualisms in social theory, and the knowledge of the competing discourses on the nature of modernity, late modernity and post-modernity.	

Programme: M. A. (Sociology)

Course Code: SOC 106

Title of the Course: Political Sociology

Number of Credits: 4

Effective from AY: 2018-2019

Prerequisites for the course:	The students should have a basic knowledge of contemporary political scenario in India and Goa. They should also have studied SOC 02 Sociology of Indian society	
Objectives:	After introducing the sub-discipline of political sociology, the course introduces some basic concepts. The course situates itself at the interface of society and polity in post-independent India. The objective is to equip the students with a critical understanding of the contemporary processes of socio-political change. The course also touches upon some of the problematic aspects of the enterprise of nation-building.	
Content:	1. Introduction: Intellectual background, Nature and scope of political sociology	8 hours
	2. Basic Concepts: Power and authority, Elite and masses, State and stateless societies, Nation-state and citizenship	10 hours
	3. State and Society in India: Religion and politics, Language and politics, Caste and politics	15 hours
	4. Dialectics of State and Civil Society: State and civil society: The Indian Experience, Challenges to Nation Building, Nation as an imagined community	15 hours
Pedagogy:	Lectures, discussions, book reviews, debates and presentations	
References/Readings:	5. Baxi, Upendra and Bhikhu, Parekh. 1995 (Eds.). <i>Crisis and Change in Contemporary India</i> . New Delhi: Sage Publications. 6. Bottomore T. N. 1972. <i>Social Change in Modern India</i>. New Delhi: Orient Blackswan Private Limited. 	
Learning outcomes:	The students will get analytical knowledge of power relations in relation to democratic politics in India and the course facilitates them to take informed decisions while participating in it as citizens.	

Programme: M. A. (Sociology)

Course Code: SOC 107

Title of the Course: Sociology of Social Stratification

Number of Credits: 4

Effective from AY: 2018-2019

Prerequisites for the course:	The students should have studied SOC 02 Sociology of Indian Society and SOC 06 Political Sociology	
Objectives:	This course aims to introduce students to the major theories of inequality and social stratification. It will give a comprehensive, integrated and empirical understanding of social stratification in India while discussing various dimensions of social stratification like caste, gender, and class.	
Content:	1. Important concepts : Social differentiation, Hierarchy and inequality, Social stratification, Social exclusion and inclusion.	12 hours
	2. Theories of stratification: Functional theory (Kingsley Davis & W. E. Moore), Marxist theory (Karl Marx), Weberian theory (Max Weber)	15 hours
	3. Forms of stratification: Estate, Class, Caste	15 hours
	4. Social mobility: The concept and types of social mobility (P. A. Sorokin), Conditions and consequences of social mobility.	6 hours
Pedagogy:	Lectures, discussions, field visits, presentations

Marx, Karl and Frederick Engels. 1959. <i>Selected Work (3 vols.)</i>, vol. 1. Moscow: Progress Publishers. 	
Learning outcomes:	The students will know how inequality and stratification are socially constructed and reproduced and not divinely ordained or biologically determined.	

Programme: M. A. (Sociology)

Course Code: SOC 108

Title of the Course: Philosophy of Social Sciences

Number of Credits: 4

Effective from AY: 2018-2019

Prerequisites for the course:	The students should have studied SOC 05 Recent trends in Sociological Theorising.	
Objectives:	Teaching and research programmes in sociology as a social science raise several philosophical questions relating to the processes and procedures of knowledge production, explanation and understanding, the ethics of social science practice, objectivity in social research and social construction and social bases of knowledge. This paper seeks to familiarise the students with some of these issues.	
Content:	1. Introduction: Philosophy and sociology, Scope of philosophy of social sciences, <i>Ideographic</i> and <i>Nomothetic</i> disciplines, <i>Emic</i> and <i>Etic</i> knowledge	8 hours
	2. Positivism, causality and its critique: Science and common sense, Patterns of scientific explanation, 'Covering law model of explanation' and its critique, Reason-action explanation and its critique.	8 hours
	3. Hermeneutics, interpretation and subjectivity: Dilthy on hermeneutically oriented social sciences, Weber on the methodology of social sciences	10 hours
	18 Values and social science knowledge production: The concept of 'value', Weber on objectivity and value freedom	10 hours
	19 Sociology of knowledge	2 hours
Pedagogy:	Lectures, discussions, book review, presentation	
References/Readings:	1. Benton, Ted and Craib, Ian. 2001. <i>Philosophy of Social Science: The Philosophical Foundations of Social</i>

New Delhi: Macmillan. 9. Ryan, Alan. 1970. <i>The Philosophy of Social Sciences</i>. London: Macmillan. 	
Learning outcomes:	After being introduced to the philosophical underpinnings of social science knowledge production, the students can attempt achieving intellectual sophistication in their own research activities.	

OPTIONAL COURSES

Programme: M. A. (Sociology)

Course Code: SOO 201

Title of the Course: Methodology of
Research in Sociology

Number of Credits: 4

Effective from AY: 2018-2019

Prerequisites for the course:	The course is open to all students in the faculty of social sciences.	
Objectives:	This course aims to provide students with an understanding of various aspects of the research process with methodological background. The course attempts to provide training in conceiving and designing research, in research methods as well as in communicating research findings.	
Content:	1. Methodology of research in Sociology: A historical introduction	8 hours
	2. Types of social research: Basic, applied and action research, Historical inquiry, Social survey, Case study, Library research.	10 hours
	3. Research procedures: Identification and formulation of research problems, Survey of literature, Pilot study and pre-test, Hypothesis, Sampling	10 hours
	4. Tools and techniques of data collection: Observation, Interview, Questionnaire, Ethnography and auto-ethnography, Content analysis, Tapping secondary data	10 hours
	5. Processing, analyses, and interpretation of data; and presentation of findings	10 hours
Pedagogy:	Lectures, discussions, conducting field based research projects	
References/Readings:	1. Barnes J. A. 1977. <i>The Ethics of Enquiry in Social Sciences</i> . Delhi: Oxford University Press. 2. Bhandarkar, P. L and Wilkinson, T. Jaipur: Rawat Publications</p>	
Learning outcomes:	The students can select and formulate a research problem of their choice and undertake research.	

Programme: M. A. (Sociology)

Course Code: SOO 202

Title of the Course: Agrarian Social
Structure in India

Number of Credits: 4

Effective from AY: 2018-2019

Prerequisites for the course:	This course is open to all students who are pursuing their post graduate studies at Goa University.	
Objectives:	This course aims to familiarise students with the realities of rural India. It attempts to provide a background of agrarian studies and its growth in Indian Sociology. It tries to provide a comprehensive understanding to the students on agrarian structure and change in India particularly, under the impact of colonialism, planning and the recent neo-liberalism and the underlying conceptual and theoretical issues.	
Content:	1. Emergence of agrarian studies as a subject of Sociological inquiry, Origin and development of rural sociology in India	8 hours
	2. Evolution of agrarian structure in pre-colonial and colonial India: Commercialisation of Agriculture, Commodification of land and de-peasantisation	15 hours
	3. Agrarian Changes in post-Independent India: Land reforms, Green revolution, Agricultural productivity and regional disparity, Debate over mode of production and class differentiation in agriculture, Farmers' suicides	15 ours
	4. Agrarian mobilisation and movements: Peasant mobilization and movements in colonial and post colonial period, and new farmers' movements	10 hours
Pedagogy:	Lectures, discussions, case studies, presentations and field visits

	15. 'Special issue on New Farmers' Movements in India' <i>The Journal of Peasant Studies</i> , Vol. 21 (3&4), April & July 1994.	
Learning outcomes:	The students will get a theoretical and empirical knowledge of the past and present rural scenario in India and Goa.	

Programme: M. A. (Sociology)

Course Code: SOO 203

Title of the Course: The Indian Diaspora

Number of Credits: 4

Effective from AY: 2018-2019

Prerequisites for the course:	This course is open to all students who are pursuing their post graduate studies at Goa University.	
Objectives:	This course is intended to introduce the students to the Indian diaspora. After explaining diaspora as an area of sociological study, it describes the socio-historical background of the Indian diaspora, analyses the processes of change and continuity among the diasporic Indians, and examines the issues confronting them. It discusses the mutual orientations of the diasporic Indians and India. The course ends with an extensive analysis of various dimensions of the Goan diaspora.	
Content:	1. Diaspora as an area of academic study: Meaning and implications of diaspora, Approaches to the study of diaspora, Scope and significance of diasporic studies	8 hours
	2. Historical background of the Indian diaspora: Pre-colonial: Trade, and spread of religion, Colonial: The indentured system, Post-colonial: Brain drain and skill drain	10 hours
	3. Case studies of the Indian diaspora: Cultural revivalism: The Caribbean, Political struggle: Fiji and Malaysia, Apartheid and subjection: South Africa and East Africa, Political dominance: Mauritius, Enclavisation and racism: The North America and U. K., Transient diaspora: The Middle East	20 hours
	4. Goa and its diaspora: A Socio historical account, Case Studies of the Goan Diaspora, The impact of migration on Goan society	10 hours
Pedagogy:	Lectures, discussions, presentations, field visits and case studies

	<i>the South Asian Diaspora.</i> New Delhi: Oxford University Press.	
Learning outcomes:	The students will get to know the extent of diaspora along with its impact on the sending societies.	

Programme: M. A. (Sociology)

Course Code: SOO 204

Title of the Course: Education and Society

Number of Credits: 4

Effective from AY: 2018-2019

Prerequisites for the course:	Students from any branch of post graduate study are eligible for this course	
Objectives:	This course will introduce students to the education system in India and relationship between education and society at various levels. The course focuses on the issues of quality education, access to education and social justice in Indian society.	
Content:	1. Introduction: Educational sociology or Sociology of education, Education and socialisation, Sources of formal education, Education and social mobility and change	8 hours
	2. Sociological perspectives on education: Classical sociological perspectives (Marx, Durkheim, and Weber), Liberal perspectives, Conflict perspectives	15 hours
	3. Contemporary perspectives on education: De-schooling society (Evan Ilich), Cultural reproduction (Bourdieu), Knowledge and power (Foucault), Cultural hegemony (Gramsci), Feminist perspectives	10 hours
	4. Education and contemporary issues: Right to education, Multiculturalism, ethnicity and social stratification, Equality in educational opportunities, Privatisation of education, Higher education in India	15 hours
Pedagogy:	Lectures, discussions, presentations and field based assignments and projects	
References/Readings:	1. Banks, O. 1971. <i>Sociology of Education</i> . (2 nd Edition). London: Batsford. 2. Bulle, N. 2008. <i>Sociology and Education: Issues in Sociology of Education</i> . New York: Peter Lang.

Uys (Eds.), <i>Contemporary India and South Africa: Legacies, Identities, and Dilemmas</i>. New Delhi: Routledge. 	
Learning outcomes:	While studying the sociological dimensions of educational practices the students can recognise gaps in such practices and develop strategies for filling such gaps.	

Programme: M. A. (Sociology)

Course Code: SOO 205

Title of the Course: Understanding Goa

Number of Credits: 4

Effective from AY: 2018-2019

Prerequisites for the course:	There are no pre-requisites for this course.	
Objectives:	The course is an invitation and introduction to study Goa, its society and historiography. While considering some social science perspectives in understanding societal transformations in Goa, the course hints that studying Goa can pose challenging and interesting questions for the social sciences.	
Content:	1. Introduction: Studying one's own society, Linear narrative versus continuities, Discontinuities and fractures in history	8 hours
	2. Myth and History: The <i>Skanda Purana</i> and other myths of origin, Pre-Portuguese <i>Konkan</i> and its geo-politics, The old and new conquests	5 hours
	3. Goankari, <i>Comunidade</i> , and community: Estuarine production, Distribution and consumption, Class and community	5 hours
	4. Colonialism: Cultural and demographic shifts: The culture of conversion and the conversion of culture, Emigration, immigration and internal migration, Changes in land relations, Goa <i>Indica</i> and Goa <i>Dourada</i> , and syncretism	15 hours
	5. Liberation and after: Democratic politics and shifts in power, Education and land reforms, The drive for a tertiary economy (and tourism), Migration and the village	15 hours
Pedagogy:	Discussions, Lectures, Field visits, presentations,	

	oral history	
References/Readings:	<ol style="list-style-type: none"> 1. Almeida, Jose C. 1967. <i>Aspects of Agricultural Activity in Goa, Daman and Diu</i>. Panaji: Government Printing Press. 2. Programme: M. A. (Sociology)

Course Code: SOO 206

Title of the Course: Language and Society

Number of Credits: 4

Effective from AY: 2018-2019

Prerequisites for the course:	Any student pursuing her/his post Graduate programme at Goa University is eligible to opt for this course.	
Objectives:	The scope of this paper is located in the interface between language use and society and culture in the context of India and Goa. It begins with a discussion of the theories, concepts and methods in the study of language use as a social activity and continues with a consideration of issues of power in the context of language use. It covers such themes as language in relation to social categories and processes, language engineering, and language dynamics. It concludes with a critical examination of the political (Party/ State) response to multilingual situation in Goa.	
Content:	1. Introduction: Socio- cultural dimensions of language, Definitions: Linguistics, linguistic anthropology, sociology of language	05 hours
	2. Language: Identity and power: Language as a medium of power, Language dominance and linguistic movements, Colonialism and the case of English/Portuguese, Language question in formal education	15 hours
	3. Language issues in state policy: National (India), State (Goa)	15 hours
	4. Language movements in Goa: A socio historical perspective	10 hours
Pedagogy:	Lectures, Discussions, Debates, Group Discussions and Presentations	
References/Readings:	<ol style="list-style-type: none"> 1. Annamalai, E. 2001. <i>Managing Multilingualism in India: Political and Linguistic Manifestations</i>. New Delhi: Sage Publications. 2. Learning outcomes:	Students can distinguish development theory from development as project and relate project development to environmental degradation.	

Programme: M. A. (Sociology)

Course Code: SOO 215

Title of the Course: Sociology of Religion

Number of Credits: 4

Effective from AY: 2018-2019

Prerequisites for the course:	Any student pursuing her/his post Graduate programme at Goa University is eligible to opt for this course.	
Objectives:	This paper introduces the students to the subfield of sociology of religion. After analysing the basic concepts and key interpretations of religion, it focuses on the interface between religion and society in India and the contestation over religion in contemporary times. It concludes with an analysis of social change in relation to religion. While the canvas of the paper is pan Indian, it draws illustrations from Goa.	
Content:	1. The scope of sociology of religion	5 hours
	2. Conceptual clarifications and methods in studying religion: Belief systems, magic and religion, Elements of religious experience, Typology of religions	8 hours
	3. Sociological interpretations of religion: Durkheim and sociological functionalism, Weber and phenomenology, Marx and Dialectical Materialism, Levi-Strauss and structuralism	10 hours
	4. Aspects of religion in India: Sacred Knowledge, Sacred Space, Sacred Time, Sacred Persona	15 hours
	5. Contestation over religion in India: Fundamentalism, Communalism, Secularism, The politics of religious conversions in South Asia	10 hours
Pedagogy:	Lectures, Discussions, Presentations, Audio Visual Media	
References/Readings:	<ol style="list-style-type: none"> 1. Baird, Robert D. (Ed.) 1995. <i>Religion in Modern India (3rd. revised edition)</i>. New Delhi: Manohar. 2. <u>Learning Outcomes</u>	<ul style="list-style-type: none"> - <i>diversity of contemporary fields of research in anthropology (and social sciences in a broader perspective)</i> - <i>exposure to the plurality of the cultures of the world and to contemporary social and political problematics, providing students with intellectual tools to critically engage with the society.</i> - <i>Reflect on the possibilities of engagement between academic life and active social responsibilities</i> 	

Programme: M.A. in Sociology

Course Code: SOO 217

Title of the Course: Out in the Field: Experimenting Ethnographic Fieldwork

Number of Credits: 04

Effective from AY: 2019-2020

<u>Prerequisites for the course:</u>	Any post graduate student can opt for this course.	
<u>Objective:</u>	<ul style="list-style-type: none"> - to introduce students to ethnographic fieldwork - to expose the students that are not familiar with anthropology to what constitutes its core methodology: human contact, participant observation, analysis of field data - to make students experiment with research practice outside classrooms 	
<u>Content:</u>	1. Before the field: introduction to anthropology and ethnography, introduction to the structure and methodology of a research project	10
	2. Out in the field: fieldwork experience	20
	3. Back to class: discuss notes, experiences, analysis of ethnographic works in several mediums: text, film, image, art practices	10
	4. Final data analysis, building of visual and textual reports, final exhibition	06
<u>Pedagogy:</u>	<ul style="list-style-type: none"> - Lectures and class discussions - If possible, lectures with guest speakers - Fieldwork in/nearby university campus - Screening of documentaries and audiovisual material - Individual or group assignments 	
<u>References/Readings</u>	<ol style="list-style-type: none"> 1. Newman, Robert, 2019. <i>Goan Anthropology. Festivals, Films and Fish</i>. Saligao, Goa 1556. 2. Srinivas, M. N., Shah, A. Western Music Course

SOO 218: UNDERSTANDING CONTEMPORARY MUSIC

Music Notation and Social processes

Part II

FOUNDATIONS OF WESTERN MUSIC

Introduction

This course is a new edition of Music in Dialogue with Western Philosophy, History and Arts Course:

UNDERSTANDING XXth CENTURY SOCIAL PROCESSES THROUGH CONTEMPORARY MUSIC- Part II. In this second part we will attempt to understand the some of the most important social processes of XXth century on western society through the theory and technique of the contemporary western music.

This 2-credit course is the continuation of the first part offered from Nov 2018 to Jan 2019. This is a practical and theoretical course that includes lectures, practical modules and exercises. Through their participation in this course the students will study different XXth century processes, art currents, creative processes and the foundations of some of the most important masterpieces of contemporary music movement.

This course will dissert about the ideas and evolution of the music parameters and their relation with the Social and political, artistic and economical processes of XXth Century. We assume the goal to study the foundations of Western Music through the analysis of different works and composers and while studying them, both, theoretically and practically, including analyzing the elements that constitute them.

Syllabus

MODULE 1

Classes 1 to 4

CONTEMPORARY MUSIC AND SOCIAL PROCESSES

The Horomenas, Legomenas and Dromenas

I –CONTEMPORARY MUIC AND SOCIAL PROCESSES – Part II

- Review on the first part of the course
- Introduction to the course: Important events of XX Century: Social Processes and Musical currents (part II).
- **Conference I:** Exploring the concepts of The Horomenas, Legomenas and Dromenas in arts (part II).
- **Activity 1:South American revolutions-** Perception and Appreciation of the musical notation phenomena: Analysis of the sound structure phenomena. Introduction to the concepts of directionality and script horizon.
- **Lecture I:** Introduction to the concepts of verticality, horizontality in Music.

II - CREATION DURING XX CENTURY

- Introduction, Structure, History and the Social context of notation in Western Music.
 - **Practical module I:** The contemporary scores I – research and construction: mirror of social processes.
 - **Music appreciation:** Exercises I.
-

MODULE 2

Classes 5 to 8

MUSICAL ASEMICITY AS TRANSMUTATION OF SOCIAL PERPLEXITY

Social atonality and music in-gravity

DECOLONIZATION PROCESSES IN CONTEMPORARY MUSIC**I - CONTEMPORARY WESTERN MUSIC INDIALOGUE WITH WORLD LANGUAGES (part II)**

- Review-ActivityWM XClass1
- **Conference II:** Musical **asemicity as transmutation of social perplexity part II**
- The Human Script: **creation of an own music notation.**
- **Activity 4:** Music scores - Reading and comprehension – **Decolonization processes**
- **Activity 5:** - Perception and Appreciation of the musical notation phenomena: Analysis of the sound structure phenomena. Introduction to the concepts of directionality and script horizon.
- Perception and Appreciation of the musical notation phenomena II: tonality and gravity in contemporary Music.
- **Lecture II:** H. Villalobos, A. Camaño and S. Revueltas: new currents of music in South America.

II – RELEGERE: SEEKING THE SENSE OF MUSIC (part II)

- Exercise: Directionality in Music
- **Activity8:** Contemporary Music Appreciation.
- **Practical module II:** Einstein on the Beach – OPERA - Seeking sense.
- **Music appreciation:** Exercises II.

MODULE 3

Classes 09 to 11

XXth CENTURY APATHEISM and ATHEISM: CONTEMPORARY MUSICAL CURRENTS

Musical Expression of Social Deception

A MUSICAL LOOK ON PRE-COLONIAL INDIGENOUS CULTURES

I - INDIALOGUE WITH EASTERN PHILOSOPHY: ALEATOREISM AND HENOTHEISM IN MUSICAL NOTATION.

- Review-Activity WM XClass2.
 - **Conference I:** The Horomenas, Legomenas and Dromenas in musical notation: *Apatheism* and Atheism after the 2nd World War.
 - **Activity 1:** Perception and Appreciation of the musical notation phenomena: Analysis of the sound structure phenomena. Introduction to the concepts of directionality and script horizon.
 - **Lecture I:** Introduction to the concepts of verticality, horizontality and language in Music: *Aleatoreism*.
-

II – Silvestre Revueltas / Alberto Ginastera / H. Villalobos

- Analysis, Semanticist and Script – Aleatoric movements.
 - **Activity6:** Introduction, structure, history and the social context of rebirth of Pre-colonial *Theism and Animism* in contemporary music.
 - **Practical module II:** The contemporary scores II – research and construction.
 - **Music appreciation:** Exercises III.
-

MODULE 4

Classes 12 to 14

THE ATONALISM - DISHARMONY I

Revolutions, Nationalism and Liberation theology in Latin America (part II)

**I – WESTERN MUSIC INDIALOGUE WITH WORLD PHILOSOPHY:
TRASPOLATION.**

- Review-ActivityWMXClass3.
- **Conference IV:**NOTATION TRASPOLATION: Historical and philosophical review of the Asemicity concept. Asemic social processes.
- **Activity 11:** Perception and Deconstruction of the Musical notation Phenomena: The “Musical Zero gravity II” concept. The atonalism: “Disharmony II”.
- **Lecture IV:** Other elements that govern harmony (apart of intonation and pitch).
- **Music appreciation:** Exercises IV – Latin-American composers.

**I – RESEARCH ABOUT MUSICAL NOTATION INTEGRATION – SOCIAL
REVOLUTIONS and MUSIC NOTATION**

- Analysis, Semanticist and Script
 - **Activity6:** Singing Music III.
 - Introduction, structure, history and the social context of orientalism.
 - **Practical module II:** The contemporary scores III – research and construction.
-

Class 5 (Module)

Class 15

- Review– Full course
- **Conference V: ¿Its possible to predict social movements through art? Limits and barriers.**
- **Practical module IV:** Works appreciation – research and construction.

Final Examination / Report.

Programme: M.A. (Sociology)

Course Code: SOO 219

Title of the Course: Tibetan Religious
Life: An Introduction to Nalanda
Tradition

Number of Credits and contact hours: 02
credits and 24 contact hours

Effective from AY: 2019-2010

Prerequisites for the course:	The course is open to any Post-Graduate student of the Goa University.	
Objectives:	Study and understand Nalanda Tradition through engaging with local experts and monk community at Tibetan Monastery	
Content:	5. Introduction of Nalanda Tradition and its relevant to present World	04 Hours
	6. Simple meditation : Lecture and training of meditation technique *Every morning there will be half an hour meditation session	07 Hours
	7. Four Noble Truth	02 Hours
	8. Love and Compassion	02 Hours
	9. Compassion based Ethics • Beyond Religion introduction and first two chapters	02Hours
	10. Excursion to Monasteries: Visit to Drepung, Gaden and Nurbu Ri • Religious Life and thoughts • The Prayer Flag Tradition	07 Hours
Pedagogy:	Lectures, discussions, tutorials, student presentations, and study tour inside the Mundgod Tibetan settlement	
References/Readings:	1. Course Material prepared and complied by His Eminent Geshe Lobsang Samten, Abbot of Drepung Losel Ling Monastery Books: 2. Dalai Lama (2012) Beyond Religion: Ethics for a Whole World, UK : Ebury Publishing 3. Dalai Lama (2001) <i>Ethics for the New Millennium</i> . London, United Kingdom: Penguin Publishing Group 4. Matthew T Kapstein. (2006) The Tibetans. USA: Blackwell Publishing 5. Dalai Lama XIV, <u>Kamalashila</u> (2003)	

	<p><i>Stages of meditation: Training the mind for wisdom.</i> UK: Rider</p> <p>6. Zopa Rinpoche T (2018) <i>The Four Noble Truths: A guide to Everyday Life</i> US: Wisdom Publications</p> <p>7. Samdhong Rinpoche (2011) <i>Tibetan Meditation.</i> UK: Wisdom Tree Publishers</p>	
Learning outcomes:	<p>The Nalanda university had been one of the oldest institutes located in India where various systems of philosophy were taught in detail. Nalanda's scholars were renowned for their pursuit of understanding through the tools of critical analysis. This rich tradition is diligently preserved in Tibetan Monasteries for centuries. This course is designed to introduce students to Nalanda tradition kept alive in Drpung Losel Ling Monastery. Student will learn not only through the Lectures of faculty but also by experiencing first hand through field trip to different part of monasteries and ritual events.</p>	

Programme: M.A. (Sociology)

Course Code: CSSEIP SOO 220

Title of the Course: Social Exclusion:
Theories, Concepts, and Policies

Number of Credits and contact hours: 04

Effective from AY: 2019-2010

<u>Prerequisites for the course:</u>	Students of any stream can choose this open elective course.	
<u>Objective:</u>	This course will attempt to help to understand the concept of social exclusion and theories and concepts associated with it.	
<u>Content:</u>	<ul style="list-style-type: none"> • Definitions Concepts and Themes. Historical background of the Concept of Social Exclusion and Inclusion 	8 hour
	<ul style="list-style-type: none"> • Poverty and dimensions of social exclusion. Human Rights Approach, Deprivation; Inequality; Globalization. 	8 hour
	<ul style="list-style-type: none"> • Social Exclusion and Marginalization. Social exclusion -Religion, Race, Caste, Ethnicity; Gender; and Disability, Social exclusion - Class, Region, Culture, Language, Migrants and Refugees 	12 hour
	<ul style="list-style-type: none"> • Socially Exclusion and Inequality. Equality, Inequality, Capability, Post-industrial Structuralism, Norm of structural exclusion, Social Policies. 	12hour
	<ul style="list-style-type: none"> • Inclusive Policy and social change. Protective discrimination, Public policies to reduce social exclusion, Constitutional safeguards. 	8 hour
<u>Pedagogy:</u>	Lectures, discussions, seminars and assignments.	

<p><u>References/Readings</u></p>	<ol style="list-style-type: none"> 1. Amartya K. Sen, (2007), Social Exclusion. Development in Practice, Published online. 2. <u>Learning Outcomes</u>	<p>1. Students will know about the origin of social exclusion its impact on marginalized communities and peoples.</p> <p>2. Students will be able to examine the cases of social exclusion in the contest of India and existing policies relating to marginalized communities and evolving strategies for making them more inclusive.</p>	

M. Sc. / M. A. in Environmental Science

**School of Earth, Ocean and Atmospheric Sciences, Goa University,
Taleigao Plateau, Goa, India - 403206.**

Why a programme in Environmental Science?

Environmental science has conventionally studied physical, chemical and biological processes in the Earth system (Lithosphere, hydrosphere, atmosphere and cryosphere). Increasingly, it now incorporates nature-human interactions and the social, political and cultural processes which impact the planet. The anthropogenic pressures on the ecological processes have forced disciplinary boundaries to merge and a student of environmental science must understand the complex relationships that drive nature-human interactions. Sustainability is one of the grand challenges that human survival faces on planet Earth.

Why at Goa University?

Goa is a biodiversity-rich state with Western Ghats on one side and the Arabian sea on the other. It has both terrestrial as well as marine biodiversity that sustains human livelihoods and provides numerous ecosystem services.

Goa University is uniquely positioned to offer students a stimulating programme to study the human-environment interaction. The university has all conventional programmes along with frontier areas like biotechnology, data science, hospitality, marine science, microbiology, women's studies among others.

What the course offers?

Goa University has designed an unique two-year postgraduate programme in environmental science keeping the above grand challenge in mind. The programme is hosted by the School of Earth Ocean and Atmospheric Sciences (SEOAS) in collaboration with Departments of Botany, Biotechnology, Zoology, Microbiology, Philosophy, Sociology, History, Faculty of Life Sciences, Goa Business School, Manohar Parrikar School of Law, Governance and Public Policy, and School of Chemical Sciences. It is conceived as a multidisciplinary programme which will teach students how to combine skills and knowledge from a variety of domains. It will allow students to explore courses from a large number of disciplines and skill themselves in a manner that they feel best suits them for their knowledge pursuits. The programme will provide a holistic approach to understand environmental issues and undertake environmental impact assessments with diverse perspectives, frameworks and using multiple data sources. All students will undertake fieldwork and laboratory work, to experience different habitats, climates, land formations and social structures.

Eligibility for admission to M.A. Environmental Science

Graduate in any discipline including Medicine and B. Tech.

Eligibility for admission to M. Sc. Environmental Science

Graduate in any science subject including Medicine and B. Tech.

Course structure and assessment methods

M. Sc. / M. A. in Environmental Science is a two years programme. The initial stages (first two semesters) of a student's study include compulsory core courses, which aim to impart a general understanding of environmental science and introduce the student to some of the main principles. The following two semesters will typically allow students to choose options from a selection of possible course modules, allowing for growing specialization. Towards the end of the program, one is likely to have the opportunity to carry out own research on a topic of one's choice. Assessment methods include essays, written discussions, exams, problem sheets, laboratory reports, field exercises, field notebooks and seminar presentations.

Key skills

Common skills gained from an Environmental Science degree include:

- Environmental Impact Assessment
- Numeracy and data analysis
- IT skills
- Research skills
- Laboratory and fieldwork
- Team work
- Self-management, including planning and meeting deadlines
- Critical evaluation
- Effective and professional communication, both spoken and written

Course structure for Semester I & II of M. Sc. / M. A. in Environmental Science with effect from June, 2022.

Sr. No	Course code	Course name	No. of credits
		Common core courses for M.Sc. / M.A.	
Semester I			
1	ESC-101	Environmental Issues and Perspectives	3
2	ESC-102	Fundamentals of Economics	3
3	ESC-103	Environmental Ethics	3
4	ESC-104	Ecosystems and Biodiversity	3
5	ESC-105	Land, Ocean and Atmospheric Interactions	3
6	ESC-106	Environmental Impact Assessment I	1
Semester II			
7	ESC-201	Ecology and Society	3
8	ESC-202	Climate Change and Sustainability	3
9	ESC-203	Environmental Geoinformatics	3
10	ESC-204	Basic Statistics	3
11	ESC-205	Environmental Management	3
12	ESC-206	Environmental Impact Assessment II	1

Course structure for Semester III & IV of M. Sc. / M. A. in Environmental Science

54	ESO-416	Global Environmental History	3
55	ESO-417	Environmental and Literature	2
56	ESO-418	Gender Sensitivity and Equity	2

Syllabus of M. Sc. / M.A. (Environmental Science) Programme

The Academic council in its meeting held on 1/3/2021, approved the minutes of the meeting of Board of studies in Environmental Science Programme held on 25/2/2021 (for Semester I and II).

The Academic council in its meeting held on 13/8/2021, approved the minutes of the meeting of Board of studies in Environmental Science Programme held on 10/8/2021 (for Semester III & IV).

The Academic council in its meeting held on 13/05/2022, approved the minutes of the meeting of Board of studies in Environmental Science Programme held on 08/03/2022 (for Semester III & IV).

Semester I

Title of the Course: Environmental Issues and Perspectives

Course Code: ESC-101

Number of Credits: 03

Total Contact Hours: 36

Effective from AY: 2021-22

Prerequisites for the course:	There is no prerequisite for this course apart from the program requirements	
Objective:	This course is an invitation to the study of environment in its multiple nuances. While familiarising environmental issues all the course also intends to introduce students to perspectives on environment.	
Content:	Module 1: Introduction to Environment Concept of environment and types of environment Environmental heritage and human dimension of environmental science Interdisciplinary and multidisciplinary approaches to environment and major themes – biological, ecological and social ecological orientations	10 hours
	Module 2: Human population and environment Basic concepts of population dynamics, population growth, demographic transition, human population effects on earth Environmental systems and ecosystems: Concepts and fundamentals.	08 hours
	Module 3: Environmental issues and concerns Environmental conservation, Food and agriculture Environmental health, pollution and toxicology Climate and global warming Solid and hazardous waste	08 hours
	Module 4: Social issues and environment Urban growth and industrial planning Development, displacement and rehabilitation Ideologies of environmentalism Towards articulating sustainable environmental future	10 hours
Pedagogy:	Lectures/assignments/workshops/campus walks/documentaries and discussion/ presentations	
References/ Readings	1. Basu, M., & Xavier, S. (2016). <i>Fundamentals of environmental studies</i> . Cambridge University Press. 2. Carolyn, M. (Ed.). (1996). <i>Ecology</i> . Rawat Publications. 3. Gadgil, M., & Guha, R. (2000). <i>Use and abuse of nature</i> . Oxford University Press. 4. Gadgil, M., & Guha, R. (1995). <i>Ecology and equity</i> . Oxford	

	<p>University Press.</p> <p>5. Guha, R. (2000). <i>Environmentalism: A global history</i>. Oxford University Press.</p> <p>6. Joseph, B. (2009). <i>Environmental studies</i> (2nd ed.). Tata McGraw Hill.</p> <p>7. Krishna, S. (1996). <i>Environmental politics</i>. Sage Publications.</p> <p>8. Rangarajan, M. (Ed.). (2007). <i>Environmental issues in India: A reader</i>. Dorling Kindersley.</p>	
Learning Outcomes	<p>1. Students are introduced to the multi-dimensional feature of environmental reality.</p> <p>2. They are familiarized with the plural perspectives on environment both as an academic focus and lived-in reality.</p>	

Title of the Course: Fundamentals of Economics

Course Code: ESC-102

Number of Credits: 03

Total Contact Hours: 36

Effective from AY: 2021-22

Prerequisites for the Course:	There is no prerequisite for this course apart from the program requirements	
Objective:	The aim of the course is to introduce students to the basic concepts, theories and principles that will provide the foundation for a proper understanding of how an economy works. The syllabus seeks to equip students with the basic tools necessary for an understanding and interpretation of economic issues affecting the economy.	
Content:	Module 1: Introduction Scope and method of economics; Building blocks of modern economy – agents, resources and classification of goods.	04 hours
	Module 2: Microeconomic analysis Consumer equilibrium, producer equilibrium, market equilibrium, general equilibrium and possible disequilibrium situations.	10 hours
	Module 3: Macroeconomic analysis Circular flow and national income, issues related to growth, unemployment and inflation.	10 hours
	Module 4: Public economics and international trade Market failure, Taxation and Quotas, Efficiency versus Equity. Balanced budgets and Debt financing. International Trade: Comparative advantage theory, gains from trade; tariffs and protection, exchange rates.	12 hours
Pedagogy:	Lectures/assignments/workshops/campus walks/documentaries and discussion/ presentations	

References/ Readings	<ol style="list-style-type: none"> 1. Banerjee, A., & Duflo, E. (2019). <i>Good economics for hard times: Better answers to our biggest problems</i>. Penguin Books. 2. Dasgupta, P. (2010). <i>Economics: A very short introduction</i>. Sterling Pub. 3. Mankiw, G. (2020). <i>Principles of economics</i> (9th ed.). Cengage Learning Asia Pte Ltd. 4. Learning Outcomes	<ol style="list-style-type: none"> 1. The students will be able to understand the basic concepts-principles and theories of Economics. 2. This course will enable the students to understand and analyse different types of equilibrium, circular flow of the economy and factors affecting growth and employment in an economy. 3. The students will learn the basics of international trade and fundamental concepts in public economics. 	

Title of the Course: Environmental Ethics

Course Code: ESC-103

Number of Credits: 03

Total Contact Hours: 36

Effective from AY: 2021-22

Prerequisites for the course:	There is no prerequisite for this course apart from the programme requirements	
Objectives:	<ol style="list-style-type: none"> 1. To analyse different approaches and broad theories of environmental philosophy. 2. Understand the philosophical basis of various conservative theories. 	
Contents:	Module 1: Introduction Introduction to environmental ethics	06 hours
	Module 2: Value and Nature Value and Nature: Moral theories (Consequentialism, Virtue Ethics and Kantianism), Intrinsic value and Instrumental values, anthropocentrism.	15 hours
	Module 3: Ecology Land ethics & deep ecology, Bio centrism, Eco-centrism, Speciesism, Culture and ecology.	15 hours
Pedagogy:	Lectures/assignments/workshops/campus walks/documentaries and discussion/ presentations	
References/ Readings	<ol style="list-style-type: none"> 1. Jaquet, F. (2019). Is Speciesism Wrong by Definition? <i>Journal of Agricultural and Environmental Ethics</i>, 32 (3). 2. Kopnina, H., Washington, H., Taylor, B., & Piccolo, 	

	<p>J.J.(2018). Anthropocentrism: More than Just a Misunderstood Problem. <i>Journal of Agricultural and Environmental Ethics</i>, 31.</p> <p>3. Sandler, R. (1986). <i>Respect for Nature: A Theory of Environmental Ethics</i>. Princeton University Press.</p> <p>8. Passmore, J. (1974). <i>Man's Responsibility for Nature</i>. Charles Scribner's son.</p>	
Learning Outcomes	<p>1. Students will be able to learn and evaluate different theories of environmental ethics.</p> <p>2. Realize the significant role and responsibility towards the protection of the environment.</p>	

Title of the Course: Ecosystems and Biodiversity

Course Code: ESC-104

Number of Credits: 03

Total Contact Hours: 36

Effective from AY: 2021-22

Prerequisite for the course:	There is no prerequisite for this course apart from the program requirements	
Objective:	<p>The course provides the fundamentals about ecosystems, their types, distribution, components, functioning, services and their role in biodiversity. Biotic components of ecosystems, fundamentally understood as Biodiversity, their measure, and factors that lead to enormous biodiversity, and essential components that maintain biodiversity. More importantly, knowledge on their resilience and thresholds, which are required for management and conservation of both biodiversity and ecosystems will be imparted.</p>	
Content:	<p>Module 1: Introduction</p> <p>Ecosystems - Development of concept and the current understanding; Ecosystem as a system. Structural and Functional components of Ecosystems. Ecological complexity. Energy flow</p>	09 hours

	<p>in ecosystems; adaptive cycle view of ecosystem development and change; Ecosystem attributes and functioning. Thermodynamics and Information theory in ecosystems. Types of ecosystems, their distribution and composition. Case study - Tropical rain forests ecosystem.</p> <p>Module 2: Ecosystems processes and applications</p> <p>Role of species in ecosystem functioning. Applications of ecosystems knowledge. Ecosystem services. Measuring Ecosystem Health. Ecosystem Processes; Controls over Ecosystem Processes. Human-Induced Ecosystem Change: Human Impacts on Ecosystems, Resilience and Threshold Changes, Degradation in Ecosystem Services.</p> <p>Module 3: Biodiversity</p> <p>Definition; the past (diversity and extinction) and present; major groups of biological organisms; evolution of biodiversity and drivers of biodiversity. The role of geology and climate in their distribution. Patterns in biodiversity: Spatial and temporal patterns at genetic, species and taxonomic diversity, Approaches to biodiversity studies. Loss of biodiversity and biodiversity targets 2020.</p> <p>Module 4: Measuring Biodiversity</p> <p>Species richness and Biodiversity Indices (diversity and evenness indices); Methods of Measuring Biodiversity; Alpha, Beta and Gamma-diversity; Genetic, Species and Ecosystem Diversity; Centres of plant diversity, Hotspots of Biodiversity and their distribution; Drivers of biodiversity change.</p> <p>Module 5: Biodiversity of India</p> <p>Bio-geographical regions of India; Forest types and major ecosystems of India. Major groups of organisms and their diversity. Endemism. Concepts of keystone, umbrella and flagship species.</p>	<p>09 hours</p> <p>06 hours</p> <p>06 hours</p> <p>06 hours</p>
Pedagogy:	Lectures/assignments/workshops/campus walks/documentaries and discussion/ presentations.

---------------------------------	--	--

Learning Outcomes	<p>After successful completion of the course, students will be able to:</p> <ol style="list-style-type: none"> 1. Understand and interpret the structure, variables, processes and functions operating in ecosystems. 2. Foresee how the alteration of the components would affect the ecosystem and its functions. 3. Able to see the connectivity among all the components of ecosystems and their services. 4. Understand the importance of biodiversity and methods to measure it. 5. Understand the threshold of resilience and predict the impact of removal of a species in an ecosystem. 	
--------------------------	---	--

Title of the Course: Land, Ocean and Atmospheric interactions

Course Code: ESC-105

Number of Credits: 03

Total Contact Hours: 36

Effective from AY: 2021-22

Prerequisites for the course:	There is no prerequisite for this course apart from the program requirements	
Objective:	The course will impart an insight to the students about the need for an integral approach to study an ecosystem.	
Content:	Module 1: Introduction Earth system science; Evolution of geosphere, biosphere, atmosphere, hydrosphere and cryosphere; Properties of sea and fresh water - distribution of temperature, salinity, density and oxygen in space and time.	06 hours
	Module 2: Optical characteristics of sea water; Water type and masses: formation and classification, identification of water masses. General circulation of the world ocean; Wind driven and thermohaline circulation; Indian monsoon circulation. Tides- generation and propagation, characteristics of tides, spring and neap tides.	10 hours
	Module 3: Atmospheric instability and convection-stability criteria; Mixing and convective condensation levels; Potential instability and latent instability; Cloud formation and types; Laws of black body radiation; Solar radiation transfer; Latitudinal and seasonal variation, absorption, scattering and reflection; Photosynthetically available radiation; Terrestrial radiation; Low and high pressure.	10 hours
	Module 4:	10 hours

	Upwelling and downwelling; Major and minor nutrients; Residence time; Dissolved gases; Marine habitats; Marine photosynthesis; Photosynthetic pigments; Biological productivity; Gross and net productivity; Redfield ratio; New and regenerated productivity; Food chain and food web; Exclusive economic zone.	
Pedagogy:	Use of conventional, online and ICT Methods. Lecture/Tutorials/Assignments	
References/ Readings	<ol style="list-style-type: none"> Wallace, J. M., & Hobbs, P. V. (2006). <i>Atmospheric science: An introductory survey</i> (2nd ed). Elsevier Academic Press. Ehlers, E., & Kraft, T. <i>Earth system science in the Anthropocene: Emerging issues and problems</i>. Springer. 	
Learning Outcomes	Understanding the interrelation between each component of Earth system to decipher meaningful information of an ecosystem.	

Title of the Course: Environmental Impact Assessment I

Course Code: ESC-106

Total Contact Hours: 12

Number of Credits: 01

Effective from AY: 2021-22

Prerequisites for the course:	There is no prerequisite for this course apart from the programme requirements	
Objective:	In order to overcome the problems of environmental degradation, it is very necessary to plan the development process in a sustainable manner so that control and mitigation measures can be undertaken prior to occurrence of degradation. One important tool to do this is carrying out Environmental Impact Assessment. Hence, knowledge of this subject is very important for an environmental engineer.	
Content:	Module 1: Introduction to the Environmental Impact Assessment process <ul style="list-style-type: none"> • Introduction and principals: Introduction; nature and purpose of EIA; Project, Environment and nature of Impacts; Changing perspective and current issues in EIA; EIA regulations. • Starting up early stages: Managing the EIA process; project screening, scoping; understanding the project/development action; establishing the environmental baseline; impact identification. • Participation, presentation and review: Impact prediction; Evaluation; mitigation and enhancement; public consultation and participation; the importance of monitoring and auditing in the EIA process; Monitoring and auditing practice; EIA presentation and review. • Practice and prospects: Legal Challenges, cost and benefits of EIA; Case studies of EIA in practice; strategic environmental assessment; extending EIA to project implementation. 	12 hours
Pedagogy:	Lectures/assignments/workshops/ street play/brain storming sessions/outreach programmes/campus walks/documentaries and discussion/ presentations	
References/ Readings	<ol style="list-style-type: none"> 1. Glasson, J., Therivl, R., & Chadwick, A. (2005). <i>Introduction to environmental impact assessment</i>. Routledge, Taylor & Francis Group. 2. Arts, J., & Morrison-Saunders, A. (Eds.). (2012). <i>Assessing impact: Handbook of EIA and SEA follow-up</i>. Routledge, Taylor & Francis Group. 3. Abaza, H., Bisset, R., & Sadler, B. (2004). <i>Environmental Impact Assessment and Strategic Environmental Assessment: Towards an Integrated approach</i>. UN Environmental Program. 4. (2001). <i>Methods of environmental impact assessment</i>, 2. Taylor & Francis. 	
Learning	After learning the course the students should be able to:	

Outcomes	1. Explain the need for EIA 2. Define EIA 3. Demonstrate the understanding of concept of Sustainable Development and justify the methods of achieving SD. 4. Appreciate the importance of EIA as an integral part of planning process. 5. Apply the different methodologies to predict and assess the impacts of minor/major projects on various aspects of environment. 6. Enumerate the role of public participation in environmental decision making process. 7. Characterize the environmental attributes.	
-----------------	--	--

Semester II

Title of the Course: Ecology and Society

Course Code: ESC-201

Number of Credits: 03

Total Contact Hours: 36

Effective from AY: 2021-22

Prerequisites for the course:	There is no prerequisite for this course apart from the programme requirements	
Objective:	The module on Goan Society, Gender and Ecology which is taught by faculty from the Women's Studies Programme of Manohar Parrikar School of Law, Governance and Public Policy will introduce students to the politics behind the popular connect between women and nature, and will deliberate on the concerns regarding land, water and livelihoods, menstruation and environment with a focus on issues in Goa. The larger objective of ecology is to understand the nature of environmental influences on individual organisms, their populations, and communities, on eco-scapes and ultimately at the level of the biosphere. One core goal of ecology is to understand the distribution and abundance of living things in the physical environment and its importance to humans.	
Content:	Module 1: Introduction Introduction to Ecology & Environment: Physical environment; biotic environment; biotic and abiotic interactions. Habitat and Niche: Concept of habitat and niche, niche, width and overlap, resource partitioning. Environmental concepts: laws and limiting factors, ecological models. Ecological structure, Ethno-zoology: The study of the past and present interrelationships between human cultures and the animals in their environment.	06 hours
	Module 2: Ecology and society Culture and cultural ecology, Environmental ethics, Community based conservation (Sacred Grooves etc.), Society and Laws (Environment Protection Act, Biodiversity Act etc.)	06 hours

	<p>Module 3: Disciplinary traditions An overview of disciplinary traditions and the study of Environmental issues. Society, culture and environment; Ecological consciousness and ecological conflicts. Environment, development and sustainable development. Environmental movements in India: Issues, ideologies and methods.</p> <p>Module 4: Gender and Ecology in Goan Society “Is Female to Male as Nature is to Culture” Sherry Ortner. Menstruation: Hygiene, Management, Eco-cultural practices and social exclusion. Forest Law, Tribes and Livelihood: Women’s experiences in Goa - Kumeri cultivation, Social Ecology, Traditional knowledge, Power and Agency. Ecology, Livelihood and Gender: Water, Land ownership, Work, Participation and impacts (tourism, mining, agriculture, fishing, craft and small scale industry).</p>	<p>12 hours</p> <p>12 hours</p>
Pedagogy:	Lectures/assignments/workshops/ street play/brain storming sessions/outreach programmes/campus walks/documentaries and discussion/ presentations	
References/Readings	<p>Module 1 and Module 2:</p> <ol style="list-style-type: none"> 1. Chapman, J. L., & Reiss, M. J. (1999). <i>Ecology: Principles and applications</i>. 	11. Manisha, P. et al. (2009). <i>Human rights, gender and the environment</i> . Dorling Kinderseley.	
Learning Outcomes	<ol style="list-style-type: none"> 1. Essential in depth understanding of the concepts and components of ecology. 2. Learners will learn ecosystem structure and function along with the interactions involved at various levels. 3. It would provide a vision to understand the ecosystem ecology along with sufficient knowledge of energy flow and exchange. 4. Sensitization of students towards the environment with respect to the global scenario and the related problems, impact, along with methods to tackle the problems. 	

Title of the Course: Climate Change and Sustainability

Course Code: ESC-202

Number of Credits: 03

Total Contact Hours: 36

Effective from AY: 2021-22

Prerequisites for the course:	Basic understanding of the marine environment and microorganisms.	
Objective:	To introduce the students to climate change and also examine the methods and policies for the mitigation of climate change	
Content:	Module 1: Introduction Earth system, greenhouse gases: carbon dioxide, methane, nitrous oxide, warming potential, radiation and energy balance, solar variability, ozone and chlorofluorocarbon, aerosols, paleoclimate, ice-ages, carbon budget and global carbon cycle.	06 hours
	Module 2: Impact of climate change and future projections Land and water resources, global warming, weather and heatwave, drought, biodiversity, extinction, migration, vegetation, agriculture and food security, human livelihood and health, ozone layer depletion, melting ice sheets, sea-level rise, precipitation.	10 hours
	Module 3: Ecological response Floods, cyclone, changes in physical and biogeochemical properties of ocean: ocean acidification, deoxygenation, oxygen minimum zones, ocean circulation, effect on marine organisms, effect on polar regions, future projections and predictions: decadal, centennial, economic consequences.	10 hours
	Module 4: Mitigation and sustainability Future Earth, adaptation, alternate energy sources: solar, wind energy, geothermal, biomass, biogas, hydrogen, lithium-ion battery, ocean thermal energy conversion, integrated assessment, emission budgets, future technologies: biofuels, hydrogen, geoengineering, carbon	10 hours

	sequestration, contribution of oceans in mitigation, ethics and environmental policy, International agreements: United Nations Framework Convention on Climate Change, Kyoto Protocol, Paris Agreement, role of India, youth and mass media in climate change mitigation.	
Pedagogy:	Lectures/tutorials/assignments/self-study	
References/Readings	<ol style="list-style-type: none"> 1. Reichle, D. E. (2020). <i>The global carbon cycle and climate Change: Scaling ecological energetics from organism to biosphere</i>. (2012). <i>Handbook of climate change mitigation and adaptation</i> (2nd ed). Springer. 	
Learning Outcomes	<ol style="list-style-type: none"> 1. Provides brief knowledge about climate change, its impact on all life forms and what measure can be taken to mitigate it. 2. It also highlights the role of youth in adopting a sustainable lifestyle to tackle this global issue. 	

Title of the Course: Environmental Geo-informatics

Course Code: ESC-203

Number of Credits: 03

Total Contact Hours: 36

Effective from AY: 2021-22

Prerequisites for the course:	A compulsory course for students admitted to Environmental Sc. course. Students for this course are expected to have experience of basic use of computers and concepts of Geography & Environment.	
Objective:	Students to gain important skills in spatial data acquisition, analysis and interpretation, lab and field methods of GIS and remote sensing.	
Content:	Module 1: Introduction Introduction, Geoinformatics for Environmental Monitoring and management; Introduction to Photogrammetry; Geodata and Geoinformatics (Geodata, Concept of Digital Earth, Geoinformatics Fundamentals). Geoinformatics-Applications to Environmental Monitoring and Management. Geoinformatics for environmental	06 hours

	Decision Making.	
	<p>Module 2: Image visualization Image visualization, analyses and Interpretation. Introduction to Aerial Photos, Satellite Imageries, Concept of Image, Resolution and Scale. Image Visualization and Digital Image Processing, Transformation and Classification; Hands on Tutorials and related image processing Exercises.</p> <p>Module 3: Fundamentals of Remote Sensing Fundamentals of Remote Sensing (Basic Concept, Principles of EM Radiation, EMR and EMR interaction with Atmosphere, Passive versus Active Remote Sensing); Optical Remote Sensing – Data Acquisition: Sensors and Systems; Microwave Remote Sensing – Principles, Microwave Systems, Radar Imaging, geometry of SAR.</p> <p>Module 4: Fundamentals of GIS Fundamentals of GIS (Basic Components, functions and applications); Data Models and Structures (Vector and Raster Data Models, GIS Topology); GIS Data Input (Data Sources, Data Capture and Editing- Vector & Raster Data Input); GIS Database (Geodatabase-Design and Database management); Spatial Analyses (Exploration, measurements, Buffering, Overlay and Reclassification). GIS Terrain Analysis.</p>	<p>10 hours</p> <p>10 hours</p> <p>10 hours</p>
Pedagogy:	Online / Classroom lectures, Tutorials, Assignments, Team activities	
References/ Readings	<ol style="list-style-type: none"> 1. Konecny G. (2003) <i>Geoinformation: remote sensing, photogrammetry, geographic information systems</i>. Taylor and Francis, London. 2. (2019) <i>Spatial Modeling in GIS and R for Earth and Environmental Sciences</i>, 770p. Elsevier. 	
Learning Outcomes	Upon successful completion of the course, the students will be prepared to demonstrate:	

	<ol style="list-style-type: none"> 1. Self-knowledge of their individual strengths and weaknesses in understanding the geospatial applications for environmental management. 2. Lifelong learning skills in Geospatial Technologies.
--	--

Title of the Course: Basic Statistics

Course Code: ESC-204

Total Contact Hours: 36

Number of Credits: 03

Effective from AY: 2021-22

Prerequisites for the course:	Completion of first semester of the programme	
Objective:	The aim of the course is to introduce students to the study of basic statistics so that they can independently explore data, analyse it and present it to academics, policy-makers and civil society.	
Content:	Module 1: Introduction Exploring Data: Basic concepts of descriptive statistics -- measures central tendency (mode, median and mean) and dispersion (range, interquartile range, variance and standard deviation). Displaying data.	04 hours
	Module 2: Correlation and regression Bivariate analyses: Correlation, Measures of correlation: (Pearson's r). Scatter plots and Linear regression analysis. Goodness of fit (R-squared).	06 hours
	Module 3: Probability and distribution Introduction to probability, random variables, concepts of events, sample space and random trials. Conditional probabilities, independence. Probability Distributions: Discrete probability distribution: Binomial and Poisson. Continuous probability distribution: Student-t, Normal, Standard Normal, Chi-square and F-distributions.	16 hours
	Module 4: Sampling distributions and inferential statistics Sampling methods: Random, stratified random, non-random sampling methods. Determining sample size. Inferential statistics: Confidence interval; Testing of hypotheses: the null hypothesis and the alternative hypothesis.	10 hours
Pedagogy:	Lectures/assignments/workshops/ street play/brain storming sessions/outreach programmes/campus walks/documentaries and discussion/ presentations.	
References/ Readings	<ol style="list-style-type: none"> 1. Heumann, C., Schomaker, M., & Shalabh. (2016). <i>Introduction to statistics and data analysis: With exercises, solutions and applications in R</i>. Springer. 2. Levine, S. D., Krehbiel, & Berenson. (2008). <i>Statistics for managers: Using Microsoft Excel</i> (5th ed). Pearson Education, Inc. 3. McClave, J. T., Benson, P. G., & Sincich, T. (2018). <i>Statistics for</i> 	

	<i>business and economics</i> . Pearson. 4. Witte, R. S., Witte, J. S., & Wiley. (2017). <i>Statistics</i> (11th ed).	
Learning Outcomes	1. The students will be able to understand the basic concepts in statistics. 2. They will learn how to collect, arrange, present and analyze data.	

Title of the Course: Environmental Management

Course Code: ESC-205

Number of Credits: 03

Total Contact Hours: 36

Effective from AY: 2021-22

Prerequisites for the course:	Completion of first semester of the programme	
Objective:	The objective of the course is to enable participants to have a holistic understanding of the environment and know the methods of managing environmental issues.	
Content:	Module 1: Introduction environmental management Introduction to environmental management: Pollution and its various forms, Sustainability and sustainable development.	06 hours
	Module 2: Biodiversity and resources Biodiversity and Resources: Societal ownership, Biodiversity, Benefits of natural resource protection, Traditional biodiversity knowledge, Bio-piracy.	06 hours
	Module 3: Environmental policies and management Environmental policies and legislations and life cycle assessment: Environmental sustainability index, National and international environmental legislation, Life cycle assessment, LCA framework, Stages in LCA Energy Management and ISO Certification: Energy audits and methods, Energy conservation, Energy demand and balances, ISO 9000 and ISO 14000 series, Environment management certification.	12 hours
	Module 4: Pollution management Water, air and noise pollution: Water pollution and management of water, Waste water and industrial waste water, Air pollution control measures. Noise pollution law and control measures. Solid waste and hazardous waste: Solid and hazardous waste sources and composition, Effect on health, storage, treatment and disposal of hazardous waste, Landfill designs, methods of disposal of solid waste. Monitoring environment using analytical methods: Statistical and instrumental methods, Analyses of all types of environmental pollution.	12 hours
Pedagogy:	Lectures/tutorials/ laboratory work /field work/outreach activities/ project work/ vocational training/ viva /seminars / term papers/ assignments / presentations / self-study/case studies etc. or a combination of some of these. Sessions shall be interactive in nature to enable peer group learning.	

References/ Readings	<ol style="list-style-type: none"> 1. Murali Krishna, V., & Manickam, V. (2017). <i>Environmental Management</i>. Butterworth-Heinemann. 2. Kulkarni, V., & Ramchandra, T. V. (2009). <i>Environmental management, commonwealth of learning</i>. Indian Institute of Science. 	
Learning Outcomes	<p>At the end of the course the participant should be able to identify:</p> <ol style="list-style-type: none"> 1. Environmental impact 2. Methods of control of such impacts 3. Analyse the impact using statistical and other analytical tools 4. Suggest specific interventions to alleviate environmental issues. 	

Title of the Course: Environmental Impact Assessment II

Course Code: ESC-206

Number of Credits: 01

Total Contact Hours: 12

Effective from AY: 2021-22

Prerequisites for the course:	Completion of first semester of the programme	
Objective:	To understand the Environmental Impact Assessment processes through the study of EIA reports available for various kinds of projects.	
Content:	<p>Module 1: Study of EIA reports for major projects of the country available online and understand the methods used, interpretations made, conclusions drawn, objections raised and decisions taken and their implementation.</p>	12 hours
Pedagogy:	Lectures/tutorials/ laboratory work /field work/outreach activities/ project work/ vocational training/ viva /seminars / term papers/ assignments / presentations / self-study/case studies etc. or a combination of some of these. Sessions shall be interactive in nature to enable peer group learning.	
References/ Readings	<ol style="list-style-type: none"> 1. Yerramilli, A., & Manickam, V. (2020). <i>Environmental impact assessment methodologies</i> (3rd ed). Learning Outcomes	After the discussion of case studies, the students will be able to understand how to work and write EIA reports for each of the major sectors.	

Semester III

Title of the Course: Environment Impact Assessment III

Course Code: ESC-301

Number of Credits: 03

Total Contact Hours: 36

Effective from AY: 2022-23

Prerequisites for the course:	The student should have completed ESC-106 (EIA I) and ESC-206 (EIA II)	
Objective:	Environmental degradation is occurring at an alarming rate. Hence, it is required to plan the developmental processes in a sustainable manner. An important tool to attain this is through the conduct of Environmental Impact Assessment.	
Content:	Module 1: Introduction EIA sectors – River valley, Mining, Manufacturing industries, Infrastructure, Power, Building and large construction, township and area development.	06 hours
	Module 2: EIA guidelines Cost-benefit analysis, Detailed project report, Feasibility report. Terms of Reference (TOR), Generic structure of EIA document and description of the project. Public consultation, Environmental Clearance (EC) processes, validity, extension, monitoring, transfer compliance report, Role of statutory agencies in environmental clearance. EIA consultant accreditation process in India. Components of EIA-Physical, Biological and Socio-cultural environment. EIA methods – Checklist & matrices.	10 hours
	Module 3: Comparative Evaluation of Alternatives Selecting a Preferred Alternative. Conceptual Basis for Trade-Off Analysis. Importance Weighting of Decision Factors. Plans and Monitoring. Elements of Mitigation. Environmental Management Plan (EMP), elements, structure and	10 hours

	<p>examples of various projects. Objectives of EIA implementation and follow up. Tools of EM & performance review. Environmental auditing. Evaluation of EIA effectiveness and performance.</p> <p>Module 4: EIA of Mining Potential sites, brief description of the project, identification, nature of mineral, Quality and quantity, resource available, geology, types of mining, carrying capacity, Blasting - Rules and Guidelines, Dust and noise pollution, transportation, Biodiversity assessment, Impact on human settlement, Restoration, reclamation and mitigation measures, hydrology, safety and prevention measures.</p>	10 hours
Pedagogy:	Lectures/assignments/workshops and discussion/presentations.	
References/Readings	<ol style="list-style-type: none"> 1. Glasston, J., Therivel, R. & Chadwick, A. (2005). Introduction to Environmental Impact Assessment. Published by Routledge. (2001). <i>Methods of environmental impact assessment</i> (Vol. 2). Taylor & Francis. New York 	
Learning Outcomes	On completion of the course, the student will be able to apply various methods to assess the impacts of developmental projects on various aspects of environment with special reference to mining.	

Title of the Course: Lab Course in Environmental Science

Course Code: ESO-302

Number of Credits: 03

Total Contact Hours: 72

Effective from AY: 2022-23

Prerequisites for the course:	Graduates in any discipline with science subjects at the 10+2 level.
Objectives:	<ol style="list-style-type: none"> 1. To introduce students to basic instruments in chemistry lab, significance of calibration of glassware/ use of analytical grade reagents/ general reagents, use of analytical balance, basic laboratory practices, safety in laboratory. 2. To understand the concentration of various pollutants including trace metals

	in the water/soil/air. The analyses of BOD and COD are used to understand the impact organic pollution on water bodies.	
Content:	<p style="text-align: center;">Section –I</p> <p>Module 1 (Any 6 experiments, 3 hours each)</p> <ol style="list-style-type: none"> 1. Demonstration of instruments (colorimeter, pH meter, conductivity meter, Karl Fischer titrator, 2. Calibration of glass electrode and conductivity meter. 3. Determination of pH and conductivity of surface, ground and sea water 4. Determination of alkalinity and acidity of surface, ground and sea water sample using titrimetric analysis. 5. Estimation of total solids, dissolved solids, suspended solids of river/lake/pond water sample. 6. Estimation of total residual chlorine of water samples. 7. Estimation of sulfate in water samples (tap water) by turbidimetry. 	18 hours
	<p>Module 2 (Any 6 experiments, 3 hours each)</p> <ol style="list-style-type: none"> 1. Determination of pH and conductivity of soil samples. 2. Determination of moisture content of soil samples. 3. Estimation of hardness of water samples by complexometric method 4. Determination of chemical oxygen demand in given water sample 5. Determination of nitrite in water sample using colorimetry. 6. Determination of chromium in water sample by colorimetry. 7. Determination of elements (Fe/Mn/Zn/Pb/Cd etc) in air using high volume sampler 	18 hours
	<p style="text-align: center;">Section –II</p> <p>Module -3:</p> <ol style="list-style-type: none"> 1. Determination of dissolved oxygen in coastal waters. (4 hrs; Ref.1) 2. Estimation of dissolved oxygen in polluted water (6 hrs. Ref. 2, 3) 3. Determination of biochemical oxygen demand in coastal waters (4 hrs; Ref. 1) 4. Estimation of hydrogen sulfide in coastal waters (4 hrs. Ref. 3) 	18 hours
	<p>Module 4:</p> <ol style="list-style-type: none"> 1. Determination of chemical oxygen demand in coastal waters by KMnO₄ method (4 hrs; Ref. 2) 	18 hours

	<p>2. Pre-concentration of sea water by solvent extraction method for analysis of trace metals by AAS (6 hrs; Ref 5,6,7)</p> <p>3. Estimation of Cu & Pb in coastal waters by AAS method (8 hrs; Ref 5, 6, 7).</p>	
Pedagogy:	Pre-lab and post-lab assignments or a combination of some of these. Sessions shall be interactive in nature to enable peer group learning.	
References/ Readings	<p>Section – I</p> <ol style="list-style-type: none"> 1. Sawyer, C. N., McCarty, P. L., & Parkin, G. F. 	<p>Press.</p> <p>7. Allen, S. E., Grimshaw, H. M., Parkinson, J. A., Quarmby, C., & Roberts, J. D. (1976). (eds) Chapman S. B, Chapter 8. Chemical analysis. In <i>Methods in plant Ecology</i>. Blackwell Scientific Publications.</p>	
Learning Outcomes	<ol style="list-style-type: none"> 1. Students will be in a position to know the basic environmental chemical processes. 2. Students will be able to explain the origin and harmful effects of toxic chemicals in the environment. 3. Student will be in position to use different techniques for qualitative and quantitative estimation of environmental samples. 4. The results of analyses of different pollutants in sea water can be used to set the limits of their discharge. 5. These concentrations will be compared with the daily intake of, or exposure to a pollutant by organism/man and it can lead to acceptable concentration of pollutant in organism. 6. These studies would help to regulate the release of a particular pollutant in the marine environment. 	

Title of the Course: Marine Pollution

Course Code: ESO-303

Number of Credits: 03

Total Contact Hours: 36

Effective from AY: 2022-23

Prerequisites for the course:	Graduates in any discipline with science subjects at 10+2 level	
Objectives:	<ol style="list-style-type: none"> 1. To identify the type of materials added to the sea and their sources. 2. What effect these additions to the sea and animal living there. 3. What implications these effects have for human health and 4. What is being done to reduce the undesirable effects. 	
Content:	<p>Module 1: Introduction</p> <p>Introduction to Environment, Objectives of environment, Marine pollution definition, Some questions, Categories of additions, Nature of inputs, and Sources of inputs. Gross chemical composition of seawater, Sources of dissolved and particulate matter in the sea, Geochemical balance and residence times of elements in seawater</p>	06 hours
	<p>Module 2: Organic wastes</p> <p>Biochemical oxygen demand, the dilution factor, Settlement, Oxygen budget, Consequences of organic discharges into Thames and Mersey estuaries. Decomposition of organic matter in oxic</p>	10 hours

	<p>and anoxic environments. Sewage and sewage treatment, Disposal of sewage sludge, Industrial wastes and treatment processes with reference to wastes from paper and pulp and soap manufacturing industries. Oil spills and Consequences of oil pollution: Introduction, Inputs, major accidental spills, fate of spilled oil at sea and Treatment of spilled oil.</p> <p>Module 3: Conservative pollutants Conservative pollutants: Measures of contamination, Toxicity, Acute, Chronic exposure and Detoxication. Trace metal pollution in coastal waters (Hg, Cd, Pb, Cu and Fe), and Radioactive pollution: Sources, classification, effects of radiation, MPD concept, protection and control from radiation, Beneficial aspects of radiation and Disposal of royal wastes. Halogenated hydrocarbons; Low molecular weight compounds, High molecular weight compounds, Inputs to sea, fate in the sea, Biological effects, environmental impact, mode of poisoning of pesticides.</p> <p>Module 4: Pollution indicators, marine corrosion and Assessment of pollution damage Pollution indicators: Criteria for selection of indicator organism, Quantification of pollution load, basic pre requisites, Response to different pollution load and Time integration capacity. Macro algae and Mollusc as indicators to monitor trace metal pollution in coastal waters. Monitoring strategies of Marine pollution: Critical pathway approach and Mass balance approach. Marine corrosion: Definition, Corrosion theory, Effects, classification, factors affecting corrosion of metal in seawater and control of marine corrosion. Standards in water quality and instrumental techniques, Pollution status of the North Sea. Present status of coastal pollution in India and Future strategies. Assessment of pollution damage: The need, serious ness of damage and assessment of damage.</p>	<p>10 hours</p> <p>10 hours</p>
Pedagogy:	Lectures/tutorials/assignments/self-study	
References/ Readings	<ol style="list-style-type: none"> 1. Riley, J. P., & Skirrow, G. (Eds.). (1975). Chemical oceanography. Academic Press Vol: 3 2. Goldberg, E. D. Learning Outcomes	<ol style="list-style-type: none"> 1. The course helps in understanding the impact of various pollutants on marine ecosystem; it analyses the factors responsible for degradation and suggests suitable corrective measures. 2. To create awareness among students, and to safeguard the marine environment 3. The course suggests policy measures to prevent marine pollution and to create sustainable marine environment and 4. To provide advisory and technical service to government and industry for pollution abatement. 	

Title of the Course: Environmental Microbiology

Course Code: ESO-304

Number of Credits: 03

Total Contact Hours: 36

Effective from AY: 2022-23

Prerequisites for the course:	Graduates in any discipline with science subjects at the 10+2 level.	
Objective:	This course develops concepts in Environmental Microbiology: Microbial diversity in different habitats and role of microorganisms in biogeochemical cycles. Microbial remediation of pollutants and microorganisms in sustainable development.	
Content:	<p>Module 1: Introduction Origin of life & 3 domains of life. Introduction to microbial world and brief history of microbiology. Microbes from diverse environments: Hypersaline, hydrothermal vent, sulphur springs, polar environments, Soda Lake, marine environments, deep sub surfaces, oligotrophic, deserts, garden/field soil, fresh water lakes.</p>	06 hours
	<p>Module 2:</p> <ul style="list-style-type: none"> • Studies on microbial diversity and methods to study microbial communities: Metabolic diversity of microbial communities. • Role of microorganisms in biogeochemical processes: Biogeochemical cycling of carbon, nitrogen, sulphur, iron and phosphorus; Functional diversity of microbial communities. Role of microorganisms in ecological succession; Microbial symbiotic associations; Biofilms. 	10 hours

	Module 3: Environmental microbiology in sustainable development Microorganisms in agriculture: Mycorrhizae, biofertilizers, composting, biocontrol agents, organic farming; Microorganisms for food security and clean energy; Microorganisms for bioremediation of oil spills, heavy metals, xenobiotics and waste water treatment.	10 hours
	Module 4: Impacts of microorganisms on environment and humans: Microbiomics; Microorganisms and climate change; Climate change and occurrence of diseases; Disease causing microorganisms and antibiotics; Algal blooms and harmful algal blooms; Ballast water and significance of invasive microorganisms.	10 hours
Pedagogy:	Lectures/tutorials/assignments/online teaching /powerPoint presentations/MOODLE, case study.	
References/Reference/Readings	<ol style="list-style-type: none"> 1. Willey, J. M., Sherwood, L. M., & Woolverton, C. J. (2017). <i>Prescott's Microbiology</i>. McGraw-hill Education. 10th Edition. 2. (2018). <i>The Gut microbiome in health and disease</i>. Springer. 	
Learning Outcomes	On successful completion, course participants will be able to understand:	

	1. Distribution of microbes in diverse environment and their role. 2. Significance of microorganisms in biogeochemical cycling. 3. Natural bioremediation processes and sustainable development.	
--	--	--

Title of the Course: Environmental Biotechnology

Course Code: ESO-305

Number of Credits: 03

Total Contact Hours: 36

Effective from AY: 2022-23

Prerequisites for the course:	Graduates in any discipline with science subjects at the 10+2 level.	
Objective:	This course will impart knowledge on biotechnological applications that can be used to tackle environmental issues emerging due to industrialization and globalization.	
Content:	Module 1: Introduction Environment, Biotechnology, Concepts in Environmental Biotechnology. Areas of environmental biotechnology. Development, use and regulation of biological systems for remediation of contaminated environments (land, air, water), and for environment-friendly processes (green manufacturing technologies and sustainable development). Ethical issues in environmental biotechnology.	06 hours
	Module 2: <ul style="list-style-type: none"> Biotechnology in agriculture and environmental sustainability Biotechnology innovations for global food security [(Genetic engineering (GE)/recombinant DNA technology (rDNA) and transgenic organisms for biological pest, weed and disease control)]; Modern plant breeding methods for increasing crop productivity and improve soil structure. Case studies - Bt cotton, Bt Brinjal, Golden Rice. Blue revolution (ocean based economy) and Sea-agriculture; Seaweed, Fish, Shrimp and Bi-valve farming. Modern marine biotechnology for the sustainable food production. Macroalgal biorefinery for supply of resources (food or feed ingredients, chemicals, bioenergy and materials). Monitoring environmental pollution Robust techniques and innovative new concepts for identifying and screening of toxins and pathogens in the environment (genetic and biochemical kits and reagents, 	10 hours

	<p>CRISPR–Cas technology, and cellular models).</p> <p>Module 3: Biotechnology in Waste handling, treatment and sustainable development (Environmental biotechnology and human health): Centralized wastewater treatment systems (primary, secondary and tertiary treatment); Decentralized wastewater treatment systems (phytoremediation in constructed wetland system, waste stabilization ponds, anaerobic digesters). Solid waste management, Plastic pollution, Rendering plastic degradation in marine environment. Genetic engineering for combating environmental pollution, bioremediation. Waste to energy power plants, recycling, reducing waste and composting & vermicomposting. Novel composting methods for sludge biomass (such as <i>terra preta</i> of the sludge); Resource recovery for sustainable development (recovery of N & P, energy, organics and clean water).</p> <p>Module 4:</p> <ul style="list-style-type: none"> • Resource management and environment conservation Basic concept of saving of resources and energy through biotechnology; Prevention of eutrophication using macroalgae; biological control of mosquitos. • Bioresource technology for clean environment Biomass (wood waste, agricultural waste, municipal solid waste, manufacturing waste, and Sewage sludge) as source of energy and bio-fuels. Microalgae as a source for Biodiesel. Biodegradable plastic. 	<p>10 hours</p> <p>10 hours</p>
Pedagogy:	Lectures/tutorials/assignments/ online/self-study	
References/Readings	<ol style="list-style-type: none"> 1. Scragg, A. (1999). <i>Environmental biotechnology</i>. Pearson Education Limited. 2. Rehm, H. J., & Reed, G. Learning Outcomes	At the end of this course, students will be able to apply their knowledge for the application of biotechnological processes for betterment of environment and sustainable development of the society.	

Title of the Course: Conservation Biology

Course Code: ESO-306

Number of Credits: 03

Total Contact Hours: 36

Effective from AY: 2022-23

Prerequisites for the course:	Graduate in any discipline from a recognised University	
Objectives:	1. To systematically understand biodiversity at global, regional and local level; threat assessment, management of biodiversity and restoration of ecosystems. 2. To appreciate the need of biodiversity conservation in the context of various developmental pathways and policy framework.	
Content:	Module 1: Introduction Introduction to conservation biology and biodiversity at global, regional and local levels; flagship species, umbrella species, keystone species, IUCN Red list of threatened species, endemic species, Scheduled species and their distribution. Valuing Biodiversity: ecological economics and direct use values, indirect use value, ethical values. Threats to biodiversity and human-wildlife conflicts.	06 hours
	Module 2: Diversity of mega-diversity countries Flora and fauna of Hotspots and Mega-diversity Countries (United States of America, Mexico, Colombia, Ecuador, Peru, Venezuela, Brazil, Democratic Republic of Congo, South Africa, Madagascar, India, Malaysia, Indonesia, Philippines,	10 hours

	<p>Papua New Guinea, China, and Australia.)</p> <p>Module 3: In-situ and ex-situ conservation Threat assessment and management, Conservation at population and species levels; in situ conservation of migratory species across borders. Biodiversity monitoring, establishing, designing and managing protected areas; national parks, wildlife sanctuaries, biospheres, sacred groove, marine protected areas, conservation outside the protected areas, conservation in Indian culture, case studies on efforts for conservation of Indian flora and fauna. Ex situ conservation, captive breeding, microbial conservation, plant propagation (tissue culture), reestablishment and relocation, conservation of plant diversity in seed banks, germplasm reserves.</p> <p>Module 4: Sustainable development, restoration and legislation Sustainable development at Local, National and International levels. Restoration of damaged ecosystem, endangered species restoration with advanced technologies, applied population biology, manipulation of wild population, establishing new populations, control of predators, herbivores and competitors. National and International conservation organisations and Institutions. Environmental policies, environmental law and legislations.</p>	<p>10 hours</p> <p>10 hours</p>
Pedagogy:	<p>Use of conventional, online and ICT methods. Field visit, case study/ field work/project/self-study. Lecture/tutorials/assignments.</p>

Learning Outcomes	<p>1. To know the value of global biodiversity.</p> <p>2. Understand threat to biodiversity, threat assessment and management plans to conserve biodiversity.</p> <p>3. Plan restoration of the damaged ecosystem using advanced technology.</p>	

Title of the Course: Water Resource Management

Course Code: ESO-307

Number of Credits: 03

Total Contact Hours: 36

Effective from AY: 2022-23

Prerequisites for the course:	Graduates in any discipline with science subjects at the 10+ 2 level	
Objectives:	<p>1. To understand occurrence and circulation of water in nature.</p> <p>2. To study the functioning, problems and measures that can be taken for sustainable development of water resource.</p>	
Content:	<p>Module 1: Introduction</p> <p>Traditional methods of water management, agriculture, sanitization systems and environment. Hydrological cycle: Evaporation, evapotranspiration, precipitation, runoff and infiltration.</p>	06 hours
	<p>Module 2: Aquifers characteristics and irrigation</p> <p>Classification of aquifers and confining layers, hydraulic properties of aquifers, water table and piezometric surface. Availability of water in Lakes, ponds, streams and rivers. Irrigation in India: Water control and crop production. Construction, technology and operation of water control system. Problems related to overexploitation and groundwater mining. Saline water intrusion in coastal aquifers and its control. Fresh-salt water interface.</p>	10 hours

	<p>Module 3: River flooding and rain water harvesting Nature, extent, magnitude and frequency of floods, urbanization and flooding. Impact of climate change on water availability. Concept of basin management, basin investigation. Subsurface investigation of groundwater. Drilling methods, construction, development and maintenance of wells. Rainwater harvesting and water conservation techniques and its importance. Concept of artificial recharge: methods, wastewater recharge for reuse.</p> <p>Module 4: Pollution and water governing laws Pollution of surface and groundwater: Municipal sources, industrial sources, agricultural sources. Case studies of water pollution in India. Physical, chemical, biological properties of water. Quality criteria for different uses. Water Governance: Salient features of The Water (Prevention and control of pollution) Act, 1974 and Goa water (Prevention and Control of Pollution) Rules, 1988.</p>	<p>10 hours</p> <p>10 hours</p>
Pedagogy:	Lectures / Assignments / Seminars/ Self-study

Learning Outcomes	The main outcome of the course is to understand and develop information with respect to occurrence and circulation of water in nature and find solutions to the water related problems.	

Title of the Course: Disaster Management
Course Code: ESO-308

Number of Credits: 03

Total Contact Hours: 36

Effective from AY: 2022–23

Prerequisites for the course:	Graduate in any discipline from a recognised University	
Objective:	To provide basic conceptual understanding of disasters, understand approaches of Disaster Management and build skills to respond to disasters	
Content:	Module 1: Introduction Understanding the Concepts and definitions of Disaster, Hazard, Vulnerability, Risk, Capacity – Disaster and Development, and disaster management Natural and Man-made disasters, Global Disaster Trends – Emerging Risks of Disasters – Climate Change and Urban Disasters – The Refugee Problem	06 hours
	Module 2: Types, trends, causes, consequences and control of disasters Geological Disasters (earthquakes, volcanic eruptions, landslides, tsunami, land subsidence); Hydro-Meteorological Disasters (floods, cyclones, lightning, thunder-storms, hail storms, avalanches, droughts, cold and heat waves) Biological Disasters (epidemics, pest attacks, forest fire); and Anthropogenic Disasters (building collapse, mining mishaps, rural and urban fire, road and rail accidents, oil spills, nuclear, radiological, industrial, chemicals and biological disasters, terrorism).	10 hours
	Module 3: Disaster management cycle and framework, and applications of science and technology to disaster management Disaster Management Cycle and the Paradigm Shift in Disaster Management. Pre-Disaster – Risk Assessment and Analysis, Risk Mapping, zonation and Microzonation, Prevention and Mitigation of Disasters, Early Warning System; Preparedness, Capacity Development; Awareness During Disaster – Evacuation, Disaster Communication, Search and Rescue, Emergency Operation Centre, Incident Command System, Relief and Rehabilitation Post-disaster – Damage and Needs Assessment, Restoration of Critical Infrastructure, Early Recovery, Reconstruction and Redevelopment Geo-informatics in Disaster Management (RS, GIS, GPS) Disaster Communication System (Early Warning and Its Dissemination) Land Use Planning and Development Regulations Disaster Safe Designs and Constructions Structural and Non Structural Mitigation of Disasters	10 hours

	<p>S&T Institutions for Disaster Management in India</p> <p>Module 4: International organisations, NGOs, best practices and disaster management in India</p> <p>International organisations: Red Cross, Sphere, Oxfam, World Relief, CBM International, UNDRO, UNDDR</p> <p>Yokohama Strategy, Hyogo Framework of Action, UNISDR</p> <p>Critical analysis of NGO experience. Community Based Disaster Risk Reduction (CBDRR)</p> <p>Disaster Profile of India – Mega Disasters of India and Lessons Learnt</p> <p>Disaster Management Act 2005 – Institutional and Financial Mechanism</p> <p>National Policy on Disaster Management, National Guidelines and Plans on Disaster Management; Role of Government (local, state and national), Non-Government and Inter-Governmental Agencies</p>	10 hours
Pedagogy:	Lectures/ tutorials/ assignments/ self-study

Learning Outcomes	Students will acquire a comprehensive understanding of disasters and the field of disaster management, so that they understand, analyse and evaluate the relationship of disasters with development, vulnerability and environmental factors.	

Title of the Course: Marine Plankton Ecology

Course Code: ESO-309

Number of Credits: 03

Total Contact Hours: 36

Effective from AY: 2022-23

Prerequisites for the course:	Graduates in any discipline with science subjects at the 10+ 2 level	
Objectives:	1. To describe the role of plankton in marine ecosystem function. 2. To understand the effects of environmental factors on plankton biogeography and their role in food web dynamics.	
Content:	Module 1: Introduction Marine environment zonation, Coastal and Open Ocean, Significance of oceans and its biodiversity to humans Significance of planktonic biota to the health of oceans Distribution of plankton in the Tree of Life Major groups of phytoplankton, zooplankton, picoplankton, virioplankton (viruses) their biology and significance	06 hours
	Module 2: Plankton diversity and trophic dynamics Phytoplankton: Diatoms, Dinoflagellates, Haptophytes (coccolithophores, prymnesiophytes), Prasinophytes Zooplankton (Holoplankton, Meroplankton): Chaetognaths, Cnidarians, Molluscs, Radiolarians, Foraminiferans, Crustaceans, Larvaceans Multiple marine protistan lineages in seven supergroups of eukaryotic tree of life Factors affecting primary production: light, nutrients, mixed layer depth, chelating agents, tides, turbulence, grazing, Mixotrophy	10 hours

	<p>Interactions within and across trophic levels (allelopathic interactions) Planktonic Food Web structure and trophic transfer efficiency, Marine microbial food webs, microbial loop, viral shunt</p> <p>Module 3: Plankton in marine ecosystem functioning Phytoplankton C:N:P ratios, stoichiometric plasticity, phenotypic plasticity, Contribution to biogeochemical cycles, Carbon Sequestration, Biological Carbon Pump Ecological success of diatoms, Blooms, Diatom/Dinoflagellate Index as an indicator for ecosystem change Harmful Algal Blooms (HABs) and biotoxins, morphological and physiological characteristics of HAB species, HAB dynamics Implications of Climate change on plankton (global warming, ocean acidification)</p> <p>Module 4: Quantitative observations of planktonic ecosystems Techniques and instruments used in plankton studies: Advances in Automated Technology to observe and measure plankton, Pigment composition, Optical and Acoustical methods e.g. Optical Plankton Counter, Zooglider Quantitative Imaging Devices e.g. Flow Cytometry, FlowCAM, FlowCytoBot Molecular Phylogenetic Approaches, High throughput ‘omics’ data Monitoring plankton in oceans through various international projects: Continuous Plankton Recorder (CPR), Global Alliance of CPR Surveys (GACS), The Scientific Committee on Oceanic Research (SCOR), Global Ocean Observing System (GOOS), Global Ocean Ecosystem Dynamics (GLOBEC), Integrated Marine Biosphere Research (IMBeR), TARA Oceans, GEOHAB</p>	<p>10 hours</p> <p>10 hours</p>
Pedagogy:	Lectures/tutorials/assignments/self-study/Moodle/Videos	
References/Readings	<ol style="list-style-type: none"> 1. Morrissey, J. F., Sumich, J. L., & Pinkard-Meier, D. R. (2018). <i>Introduction to the biology of Marine life</i> (11th ed). Learning Outcomes	Students will be able to understand ecosystem processes such as grazing, productivity, and the relative importance of plankton to marine food webs and biogeochemical cycling, and also monitoring work carried out globally.	

Title of the Course: Water and Wastewater: Monitoring and Treatment Technologies

Course Code: ESO-310

Number of Credits: 03

Total Contact Hours: 36

Effective from AY: 2022-23

Prerequisites for the course:	Graduate in any discipline from a recognised University	
Objectives:	<ol style="list-style-type: none"> Understand the water quality criteria and Standards of water for domestic, industry and agriculture consumption. Learn the causes and effects of water pollution and quality deterioration. Learn the principles and instrumentation for water quality control and monitoring. Motivate students for designing innovative methodologies in monitoring and treatment of water and wastewater. 	
Content:	<p>Module 1: Introduction</p> <ul style="list-style-type: none"> Water balance and benchmarks: Earths water budget, Hydrological cycle, Demand -supply situation and global benchmarks for major water dependent Industries Water quality: water quality standards, Standards for Package Drinking water and mineral water, Water quality standards and parameters (ISI-BIS and 	06 hours

	<p>USPH), Water pollution: Sources and types of water pollution, Causes and impacts on Environment</p> <ul style="list-style-type: none"> • Water pollutants: Organic (Pesticides, oil spill, tar balls and toxic organic chemicals, antibiotics), Inorganic, Sediments, Marine, Radioactive, Eutrophication, trace and heavy elements in water, Bioindicators. <p>Module 2: Water and wastewater analysis</p> <ul style="list-style-type: none"> • Water and wastewater: Characteristics, Classification of wastewater • Sampling techniques: Separation scheme for organic compounds in water. Preservation techniques for sample. • Monitoring techniques and methodology: Physical, Chemical and biological analysis of water and wastewater parameters such as pH, Conductance, Turbidity, Temperature, Total Dissolved Solids (TDS), Total Suspended Solids (TSS), TKN, Dissolved Oxygen (DO), Acidity and Alkalinity, Ammonia, Chlorides, Fluoride, Nitrate and Nitrite, Cyanide, sulphide, Sulphate, Phosphate, Total Hardness, Boron, Silica, Metal and Metalloids, Heavy metals and other pollutants, Chemical Oxygen Demand (COD) and Biochemical Oxygen Demand (BOD). <p>Module 3: Water treatment</p> <ul style="list-style-type: none"> • Treatment of water: Conventional and modern methods of treatment, Flowchart of the Water Treatment Plant, Treatment Methods (Theory and Design). • Treatment processes: Screening, Oil Separation, Sedimentation, Coagulation-Flocculation, Settling tanks, Aeration and Gas transfer, Precipitation, Softening, Filtration- Sand, Charcoal, Multimedia etc., Reverse Osmosis technology, Membrane processes, Ultra filtration. Disinfection System: chemical based and other disinfection methods such as Chlorination, Ozonation, UV, Adsorption and Ion exchange, Electrochemical and other methods. <p>Module 4: Biological treatment</p> <ul style="list-style-type: none"> • Types of treatment processes: attached and submerged, aerobic and anaerobic, facultative etc., • Aerobic processes: Activated Sludge Process and various modified processes, SBR, MBR, UA-SBR, FAB etc, Oxidation ponds and Rotating Biological Contactors 	<p>10 hours</p> <p>10 hours</p> <p>10 hours</p>
--	--	---

	<ul style="list-style-type: none"> • Anaerobic processes: Up flow Anaerobic Sludge Blanket, Anaerobic digesters, Anaerobic filters. • Sludge treatment: Preliminary operation, thickening, conditioning, Dewatering, Filtration, Digesting and Drying of sludge, Sludge disposal • Modular Sewage Treatment Plant: Water reuse and recycling (Industry / Site visit for Water treatment plant and STP) 	
Pedagogy:	Lectures/case studies /workshops/industrial visit /documentaries and discussion/ research article analysis /mini projects / survey or mapping projects.

Learning Outcomes	<p>After successful completion of the course student will be able to:</p> <ol style="list-style-type: none"> 1. Explain the causes and effects of water pollution. 2. Analyse the water as per BIS and international standards. 3. Identify suitable technologies for the treatment of water and wastewater. 4. Design the water and wastewater treatment plants. 5. Operate, maintain and manage treatment plants. 6. Start own enterprise. 	

Title of the Course: Industrial water and wastewater treatment technologies

Course Code: ESO-311

Number of Credits: 03

Total Contact Hours: 36

Effective from AY: 2022-23

Prerequisites for the course:	Graduate in any discipline from a recognised University	
Objectives:	<ol style="list-style-type: none"> 1. Elaborate the latest development in wastewater treatment technologies 2. Explain the sources and effects of water pollution from various industries 3. Understand the principles and processes in wastewater treatment technologies 4. Identify suitable technologies for wastewater treatment 	
Content:	<p>Module 1: Introduction</p> <p>Types of industrial pollutants, Industrial wastewater characterisation, Categorisation of industries- green, orange and red industries, Standards of industrial waste disposal, Minimum National Standards (MINAS) and Goa State Regulatory Framework for effluents and trade waste.</p> <p>Module 2: Industrial wastewater treatment</p> <ul style="list-style-type: none"> • Methods of industrial waste treatment: Primary, secondary and tertiary/polishing treatment such as equalisation, neutralisation, precipitation. • Physico-chemical and biological treatment processes: Sedimentation, Oil separation, Floatation, Coagulation, Filtration, Ion exchange membranes. • Biological oxidation - Removal of organics (Sorption, 	<p>06 hours</p> <p>10 hours</p>

	<p>Stripping, bio-degradation), Unit operations and electromechanical equipment used in the treatment processes.</p> <p>Module 3: Advance wastewater treatment</p> <ul style="list-style-type: none"> • Advance wastewater treatment process – Removal of specific pollutants – nitrification, denitrification/Anammox process, SHARON-ANAMMOX process for treatment of ammonium rich wastewater, Biological Phosphate Removal (BPR). • Membrane processes – Fundamentals, Membranes – Types, classifications, Microfiltration, Ultrafiltration, Nanofiltration and reverse osmosis, Electrodialysis, Ion exchange. • Advance oxidation process: Photocatalysis, Ozonation – Ozone / UV, Ozone / Hydrogen peroxide, Hydrogen peroxide/ UV applications and other significant proven technologies. • <p>Module 4: Common Effluent Treatment Plant (CETP) & Decentralised Wastewater Treatment (DWT)</p> <ul style="list-style-type: none"> • CETP and DWT: Requirement and objectives Planning and management of CETP and DWT, facilities for small scale industries • Energy recovery from wastewater: Microbial fuel cells, microbial electrolysis cell, microbial desalination cell, biohydrogen production and combination of technologies. 	<p>10 hours</p> <p>10 hours</p>
Pedagogy:	Lectures/ video/ Powerpoint presentation/ Industrial visit / documentaries and discussion / research article analysis / mini projects / survey and mapping projects	
References/ Readings	<ol style="list-style-type: none"> 1. De, A. K. (2019). <i>Environmental Chemistry</i>. (9th Ed.). New Age International Publishers. 2. Bennett, M.R. & Doyle, P. Learning Outcomes	<p>After successful completion of the course student will be able to:</p> <ol style="list-style-type: none"> 1. Explain different pollutants from various industries. 2. Suggest suitable technologies for the wastewater treatments depending on type of pollutants. 3. Design the suitable process for wastewater treatment plants. 4. Manage and supervise the maintenance of treatment plants. 5. Adopt the principle of reduce, recycle and reuse in industries. 	

Title of the Course: Water and Wastewater Analysis

Course Code: ESO-312

Number of Credits: 04

Total Contact Hours: 96

Effective from AY: 2022-23

Prerequisites for the course:	Graduate in any discipline from a recognised University	
Objective:	Develop analytical skills of the students for water and wastewater analysis useful in wastewater and industrial treatment plants	
Content:	<p>Part I</p> <ul style="list-style-type: none"> • List of the experiments (6 hour duration) 1. Determination of pH, conductivity and Turbidity of water and wastewater samples (pH meter, conductometer, and nephelometer) 2. Determination of dissolved oxygen and total hardness of water (Ca and Mg) of water and wastewater sample. 3. Determination of BOD of wastewater samples. 4. Determination of COD of wastewater samples. 5. Determination of TSS and TDS of a given water sample. 	48 hours

	6. Determination of Chromium in given water sample using UV-VIS spectrophotometer. 7. Determination of the metal ions (Na and K) using Flame photometer (Including working, standardization and plotting of calibration curve). 8. Estimation of Metals and metalloids (spectrophotometry / AAS). • A visit to ETP / STP and report writing (8 hours) Part 2 : Waste water from industrial effluents (6 hours each) 1. Estimation of ammonia from wastewater samples (Nessler's Method) 2. Nitrate and nitrite using spectrophotometric method 3. Determination of fluoride using spectrophotometer 4. Determination of phosphates in wastewater using spectrophotometric method 5. Estimation of total cyanide in wastewater using titrimetry and spectrophotometric method 6. Estimation of tannin and lignin and surfactants from Wastewater 7. Estimation of pesticides in water sample using GC 8. Determination of <i>E. coli</i> and total bacteria in wastewater	48 hours
References/ Readings	1. Kaur, K. (2007) <i>Handbook of Water and wastewater Analysis</i> . Atlantic 2. Maiti, S.K.(2011) <i>Handbook of Methods in Environmental Studies: Water and Wastewater Analysis</i> , Oxford Book Company, ISBN-10 9380179871 3. New Age International Publications ISBN-10 9789387477247	
Learning Outcomes	After successful completion of the course student will be able to: 1. Carry out analysis of wastewater and evaluate the results. 2. Design various experiments for reducing the environmental pollution. 3. Provide innovative solutions for the treatment of wastewater and recycling. 4. Analyze industrial effluent for water quality parameters and submit report to various agencies.	

Title of the Course: Occupational Work Environment and Health Hazards

Course Code: ESO-313

Number of Credits: 02

Total Contact Hours: 24

Effective from AY: 2022-23

Prerequisites for the course:	Graduate in any discipline from a recognised University
--------------------------------------	---

	<p>Environment and Loss Prevention. Taylor and Francis Publications.</p> <p>3. Reese, C.D. (2015). <i>Occupational Health and Safety Management: A Practical Approach</i> (3rd Ed). CRC Press. ISBN 978-1482231335</p> <p>4. Stranks, J. (2006). <i>The health and safety handbook (A practical guide to health and safety law, management policies and procedures)</i>. Learning Outcomes	<p>After completing the course student will be able to:</p> <ol style="list-style-type: none"> 1. Evaluate workplace to determine the existence of occupational safety and health hazards. 2. Identify relevant regulatory and national standards benchmarking with best practices in industry. 3. Select appropriate control methodologies based on the hierarchy of the controls. 4. Analyze injury and illness data for trends. 	

Title of the Course: Mangrove Ecosystem and Biodiversity

Course Code: ESO-314

Number of Credits: 01

Total Contact Hours: 12

Effective from AY: 2022-23

Prerequisites for the course:	Graduates in any discipline with science subjects at 10+2 level.	
Objective:	To introduce the students to the dynamic mangrove ecosystem, its composition – abiotic and biotic, benefits, threats and need for conservation.	
Content:	<p>Module 1: Introduction Mangroves, global distribution, current status, threats, ecology and environment, relation with other ecosystems, uses of mangroves.</p> <p>Module 2: Structure and function of mangrove ecosystem Physical mangrove environment, forest types – overwashed, fringe, dwarf, riverine, basin, hammock; true mangroves – red, white, green, black; mangrove associates, adaptations in mangroves, patterns and processes in mangrove ecosystem, environmental factors - climate and habitats Biodiversity in mangrove ecosystem: flora and fauna</p>	<p>02 hours</p> <p>10 hours</p>
Pedagogy:	Lectures/ case studies/ tutorials/ videos/ assignments/ self-study/ visits	
References/ Readings	1. Kathiresan, K., & Ajmal Khan, S. (2005). UNU-INWEH- UNESCO International training course on Coastal Biodiversity in Mangrove Ecosystem- Course manual (pp. 410). Annamalai University, India.

Learning Outcomes	Students will gain knowledge about mangrove ecosystem, its floral and faunal biodiversity.	

Title of the Course: Mangrove Ecology

Course Code: ESO-315

Number of Credits: 01

Total Contact Hours: 12

Effective from AY: 2022-23

Prerequisites for the course:	Graduates in any discipline with science subjects at 10+2 level.	
Objective:	To introduce the students to the dynamic mangrove ecosystem, its composition – abiotic and biotic, benefits, threats and need for conservation.	
Content:	<p>Module 1: Introduction Mangroves, ecology and environment, uses of mangroves, threats to mangrove.</p>	02 hours
	<p>Module 2: Ecological importance of mangrove ecosystem and the impact of anthropogenic activities Functional aspects – biomass, productivity, litter and its decomposition, carbon sink and organic carbon productivity, nitrogen and sulfur cycling, nutrient status, nurseries, biofilters for toxic pollutants, breeding grounds – fish, birds; mitigation of climate change, coastal defence mechanism Indigenous people of mangroves – livelihood dependency –Case study on Sunderban</p>	10 hours

	Anthropogenic destruction - deforestation, landfills, land reclamation, waste disposal sites, pollution – water quality and persistent chemicals, loss of mangrove biodiversity	
Pedagogy:	Lectures/ case studies/ tutorials/ videos/ assignments/ self-study/ visits	
References/ Readings	<ol style="list-style-type: none"> 1. Kathiresan, K., & Ajmal Khan, S. (2005). Learning Outcomes	<ol style="list-style-type: none"> 1. Imprint the importance of mangroves in maintaining the global climate and balance in the nutritional as well as biogeochemical cycles. 2. Awareness about indigenous people and anthropogenic destruction 	

Title of the Course: Mangrove Restoration and Conservation

Course Code: ESO-316

Number of Credits: 01

Total Contact Hours: 12

Effective from AY: 2022-23

Prerequisites for the course:	Graduates in any discipline with science subjects at 10+2 level.
Objective:	To introduce the students to the dynamic mangrove ecosystem, its

	composition – abiotic and biotic, benefits, threats and need for conservation.	
Content:	Module 1: Introduction Mangroves, global distribution, current status, threats, uses of mangroves.	02 hours
	Module 2: Restoration and conservation Restoration and afforestation projects, ecosystem based management, protected areas, restoration tools, monitoring methods – remote sensing and GIS, awareness programmes, training programmes, community based management, role of institutions, NGOs, global conservation strategies, economic valuation (cost benefit analysis), national and global mangrove conservation policies, conservation and mangrove protection laws, international agreements – Ramsar convention, case study – mangroves of Goa.	10 hours
Pedagogy:	Lectures/ case studies/ tutorials/ videos/ assignments/ self-study/ visits	
References/ Readings	<ol style="list-style-type: none"> 1. Kathiresan, K., & Ajmal Khan, S. (2005). Learning Outcomes	This paper will highlight the need to conserve and protect the mangroves.	
--------------------------	---	--

Title of the Course: Environmental History of India

Course Code: ESO-317

Number of Credits: 03

Total Contact Hours: 36

Effective from AY: 2022-23

Prerequisites for the course:	Graduate in any discipline from a recognised University	
Objectives:	<ol style="list-style-type: none"> 1. To cover in a systematic, comprehensive and critical way the nature, issues, problems and movements related to environmental history in India. 2. To enable the students to comprehend the urgent need for environmental conservation, and appreciate the policy of sustainable development. 3. To encourage an interdisciplinary approach to environmental history. To inculcate the spirit of environmental ethics. 	
Content:	Module 1: Introduction Definition of Environmental History –Historiography - Sources.	06 hours
	Module 2: Man and nature in pre-modern India Hunter-Gatherer Societies to Agricultural Societies – the Eclectic Belief Systems and Cultural Ecology – Sacred Groves.	10 hours
	Module 3: Environmental change and conflict in modern India Colonial Interests on Forests, Forest Acts (1865, 1878 and 1927) and Policies – Systematic Conservation vs. Exploitation Debate – Issue of Shifting Cultivation - Settled Cultivators and the State – Decline of Artisanal Industry – Deforestation – Protests Against the British Forest Acts and Policies.	10 hours
	Module 4: Independent India Policies towards Forestry – Forest Policy Resolutions and Acts (1952, 1980 and 1988) – Policies towards Environment - Role of NGOs – Environmental Movements: Chipko Movement - Appiko Movement – Scientific Conservation of Environment – Environmental Ethics - Major International Environmental Conventions and Protocols.	10 hours
Pedagogy:	Lectures/tutorials/assignments/self-study/seminars/field work based write up.

Learning Outcomes	<ol style="list-style-type: none"> 1. Understand the environmental history of India through the ages from the ancient to the modern. 2. Appreciate Cultural Ecology and its significance. 3. Comprehend Environmental Ethics. 4. Understand sustainable development, rational use of natural resources, renewable sources of energy, and methods of controlling pollution. 	

Title of the Course: Environmental Politics

Course Code: ESO-318

Number of Credits: 03

Total Contact Hours: 36

Effective from AY: 2022-23

Prerequisites for the course:	Graduate in any discipline from a recognised University	
Objectives:	<ol style="list-style-type: none"> 1. The course seeks to discuss the manner in which politics shapes the discourse on environment at various levels. 2. It shall address how actors and institutions of politics impinge on decision making and outcomes in addressing environmental problems of the day. 3. While doing this it tries to expose the students to issues of power, contestation and cooperation that often emerge at local, national as well as international environmental domain. 	
Content:	Module 1: Introduction Concept of Power, Conflict and Interests in relation to Environment, Green Political Theory, Green Political Parties	06 hours
	Module 2: State and environmental politics State as repository of Power and Authority, Regulation, State as an agency of Development,	10 hours
	Module 3: Non-state actors and environmental politics Non-Governmental organizations as pressure groups/advocates/partners in environmental change, Conflict with state and corporations.	10 hours
	Module 4: Multilateral institutions and environmental regimes International and regional organizations relating to environment, Multilateral institutions as sites of international negotiations, goal setting and accountability.	10 hours
Pedagogy:	Lectures/tutorials/assignments/self-study/case-studies	
References/	1. John B. 1999. Rethinking Green Politics Nature, Virtue	

Readings	<p>and Progress, Sage Publishers.</p> <ol style="list-style-type: none"> Schumacher E.F. 1993. Small Is Beautiful: A Study of Economics as if People Mattered, RHUK Publishers Guha R. 2016. Environmentalism: A Global History, Penguin Random House. India. Gareth P. 1995. Global Environmental Politics: Second Edition (Dilemmas in World Politics), Westview Press Neil C. 2012. The Politics of the Environment: Ideas, Activism and Policy, Cambridge University Press. Duit A. et al., 2014. State and Environment – The Comparative Study of Environmental Governance, MIT Press. Newell P. 2006. Climate for Change: Non-State Actors and the Global Politics of the Greenhouse, Cambridge University Press. Schiele S. 2014. International environmental regimes and their treaties, Cambridge University Press. Gupta S.S. 2016. Caring for Nature: The River of life (The Story of the Narmada Bachao Andolan), The Energy and Resources Institute. Khanna D.R., Kumar P. and Singh V. 2013. Ecology of the Tehri Dam, Biotech Books. Kutting G. and Herman K. 2018. Global Environmental Politics: Concepts, Theories and Case Studies, Taylor and Francis. 	
Learning Outcomes	<ol style="list-style-type: none"> The student should be able to relate environment with the larger context of politics that often emerges out of it. He/she would be able to look at not only the key environmental issues at stake, but also how various actors both state and non-state influence the same through both cooperation and discord. The course would thus enable the student to get a grasp of how the institutions, politics and policy intersect in the domain of environment. 	

Title of the Course: Global Environmental Governance

Course Code: ESO-319

Number of Credits: 03

Total Contact Hours: 36

Effective from AY: 2022-23

Prerequisites for the course:	Graduate in any discipline from a recognised University
Objectives:	<ol style="list-style-type: none"> To provide interdisciplinary knowledge and competences that assist in dealing with environmental governance in an international context.

	<ol style="list-style-type: none"> 2. This inter-disciplinary course provides in-depth insights to the actors, processes and problems of global environmental politics and aims to summarise debates about ‘global’ environmental problem. 3. It will also aim to understand the various international organisations and their role in global governance. 4. The main focus of the course is on understanding the evolution of environmental policy regimes at multiple scales and with multiple actors. 	
Content:	<p>Module 1. Introduction Globalization of Environmental Threats and Impact on Security, Trade, Health and Development.</p> <p>Module 2. Core dimensions and key actors of global environmental governance Actors, Institutions—International Organizations—the UN System; Sustainable Development Goals (SDGs); Environment Summits—From Stockholm to Rio to Johannesburg; India’s Environmental Diplomacy.</p> <p>Module 3. Environmental accords and governance History of Environment’s Lawmaking and Institution Building Processes—1987 Brundtland Commission Report, International Environmental Agencies including UNEP, Commission on Sustainable Development, Select Multilateral Environmental Agreements-Agreements on Climate Change, Antarctica Treaty, Polar Regions and the Amazonia.</p> <p>Module 4. The indigenous and environmental governance in comparative perspective: Case studies from the high north (polar region) and the Amazonia Evolving Indigenous Governance in the Arctic; Rights of Minorities and Indigenous Peoples in the Arctic Region; Indigenous People and the Amazonia—Issues, Challenges and Governance of the Region; Role of Groups and Questions of Land and Water Rights in the High North and the Amazonia.</p>	<p>06 hours</p> <p>10 hours</p> <p>10 hours</p> <p>10 hours</p>
Pedagogy:	Lecture classes, interactions, assignments, presentations

--	---	--

Learning Outcomes	<p>At the end of the course, the students can retrieve, recognize, and recall knowledge acquired from the course (including lectures, readings, and assignments) on:</p> <ol style="list-style-type: none"> 1. Global environmental problems and issues. 2. Concepts and theories. 3. International organizations and regimes. 4. Different types of actors and the roles they play in global environmental governance. 	
--------------------------	---	--

Title of the Course: Women and Environment

Course Code: ESO-320

Number of Credits: 03

Total Contact Hours: 36

Effective from AY: 2022-23

Prerequisites for the course:	Graduate in any discipline from a recognised University	
Objectives:	<ol style="list-style-type: none"> 1. This course will provide students with an understanding of the relationship between women and environment. 2. Students will be introduced to basic concepts and terms to enable the understanding of the gendered impact of environmental concerns, human-made and natural disasters, women's agency, knowledge of traditional healing systems and women's role as farmers. 3. Environmental movements and conservation both past and present particularly women's role in them will also be discussed. 4. Through this course students will get an insight into initiatives and commitments on women and the environment. 5. The course will highlight the inter-connectedness of ecosystems, environment, society and gender which are important for sustainable development. 	
Content:	Module 1: Introduction <ul style="list-style-type: none"> • Gender Equality and Equity • Gendered impacts of day to day environmental concerns, human-made and natural disasters due to patriarchy, stereotypes and socially constructed division of labour. 	06 hours
	Module 2: Understanding concepts <ul style="list-style-type: none"> • Eco-feminism • Feminist Political Ecology • Feminist Environmentalism • Gender Mainstreaming and Auditing 	10 hours
	Module 3: Women's involvement in environmental movements and conservation: past and present <ul style="list-style-type: none"> • Movements (e.g. Chipko, Silent Valley, Green Belt, Narmada Bachao Andolan, Navdanya and contemporary movements) 	10 hours

	<ul style="list-style-type: none"> • Conservation: Seed cooperatives and traditional knowledge systems, community forestry. <p>Module 4: Initiatives and instruments for gender and environment</p> <ul style="list-style-type: none"> • UN Environment Programme (Gender) – Gender and Water Alliance (GWA), - Global Gender and Climate Alliance (GGCA), - Women’s Earth and Climate Action Network, International (WECAN) • Greenpeace • 350.org • Pani Panchayat • Paani Foundation 	10 hours
Pedagogy:	Lectures/assignments/workshops/ brain storming sessions/outreach programmes/campus walks/documentaries and discussion/ presentations

Learning Outcomes	<p>1. Students will understand the relationship between gender and the environment.</p> <p>2. Students will acquire knowledge about global and local initiatives on gender and environment.</p> <p>3. Students will understand the vital role that women play in conservation of nature, sustainable use of natural resource, mitigating environmental conflicts and addressing environmental issues through activism.</p>	

Title of the Course: Environmental Externalities and Policy

Course Code: ESO-321

Number of Credits: 01

Total Contact Hours: 12

Effective from AY: 2022-23

Prerequisites for the course:	Graduate in any discipline from a recognised University
Objective:	This course aims to equip the learner with tools of resource allocation using basic concepts in Economics. This will include market and non-market-based approaches to understanding problems of global and local pollution

	and challenges to sustainability using techniques of environmental valuation.	
Content:	Module 1: Introduction Meaning of externalities, environmental policy in the presence of externalities.	02 hours
	Module 2: Theory of externalities & environmental policy Missing Markets, Non-convexity, Non-linearity, Public Goods, Common Property Resources, Coase Theorem and Issues in Property Rights; Pigouvian Taxes, Subsidies, Tradable Permits, Price v/s Quantity tools.	10 hours
Pedagogy:	In class/online lectures, assignments, group activities, presentations.	
References/Readings	1. Harris, J.M., & Roach, B. (2021). <i>Environmental and Natural Resource Economics: A Contemporary Approach</i> . Routledge. 2. Kolstad, C. (2012). <i>Intermediate Environmental Economics</i> . Oxford University Press. 3. Perman, R, Ma Y., Common, M., Maddison, D, & McGilvray. (2011). <i>Natural Resource and Environmental Economics</i> (4th ed.). Addison Wesley. 4. Rondeau, D., & Conrad, J.M. (2020). <i>Natural Resource Economics: Analysis, Theory, and Applications</i> . Cambridge University Press. 5. Tietenberg, T. (2000). <i>Environmental and Natural Resource Economics</i> (5th ed.). Addison Wesley.	
Learning Outcomes	On successful completion, course participants will be able to: 1. Understand how the environmental resources affect human welfare. 2. Have an informed opinion on environment-development trade-offs. 3. Assess international challenges of sustainability.	

Title of the Course: Introduction to Sustainable Development

Course Code: ESO-322

Number of Credits: 01

Total Contact Hours: 12

Effective from AY: 2022-23

Prerequisites for the course:	Graduate in any discipline from a recognised University
Objective:	This course aims to equip the learner with tools of resource allocation using basic concepts in Economics. This will include market and non-market based approaches to understanding problems of global and local pollution and challenges to sustainability using techniques of environmental valuation.

Content:	Module 1: Introduction Meaning of sustainable development.	02 hours
	Module 2: Sustainable development Renewable and Non-renewable Resources - Optimal use under different market Structures. Strong and weak sustainability; Global agreements, Economics of ecosystems and biodiversity. Issues of climate change adaptation and mitigation.	10 hours
Pedagogy:	In class/online lectures, assignments, group activities, presentations.	
References/Readings	<ol style="list-style-type: none"> 1. Harris, J.M., & Roach, B. (2021). <i>Environmental and Natural Resource Economics: A Contemporary Approach</i>. Routledge. 2. Kolstad, C. Learning Outcomes	<p>On successful completion, course participants will be able to:</p> <ol style="list-style-type: none"> 1. Understand how the environmental resources affect human welfare. 2. Have an informed opinion on environment-development trade-offs. 3. Assess international challenges of sustainability 	

Title of the Course: Introduction to Environmental Valuation

Course Code: ESO-323

Number of Credits: 01

Total Contact Hours: 12

Effective from AY: 2022-23

Prerequisites for the course:	Graduate in any discipline from a recognised University	
Objective:	This course aims to equip the learner with tools of resource allocation using basic concepts in Economics. This will include market and non-market based approaches to understanding problems of global and local pollution and challenges to sustainability using techniques of environmental valuation.	
Content:	Module 1: Introduction Meaning, importance of environmental valuation.	02 hours
	Module 2: Issues in valuation Costs and benefits. Use values, Non-use values, Option values, Discount rates. Methods of valuation: Revealed and stated	10 hours

	preferences; Market and non-market valuation; Applications of valuation in developing countries.	
Pedagogy:	In class/online lectures, assignments, group activities, presentations.	
References/Readings	<ol style="list-style-type: none"> 1. Harris, J.M., & Roach, B. (2021). <i>Environmental and Natural Resource Economics: A Contemporary Approach</i>. Routledge. 2. Kolstad, C. (2012). <i>Intermediate Environmental Economics</i>. Oxford University Press. 3. Perman, R, Ma Y., Common, M., Maddison, D, & McGilvray. (2011). <i>Natural Resource and Environmental Economics</i> (4th ed.). Addison Wesley. 4. Rondeau, D., & Conrad, J.M. (2020). <i>Natural Resource Economics: Analysis, Theory, and Applications</i>. Cambridge University Press. 5. Tietenberg, T. (2000). <i>Environmental and Natural Resource Economics</i> (5th ed.). Addison Wesley. 	
Learning Outcomes	<p>On successful completion, course participants will be able to:</p> <ol style="list-style-type: none"> 1. Understand how the environmental resources affect human welfare. 2. Have an informed opinion on environment-development trade-offs. 3. Assess international challenges of sustainability. 	

Semester IV

Title of the Course: Environment Impact Assessment IV

Course Code: ESC-401

Number of Credits: 03

Total Contact Hours: 36

Effective from AY: 2022-23

Prerequisites for the course:	The student should have completed course nos. ESC-106 (EIA I), ESC-206 (EIA II) and ESC-301 (EIA III)	
Objective:	To learn the legal and administrative aspects of EIA and its application with specific reference to industrial sector.	
Content:	Module 1: Introduction Traditional and modern technologies associated with mining, aquaculture, sewage treatment plant, ports, airports, roads and railways.	06 hours
	Module 2: EIA and development EIA with reference to land-use pattern, centralized land-use, procedures and methodologies, EIA plans (state and central legislation), EIA (waste management), alternate technologies and	10 hours

	<p>waste management strategies, remediation, guidelines for the preparation of EIA document, Quality Management System for EIA.</p> <p>Module 3: EIA for specific projects Industrial setup and establishment - infrastructure, operation and management, effluent and waste, practices, effectiveness, practices. Biodiversity assessment, inventorization of flora and fauna, impact on migratory population and existing settlement, strategic mitigation measure.</p> <p>Module 4: EIA rules and notifications Legal, policy and regulation framework- Global and Indian context. Policy and legislation: Environmental Protection Acts & Rules. EIA notification 1994 and 2006 and amendments. EIA 2020 draft notification and objections. Public hearing guidelines. Case studies and reports.</p>	<p>10 hours</p> <p>10 hours</p>
Pedagogy:	Lectures/assignments/workshops/outreach programs/field trips and discussion/presentations.	
References/Readings	<ol style="list-style-type: none"> 1. Glasston, J., Therivel, R. & Chadwick, A. (2005). Introduction to Environmental Impact Assessment. Published by Routledge. Learning Outcomes	<p>On completion of the course, the student will be able to:</p> <ol style="list-style-type: none"> 1. Independently assess EIA of past projects. 2. Participate in EIA processes and evaluate policy decisions. 	

Title of the Course: Environmental Chemistry**Course Code:** ESO-403**Number of Credits:** 03**Total Contact Hours:** 36**Effective from AY:** 2022-23

Prerequisites for the course:	Graduates in any discipline with science subjects at the 10+ 2 level.	
Objectives:	<ol style="list-style-type: none">1. To introduce fundamentals of environmental chemistry.2. To provide basic knowledge of environmental pollution, effects of environmental pollutants and control measures.3. Introduction of various experimental techniques for analysis.4. Evaluate the utility of various analytical techniques as a qualitative and quantitative tool.	
Content:	Module 1. Introduction Environmental segments (Lithosphere, Hydrosphere, Atmosphere, Cryosphere and Biosphere). Biogeochemical cycles (hydrogen, carbon, nitrogen, oxygen, phosphorus, and sulphur). Introduction to Microplastics and Nanoplastics (harmful effects, preventive measures and control measures), E-waste (impact on environment, harmful effects and control measures), and Radioactivity (contamination of radioactivity, radiation hazards, control measures).	06 hours
	Module 2: Air pollution Air pollutants (primary and secondary), photochemical reaction, Acid rain, Ozone layer depletion, global warming. Carbon monoxide, nitrogen oxides, sulphur dioxide and hydrocarbons (sources, harmful effects, analysis and control measures). Particulate matters (inorganic, organic and radioactive), health hazards, analysis, control devices (Gravitational settlings, particulate air filters, centrifugal separators, wet scrubbers). Case study: Bhopal gas tragedy, London and Los Angeles smog	10 hours
	Module 3: Water pollution Water analysis (salinity, hardness, pH BOD, COD, colour, turbidity, taste and odour), Water pollutants: nitrates, phosphates, phenols, cyanides, heavy metals (Cd, Hg, Pb, Se, As) and analysis methods. Lake and river water treatment, municipal waste water treatment and industrial effluent treatment (from pesticides, pharmaceutical and electroplating). Case study: Kepone, Minamata	10 hours
	Module 4: Soil pollution Inorganic and organic components in soil, Reactions in soil, waste pollutants in soil. Excess usage of agrochemicals, soil	10 hours

	contamination with pollutants. Pesticides (toxicity, biochemical effects and control measures). Waste Management (sources and types of solid wastes, disposal techniques, collection methods, waste management approach). Case study: use of pesticides e.g. DDT	
Pedagogy:	<ol style="list-style-type: none"> 1. Mainly lectures / tutorials. Seminars/assignments/presentations/ self-study or a combination of some of these could also be used to some extent. 2. Pre-lab and post-lab assignments or a combination of some of these. Sessions shall be interactive in nature to enable peer group learning. 	
References/ Readings	<ol style="list-style-type: none"> 1. De, A. K. (2005). <i>Environmental chemistry</i> (3rd ed). New Age International Publishers. 2. Salker, A. V. (2017). <i>Environmental chemistry</i> (1st ed). Narosa Publishing House. 3. Sharma, B. K. (2003). <i>Environmental chemistry</i> (1st ed). GOEL Publishing House. 4. O'Neill, P. (2009). <i>Environmental chemistry</i> (3rd ed). Blackie Academic & Professional. 5. Khopkar, S. M. (2005). <i>Environmental pollution analysis</i>. (1st ed.) New Age International Publishers. 	
Learning Outcomes	<ol style="list-style-type: none"> 1. Students will be in a position to know the basic environmental chemical processes. 2. Students will be able to explain the origin and harmful effects of toxic chemicals in the environment. 3. Student will be in position to use different techniques for qualitative and quantitative estimation of environmental samples. 	

Title of the Course: Green Chemistry

Course Code: ESO-404

Number of Credits: 03

Total Contact Hours: 36

Effective from AY: 2022-23

Prerequisites for the course:	Graduates in any discipline with science subjects at the 10+ 2 level.	
Objectives:	<ol style="list-style-type: none"> 1. To learn basic knowledge and principles involved in green chemistry and create awareness of greener chemistry. 2. To understand energy saving and making green processes in chemical reactions. 3. To develop social concern for waste generated from various processes. 	
Content:	Module 1: Introduction (Ref. 1,3) Need for Green Chemistry; Overview of twelve green chemistry principles as proposed by Paul Anastas and John Warner;	06 hours

	<p>Explanation with examples under each principle. Introduction to sustainable development; Why regulation is required to achieve sustainable development; Environmental policy and innovation; Future trends and challenges in sustainable development.</p> <p>Module 2: Designing Greener Approaches and Waste Handling (<i>Ref. 1, 4</i>) Safer designs for the target molecule, Minimization, Simplification, Substitution, Moderation, Limitations, Replacement of Toxic Reagents, Use of Alternative Solvents (suitable examples in each case). Problems caused by waste; Sources of waste from the chemical industry; Waste minimization techniques; On-site waste treatment; physical treatment; Chemical treatment; Biotreatment; Degradation; Rules for degradation; Polymer recycling</p> <p>Module 3: Future Trends in Green Chemistry and Chemicals from Renewable Raw Materials (<i>Ref. 2, 5</i>) Introduction to solid acid catalysts and their significance in industrial applications; phase-transfer catalysis, Biocatalysis: basic principles, enzyme catalysed reactions, Photocatalysis: Introduction and significance with examples. Renewable Raw Materials: Carbohydrates, Ethanol, Lactic acid, Indigo-natural colour, Riboflavin, Ascorbic acid, Fats and oils, Biodiesel, Fatty acid esters, Terpenes and green polymers</p> <p>Module 4: Alternative energy sources for greener processes (<i>Ref. 1</i>) Design for energy efficiency; Photochemical reactions; Advantages of and challenges faced by photochemical processes; Examples of photochemical reactions; Chemistry using microwaves; Microwave heating; Microwave-assisted reactions; Sonochemistry; Electrochemical synthesis.</p>	<p>10 hours</p> <p>10 hours</p> <p>10 hours</p>
Pedagogy:	Mainly lectures / tutorials, seminars / assignments / presentations / self-study or a combination of some of these could also be used to some extent.	

References/ Readings	<ol style="list-style-type: none"> 1. Lancaster, M. (2002). <i>Green chemistry-an introductory text</i> (1st ed). Royal Society of Chemistry. 2. Sheldon, R. Ahluwalia, V. K., & Kidwai, M. (2004). <i>New trends in green chemistry</i>. Anamaya publishers. 	
Learning Outcomes	<ol style="list-style-type: none"> 1. Student should be in position to understand and apply the basic principles of Green chemistry in daily life. 2. Students should understand control measures of waste. 3. Students will be able to understand the green Industrial processes. 	

Title of the Course: Ecotoxicology

Course Code: ESO-405

Total Contact Hours: 36

Number of Credits: 03

Effective from AY: 2022-23

Prerequisites for course:	Graduate in any discipline from a recognised University	
Objectives:	<ol style="list-style-type: none"> 1. Students will gain full understanding of the effects of toxic substances on ecosystems and their living components. 2. Students will also gain knowledge on the various organisms and methods used in ecotoxicological testing as well as mitigation. 	
Content:	Module 1: Introduction Important concepts of ecotoxicology, Routes by which pollutants enter ecosystems; Major classes of pollutants, their sources and Ecotoxicological effects, permissible levels of toxicants in the environment.	06 hours
	Module 2: Concepts of toxicology Acute and chronic toxicity, dose response, bioaccumulation, biomagnification, bioavailability, biodegradation; Toxicokinetics: Absorption, Distribution, Metabolism, Biotransformation and Elimination of Toxicants, Physiological and biochemical effects of toxic substances: Genotoxic, neurotoxic compounds, endocrine	10 hours

	<p>disruptors; Effects at the molecular level, cellular level, organism level (physiological, reproduction, behaviour)</p> <p>Module 3: Biomonitoring</p> <p>Eco-toxicity tests (lab-based and field tests) in air, water and soil, biosensors, molecular biology assays, Use of model organisms for ecotoxicology: fish, helminthes, molluscs, mice, Environmental Risk Assessment. Environmental bio-indicators of eco-toxicity with faunistic studies</p> <p>Module 4: Microbial Ecotoxicology and Biotechnology for mitigating environmental toxicity</p> <p>Interaction between microorganisms and pollutants; Role of microorganisms in detoxification and degradation of environmental pollutants, Metagenomic techniques to study microbial diversity in polluted environment. Biological consortia to degrade or sequester in situ toxic materials. Primary, secondary and tertiary treatment of wastewater. Ameliorating nutrient toxicity (Nitrates and Phosphates), Handling sludge toxicity, Microbial and Phytoremediation (wetlands), Treatment of domestic wastewater using wetlands – a case study.</p>	<p>10 hours</p> <p>10 hours</p>
Pedagogy:	In class/online lectures, assignments, group activities, presentations.	
References/Readings	<ol style="list-style-type: none"> 1. Walker, C. H., Sibly, R. M., Hopkin, S. P., & Peakall, D. B. (2012) <i>Principles of Ecotoxicology</i>. 4th Edition. 	<i>applications. 3rd edition.</i> Garland science. 11. Satyanarayana, T., Johri, B., & Anil, T. (2012) <i>Microorganisms in Environmental Management.</i> Springer.	
Learning Outcomes	On successful completion, students will be able to: 1. Understand the toxic effects of pollutants in ecosystems 2. Apply concepts of ecotoxicology using model organisms and for assessing environmental risk 3. Understand mitigation strategies using micro-organisms	

Title of the Course: Microplastics in Environment

Course Code: ESO-406

Number of Credits: 03

Total Contact Hours: 36

Effective from AY: 2022-23

Prerequisites for the course:	Graduates in any discipline with science subjects at 10+2 level	
Objective:	This course introduces to the concept of microplastics as a pollutant and its impact on the environment and human.	
Content:	Module 1: Introduction to microplastics Introduction to Plastics and microplastics: Types of plastics: PET, HDPE, PVC, LDPE, PP, PS, Other; and microplastics types: fibres, microbeads, fragments, nurdles, foam. Primary and Secondary, microplastics and its formation.	06 hours
	Module 2: Distribution of microplastics Global occurrence, sources of microplastics. Distribution and fate of plastic in the environment. Microplastics pollution in Land, Water- Freshwater and Marine waters, Air, Snow.	10 hours
	Module 3: Impacts of microplastics Potential impacts on the environment and human health. Microplastics as carriers of trace and heavy metals and its role as pollutant. Microplastic in plants, animals and humans.	10 hours
	Module 4: Sampling, characterization, mitigation of microplastics and case studies <ul style="list-style-type: none"> Sampling and characterization Methods used for sampling, quantification of microplastics. Instrument for identification of microplastics- FTIR and Raman Spectroscopy. Mitigation 	10 hours

	<p>Mitigation methods for microplastics and role of Blue Flag certification- international eco-level tag Foundation for Environmental Education.</p> <p>G20 and United Nations Environment Assembly resolution on marine litter and microplastics.</p> <ul style="list-style-type: none"> • Case studies <p>Microplastics pollution studies in India-Case studies with special reference to Goa.</p>	
Pedagogy:	Since it is a theory course, to get a strong understanding of the subject, case studies will be discussed and seminar topics other than from the syllabus will be given to students.	
References/ Readings:	<ol style="list-style-type: none"> 1. Crawford, B.C & Quinn, B. (2016). <i>Microplastic Pollutants</i> (1st ed.). Elsevier Science. 2. Rocha-Santos, T., Costa, M. & Mouneyrac, C., (Eds.). (2022). <i>Handbook of Microplastics in the Environment</i> (1st ed.). Springer. 3. Rocha-Santos, T.A.P. & Duarte, A.C. (Eds.). (2017). <i>Characterization and Analysis of Microplastics</i> (1st ed.). Elsevier Science. 	
Learning Outcomes	<ol style="list-style-type: none"> 1. The course helps in understanding the formation of microplastics and its impact on environment. 2. The course will help in creating awareness among student about microplastic pollution and will help them to reflect upon mitigation of such problems. 	

Title of the Course: Renewable Energy System

Course Code: ESO-407

Number of Credits: 03

Total Contact Hours: 36

Effective from AY: 2022-23

Prerequisites for the course:	Graduate in any discipline from a recognised University	
Objective:	This course develops to understand the concept of energy and its form. Various form of energy, its conversation to electric form and relevant systems and energy management.	
Content:	<p>Module 1: Introduction</p> <ul style="list-style-type: none"> • Classification of energy <p>Energy chain and common forms of usable energy, Present energy scenario, World energy status-Energy scenario in India, Introduction to renewable energy resources: Solar, Wind, Hydro Power and Nuclear Energy.</p> <p>Module 2: Solar energy harvesting systems</p> <ul style="list-style-type: none"> • Solar energy and systems 	06 hours

	<p>Introduction to Solar Energy-Energy from sun-Spectral distribution of Solar radiation- Instruments for measurement of solar radiation-Solar radiation data analysis. Thermal applications -Introduction to Solar thermal collectors- Types - Principle of operation of different collectors - Flat plate-Evacuated tube collectors-Compound parabolic collectors-Solar air heaters - Solar dryers-solar cookers- solar stills - Solar ponds - concentrating collectors- line type - point type - Methods of Solar power generation - Power towers</p> <ul style="list-style-type: none"> • Solar photovoltaics cells <p>Physics of solar cells - Cell and module , Manufacturing Process: Characteristics of cells and module - Performance parameters -BoS- PV System applications - Standalone- Grid connected systems.</p> <p>Module 3: Alternative energy harvesting systems</p> <ul style="list-style-type: none"> • Small hydro power, ocean and geothermal energy systems, wind energy <p>Introduction - types - system components, discharge curve and estimation of power potential - Turbines for SHP; Power generation through OTEC systems - various types - Energy through waves and tides - Energy generation through geothermal systems – types ; Resource assessment - types of wind turbines - selection of components - blade materials - power regulation - various methods of control - wind farms - site selection - off shore wind farms - Solar Wind Hybrid energy systems.</p> <ul style="list-style-type: none"> • Electric vehicles and its roadmap <p>Electric Vehicles, Batteries design material, resources, specifications and EV roadmap.</p> <p>Module 4: Energy Management</p> <ul style="list-style-type: none"> • Energy management <p>Transmission of Energy System AC and DC Forms, Relevant issues in Transmission and Transmission lines, Engine Efficiency, Low power designs and managements, E-Waste, Worldwide Scenario and Indian Context, Rules and Regulations.</p>	<p>10 hours</p> <p>10 hours</p> <p>10 hours</p>
Pedagogy:	Lectures/ tutorials/assignments/self-study	
References/ Readings	<ol style="list-style-type: none"> 1. Andrews, J., & Jelley, N. (2013). <i>Energy science: Principles, technologies and impacts</i>, Oxford Universities press. 2. Fang, L. Y., & Hong, Y. (2012). <i>Renewable energy</i>

Learning Outcomes	<ol style="list-style-type: none"> 1. Correlate various form of energy and World energy status and various conversion system. 2. Define opportunities available for energy conservation and for use of renewable energy resources in local and regional entities. 	

Title of the Course: Coral Ecology

Course Code: ESO-408

Number of Credits: 03

Total Contact Hours: 36

Effective from AY: 2022-23

Prerequisites for the course:	Graduate in any discipline from a recognised University	
Objectives:	<ol style="list-style-type: none"> 1. To understand the reef formation, distribution and biological/ecological processes of coral reefs. 2. To explore the coral biome and its ecological interactions 3. To study the threats, climate change adversities and restoration of coral habitats. 	
Content:	<p>Module 1: Introduction</p> <ul style="list-style-type: none"> • Coral reef distribution and significance <p>Types of coral reefs and their global distribution with special emphasis to Indian waters.</p> <p>Salient features of the ecosystem: Habitat characteristics, reef biodiversity and nursery grounds, interactions with seagrass ecosystem and migratory corridors, natural barriers.</p> <p>Economic Importance: Fisheries and marine products, tourism and recreational activities.</p>	06 hours

	<p>Module 2: Coral evolution and community interactions</p> <ul style="list-style-type: none"> • Coral evolution and development Paleoecology of corals. Theories of evolution: Subsidence theory, Glacial Control Theory, Stand Still Theory, Cycle of Erosion theory. Coral reef formation, morphology and functional zones, Ocean chemistry and aragonite saturation. Hydrodynamics and lagoon circulation. • Coral biome dynamics Coral communities and trophic structure: Primary producers, consumers, food webs, productivity in coral reefs. Symbiotic associations: Algal-coral associations, bacterial symbiosis, multi-partner symbiosis. Internal nutrient cycling, Energy transfer/trophodynamics, Adaptive bleaching hypothesis, Coral probiotic hypothesis, Rosenberg's hologenome hypothesis. <p>Module 3: Threats to coral ecosystem</p> <ul style="list-style-type: none"> • Physico-chemical and biological factors influencing coral reefs Environmental factors (pH, temperature, salinity, sedimentation, waves, ocean currents, weather, nutrients, aerial exposure, light) and their impact. Competitors, Microbial infections, predators, parasites • Anthropogenic threats Tourism and its impact, pollution, overfishing, habitat destruction. Global warming, thermal bleaching, ocean acidification, sea level rise and its effect on coral health. <p>Module 4: Coral disease spread assessment and prophylactic measures Coral disease survey and monitoring protocols. Disease response plan and outbreak management. Ex-situ treatment measures: Use of antibiotics, anti-oxidants and Phage therapy. Cultivation and conservation of corals: Coral Restoration and Health Consortium (CRHC), Global Coral Reef Conservation Project, Resilient Reef Initiative Project, Mithapur Coral Reef Recovery Project. Traits of climate change resilient clades. Laws and policies for conservation and management of corals in Indian seas/waters.</p>	<p>10 hours</p> <p>10 hours</p> <p>10 hours</p>
Pedagogy:	Lectures/tutorials/assignments/self-study/case-studies

Learning Outcomes	<ol style="list-style-type: none"> 1. The coral ecosystem function and its ecological and economic implications. 2. Awareness of impact of anthropogenic activities on coral health 3. Conservation and management strategies of damaged corals and their recovery. 	

Title of the Course: Polar Sciences

Course Code: ESO-409

Number of Credits: 03

Total Contact Hours: 36

Effective from AY: 2022-23

Prerequisites for the course:	Graduates in any discipline with science subjects at 10+2 level
Objective:	Lectures provide basic information about physical geographic conditions of the Arctic and Antarctic, history of discovery and colonization of these regions. The course also includes assessing the significance of the Polar Regions in context of atmospheric circulation, energy exchange, circulation

	in the Southern Ocean, cryosphere, biota and its sensitivity to global changes. Lectures are an integral part of information on current trends in polar research, development of tourism and its potential impacts, protection of natural resources and polar ecosystems.	
Content:	Module 1: Introduction <ul style="list-style-type: none"> • Delimitation of Arctic and Antarctic, their basic differences, discovering, exploitation and scientific utilizability. • Astronomic factors and their reflexion in polar regions. 	06 hours
	Module 2: Ecology of polar region <ul style="list-style-type: none"> • Climate of polar regions - energy balance of the ground surface, water balance, baric field and atmospheric circulation, air temperature and air humidity, precipitation. Climate change and climate variation and their consequences i.e. polar regions (glacials and interglacials and their influence on the hydrosphere, geosphere, cryosphere and biosphere). • Freshwater hydrology and oceanology. Surface water and ground water. Polar oceans - submarine relief, systems of sea currents, water substitution with the lower latitudes and its energy consequences 	10 hours
	Module 3: Glaciology <ul style="list-style-type: none"> • Glaciology of polar regions - reasons of glaciation and its development, glaciation of continents and of sea surface, ice mass balance. Cryosphere as a stabilizer of Earth climate. • Development of earth surface in polar regions, glacial and periglacial geomorphologic processes - permafrost and its energy roots, regional structure, active layer of permafrost, frost weathering, slope dynamics. Soil in polar regions. 	10 hours
	Module 4: Flora and fauna <ul style="list-style-type: none"> • Vegetation in polar regions - limiting by abiotic factors (microclimate, nutrients, water), soil flora, space structure of polar vegetation (subpolar, polar, polar deserts and semideserts, polar wetlands). Origin of polar (alpine) plants, vascular plants and their adaptation and acclimatization on the polar environment. Cryptogams in polar regions. • Stress physiology of polar plants. • Fauna of polar regions - invertebrates, evolution and space structure, physiological adaptation on polar conditions, nutrient succession. • Microbial diversity - Anthropogenic impacts on polar ecosystems - heat pollution of planetary geosystem, changes 	10 hours

	in chemical composition of atmosphere and their consequences (global transport of pollutants, anthropogenic change in greenhouse effect, ozone depletion and its consequences), changes in biodiversity.	
Pedagogy:	Online/offline lectures, tutorials, assignments and visit to research laboratory	
References/ Readings	<ol style="list-style-type: none"> 1. Holdgate, M.W. (1970). Antarctic Ecology. <i>Academic Press, London, New York.</i> 2. King, J.C. & Turner, J. (1997). The climate of the Arctic. <i>Dordrecht: Kluwer Academic Publishers</i>, 270. 5. Richard, S., Per, M. (2006). Buffalo A complete guide to Arctic wildlife. <i>N.Y.: Firefly Books</i>, 464. 6. Stonehouse, B. (1989). Polar Ecology. <i>Blackie, Glasgow – London.</i> 7. Thurman, H.V. & Alan, P.T. (2005). Oceánografie: [tajemnýsvětmořiaoceánů]. <i>Praha: Computer Press</i>, viii, 479. 8. Warwick, F., Johanna, V., Parry, L. (2008). Polar lakes and rivers: limnology of Arctic and Antarctic aquatic ecosystems. <i>Oxford: Oxford University Press</i>, xviii, 327. 	
Learning Outcomes	Polar ecosystems are comparatively simple from point of view of their internal structure. On the other hand they exist as a result of long development whose effect is perfect adaptation of their biotic component to the extremal living conditions. It enables their existence on the bounds of energy, climate and food requirement. Polar ecosystems were form under influence of specific astronomic, geographical, oceanographic, atmospheric and geochemical factors. They have influenced their inanimate components (georelief and its substratum, atmosphere, hydrosphere, kryosphere, pedosphere) and subsequently biosphere. Nevertheless, arised ecosystems impact backward as a complex the whole planet - notably from the energetic point of view. Its reflexion is first of all global change of ocean water, global climate and consequently complicated cascade of processes, which form the development of shape of Earth surface and development of the biosphere.	

Title of the Course: Marine Biodiversity and Conservation

Course Code: ESO-410

Number of Credits: 03

Total Contact Hours: 36

Effective from AY: 2022-23

Prerequisites for the Course:	Graduates in any discipline with science subjects at the 10+2 level.	
Objective:	Addresses basic concepts of marine biodiversity at all levels, IPR, life patenting, values and its implications on the environment and human life with respect to the anthropogenic inputs.	
Content:	Module 1: Introduction Biodiversity, definition, concept, types; Biodiversity measurements - taxic, phylo-genetic and molecular approaches.	06 hours
	Module 2: Genetic variance and dynamics Intra-specific Genetic variance and factors affecting, biodiversity and intra-specific variations, dominance and over-dominance hypothesis, adaptive polymorphism, genetic variations, loss and increase dynamics of biological diversity, conceptual models, hypothesis proposed in deep sea biodiversity.	10 hours
	Module 3: Ecological processes and ecosystem stability Marine Biodiversity and ecosystem functions, competition, predation and heterogeneity as biodiversity determinants; ecosystem approach, functions and keystone species, engineer organisms, diversity-stability, rivet, drivers and passenger, idiosyncratic hypothesis, co-operative relations, top down and bottom up theories, cascade effects and fishing through the food webs.	10 hours
	Module 4: IPR and biodiversity conservation Biodiversity and Intellectual Property Rights (IPR) and bio-piracy, life patenting and implications, impact of GATT/WTO on farmer's right, indigenous, traditional knowledge. Biodiversity conservation - Biological diversity Act, sanctuaries, marine parks, protected areas, hotspots and marine biosphere reserves of India	10 hours
Pedagogy:	Lectures / tutorials / assignments / self-study	
References/ Readings	<ol style="list-style-type: none">1. Hiscock, K. (2014). <i>Marine biodiversity conservation: A practical approach</i>. Routledge Taylor & Francis Group.2. Kumar, A. (2004). <i>Biodiversity & environment</i>. A.P.H. Pub. Corp.3. Ormond, R., Gage, J. D., & Angel, M. V. (1997). <i>Marine</i>	

	<i>biodiversity: Patterns and processes. Cambridge University Press.</i> 4. Queiroga, H. (2006). <i>Marine biodiversity: Patterns and processes, assessment, threats, management and conservation.</i> Springer. 5. Shiva, V. (1994). <i>Cultivating diversity: Biodiversity conservation and the politics of the seed.</i> Research Foundation for Science, Technology & Natural Resource Policy.	
Learning Outcomes	The students will be able to understand holistic view of the marine biodiversity with emphasis on ecosystem functions, IPR, life patenting and conservation policies.	

Title of the Course: Ecotourism

Course Code: ESO-411

Number of Credits: 03

Total Contact Hours: 36

Effective from AY: 2022-23

Prerequisites for the course:	Graduation in any discipline from a recognised University	
Objectives:	To understand ecotourism potential, resources and management issues.	
Content:	Module 1: Introduction Definition, history, scope, principles, and characteristics of ecotourism. Tourist motivation, tourist interaction, and intensity of interaction with nature. Ecotourist, eco-sensitivity, ecocentrism, ethics of ecotourism, local participation benefits, and conservation.	06 hours
	Module 2: Resource potentials Flora and fauna of Wildlife Sanctuaries, Bird Sanctuaries, National Park, sacred grooves, mangroves, backwater, waterfalls, springs, beaches, hill stations, deserts, butterfly parks, spice plantations. Taxonomy and ecology of aquatic faunal resources (Dolphin, crocodile, corals, mollusca) and terrestrial faunal resources (birds, butterflies, other insects).	10 hours
	Module 3: Ecotourism Management Marketing of ecotourism, Economic impact, development, governance and policy, programme planning, codes of practice carrying capacity, resource management and impact of ecotourism, impact assessment and management analysis. Visitor activity and impact management, role of interpretation centre. Safety measures on field and first aid.	10 hours
	Module 4: Designing ecotourism projects Designing, interpretation centres, ecotourism websites, portals	hours

	and documentaries, Identification of site-specific flora and fauna.	
Pedagogy:	Use of conventional, online and ICT Methods. Field visit Case study/ ecotourism project proposal/project/self-study Lecture/Tutorials/Assignments	
References/ Readings	<ol style="list-style-type: none"> 1. Bhatia, A.K. (2014) Tourism development: principles and practices, New Delhi: Sterling Publishers Pvt. Ltd. 2. Cooper, Chris (1994) Tourism Principles and practice. Great Britain Pitman publishing. 3. Fennell David S. (2004) Ecotourism 4th edition Routledge Taylor & Francis group 4. Fennell, David A. Learning outcomes	<ol style="list-style-type: none"> 1. To identify ecotourism potential sites, assess ecoresources. 2. Design and execute visitor management plan and promotional material for ecotourism. 	

Title of the Course: Mineral Resources, Environmental Problems and Management

Course Code: ESO-412

Number of Credits: 01

Total Contact Hours: 12

Effective from AY: 2022-23

Prerequisites for the course:	Bachelor's degree of this University or an examination of any other University recognised as equivalent.
Objective:	To understand the interaction of humans with the geological environment.

Content:	Module 1: Introduction <ul style="list-style-type: none"> • Earth in space and time • Internal structure of the earth and Geological time scale 	02 hours
	Module 2: Earth, its resources and the management <ul style="list-style-type: none"> • Geological evolution of earth: plate tectonics and seafloor spreading • Mineral resources and reserves; UNFC. • Mining: surface and underground mining, mine ventilation, mine drainage, environmental effect of mining, environmentally sensitive green mining, mine closure. Trace elements and their implications on health.	10 hours
Pedagogy:	Lectures, case studies, discussions and assignments.	
References/Readings	1. Merritts. D., De Wet, A., & Menking, K. (1997). <i>Environmental Geology: an earth system science approach</i> . W. H. Freeman, New York. 2. Keller, E. A. (2012). <i>Introduction to Environmental Geology</i> (5th ed.). Prentice Hall. 3. Montgomery, C. W. (2010). <i>Environmental geology</i> . (9th ed.). Professor Emerita, Northern Illinois University. 4. Montgomery, C. W. (2020). <i>Environmental geology</i> . (11th Ed.). Professor Emerita, Northern Illinois University. 5. Pipkin, B. W., Trent, D. D., Hazlett, R., & Bierman, P. (2013). <i>Geology and the Environment</i> . Cengage Learning. 6. Valdiya, K. S. (1987). <i>Environmental geology, Indian context</i> . Tata McGraw-Hill Pub. Co.	
Learning Outcomes	In this course a student will learn about: <ol style="list-style-type: none"> 1. Concepts of environmental geology and its interaction with the human beings, 2. Management of geological resources. 	

Title of the Course: Pollution and Environment

Course Code: ESO-413

Number of Credits: 01

Total Contact Hours: 12

Effective from AY: 2022-23

Prerequisites for the course:	Bachelor's degree of this University or an examination of any other University recognised as equivalent.
Objective:	<ul style="list-style-type: none"> • To understand the interaction of humans with the geological environment. • To study pollutants in the environment and to find the suitable remedial measures to cover harmful effects.

Content:	Module 1: Introduction <ul style="list-style-type: none"> Human and geological environment 	02 hours
	Module 2: Types of pollution and remedial measures <ul style="list-style-type: none"> Hydrology and pollution – Impact assessment of degradation and contamination of surface water and groundwater quality due to industrialization and urbanization; remedial measures. Soil Science - Soil profile, soil types and their classification and formation; soil quality degradation, control measures Waste and its disposal - surface and subsurface disposal of toxic, metallic and radioactive wastes. Planning and management of hazardous waste. Domestic refuse and landfill.	10 hours
Pedagogy:	Lectures, case studies, discussions and assignments.	
References/Readings	1. Keller, E. A. (2012). <i>Introduction to Environmental Geology</i> (5th ed.). Prentice Hall. 2. Montgomery, C. W. (2010). <i>Environmental geology</i> . (9th ed.). Professor Emerita, Northern Illinois University. 3. Montgomery, C. W. (2020). <i>Environmental geology</i> . (11th Ed.). Professor Emerita, Northern Illinois University. 4. Pipkin, B. W., Trent, D. D., Hazlett, R., & Bierman, P. (2013). <i>Geology and the Environment</i> . Cengage Learning. 5. Valdiya, K. S. (1987). <i>Environmental geology, Indian context</i> . Tata McGraw-Hill Pub. Co.	
Learning Outcomes	In this course a student will learn about: <ol style="list-style-type: none"> Concepts of environmental geology and its interaction with the human beings, Management of geological resources, Appropriate use of the geological site for waste disposal. 	

Title of the Course: Natural and Manmade Hazards

Course Code: ESO-414

Number of Credits: 01

Total Contact Hours: 12

Effective from AY: 2022-23

Prerequisites for the course:	Bachelor's degree of this University or an examination of any other University recognised as equivalent.	
Objective:	<ol style="list-style-type: none"> To understand the interaction of humans with the geological environment. To impart knowledge about different natural as well as manmade hazards with deterrent measures. 	
Content:	Module 1 : Introduction <ul style="list-style-type: none"> Life on Earth 	02 hours

	Module 2 : Geological hazards Assessing geological hazards and risks: Earthquakes, volcanic eruptions, floods and droughts, mass movement-landslides, rock fall, preventive and mitigation measures.	10 hours
Pedagogy:	Lectures, case studies, discussions and assignments.	
References/ Readings	<ol style="list-style-type: none"> 1. Keller, E. A. (2012). <i>Introduction to Environmental Geology</i> (5th ed.). Prentice Hall. 2. Montgomery, C. W. (2010). <i>Environmental geology</i>. (9th ed.). Professor Emerita, Northern Illinois University. 3. Montgomery, C. W. (2020). <i>Environmental geology</i>. (11th Ed.). Professor Emerita, Northern Illinois University. 4. Pipkin, B. W., Trent, D. D., Hazlett, R., & Bierman, P. (2013). <i>Geology and the Environment</i>. Cengage Learning. 5. Valdiya, K. S. (1987). <i>Environmental geology, Indian context</i>. Tata McGraw-Hill Pub. Co. 6. Valdiya, K. S. (2013). <i>Environmental Geology: Ecology, Resource and Hazard Management</i>. McGraw-Hill Education. 	
Learning Outcomes	In this course a student will learn about recognition of natural hazards and mitigation.	

Title of the Course: Environmental Security: Dimensions and Perspectives

Course Code: ESO-415

Number of Credits: 03

Total Contact Hours: 36

Effective from AY: 2022-23

Prerequisites for the Course:	Graduate in any discipline from a recognised University	
Objectives:	<p>The course beholds the following objectives:</p> <ol style="list-style-type: none"> 1. Aims to disseminate rudimentary knowledge in the realm of environmental security, aligned with concurrent analytical comprehension of the natural and human induced environmental mutations, plausibly impacting human security and well-being. 2. Disseminating knowledge and information coalesced around conflicts impelled by environmental resources-scarcity and instituted peace-building processes. 3. Endeavouring to emphasise on typologies and taxonomies of environmental stresses, such as demographics and migration, the dialectic choices between conventional and renewable energy sources, and socio-economic underpinnings of poverty-led insecurity, contextualised to national, region and global environs. 	
Content:	Module 1: Introduction Conceptual-Construct and Topical Phenomenon – Definitions,	06 hours

	<p>Narratives in Discourse, Schools of Thought.</p> <p>Module 2: ‘Environmental Security’ qua ‘Conventional’ and ‘Non-Conventional’ security</p> <p>Typologies of Armed Conflicts & Analysis; Inter-State Conflicts in the Global South (Case Studies from Africa, West Asia, South Asia); Population Pressures and Migration Patterns in Conflict; Role of Non-State Actors; Socio-Economic Issues (Poverty, Occupation and Livelihoods, Infectious Diseases, Industrialisation and Urbanisation Trends).</p> <p>Module 3: Environmental security and sustainability imperatives for ecological harmony and development</p> <p>Food Security; Water Scarcity; Energy Security and Independence; Coastal, Marine, and Blue Economy Resources; Climate Change; Natural Resources Administration; Disaster Management; Land and Forests Vulnerability.</p> <p>Module 4: Environmental security as global commons and global good</p> <p>Perspective on Challenges; Template for Cooperation; Environmental Peace-building Movements, Environmental Justice.</p>	<p>10 hours</p> <p>10 hours</p> <p>10 hours</p>
Pedagogy:	Classroom lectures, written and oral assignments, audio-visual presentations	
References/ Readings	<ol style="list-style-type: none"> 1. Das O. 2013. Environmental protection, Security and Armed Conflict: a sustainable development perspective, Edward Elgar Publishing Ltd. 2. Hough P. 2021. Environmental security: an introduction, Routledge (2nd Ed.). 3. Lanicci J. et. al. 2020. Environmental security – concepts, challenges and case studies, AMS. 4. Lee J. 2019. Environmental conflict and cooperation: premise, purpose, persuasion and promise, Routledge (1st Ed.). 5. Pirages D. et al. 2011. Ecological and non-traditional security challenges in South Asia, NBR Special Report. 6. Richard M. 2010. Global environmental change and human security, London: MIT Press. 7. Scheffran J. et al. 2012. Climate change, human security and violent conflict: challenges for societal stability, Springer. 	

Learning Outcomes	<p>Upon completion of instruction and pedagogy, the course will render students, the following takeaways:</p> <ol style="list-style-type: none"> 1. Acquaint and introduce them, to the latest thought-process discourse, in terms of theory and praxis, on environmental security and peace-building, in a manner that helps internalise the conceptual phenomenon, as cross-cutting generations, policy-axes, and vectors of human endeavour. 2. Glean as to how environmental harness and the excesses of it materially impinge, on the natural security calculus of individual nation-states, inducing the imperative for responsible and sustainable recourses, by sovereign and institutional actors, alike. 3. Internalise how environmental preservation and protection remains pivotal, to beneficently shaping critical sustainable development concerns, of water, food and energy security, that intimately segue with existential aspects of upholding livelihoods and fostering societal-uplift, vide ecological sentence. 4. Students can emerge as stakeholder-contributors to wide-ranging policy analysis in environmental security and peace, through requisite appraisal and appreciation of policy formulations and interventions, beyond their chosen domain of scientific core competence.

Title of the Course: Global Environmental History

Course Code: ESO-416

Total Contact Hours: 36

Number of Credits: 03

Effective from AY: 2022–23

Prerequisites for the course:	Graduate in any discipline from a recognised University	
Objective:	Global Environmental History focusses on the interactions that humans have with nature. Natural world comes in many forms, scales, and styles—forests, rivers, mountains and climate, which makes it a remarkable tool for understanding science, society and nation. This course examines natural world as active, rather than passive; how nature influences humans, how humans intervene in nature and how is nature shaped by human action.	
Content:	Module 1: Introduction Humans and nature in a time-dimension: Ibn Khaldun; Montesquieu; George Perkins Marsh; Fernand Braudel.	06 hours
	Module 2: Early human condition: Ecological process Historicizing climate; Early humans; Early agriculture; the metal ages.	10 hours

	<p>Module 3: Commodity frontiers and natural assets Columbian exchange; Industrial world; Fossil fuels; Environmental relationships.</p> <p>Module 4: Nations and nature Environment and empire—Imperialism and environmental change; Significance of <i>Silent Spring</i>; science and the discourse of ecological crisis; the ideology of scientific conservation, the environmental debate, green capitalists, environmental justice.</p>	<p>10 hours</p> <p>10 hours</p>
Pedagogy:	Lectures (traditional, problem-based, discussion-based); tutorials; assignment-based; seminars; cooperative learning and self-study.	
References/Readings	<ol style="list-style-type: none"> 1. Anker, P. (2002). <i>Imperial Ecology: Environmental order in the British empire, 1895–1945</i>. Harvard University Press. 2. Learning Outcomes	<ol style="list-style-type: none"> 1. Understand the historical relationship between humans and the environment. 2. Recognise the ways in which humans modified and adapted nature. 3. Analyse the nature of environmental change that world has gone through historically and how they have impacted nations and different segments of society. 4. An ethic which applies to the whole of nature, including humans. 	

Title of the Course: Environment and Literature

Course Code: ESO-417

Number of Credits: 02

Total Contact Hours: 24

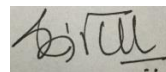

Effective from AY: 2022-23

Prerequisites for the course:	Bachelor's degree in any discipline	
Objectives:	<ol style="list-style-type: none"> 4. To highlight the symbiotic relationship between environment and literature beginning from the Vedic times. 5. To focus on the preoccupation of modern writers with issues related to environmental degradation, consumerist culture etc. 6. To encourage the students to adopt an interdisciplinary perspective while dealing with the large spectrum of issues pertaining to environment and literature. 7. To drive home the idea that questions related to aesthetics cannot be divorced from ethics. 	
Content:	Module 1: Introduction Tracing the Trajectory of Environmental Concerns in Indian & Western Literature: Moments & Movements	04 hours
	Module 2: Paradigms & Categories	08 hours

	<p>Romanticism Martin Heidegger on Technology Ecocriticism Ecofeminism Environmental Humanities Externality Deep Ecology</p> <p>Module 3: Indian Perspective <i>The Upheaval</i> by Pundalik Naik (Novel)</p> <p>Module 4: Western Perspective <i>The Road</i> by Cormac McCarthy (Novel)</p>	<p>06 hours</p> <p>06 hours</p>
Pedagogy:	Lectures/tutorials/assignments/seminars.	
References/ Readings:	<ol style="list-style-type: none"> 1. Bellamy P. 2007. <i>Dictionary of Environment</i>, New Delhi, Academic (India) Publishers. 3rd Edition. 2. Translated by Vidya Pai, New Delhi, Oxford University Press. 	
Learning Outcomes	<ol style="list-style-type: none"> 5. Understand the relationship between literature and environment. 6. Appreciate and recognise the aesthetic as well as the ethical dimensions of literature. 7. Make an independent analysis of literary texts in the context of issues related to environment. 	

Title of the Course: Gender Sensitivity and Equity**Course Code: ESO-418****Number of Credits: 02****Total Contact Hours: 24****Effective from AY: 2022-23**

Prerequisites for the course:	Student should be registered with Goa University Post Graduate Programme	
Objective:	This course aims to develop the basic understanding of gender related issues in the society among students with multidisciplinary approach.	
Content:	Module 1: Introduction The universal commitment to Gender Equality and Social Equity – SDGs, Provisions in the Indian Constitution, Towards Equality Report and the creation of the discipline of Women's Studies in India. Sex and Gender: Non-duality of these terms. Nature vs Nurture debate, socialisation, stereotyping.	08 hours
	Module 2: Social Equity Power, Intersectionality. Marginalised sections based on caste, class, abilities, religion etc. Women's rights as human rights. Women's issues in Goa.	08 hours
	Module 3: Introduction to Laws Sexual Harassment at Work Place (Protection, Prohibition, and Redressal Act of 2013) and Protection of Women from Domestic Violence Act of 2005. Forms of violence against women: a review.	08 hours
Pedagogy:	This course will be taught through workshops/ lectures/ group discussions/assignment/quiz games/ tutorials/ assignments/ films/ documentaries/ group	
References/Readings	<ol style="list-style-type: none">1. Government of India. 2005. DV Act 2005 http://ncw.nic.in/acts/TheProtectionofWomenfromDomesticViolenceAct2005.pdf2. Goa University

P. O. Goa University, Taleigao Plateau, Goa - 403 206, India

Syllabus of M.Sc. (Applied Geology) Program at Earth Science Department

(Effective from Academic year 2018-19 onwards)

The Department of Earth Science offers a versatile Master of Science (MSc) program in Applied Geology that prepares its students for many professional opportunities in industry, research and education through an interdisciplinary approach, the syllabus of which is so designed to train the students to face all the competitive/professional exams like GATE, NET, and UPSC exams.

Academic focus and purpose of Studying Geology:

- Geology is the science of the origin, composition and evolution of the Earth over 4.5 billion years, and the processes that change the Earth and form the foundation for our existence.
- Through the Master of Science (MSc) programme, you will specialise in the area of geology which you find most interesting. Depending on your interests, you can focus your career in various directions which include:
 - ✓ Solving selected day-to-day basic problems in the geological sciences - with the world as your playing field; exploration and exploitation oil and gas, minerals and natural raw materials; groundwater exploration and exploitation, water supply, pollution prevention.
 - ✓ The origins, evolution and future of life; climate change; Research in natural and industrial materials and their technological application

Prerequisites:

- Bachelor's Degree in Geology of Goa University or equivalent Bachelor's degree in Geology from any other recognized universities in India and Abroad. For more details one can visit the university website <http://www.unigoa.ac.in> or refer the Handbook of Admission at Goa University.

Program structure and what you will be studying:

- The Program runs over two years with 4 Semesters. The Program has compulsory/Core Courses and optional courses each representing either 1/2/3/4/5/6 credits and covers most of the Geoscience disciplines (both in Theory and practical).

Credits (theory, tutorials and practical):

The Program follows the Choice Based Credit System (CBCS) and in each semester students have to opt for the theory and practical courses in Geology in addition to the other chosen subjects.

- Minimum 64 Credits spread over 4 semesters are required to be obtained (32 credits for Compulsory Core courses and 16 Credits in optional courses offered by the parent department and the remaining 16 credits can be obtained/earned from any other departments/universities).
- Detailed list of Courses with Credit weightage are given in the following Tables.

Project Work/Dissertation:

- Dissertation work is an optional 8 credit course (to be offered and started from end of 1st year).

Geological Field Mapping/Industrial Training:

- Geological field mapping & field training forms an integral part of the program, provides students an opportunity to interact and learn from scientists/professionals from research & academic institutes.

Career Opportunities:

- As the program is tailored to suit both academic & industry career progression, the MSc in Applied Geology gives a world of opportunities for employment government with many interesting and different socially relevant assignments in India and abroad.
- The program is also widely recognized by a broad range of employers in the geology, mining and environment related govt/private sectors apart from admission to the Ph.D programs.
- Majority of our alumni are working in Oil and Mineral Industry in India and Abroad.

Note: Please refer the following tables for complete list of the courses and the detailed contents.

List of Courses offered in 2 year M. Sc. (Applied Geology) Program

Compulsory Courses (32 Credits)

Compulsory Courses (Theory/Practical)	L-T-P	Credits
GLC-101: Principles of Mineralogy and Geochemistry	3-0-0	3
GLC-102: Structural Geology and Geotectonics	3-0-0	3
GLC-103: Igneous Petrology	3-0-0	3
GLC-104: Metamorphic Petrology	3-0-0	3
GLC-105: Sedimentology	3-0-0	3

L-T-P: Lecture-Tutorial-Practical hours

Syllabus of the M. Sc. Geology Curriculum

(from Academic year 2018-19 onwards)

GLC-101: Principles of Mineralogy and Geochemistry	3-0-0 = 3 Credits
<p>Introduction and scope of geochemistry, types, geochemical classification of elements, composition of the crust, mantle and the core, distribution and behaviour of major and trace elements in igneous, sedimentary and metamorphic processes and products, introduction to stable isotope geochemistry. Introduction to crystal chemistry: ionic radii and co-ordination. Composition, structure, Chemistry and paragenesis of the mineral groups:- Olivine, Pyroxene, Amphibole, Mica, Feldspar, Garnet.</p> <p>Optical mineralogy: Introduction to optical properties of minerals - colour, pleochroism, relief, birefringence, extinction and interference colour. Study of isotropic and anisotropic minerals under convergent light.</p> <p>List of Books:</p> <ol style="list-style-type: none"> 1. Deer, Howie and Zussman: Introduction to rock forming minerals, and rock forming minerals Vol I and II 2. Klein and Hurlbut: Dana's mineralogy 3. Winchell: Optical mineralogy 4. Nesse: Introduction to Optical Mineralogy 5. Kerr, Paul: Optical mineralogy 6. Mason and Moore Introduction to geochemistry 7. Krauskopf: Introduction to geochemistry 8. Walther, J. V: Essentials of geochemistry Henderson: Inorganic geochemistry 	
GLC-102: Structural Geology and Geotectonics	3-0-0 = 3 Credits
<p>Rock mechanics: Stress and Strain. Behaviour of crustal rocks. Microstructures and deformation mechanics. Fractures and faults: fracture analysis, fracture mechanics, joints in Plutons. Fault mechanics: role of fluids, movement mechanisms, brittle versus ductile faults, shear sense indicators, shear zone Kinematics. Fold: Mechanism of folding and accompanying phenomena, deformation mechanism and strain, Ramsay's classification of folds, lineations and fold mechanism, occurrence and recognition, cleavage and foliations. Linear structures: lineation as shear sense indicators, interpretation of linear structures. Structural analysis: procedures, mesoscopic analysis, symmetry of fabrics. Fundamentals concepts of Geotectonics and Isostasy. Sea floor spreading; Continental drift and plate tectonics. Volcanic and seismic belts of the Earth. Thermal history of the earth. Major tectonic features of the Earth: shield areas, mobile belts, rift valleys, mid-ocean ridges, submarine canyons.</p> <p>List of Books</p> <ol style="list-style-type: none"> 1. Hatcher, R. D. - Structural Geology: Principles, concepts and problems. Merrill Publi.Co. 2. Condie, K. C. - Plate Tectonics and Crustal Evolution. Pergamon Press 3. Windley, B. - The Evolving Continents. John Wiley & Sons 4. Twiss, R. - Structural Geology. New York: W. H. Freeman and Company 5. Hobbs, B.E., Means, W.D. & Williams, P.F. An Outline of Structural Geology, John Wiley 6. Park, R. - Foundations of Structural Geology. Blackie and Sons Limited 7. Ramsay, J. - Folding and Fracturing of Rocks. McGraw-Hill 8. Moores, E. - Tectonics. W. H. Freeman & Co. 9. Ben A. Van Der Pluijm and Stephen Marshak: Earth Structure Published by W W Norton 10. Stephen Marshak and Gautam Mitra: Basic methods of Structural Geology Prentice Hall 11. Fossen, H: Structural Geology. Cambridge University Press. 	
GLC-103: Igneous Petrology	3-0-0 = 3 Credits
<p>Introduction to Magmas and Magmatic Processes; Process of formation and description of Textures and Structures of volcanic and plutonic rocks; Classification of igneous rocks: modal, chemical-, quasi-chemical-schemes: their merits and demerits; Magma generation: Heat source and the factors responsible to bring about melting, Fractional melting, Batch melting and Zone melting; Magmatic Evolution; Magmatic differentiation:</p>	

crystal fractionation, gravitational differentiation, flowage differentiation, filter pressing, liquid immiscibility; Magmatic assimilation, Magma Mixing and contamination; Composition of the mantle; Enriched- and Depleted-mantle and their characteristics; Binary and ternary systems; Magma Associations in relation to Plate Tectonics.

Continental Layered Intrusions: Mineralogical and Petrological characteristics with special reference to the Bushveld-, Skaergaard-, Stillwater-Complexes; Basaltic associations: continental flood basalts such as the Deccan Traps; Mid Ocean Ridge Basalts, Ocean Island basalts, Continental as well as ocean Arc magmatism; Alpine type intrusions and Ophiolites; Alkaline rocks- Nephelinites and Ijolites, Lamprophyres & Lamproites, Carbonatites & Kimberlites; Granites and Granitic rocks, I-type, S-type, A-type and M-type granites, anatexis and Granitization; Anorthosites.

List of Books :

1. Barker: Igneous Rocks
2. Best and Christensen: Igneous Petrology
3. Bowen and Tuttle: Carbonatites
4. Rock, N.M.S.: Lamprophyres
5. Dawson: Kimberlites
6. Willey, P.J.: Ultramafic and Related Rocks
7. Wilson, M. J.: Igneous Petrology
8. William, Turner and Gilber: Petrography
9. Moorhouse, W.W.: The Study of Rocks in Thin Sections
10. Wager and Brown: Layered Igneous Rocks

GLC-104: Metamorphic Petrology

3-0-0 = 3 Credits

Introduction, Categories of metamorphism, general characteristics of contact and regional dynamothermal metamorphic terrains, zones and facies of metamorphism, isograds and isoreactiongrads, classification of metamorphic rocks, factors of metamorphism, mineralogical phase rule and the concept of equilibrium in metamorphic systems, facies and grade concept, facies of contact and regional dynamothermal metamorphism, progressive reactions in metamorphism of limestones, shales and mafic rocks, metamorphism in the context of plate tectonics.

List of Books

1. Best: Igneous and metamorphic petrology
2. Winkler: Metamorphic petrogenesis
3. Turner: Metamorphic rocks
4. Bucher K, Grapes R: Petrogenesis of Metamorphic rocks
5. Philpotts A, Ague J. J.: Principles of Igneous and Metamorphic Petrology
6. Winter J.: Principles of Igneous and Metamorphic Petrology
7. Ehlers, Ernest: Petrology: Igneous, Sedimentary and Metamorphic

GLC-105: Sedimentology

3-0-0 = 3 Credits

Introduction to Sedimentology; Sedimentary processes (Weathering, Transportation & Deposition); Textures and structures of sedimentary rocks; Petrography and classification of the- terrigenous/ clastic (conglomerates, sandstones and mud rocks), carbonate rocks (limestones and dolomites) and other non-clastic (evaporitic carbonaceous, silicious, phosphatic, iron & manganese-rich) sedimentary rocks; Provenance; Introduction and classification of sedimentary environments and environmental analysis & interpretation.

List of Books :

1. Pettijohn, F. J. Sedimentary Rocks.
2. Collinson, J. & Thompson, D., Sedimentary Structures, Terra Publ, 3rd Ed, 2006.
3. Nicholls, G. Sedimentology and Stratigraphy. Wiley-Blackwell, 1999.
4. Prothero, D.R. and Schwab, F. Sedimentary Geology: An Introduction to Sedimentary Rocks and Stratigraphy, 2nd Edn., W.H. Freeman, 2003.
5. Selley, R.C., Applied sedimentology, 2nd Edn., Academic Press, 2000.

6. Tucker, M.E. Sedimentary Petrology, 3rd Edn., Blackwell Science, 2001. 7. Sam Boggs Jr., Principles of Sedimentology & stratigraphy, 4th Ed, PEARSON publ, 2006 8. Sam Boggs Jr., Petrology of Sedimentary Rocks, 2nd Ed. Cambridge Univ press, 2009 9. Greensmith, J. T. Petrology of the Sedimentary Rocks, 7th Ed., UNWIN HYMAN 10. Lindholm, R. C. A Practical Approach to Sedimentology, ALLEN & UNWIN, 1987.	
GLC-107: Economic Geology	3-0-0 = 3 Credits
Introduction: scope of economic geology Mineral economics. Ore, tenor, gangue, resource, reserves Texture and structures of ore deposits Classification of ore deposits. Ore bearing fluids: type, nature, chemistry Physico-chemical controls of ore deposition Wall-rock alteration. Controls of ore localization. Distribution of ore deposits in relation to plate tectonic settings. Ore Deposits of India (Banded Iron Formations; Iron ore deposits; Manganese ore deposits; Polymetallic ore deposits: copper, lead, zinc; Chromite deposits; Laterite and Bauxite deposits: distribution in India and genesis; Asbestos deposits of India; Barite deposits; Gold in India; Diamond deposits.	
<u>List of Books</u> 1. Gilbert and Parks: Geology of Ore Deposits 2. Parks and McDiarmid: Ore Deposits 3. Bateman, A. M. : Economic Mineral Deposits 4. Hutchison: Economic Mineral Deposits 5. Atkinson: Economic Ore Deposits 6. Smirnov: Economic Ore Deposits 7. Jensen, M. L. and Bateman, A. M.,: Economic Mineral Deposits 8. Brown and Dey: The minerals and nuclear fuels of the Indian Subcontinent 9. Burma Roy, B.C., : Indian Mineral Resources: Industries and Economics 10. Deb: Industrial Minerals and Rocks of India 11. Gokhale and Rao: Ore Deposits of India 12. Wadia, D. N.,:Mineral wealth of India 13. Krishnaswami: India's Mineral Resources 14. Arndt N. & Ganino C.: Metals & Society. Springer. 15. Taylor R.: Ore Textures. Springer.	
GLC-108: Principles and Stratigraphy and Indian Geology	3-0-0 = 3 Credits
Introduction. Stratigraphic principles. Evolution of Stratigraphic column. Stratigraphic (Lithostratigraphic, Chronostratigraphic and Biostratigraphic) nomenclature. Correlation. Stratigraphy of India: Precambrian, Proterozoic, Palaeozoic, Mesozoic and Cenozoic stratigraphic successions. Gondwana stratigraphy. Quaternary stratigraphy.	
<u>List of Books :</u> 1. Naqvi, S.M. and Rogers, J.J.W.- Precambrian Geology of India, Oxford University Press. 2. Ramakrishnan, M. and Vaidyanadhan, R. - Geology of India vol. 1 & 2. Geol. Soc. India. 3. Krumbein, W. - Stratigraphy and Sedimentation. W. H. Freeman and Company 4. Prothero, D. - Sedimentary Geology: An introduction to sedimentary rocks and stratigraphy. Freeman & Co. 5. Boggs, S. - Principles of sedimentology and stratigraphy. Pearson Prentice Hall 6. Ravindra, K. - Fundamentals of Historical Geology and Stratigraphy of India. New Age International Limited, Publishers.	
GLC-121: Geological Field Mapping	0-0-2 = 2 Credits
The student will be taught the techniques of geological mapping, field data collection: recording the attitude of beds, foliation, lineation, joints and their analysis. Sampling of rocks, preparation of geological field report. The record of data will be maintained in a field-diary. This work will be carried out under the supervision of teachers who will accompany the students during the course of the field-traverse. There will be a viva-voce examination based on the field report.	
GLC-122: Geological Field Training	0-0-2 = 2 Credits

Visit to important mines/mineral deposits; Visit to Industry/Professional Organizations/National Institutes which may include short term in-house training at respective labs. The training program will be carried out under the supervision of teachers. Students are expected to learn the techniques and methodologies applied on site in the professional organizations and also to gain knowledge related to instrumentation. Students are expected to write a detailed report on their visit. There will be a viva-voce examination based on the field report.	
GLC-124: Practical of GLC-101 (Mineralogy and Geochemistry)	0-0-1 = 1 Credit
Observing and recording properties of representative minerals in hand specimens. Observation and recording of optical properties of major rock forming minerals. Study of anisotropic uniaxial and biaxial minerals in convergent light and determination of the optic sign of the mineral with the aid of suitable accessory plates.	
GLC-125: Practical of GLC-102 (Structural Geology & Geotectonics)	0-0-1 = 1 Credit
Completion of outcrops. Preparation and interpretation of geological maps and sections; Structural problems concerning economic deposits; Recording and plotting of the field data; Study of deformed structures in hand specimens; Strain estimation from the data already collected from the field.	
GLC-126: Practical of GLC-103 (Igneous Petrology)	0-0-1=1 credit
Study of the textures and structures and identification of rocks in hand specimens. Characterisation of the following suites of rocks from micro-sections: ultramafic rocks, mafic igneous rocks, intermediate rocks, granitic rocks and alkaline igneous rocks. CIPW normative calculations of minerals based on available compositional data. Applications of trace elements in igneous petrology, such as spidergrams, REE distribution patterns and implications in deducing origin, source and evolution of magma, and inferencing from trace element ratio plots.	
GLC-127: Practical of GLC-104 (Metamorphic Petrology)	0-0-1=1 credit
Description of fabric of common metamorphic rocks in hand specimen and thin section. Description, identification and classification of commonly occurring metamorphic rocks in hand specimen and thin section.	
GLC-128: Practical of GLC-105 (Sedimentology)	0-0-1=1 credit
Granulometric analysis, presentation and interpretation of textural data; Palaeocurrent analysis; Megascopic and thin section petrographic study for observation of Texture, composition and diagenetic changes.	
GLC-130: Practical of GLC-107 (Economic Geology)	0-0-1=1 credit
Study of representative ores, and industrial minerals in hand specimens. Preparation of charts showing the distribution of ore minerals in India. Mineralogical and textural studies of common ore minerals in incident light.	
GLC-131: Practical of GLC-108 (Prin Stratigraphy & Ind. Geol)	0-0-1=1 credit
Study of rocks in hand specimens from known Indian stratigraphic horizons and type localities; Exercises on stratigraphic classification and correlation. Preparation of stratigraphic range charts.	

Optional Courses

GLO-201: Groundwater Geology	3-0-0 = 3 credits
Introduction: Genetic classification of water, global distribution of water. Hydrologic cycle: precipitation, runoff, infiltration and evapotranspiration. Historical developments in science of hydrogeology. Vertical distribution of sub surface water, classification of aquifers and confining layers, hydraulic properties of aquifers, water table fluctuations. Concepts of	

<p>drainage and groundwater basins. Water table and piezometric surface.</p> <p>Well Hydraulics and well designs: Theory of groundwater flow, Darcy's law, its validity and applications, determination of permeability in laboratory and in field. Types of wells, drilling methods, construction, design, development and maintenance of wells. Specific capacity and its determination Steady and unsteady and radial flow conditions. Pumping tests-methods, data analysis and interpretations. Seawater intrusion. Groundwater Chemistry: Groundwater quality- physical, chemical, biological properties of water quality criteria for different uses, graphical presentation of water quality data, problems of arsenic and fluoride in India Saline water intrusion in coastal aquifers and its prevention. Groundwater contamination.</p> <p>Groundwater occurrence and exploration: Classification of rocks with respect to their water bearing characteristics, groundwater provinces of India. Groundwater exploration techniques.</p> <p><u>List of Books</u></p> <ol style="list-style-type: none"> 1. Todd D.K.: Groundwater hydrology, John Wiley, NY , 1980 2. Raghunath, H.M.: Ground Water, New Age International Publishers, 2007 3. Fetter, C.W.: Applied hydrogeology, NY, Macmillan, 1994 4. Davis and De Wiest: Hydrogeology 	
GLO-202: Petroleum Geology	3-0-0 = 3 credits
<p>Introduction to petroleum. Physical properties and chemical composition of petroleum. Origin of Petroleum. Petroleum Traps and Reservoir rocks. Primary and secondary migration and Accumulation. Petroleum exploration. Petroliferous basins of India. Oil belts of the world.</p> <p><u>List of Books</u></p> <ol style="list-style-type: none"> 1. Selley, R.C., Elements of Petroleum Geology: W.H. Freeman & Co, New York.2003 2. Tissot, B.P., and Welte, D.H. Petroleum Formation and Occurrence - A New Approach to Oil and Gas Exploration: Springer -Verlag, Berlin. 1978 3. Levorsen , A.I. Geology of Petroleum: W.H. Freeman and Company. 1967 4. North, F.K., Petroleum Geology: Allen & UnWin, 607p. 1986 	
GLO-203: Exploration Geophysics	3-0-0 = 3 credits
<p>Introduction to exploration geophysics: Electrical methods: instrumentation, field procedure and interpretation using electrical methods. Electrical profiling and sounding using Wenner and Schlumberger configurations. Principles and fundamental procedures of data collection and interpretation. Seismic Methods: Principles, instrumentation, survey procedures and interpretation using seismic methods. Correction applied to seismic data.</p> <p>Geophysical well logging: Introduction well logging methods, porosity logs, well log interpretation. Gravity and magnetic methods: Principles-field methods-gravimeters-corrections, interpretation of gravity data. Principles, instrumentation, field procedures and interpretation of magnetic data.</p> <p><u>List of Books</u></p> <ol style="list-style-type: none"> 1. William Lowrie. Fundamentals of geophysics,Cambridge university press, 1997 2. Kearey and Brook. An introduction to exploration geophysics, Blackwell Sc. publ, 1984 3. Sharma P.V. Geophysical methods in geology, Elsevier, 1986 4. Dobrin M.B. An introduction to geophysical prospecting, McGraw Hill New Delhi, 1984 5. Ramachandra Rao, M.B. Outline of geophysical prospecting, Wesley press, 1975. 	
GLO- 204: Micropalaeontology	3-0-0=3 Credits
<p>Surface and sub-surface sampling methods, sample processing techniques; morphology, classification and evolution of foraminifera. Study of selected benthic and planktonic foraminifera. Morphology and geological distribution of ostracoda, calcareous nannofossils, radiolaria, conodonts. Applications of microfossils in biostratigraphy, palaeoenvironmental interpretation and sequence stratigraphy. Deep sea record and stable isotopes studies of calcareous microfossils. Role of micropalaeontology in hydrocarbon exploration.</p> <p><u>List of Books</u></p>	

<ol style="list-style-type: none"> Haynes, J.R. Foraminifera. John Wiley and Sons, 1981. Armstrong, H.A. and Brasier, M.D. Microfossils, II Edition, Blackwell Publishing, 2005. Haq, B.U. and Boersma, A. (Eds) Introduction to Marine Micropaleontology. Elsevier, 1978. Murray, J.W. Ecology and Palaeoecology of Benthic Foraminifera. Longman, 1991. 	
GLO-205: Environmental Geology	3-0-0 = 3 credits
<p>Scope of environmental geology, ecosystem, lithosphere, hydrosphere, cryosphere and Atmosphere. Natural and man-made hazards. Mass movements, landslides, rock falls, subsidence and causes.</p> <p>Volcanic and seismic hazards and mitigation measures. Dams and reservoirs-silting, Deforestation, seismicity, water logging and related hazards. Floods and droughts and their mitigations.</p> <p>Groundwater pollution and management-case studies related to fluoride, pesticide, fertilizers and arsenic contaminations in India. Sea level changes, causative factors and related coastal hazards. Geological and hydrogeological aspects of waste disposal, site selection for solid waste disposal-sanitary landfills. Pollution from waste disposal sites. Conservation and protection of natural resources with special reference to water. EIA legislative measures in India.</p> <p><u>List of Books</u></p> <ol style="list-style-type: none"> Keller, E.A. Environmental Geology, Columbus, 1985 Coates, D.R. Environmental Geology, John Wiley, 1981 Soliman, M.M. et al, Environmental Hydrogeology, Lewis Publi., 1997 Valdiya, K.S. Environmental Geology-Indian context Tank, Environmental Geology Straler and Stralher, Environmental Geology 	
GLO-206: Remote Sensing	3-0-0 = 3 Credits
<p>Introduction and History of Remote Sensing; Basics of remote sensing: Electromagnetic Radiation (EMR): Resolution; Electromagnetic Spectrum: Optical/Microwave - Visible region - Radiation Sources: active & passive; Radiation quantities -Radiant energy, radiation flux, irradiation, radiance. Interaction of EMR with atmosphere and Earth's features: particulate scattering & absorption; Rayleigh's & Mie's theories; Atmospheric Windows. Spectral signature concepts - Spectral reflectance; spectral reflective characteristic of water, vegetation, soil, minerals/rocks; Factors affecting spectral reflectance of materials. Platforms and Sensors: Airborne platforms and Spaceborne platforms - Sun synchronous and Geostationary satellites - Platform & sensor characteristics, Thermal detectors - Thermal infrared scanners; RADAR - SAR -interferometry; Introduction to Hyperspectral Remote Sensing. Applications of remote sensing in Geology, ground water & natural resource management.</p> <p><u>List of Books</u></p> <ol style="list-style-type: none"> Sabins, F. F. Remote Sensing - Principles and Interpretation 35th Ed. W.H. Freeman, 1997 Jensen, J. Introductory Digital Image Processing- Remote Sensing Perspective. 2 Ed. Prentice Hall, 2003 Rees, W. G. : Physical Principals of remote sensing, 3rd Ed., Cambridge Univ. Press, 2013 Lillesand, TM, Kiefer, RW and and Chipman, JW. Remote sensing and Image Interpretation. John Wiley& sons, 5th Ed, 2003. Ravi P. Gupta: Remote Sensing Geology. 3Ed., Springer-Verlag, 2003. 	
GLO-207: Marine Geology	3-0-0 = 3 Credits
<p>Introduction and scope of marine geology, morphologic and tectonic domain of the ocean floor. Oceanic profile, oceanic features, origin of oceanic crust, ocean sediments, classification, ocean tectonics, Law of the seas, EEZ. Classification of marine mineral deposits, origin and depositional system of marine resources. Beach placers, shelf deposits,</p>	

deep ocean phosphatic, polymetallic nodules, sulphate deposits, hydrocarbon deposits. Concept and causes of sea level changes and measurements. Physical and chemical properties of seawater. Residence times. Seismic stratigraphy, sequence stratigraphy. Coastal erosion and protection measures.

List of Books

1. Shepard, Submarine geology
2. Kuenen, P. Marine geology
3. King, Introduction to marine geology and geomorphology
4. Keen, Introduction to marine geology
5. James Kennet, Marine geology, 1982, prentice hall
6. Riley and Chester, Introduction to marine chemistry
7. James Drever, The geochemistry of natural waters.

GLO-208: GIS Fundamentals

3-0-0 = 3 Credits

Introduction; Coordinate Systems: GCS, Map projections, Projected coordinate systems; Data Models: Vector and Raster Data Models; Geodatabase; GIS Data Input; Geometric Transformations; Spatial data Editing; Attribute Data Input and Data Base Management; Data Display & Cartography; Data Exploration; Spatial Analyses: Vector Data Analysis; Raster data Analysis; Terrain mapping and Analysis; Spatial Interpolation; Network and path analysis/applications; GIS Models & Modeling. GIS software and hardware - Review of GIS software packages

List of Books

1. Longley, Geographic Information Systems and Science, 2nd Ed. WILEY, 2003
2. Burrough, P.A. An Introduction to GIS, 1996
3. Chang, K. Introduction to Geographic Information Sc., McGraw Hill, 2002.

GLO-209: Mining Geology

3-0-0 = 3 Credits

Introduction to mining geology and exploration methods. Role of geologists in mining. Mining methods for metal and coal mining. Outlines of surface methods of mining. Underground mining. Shaft sinking and development of mine. Stopping methods. Principles of sampling and sampling methods. Core drilling (wet and dry). Type of core bits. Casing and their applications. Classification and estimation of ore reserves. Mine ventilation, mine gases and mine diseases. Slope stability in open cast mines, dewatering techniques in open cast and underground mines. Environment management. Pollution aspects, impact of mining on environment. Mine evaluation, mineral economics, mineral beneficiation techniques, mining laws, National mineral policy Mineral taxation and mine leasing. Conservation and substitution

List of Books

1. R. N. P. Arogyaswamy : Course in Mining Geology. Oxford & IBH Publishers
2. H. E. Mckinstry : Mining Geology. Asia Publishing House
3. G. J. Youn : Elements of Mining Geology. McGraw Hill
4. Sinha and Sharma : Mineral Economics. Oxford & IBH Publishers
5. Taggart : Mineral Ore Dressing.

GLO-210: Coal Geology

3-0-0 = 3 credits

Characteristics: Coal as rock-types of coal-mode of occurrence -structure in coal seams-coals through ages-physical and chemical characteristics of coal-macropetrographics-microlithotypes; Genetics and exploration: Origin-classification of coal-Indian coal grading-exploration of coal-Modern techniques-drilling and logging-assessment of coal reserves-calculation of coal reserves; Preparation and utilization: Coal preparation- cleaning-sizing-washing-supporting operations-beneficiation of Indian coals- coal utilization- combustion-carbonisation-gasification-hydrogenation;

Resources and Environments: Resources-Production and consumption pattern-Energy policy, conservation-environment pollution-reduce environmental hazards-mining hazards

<p>in India-world coal resources-principal Indian Coal Fields: Occurrences-geological and geographical distribution-Gondwana coalfields-Tertiary coalfields-lignite deposits of India</p> <p><u>List of Books</u></p> <ol style="list-style-type: none"> 1. Chandra, D., Singh, R.M. & Singh, M.P. Text book of coal (Indian context). Tara book agency, 2000 2. Stach, E. Mackowsky, M. Th., Teichmuller, M., Taylor, G.H., Chandra, D. and Teichmuller, R. Stach's. Text book of coal petrology, Gebnudar Borntraeger, Stuttgart, 1982 3. Wilfrid Francis. Coal its formation and composition. Edward Arnold (publ) Ltd, London 1961 4. Van Kreuelen. Coal- Typology-Chemistry-Physics constitution. Elsevier publ. company, 1961. 	
GLO-211: Soil Science	3-0-0 = 3 Credits
<p>Introduction: Nature and importance of soil, soil formation, soil survey, physical, chemical and biological characters of soil. Relationship between soil, plants and animal; Soil types: Soil types and classification, soil genesis, mineralogy and geochemistry of soil types: laterites, bauxites, ardisols, vertisols, camborthids. Application of soil micromorphology and landscape evolution. Radiometric age determination of soils; Soil and crop production: Elements essential for plants and animals, soil nutrients, nitrogen, phosphorous, potassium, calcium, magnesium, and sulphur in soil and their significance in plant growth, micronutrients; Soil quality and landscape: Soil and water relation, organic matter in soil, functions of organic matter, organic matter and soil structure, organic matter and essential elements, tillage, cropping systems and fertility and case studies. Soil management and conservation: Introduction, irrigation, drainage, soil management for field crops, gardens, lawns, pastures, rangelands and forests. Conservation factors and implementation methods.</p> <p><u>List of Books</u></p> <ol style="list-style-type: none"> 1. Nyle C. Brady, Ray R. Weil, The nature and properties of soils. (13th ed) Prentice Hall, 2002. 2. Donald L. Sparks, Environmental soil chemistry, 2002. 3. Raymond B. Daniels, Richard D. Hammer. Soil geomorphology, John Wiley & Sons, 2000. 4. Summer, M.E. Hand book of soil science. 1992 5. Donald Sparks, Donald L. Sparks D, Environmental geochemistry, Academic press, 2002. 	
GLO-212: Microtectonics	3-0-0= 3 Credits
<p>Introduction to microtectonics; Introduction to flow and deformation, and manifestation in rocks; Rheology; Mechanisms of deformation; Foliation, lineation and lattice preferred orientation; Shear zones; Porphyroblasts, porphyroclasts and reaction rims; Veins, strain shadows, fringes and boudins; Primary structures in rocks</p> <p><u>List of Books</u></p> <ol style="list-style-type: none"> 1. Ague. Petrography of igneous and metamorphic rocks 2. Komprobst. Metamorphic rocks and their geodynamic significance 3. Passchier & Trou. Microtectonics 4. Passchier, Trou and Miersma. Atlas of mylonites . 5. Vernon and Clarke. Metamorphic petrology 6. Vernon. A practical guide to rock microstructures.. 	
GLO-213: Planetary Geology	2-0-0=2 Credits
<p>Internal Structure of Earth and Other Planets; Volcanism; Surface Processes; Atmospheres; Basic Celestial Mechanics; General Features of Asteroids, Comets and Meteorites.</p> <p><u>List of Books:</u></p> <ol style="list-style-type: none"> 1. An Introduction to the Solar System", 2004, by Neil McBride and Lain Gilmour, The Open University and Cambridge University Press. 	
GLO-214: Sedimentary Basin Analysis	3-0-0= 3 Credits
<p>Basin classification and their characteristics; tectonic framework of basins and their architecture; economic significance of basin analysis; facies concept, process-response</p>	

models and interpretation of sedimentary environments; carbonate and clastic facies models; seismic facies and stratigraphy; well-log facies application in sequence stratigraphy; sequence stratigraphy; stratigraphic correlation; basin mapping - structure and isopach contouring, lithofacies and biofacies maps, preparation of stratigraphic cross-sections and palaeogeographic synthesis; regional and global stratigraphic cycles.

List of Books:

1. Miall, A.D. Principles of Sedimentary Basin Analysis, 3rd Ed, Springer-Verlag, Berlin, 2000.
2. Busby, C.J. and Ingersoll, R.V. Tectonics of Sedimentary Basins, Blackwell Sc, Oxford, 1995.
3. Reading, H. Sedimentary Environments: Processes, Facies and Stratigraphy, Blackwell Sc, Oxford, 1996..

GLO-215: Natural Resource & Environmental Management

3-0-0 = 3 Credits

Description of the resource. Classification of natural resources. Non-renewable Resources: Minerals Energy Resources: natural gas, oil, coal, atomic minerals. Renewable resources: Water and forests Functions and Values of the resource. Utility to humans and human-influence on the mineral resources. Supply and Demand. Ecological and social concerns. Conflicts involved in resource exploitation. Policies and the legislation concerning the natural resources. National mineral policy. Coastal resources and coastal processes Coastal zone management. Air pollution and controlling measures Forest conservation. Environmental Impact analysis.

Watershed management. Wetland: definition, classification, restoration and protection. Groundwater and wetland conservation Waste water management. Soil resources, types of soils, policies on soil conservation. River resources and flood control. Alternative Energy Resources, Global warming.

List of Books

1. U. Aswathanarayana. Mineral resources Management and the Environment. Taylor & Francis e--Library 2005
2. Holecheck, J. L. and others: Natural Resources: ecology, economics and policy, Prentice Hall Education
3. Shenk, T. M., and others: Modelling in natural resource management development, interpretation and applications Island Press
4. Wondolleck, J. M., and Yaffee S. L. : Making Collaboration Work Lessons from Innovation in Natural Resource Management, Island Press.

GLO-216: Engineering Geology

3-0-0 = 3 Credits

Introduction: Geology and civil engineering- Engineering properties of rocks and soils: Classification-rock strength- methods of determination-field and laboratory tests.

Geological information for slope stabilization-rock excavation-ground subsidence and landslides-coastal protection structures.

Dams and Tunnels: Dams and tunnels-design and construction, geological investigations, geotechnical problems related to groundwater occurrence, methods of site investigation, introduction to bridges.

Foundation Geology: Determination of bed rock depth-identification of fractures and zones of weakness-shear and cohesive and frictional strength- failure criteria - RQD-RMR-pore water pressure - borehole logging- panel diagram- types of foundations. Geophysical methods in foundation engineering.

List of books:

1. Krynine and Judd. Principles of Engineering geology and getechnology. McGraw Hill, 1962.
2. Chandler R.J. Slope stability and engineering developments 1992
3. Sathy Narayanaswami. Engineering geology. Dhanpat Rai Publishers and co., Delhi, 1994 4. Waltham, A.C. Foundations of engineering geology, Blackie Acad. Prof. Pub., I Ed,1994.

4. Vellejo & Mercedes Ferrer: Geological Engineering, CRC Press.	
GLO-217: Sedimentary Facies and Environments	3-0-0 = 3 credits
<p>Modern and ancient sedimentary environments: processes & products- rivers, lakes, eolian, glaciers, shallow seas, delta, estuaries and deep marine, interpreting ancient depositional environments. Concept of sedimentary facies, paleocurrents and provenance; Sequence stratigraphy and sea level changes. Sedimentary basins- classifications; introduction to basin analysis.</p> <p><u>List of books</u></p> <ol style="list-style-type: none"> 1. Nicholls, G.: Sedimentology and Stratigraphy. Wiley-Blackwell, 1999. 2. Prothero, D.R. and Schwab, F. Sedimentary Geology: An Introduction to Sedimentary Rocks and Stratigraphy, 2nd Edn., W.H. Freeman, 2003. 3. Selley, R.C.: Applied sedimentology, 2nd Edn., Academic Press, 2000. 4. Reading, H. G.: Sedimentary environments & facies, 1985. 5. Selley, R. C.: Ancient Sedimentary environments, 1978 	
GLO-218: Statistical Geology	3-0-0 = 3 credits
<p>Introduction and scope of statistical and mathematical applications in geology. Data collection and preparation. Univariate and bivariate statistics. Testing hypothesis. Non-parametric statistics. Directional data and circular statistics. Temporal and spatial data analysis. Multivariate statistical methods. Introduction to computing techniques, use of computers & software in statistical analyses of geological data.</p> <p><u>List of Books</u></p> <ol style="list-style-type: none"> 1. Davis, J. C.: Statistical methods in Geology, J Wiley Publ. 	
GLO-219: Industrial Mineralogy	3-0-0 = 3 credits
<p>Introduction to industrial raw material. Specifications of raw materials used in following industries: ceramics, abrasives, construction, cement, fertilizers, paints, electronics, chemicals. Outline of techniques used in testing raw materials. Introduction to gems, basic properties of gems, formation of gem stones. Identification with the help of refractometer, polariscope, dichroscope and spectroscope Methods of determination of specific gravity Causes of colour in gem stones.</p> <p><u>List of Books</u></p> <ol style="list-style-type: none"> 1. Deb, S.: Industrial Minerals and Rocks of India 2. Krishnaswamy, S.: India's Mineral Resources 3. Gokhale and Rao: Ore Deposits of India 4. Phillips, W. J. and Phillips, N.: An introduction to Mineralogy for Geologists 5. P. G. Read: Gemmology 6. Karanth: Gem and Gem Industry in India 7. Webster: Gems their source, descriptions and identification. 	
GLO-220: Pre Cambrian Crustal Evolution	1-1-0=2 credits
<p>Distribution and tectonic setting of Precambrian crust: Global distribution, Paleomagnetism and continental reconstructions; Orogenies and tectonic cycles; Geologic setting of some cratons: Indian shield, Greenland shield, African shield, Antarctic craton; Nature of Archean crust: Dharwar craton, Southern granulite terrain, Eastern Ghat Belt, Singhbhum craton, Aravalli craton, Bhandara craton, Mineralization associated with Precambrian shields; Early Proterozoic crust; Mid-Proterozoic crust; Evolution of the continental crust: Introduction, Archean heat flow and geotherms, Granitoid associations, Composition of continental crust, High grade metamorphic terrains, Banded Iron Formations, Uraniferous Conglomerates; Proposed models for evolution of the continental crust</p> <p><u>List of Books:</u></p> <ol style="list-style-type: none"> 1. Kent Condie. Plate tectonics and crustal Crustal evolution - 2. Kent Condie. Archean greenstone belts - 3. Keary and others. Global tectonics - 	

4. Miller, Holdsworth et al. Continental reactivation and reworking - ed: 5. Coward and Ries Collision tectonics.	
GLO-221: Mineral Economics	1-1-0 = 2 Credits
Mineral economics Introduction and concepts; Peculiarities inherent to Mineral industry; World Resources of Minerals; Mining Laws; Law of sea bed for Marine mineral resources; Mines & Mineral legislation of India; Mineral taxation & Incentive measures; Tenor, Grade and specifications; Strategic, Critical and Essential Minerals; National Mineral Policy: Basic features, regulations of minerals; Role of states in mineral development; Mineral export policy, taxation. <u>List of Books:</u> 1. Sinha, R. K. & Sharma, N. L. Mineral economics. 3 Ed., Oxford&IBH Publ., 1980. 2. IBM publication on National Mineral Policy	
GLO-222: Climate Geology	1-1-0 = 2 credits
Introduction to climatic geology, atmosphere, lithosphere and ocean dynamics, paleoclimate, geobiology. Antarctica and study of ice sheets global warming, atmospheric aerosols and air pollution, framework of climate change, Milankovitch cycles and solar activity, climate modelling. <u>List of Books:</u> 1. Ahrens C.D., Meteorology Today, An Introduction to Weather, Climate, and the Environment, 7th ed. Thomson Brooks/Cole, 2003. 2. Oliver J.E. & Hidore, J.J. Climatology, An Atmospheric Science, 2nd edn. Prentice Hall, 2002. 3. Kump, L.R., Kasting, J.F. and Crane, R.G., The Earth System, 2nd ed, Prentice Hall, 2004. 4. Oerlemans, J., Glaciers and climate change. A.A Balkema , 2001.	
GLO-223: Trace Element Geochemistry	1-0-0 = 1 Credit
Beginnings of geochemistry; Thermodynamic consideration of TE solid solutions; Partition coefficient; Ionic model for bonding and the role of ionic radii in understanding the partitioning of trace elements between phases; Nomenclature for trace element classification; Determination of partition coefficients; Fractional crystallization; Fractional melting; Complex melting models <u>List of Books</u> 1. Wood, B. J., and D. G. Fraser. Elementary Thermodynamics for Geologists. New York, NY: Oxford University Press, 1977 2. McSween, H. Y., Jr., S. M. Richardson, and M. E. Uhle. Geochemistry: Pathways and Processes. New York, NY: Columbia University Press, 2003 3. Rollinson, H. R. Using Geochemical Data: Evaluation, Presentation, Interpretation. Harlow, Essex, England: Longman Group, 1993. 4. Albarede, F. Introduction to Geochemical Modeling. New York, NY: Cambridge University Press, 1995. 5. Shaw, D. M. Trace Elements in Magmas. New York, Cambridge University Press, 2006. 6. Denbigh, K. The Principles of Chemical Equilibrium. New York, NY: Cambridge University Press, 1981. 7. Mason and Moore Introduction to geochemistry 8. Krauskopf: Introduction to geochemistry 9. Walther , John V: Essentials of geochemistry Henderson: Inorganic geochemistry.	
GLO-224: GPR Applications	1-0-0 = 1 Credit
Introduction; Basics principles; Electric and Magnetic properties of rocks, soils and fluids; GPR system design; Antennas; GPR data processing, modeling and analysis; Applications of GPR. <u>List of Books:</u> 1. Harry, M.J. GPR theory and applications, 543p, Elsevier. 2009 2. Saleh, B. Introduction to sub-surface imaging, Cambridge University Press, 456p, 2011	
GLO-225: Digital Image Processing	1-0-0 = 1 credits
Introduction - Image acquisition, digital data formats, software; Preprocessing: Radiometric and Geometric Corrections; Image Enhancements; Classification: unsupervised and supervised;	

Ground Truth; Accuracy assessment; Change Detection. <u>List of Books:</u> 1. Campbell, J. B & Wynne, R.H. Introduction to Remote Sensing, 5 Ed. Guilford Press, 718p, 2011 2. Rees, W. G. 2001. Physical principles of Remote Sensing. 369p. Cambridge University Press, 2001. 3. Jenson, J. 1998. Digital Image Processing	
GLO-226: Glaciology	1-1-0=2Credits
Introduction to Global Glaciations; Mass Balance and mechanism of Ice Flow; Glacial Erosion: Processes & Landforms; Glacial transport Sedimentation: Glacial depositional landforms; Palaeoglaciology. <u>List of Books:</u> 1. Bennette, M. R & Glasseer, N. F. Glacial Geology; Ice Sheets & Landforms; 402p, Wiley Blackwell, 2009	
GLO-227: Geoscience Data Mining	1-1-0 = 2 Credits
Course coordinator will assign the topics (separate for each student) and the students offered to the program are expected to do an in depth review of literature of the papers published in that topic/item and the data gathered through the same to be subjected to the thorough analysis and interpretation. Student can use the relevant software/programs for the quantitative analysis/plotting the data gathered. Final outcome in the form of Detailed write-up is submitted for assessment. List of Books 1. Books based on the topic and as suggested by the Course Instructor	
GLO-228: Term Paper	1-1-0 = 2 Credits
Course coordinator will assign the topic to ALL the students offered to the program and the students are required to spend time at home/library/department or visit the libraries outside university in Goa and outside Goa to read the relevant literature and they are expected to answer the questions at various examinations for assessment. List of Books and journals relevant to the topic assigned by the Coordinator.	
GLO-229: Minor Project	1-1-0 = 2 Credits
Students offering to the course are expected to work under the supervision of the course coordinator on the assigned topics of the project (as individual or in groups) as assigned and undertake such field/laboratory work required for the project and finally to submit the project report. List of Books and journals relevant to the topic assigned by the Coordinator.	
GLO-230: Hydrogeological Problems and Management	3-0-0 = 3 Credits
Introduction to hydrogeology, aquifers and aquifer parameters. Relevance of hydrogeology in various developmental activities. Concepts of drainage and groundwater basins. Water table and piezometric surface. Groundwater flow and Darcy's law. Groundwater problems related to foundation work, mining, canals and tunnels. Problems of overexploitation and groundwater mining. Groundwater development in urban areas and coastal regions. Rainwater harvesting and water conservation techniques. Artificial recharge methods. Groundwater problems in arid regions and remediation. Groundwater balance and methods of estimation. Groundwater legislation. Sustainability criteria and managing renewable and nonrenewable groundwater resources. Ground water pollution- sources and remediation. Water logging and remediation. Impact of climate change on groundwater availability and quality. Impact assessment of anthropogenic activities on groundwater resources. Impact of agricultural modernization on groundwater regime. Groundwater provinces of India. <u>List of Books</u> 1. Todd D.K. Groundwater hydrology, John Wiley, NY, 1980 2. Raghunath, H.M. Ground Water, New Age International Publishers, 2007	

3. Fetter, C.W. Applied hydrogeology, NY, Macmillan, 1994 4. Davis and De Wiest, Hydrogeology 5. Keller, E.A. Environmental Geology, Columbus, 1985 6. Coates, D.R. Environmental Geology, John Wiley, 1981	
GLO-231: Well Site Geology	2-0-0 = 2 credits
Geologists' Role, duties and responsibilities; Drill cuttings - evaluation; Evaluation of hydrocarbon shows; Basics of drilling; LithoLog/StripLog and GTO preparation; Mud logging operations and Supervision of Mud Logging Operations; Coring - Process & practices; Wireline logging Runs-participation, MWD; Drill Stem Testing (DST); Interpretation of Formation Test of Results; Well site communications; Equipment, Techniques and Procedures. <u>List of Books:</u> 1. Well Site geology - Reference Guide; Baker Hughes Inteq, 2003.	
GLO-232: Petrophysics	2-0-0 = 2 credits
Fundamentals of petrophysics. Porosity, permeability, capillary action in porous media, relative permeability, Interaction between petrophysical parameters. Borehole environment. Invasion profiles and invasion characteristics. Hydrocarbon mobility. Acquisition of petrophysical data. Data quality assurance. Presentation of petrophysical data. Measurement of natural gamma rays. Formation waters, Importance of formation water characteristics. The SP curve. Well-site log evaluation. Formation resistivities. Shallow and deep resistivity measuring devices. Fluid zones and capillary pressure, capillary pressure saturation. Case studies with well log, core analysis and well pressure data. <u>List of Books:</u> 1. Tiab, D & Donaldson, E.C. - Petrophysics. 2 nd Ed., Gulf Professional Publishers (Elsevier) 2. Zinszner, B & Pellerin, F.M. - A geoscientists' guide to Petrophysics, IFP Publ, 363p. 3. Krygoloski, D. -Guide to Petrophysical Interpretation. 147p, (Austin, Texas)	
GLO-233: Well logging	2-0-0 = 2 credits
Well logging and geology, Formation evaluation, Archie's formulae, Well drilling technology, Drilling fluids, Borehole environment, Invasion profiles, Principles, methods and application of logging tools including Spontaneous polarization, Resistivity, Microresistivity, Induction, Sonic, Density, Litho-density, Neutron, Pulsed neutron, Natural Gamma ray, Gamma ray spectrometry, Cement bond, Variable density, Caliper, Dipmeter, Formation microscanner and imager. Well log interpretation - quick look techniques, Hingle, Pickett, MID, M-N cross plots, saturation estimation, lithology, porosity and permeability determination, Log interpretation case studies. <u>List of Books:</u> 1. Asquith, G.B and Gibson, C. R. Basic well log analyses for Geologists. AAPG Publ, 234p. 2. Lecture Notes on Basic log interpretation. HLS Asia Ltd., 56p., 2007	
GLO-234: Geoheritage	2-0-0 = 2 Credits
Introduction to Geoheritage, Geodiversity, Geoconservation; Geopark models - American, European and Australian. Geological outcrops and society. Geopark examples; Geosites, Geotourism. Role of local, state and national governments. <u>List of Books:</u> 1. UNESCO publications on Geoheritage, Geoparks. 2. Web resources on geoheritage	
GLO-235: Palaeo-Palynology	2-0-0 = 2 Credits
Introduction to palynology; Laboratory methodologies; Natural history of palynomorphs;	

Spores/Pollens: Basic Biology, Morphology; Stratigraphic Palynology; Palynoflora; Palynofacies paleoenvironmental interpretation; applications <u>List of Books:</u> 1. Armstrong, H.A. and Brasier, M. Microfossils. Blackwell, 2004. 2. Jansonius, J. and McGregor, D.C. (Eds.) Palynology: Principles and Applications. AASP foundation, 1996.	
GLO-236: Advanced Structural Analysis	2-0-0 = 2 Credits
Shear Zone: faults, definition, mechanism of formation, fault and earthquake, P-wave fast motion analysis, rock types in a faulted zone, cataclasites and pseudotachylites, formation and analysis, shape and size analysis of clasts, ductile shear zone, definition, simple shear and pure shear deformation, two dimensional and three dimensional strain, transpression and transtension, strain pattern in transpression and transtension, kinematics of the ductile shear zone, riedel shears, volume strain, computation of strain, extensional veins and progressive deformation, examples of crustal scale shear zone and their implication in plate dynamics. <u>List of Books:</u> 1. Van der Pluijm, B.A. and Marshak, S. An Introduction to Structural Geology and Tectonics, Second Edition, W.W. Norton & Company, London, 2003. 2. Ramsay, J. G. and Huber, M. I. The Techniques of Modern Structural Geology, Vol. 1. Strain Analysis, Academic Press, London, 1983. 3. Ramsay, J. G. and Huber, M. I. The Techniques of Modern Structural Geology, Vol. 2. Fold and Fractures, Academic Press, London, 1987. 4. Ramsay, J.G. and Lisle, R. The Techniques of Modern Structural Geology, Vol. 3. Application of Continuum Mechanics in Structural Geology, Academic Press, London, 2000	
GLO-237: Geodesy Surveying, GPS	2-0-0 = 2 Credits
Basis of surveying: Definition, principles, types and various applications of surveying. Scale and reference frame of a map or plan. Geodetic reference frames and coordinate transformations - various reference systems and map projections. Leveling, distance measurement, angles and directions, theodolites, total stations, traverse surveys. Topographic surveying and mapping, Great Triangulation Survey. Satellite positioning, time systems, satellite orbit and signals, Atmospheric effects, GPS observables and data processing, Precision analysis and high precision GPS, Applications of GPS. <u>List of Books:</u> 1. Kavanagh, B., Surveying Principles and Applications . Prentice Hall, 2008. 2. Leick, A., GPS Satellite Surveying. John Wiley and Sons, 2004. 3. Hoffmann-Wellenhof, B., Lichtenegger, H. & Collins, GPS Theory and Practice. Springer, 2001	
GLO-238: Petroliferous Basins of India	3-0-0 = 3 Credits
Types of petroliferous basins, relations between basin type and hydrocarbon richness; classification of petroliferous basins of India; Stratigraphy, structure and petroleum geology: Assam shelf, Cambay, Bombay offshore basins, K-G basin, Cauvery basin and Rajasthan Basins; Potential source rocks, reservoir rocks and exploration targets of Mahanadi, Bengal, Kutch, Saurashtra and Rajasthan Basins; Current status of exploration and prospects in Indo-Gangetic plains, Kashmir valley and Vindhyan Basins. <u>List of Books:</u> 1. Bhandari, L.L., Venkatachala, B.S., Kumar, R., Swamy, S.N., Garga, P. and Srivastava, D.C. (Eds.) Petroliferous Basins of India, Petroleum Asia Journal, Himachal Times Group, 1983 2. Biswas, S.K., Dave, A., Garg, P., Pandey, J., Maithani, A. and Thomas, N.J. (Eds.). Proceedings of 2nd Seminar on Petroliferous Basins of India, Dehra Dun, Dec.18-20, 1991, Vol. 1 & 2, Indian Petroleum Publishers, Dehra Dun, 1993.	

3. Biswas, S.K., Dave, A., Garg, P., Pandey, J., Maithani, A. and Thomas, N.J. (Eds.). Proceedings of 2nd Seminar on Petroleum basins of India, Dehra Dun, Dec. 18-20, 1991, Vol.3, Indian Petroleum Publishers, Dehra Dun, 1994. 4. Singh, L. Oil and Gas Field of India, Indian Petroleum Publishers, Dehra Dun, 2000.	
GLO-239: Geomorphology	3-0-0 = 3 Credits
Introduction to Geomorphology ; Tectonic Geomorphology; Weathering Processes and Landforms; Mass Wasting Processes and Landforms; Glaciers and Glacial Processes; Glacier Processes and Landforms; Periglacial Processes and Landforms; Fluvial Processes and Landforms; Topic 9: Coastal Processes and Landforms; Geomorphology of Aeolian Landscapes; Geomorphology of Karstic Landscapes; Applied Geomorphology. <u>List of Books:</u> 1. Bird, E. C. F. (2000) Coastal Geomorphology: An Introduction. Chichester: JohnWiley & Sons. 2. Goudie (Ed.) Encyclopedia of Geomorphology, Vol 1 & 2; Routledge-Taylor & Francis; 2004 3. Richard Huggett. Fundamentals of Geomorphology 2nd Edition. 2007. Routledge-Taylor & Francis 4. Smithson et al. Fundamentals of the Physical Environment 4th edition. 5. Summerfield, M.A 2005. GlobalGeomorphology 6. Thornbury, W. D. (1954) Principles of Geomorphology, 1st edn. New York: JohnWiley & Sons.	
GLO-240: Basics of RS, GIS and GNSS	3-0-0 = 3 Credits
Course Content as per the IIRS-ISRO offered Course in Distance/Internet Mode using EDUSAT facility	
GLO-241: Geoscience and Society	2-0-0 = 2 Credits
Application of fundamental geological principles to issues of concern to society such as global climate change; wildfires; drought and water resources; earthquake, volcano, and tsunami hazards; medical geology; energy resources; sustainability; coastal processes	
GLO-242: Internship in Geoscience	0-0-3 = 3 Credits
Preparation of written report and oral presentation to Department summarizing internship experience and evaluating the applicability of academic experience to job situations and the impact of the internship experience on academic and career plans. Students with summer /winter internship must pre-register for the corresponding semester. Internship can be undertaken at any scientific/research/professional (private/govt) organizations related to Geosciences	
GLO-243: Geoscience Software	0-0-2 =2 Credits
Introduction to applications of computers in geosciences; Most common geoscience software; Data entry, data import, charts preparation, Data analysis using Surfer, Rockware Utilities, Rock Works. <u>List of Books:</u> 1. Manuals of software (soft copies) 2. Help documentation built-in software 3. Web resources	
GLO- 244: Seminar Participation	0-0-1 = 1 credit
Participation of Students at any Regional/National/International seminars/ conferences/ workshops - Attendance or paper presentation undergoing specialized training. Students are required to submit a detailed report on their participation and the knowledge gained from technical presentations.	
GL O-245: Physical Training / Sports Participation	0-0-1 = 1 credit
Students to show their participation in sports/physical training on a regular basis, to maintain a	

diary and obtain a certificate from the sports/PT instructor	
GLO-246: Practical of GLO-201 (Groundwater Geology)	0-0-1 = 1 credit
Groundwater flow net construction and interpretations; Graphical plotting and interpretation of chemical quality data of waters; Analysis of aquifer test data; Problem solving on groundwater recharge, groundwater volume, balance.	
GLO-247: Practical of GLO-202 (Petroleum Geology)	0-0-1 = 1 credit
Determination of moisture content and the porosity of rocks. Determination of direction, amount of dip and the of reservoirs from the given bore hole data. Interpretative contouring method for the determination of depth of oil bearing horizons. Well-log interpretation	
GLO-248: Practical of GLO-203 (Exploration Geophysics)	0-0-1 = 1 credit
Field survey using resistivity methods. Interpretation of resistivity data using master curves matching and digital techniques; Interpretation of seismic refraction and reflection data; Field survey using magnetometers and data interpretation; Interpretation of well logs	
GLO-249: Practical of GLO-204 (Micropaleontology)	0-0-1 = 1 credit
Extraction of microfossils from geologic formations and sediments using standard procedures. Sorting and identification and morphological description, classification of microfossils. Quantification of microfossils of different species	
GLO-250: Practical of GLO-205 (Environmental Geology)	0-0-1 = 1 credit
Preparation of global and Indian natural hazard maps; Interpretation of transport of pollutants in the subsurface based on given data; Preparation of local level maps of pollution case studies; Preparation of groundwater flow nets and assessment of probable contaminant movement in the subsurface; Problem solving on movement of pollutants in the subsurface using simple computer assisted models.	
GLO-251: Practical of GLO-206 (Remote Sensing)	0-0-1 = 1 credit
Study and Visual Interpretation Aerial Photos. Photogrammetric measurements (Scale, Height, stereo Parallax etc.). Digital Image Processing analysis	
GLO-252: Practical of GLO-207 (Marine Geology)	0-0-1 = 1 credit
Analysis of seawater samples, study of marine minerals in hand specimen, preparation of ocean resource distribution maps and maps of ocean morphometry and tectonics	
GLO-253: Practical of GLO-208 (GIS)	0-0-1 = 1 credit
Creating Spatial and non-spatial (attribute) data. (Creating Polygon, line and point vectors; attribute data table; etc.). Correcting errors, structure and restructure of data. Transformation of map data and map projections. Spatial data input, editing and querying. Creating Thematic maps and map composition. Map analysis & integration	
GLO-254: Practical of GLO-209 (Mining Geology)	0-0-1 = 1 credit
Preparation of mine plans; mine visits to get acquainted with mine plans. Preparation of bore-hole logs. Calculation of ore to overburden ratio from sections. Preparation of mine pit sections. Exercises on reading of open cast and underground mines. Calculation of reserves	
GLO-255: Practical of GLO-210 (Coal Geology)	0-0-1 = 1 credit
Hand specimen description of coal, preparation of coal deposit distribution maps for the world and India, type of mining, study of characteristics of major coal fields in India	
GLO-256: Practical of GLO-211 (Soil Science)	0-0-1 = 1 credit
Preparation of soil distribution maps of Goa using NBSS data source, study of soil profile and nomenclature of horizons, soil colour description in the field. Collection of soil sample and grain size distribution analysis and classification of soils using US SCS method	
GLO-257: Practical of GLO-212 (Microtectonics)	0-0-1 = 1 credit
Field studies on structural aspects of fault and shear zones. Study and interpretation of microstructures of deformed rocks.	
GLO-258: Practical of GLO-214 (Sedimentary Basin Analysis)	0-0-1 = 1 credit
Preparation of stratigraphic sections/columns, plotting of lithological data for facies map	

preparation. Stratigraphic (litho-bio-chrono) correlation and interpretation	
GLO-259: Practical of GLO-215 (Nat. Resources & Env.Managmt)	0-0-1 = 1 credit
Case studies of resource management in mining, coastal restoration, groundwater management, forest resources and sea water intrusion, wetlands conservation, methods of soil conservation, soil profiles, resource planning	
GLO-260: Practical of GLO-216 (Engineering Geology)	0-0-1 = 1 credit
Reading and interpretation various lithological properties of bore hole cores. Calculation of pore water pressure in a slope using groundwater flow net. Bore hole problems. Stereographic plotting of various structural features and their engineering implications. Reading of toposheets and identification of geomorphic and geologic features for locating engineering structures. Physical model studies for tunnel construction. Field visits	
GLO-261: Practical of GLO-217 (Sed. Facies and Environments)	0-0-1 = 1 credit
Presentation and interpretation of textural data. Megascopic and thin section petrographic study of sedimentary rocks. Palaeocurrent analysis, heavy mineral separation and identification	
GLO-262: Practical of GLO-218 (Statistical Geology)	0-0-1 = 1 credit
Univariate statistics, Bivariate and Multivariate statistics. Writing simple programmes related to geological problems. Exercises on regression analysis, moving averages, and standard deviation using MS-Excel.	
GLO-263: Practical of GLO-219 (Industrial Mineralogy)	0-0-1 = 1 credit
Study of physical properties of industrial minerals and mineral-materials in hand specimens; Preparation of charts depicting specifications of industrial materials; Visual observation of gem stones, Detection of optical properties; Determination of specific gravity; Use of inclusions and other internal features to distinguish natural materials from synthetic ones.	
GLO-264: Practical of GLO-223 (Trace Element Geochemistry)	0-0-1 = 1 credit
Basics about analytical methods in geochemistry, measuring of partition coefficients, plotting of chemical data on variation diagrams, their correlation and interpretation	
GLO-265: Practical of GLO-224 (GPR Applications)	0-0-1 = 1 credit
GPR handling, mapping and data collection, processing, analysis and interpretation	
GLO-266: Practical of GLO-225 (Digital Image Processing)	0-0-1 = 1 credit
Pre-processing, image enhancement, classification	
GLO-267: Practical of GLO-230 (Hydrogeol Problems & Managmt)	0-0-1 = 1 credit
Groundwater flow net construction and interpretations. Analysis of groundwater sample. Determination of porosity in the laboratory. Pumping tests field survey and parameter estimation_Assessment of pollutant movement under the landfill site using simple analytical and numerical techniques	
GLO-268: Practical of GLO-232 (Petrophysics)	0-0-1 = 1 credit
Porosity and conductivity estimation using bore hole cores and open samples using graphical and laboratory methods.	
GLO-269: Practical of GLO-233 (Well Logging)	0-0-1 = 1 credit
Interpretation and measurements of well logs.	
GLO-270: Practical of GLO-235 (Palaeo-Palynology)	0-0-1 = 1 credit
Stratigraphical range charts for various fossils, paleoenvironmental interpretations, description in thin sections of various palyno-fossils	
GLO-271: Practical of GLO-236 (Adv. Structural Analysis)	0-0-1 = 1 credit
Kinematics of ductile shear zone, computation of strain, textures and structures of deformed rocks in hand specimen as well as thin section, shape and size analysis of clasts, simple and pure shear techniques	
GLO-272: Practical of GLO-237 (Geodesy, Surveying & GPS)	0-0-1 = 1 credit
Field surveying practice; data collection, survey map preparation.	
GLO-273: Practical of GLO-238 (Petroliferous Basins of India)	0-0-1 = 1 credit

Plotting and categorisation of sedimentary basins on outline maps of India based on hydrocarbon potential. Stratigraphic correlation of various petroliferous basins of India. Evaluation of basin potential using published data. Plotting of latitude and longitudes of a location on topographic maps.	
GLO-274: Practical of GLO-239 (Geomorphology)	0-0-1 = 1 credit
Analysis of drainage pattern from Survey of India toposheets, demarcation of watershed boundaries, stream ordering, study of morphological features using Google images, local field visits. Mapping of lineaments and faults using google images and drainage network geometry. Land use/land cover mapping, surface water body mapping and area computation	
GLO-275: Practical of GLO-240 (Basics of RS, GIS and GNSS)	0-0-1 = 1 credit
Practicals as provided under IIRS-ISRO Edusat Online course	
GLC-276: Palaeontology	3-0-0 = 3 credit
Introduction: Nature of the fossil record, taphonomy; allometry and heterochrony; species concepts and systematics - nomenclature, classification and phylogenetics; evolutionary rates and trends; global diversity and extinction, mass extinctions. Applications of fossils in stratigraphic correlation and sequence stratigraphy. Sampling and sample preparation techniques for microfossils, morphology and classification of foraminifera, study of common benthic and planktonic foraminifera. Stratigraphic palaeontology of India. <u>List of Books:</u> 1. Foote, M & Miller, A.I. Principles of Paleontology, 3 rd ed. Freeman & Company, 2007. 2. Clarkson, E.N.K. Invertebrate Paleontology and Evolution, 4 th ed, Blackwell Sc, 1998. 3. Prothero, D.R. Bringing Fossils to Life: An Introduction to Paleobiology. Mc Graw Hill, 1998. 4. Armstrong, H.A. and Brasier, M.D. Microfossils, 2 nd Ed, Blackwell Publishing, 2005.	
GLO-277: Practical of GLC-106 (Palaeontology)	0-0-1 = 1 credit
Techniques of sample preparation of fossils, biostratigraphic correlation, study of morphology and classification of foraminifera, paleogeography through time, stratigraphic palaeontology of India	
GLO-278: QGIS for Professionals (Internet based self-learning Course)	0-0-2 = 2 Credits
Tutor assisted-cum-self-learning Course: Open source software & QGIS; Installing & Exploring QGIS interface; Spatial Data loading into QGIS; Attribute Data input and linking to Spatial Data (with online available data sets); Vector Data Creation and editing; Spatial Analyses: Vector and Raster analyses; Geoprocessing framework. Introduction to Extending QGIS with Python. Assessment and evaluation is based on the assignments given by the tutor and the interaction (through chat/email/skype and other communications) <u>List of Books</u> 1. Luigi Pirelli. Mastering QGIS, Packt Publishing, 2015 2. Kurt Menke. Discover QGIS Workbook for the GeoAcademy Curriculum, Locate Press, 2016 3. Anita Graser. Learning QGIS, 3 rd Ed., Packt Publishing, 2016 4. Alexander Bruy. QGIS By Example, Packt Publishing, 2015 5. QGIS: Online Resources Tutorials/Ytube 6. QGIS: Training Manual (online), https://docs.qgis.org/2.8/en/docs/training_manual/	
GLO-279: Digital terrain analysis (Geomorphometry)	3-0-0=3 Credits
This course focuses on the generation, analysis, classification and application of digital elevation models (DEMs) in combination with remotely sensed data on environmental topics like landform distribution, slope hazards and other processes, both terrestrial and sub-marine. The course gives specialised lectures and training in <ul style="list-style-type: none"> • Geomorphometrical description of the earth surface • Generation of DEMs and interpolation procedures • Terrain parameterisation • Topographic based models (snow distribution, energy balance) 	

<ul style="list-style-type: none"> ▪ Topographic classification ▪ Applications of topographic analysis on geomorphological processes and slope hazard ▪ Sub-marine topography ▪ Inclusion of remotely sensed data ▪ Environmental and cartographic modelling <p><u>List of Books</u></p> <ol style="list-style-type: none"> 1. John P. Wilson & John C. Gallant (Editors): Terrain Analysis: Principles and Applications, Wiley, 2000. 2. Reuter, Hannes I Hengl, Tomislav. Geomorphometry: concepts, software, applications, Elsevier, 2009 3. Jasiewicz. J, Zwoliński. Z, Mitasova. H, & Hengl.T. Geomorphometry for Geosciences, Bogucki Wydawnictwo Naukowe, 2015 	
GLO-280: Practical of GLC-279 (Geomorphometry)	0-0-1=1 Credit
Practicals will be based on the use of sample data (including satellite data) available online and working in GIS software for exercises related to construction of DEM for deriving geomorphometry related parameters and interpretation.	
GLO-290: Industrial Training (Summer Internship of 2 to 4 weeks)	0-0-4=4 Credits
Will involve hands-on training at Industry/Professional organization/National Research Labs/Well site/Mine site wherein the student/group of students is/are expected work under the guidance of a Scientist/Professional Geologist to gain the professional experience in analytical/field methodologies, data analysis, presentation & Interpretation. A report based of the work will be submitted which will be evaluated by the Departmental Council	
GLO-301: Dissertation	0-0-8=8 Credits
Dissertation based on the Geology of any chosen area, involving independent mapping, collection of samples, data analysis of data and preparation of geological and other maps, charts & report based on the field and laboratory analyses. Students to work under supervision of the faculty. Student can chose to work for dissertation in the department or in any national laboratory or industry under the supervision of a scientist on laboratory analytical problems related to geology of any area. Students are required to present the dissertation work before the faculty.	

Goa University
P.O. Goa University, Taleigao Plateau, Goa 403 206, India

Syllabus of M.Sc. (Marine Microbiology) Programme

The School of Earth, Ocean and Atmospheric Sciences (SEOAS) offers a two-year full time M.Sc. Marine Microbiology programme, w.e.f. the academic year 2020-21. This Programme was initiated in June 2012, under the award of UGC sponsored 'Innovative Programme for teaching and research in interdisciplinary and emerging areas'.

The Programme is meant for students to pursue higher studies in Marine Microbiology. Being a University in coastal state of India, Goa University provides a strategic advantage in learning Microbiology of marine and coastal ecosystems. It serves to impart advanced training to students in the field of Marine Microbiology with focus on marine microbial diversity, bioprospecting and applications of marine microbes in the production of various biologically significant metabolites; and in bioremediation of polluted environments. Students undergo hands-on training with state-of-the-art technologies and are trained so as to develop an aptitude for independent research. The Programme equips students for higher research leading to the Ph.D. Degree in India or in International Universities overseas, or for employment in Research Institutes, in teaching, and in Industry, the students finding speedy employment.

Prerequisites: B. Sc. Microbiology

Course Structure of M.Sc. Marine Microbiology

Core papers: 32 Credits

Optional Papers: 32 Credits

Code	Title of paper	L-T-P hrs/week	Credits
Semester I - Core Papers			
MMC 101	Microbial Biochemistry	3-0-0	3
MMC 102	Microbial Biochemistry – Practical	0-0-2	1
MMC 103	Fundamentals of Oceanography	3-0-0	3
MMC 104	Fundamentals of Oceanography – Practical	0-0-2	1
MMC105	Microbial Taxonomy and Systematics	3-0-0	3
MMC 106	Microbial Taxonomy and Systematics – Practical	0-0-2	1
MMC 107	Mathematics and Statistics in Biology	3-0-0	3

Programme: M.Sc. (Marine Microbiology)
Course Code: MMC 101
Title of the Course: MICROBIAL BIOCHEMISTRY
Number of Credits: 3
Effective from Academic Year: 2020-21

Prerequisites	The student should be familiar with the different biomolecules and their metabolism.	
Objective:	This course deals with the characteristics, properties and biological significance of the biomolecules of life. In depth knowledge of the energetics and regulation of different metabolic processes in microorganisms.	
Content:		
1	Biological Molecules	12 L
1.1	Proteins	
	Amino acids: features and properties.	
	Protein: structure, principles of separation and purification, molecular weight determination; sequencing and synthesis. Enzymes: activity, inhibition, mechanism of action	
1.2	Carbohydrates	
	Monosaccharides: types, characteristics and properties.	
	Disaccharides, oligosaccharides, polysaccharides – biological significance.	
1.3	Lipids	
	Fatty acids: saturated and unsaturated, structure and properties.	
	Lipids: biological significance; lipid composition of microorganisms.	
2	Overview of Carbohydrate, Amino acid, Nucleotide and Lipid metabolic pathways	14 L
2.1	Carbohydrate metabolism	
	Central pathways of metabolism – regulatory mechanisms, bioenergetics and significance – EMP, TCA cycle (glucose aerobic and anaerobic metabolism, malate metabolism), Glyoxylate cycle.	
	Gluconeogenesis from TCA intermediates / amino acids / acetyl-CoA; biosynthesis of polysaccharides and sugar interconversions.	
2.2	Lipid Metabolism	
	Anabolism: Biosynthesis of fatty acids: saturated and unsaturated, triglycerides, phospholipids,	
2.3	Amino Acid and Nucleotide Biosynthesis	
	Amino acid biosynthetic pathways and their regulation.	
	Purine and pyrimidine nucleotides, Deoxyribonucleotides: biosynthesis and regulation. Biosynthesis of nucleotide coenzymes	
3	Mechanisms involved in Photosynthesis, Chemosynthesis and Osmoregulation	10 L
3.1	Photosynthetic Metabolism	

	Organisms and photosynthetic pigments, fundamental processes in Photosynthesis. Photosynthetic electron transport and photophosphorylation	
3.2	Chemosynthesis	
	Organisms, substrates, bioenergetics of metabolism.	
3.3	Osmoregulation	
	Salt-in-cytoplasm mechanism, Organic-Osmolyte mechanism, Proton-motive force, Osmolyte transporters, Osmosensing.	
Pedagogy:	Lectures/tutorials/assignments/self-study	
References/ Readings	Lehninger, A., Cox, M. and Nelson, D. L., Principles of Biochemistry, W. H. Freeman & Company.	
	Moat, A. G., Foster, J. W. and Spector, M. P., Microbial Physiology, A. John Wiley & Sons Inc. Publication.	
	Voet, D., Voet, J. G. and Pratt, C. W., Principles of Biochemistry, John Wiley and Sons Inc.	
	Murray, R. K., Bender, D. A., Botham, K. M., Kennelly, P. J., Rodwell, V. W. and Weil, P. A., Harper's Illustrated Biochemistry, The McGraw-Hill Companies, Inc.	
	Bull, A. T. and Meadow, P., Companion to Microbiology, Longman Group Limited, New York	
	Plummer, D. T., An Introduction to Practical Biochemistry, Tata McGraw Hill Publishing Company	
	H. J. Kunte, Osmoregulation in Bacteria: Compatible Solute Accumulation and Osmosensing. Environ. Chem. 2006, 3, 94–99. doi:10.1071/EN06016	
Learning outcomes	<ol style="list-style-type: none"> 1. Apply the knowledge to understand the microbial physiology and to identify the microorganisms. 2. Understand the regulation of the biochemical pathway and possible process modifications for improved control over microorganisms for microbial product synthesis. 	

Programme: M.Sc. (Marine Microbiology)

Course Code: MMC 102

Title of the Course: MICROBIAL BIOCHEMISTRY - Practical

Number of Credits: 1

Effective from Academic Year: 2020-21

Prerequisites:	It is required that students have theoretical knowledge about various biomolecules	
Objective:	This course provides opportunities for hands-on experience with microbiological and biochemical concepts in laboratory setup.	
Content:		
I	Microbial Biochemistry (MMC 102)	24 H
1.	Standard curve for carbohydrates.	
2.	Standard curve for protein.	
3.	Enzyme assay.	
4.	Precipitation of protein from solution by salting out.	
5.	Dialysis.	
6.	Specific activity, fold purification, percentage yield of enzyme.	
7.	Molecular weight determination by SDS-PAGE.	
Pedagogy:	Experiments in the laboratory	
References/ Readings	Plummer, D. T., An Introduction to Practical Biochemistry, Tata McGraw Hill Publishing Company	
	Murray, R. K., Bender, D. A., Botham, K. M., Kennelly, P. J., Rodwell, V. W. and Weil, P. A., Harper's Illustrated Biochemistry, The McGraw-Hill Companies, Inc.	
Learning Outcomes	Skilful handling and estimating biomolecules and other metabolic products of microorganisms	

Programme: M.Sc. (Marine Microbiology)

Course Code: MMC 103

Title of the Course: FUNDAMENTALS OF OCEANOGRAPHY

Number of Credits: 3

Effective from Academic Year: 2020-21

Prerequisites:	Basic understanding of the marine environments.	
Objective:	Introduce the students to the dynamic nature of the marine environment.	
Content:		
1	Introduction to Physical Oceanography	12 L
1.1	Physical properties of the sea - temperature, salinity, pressure, density. Mixed layer depth. Ocean circulation- wind driven and thermohaline circulation. Eddies and gyres. Coriolis effect. Upwelling. Ekman transport. Currents. Water mass. Waves, tides and tsunamis. Sound in the ocean, energy from oceans.	
1.2	Atmospheric circulation, albedo, land-sea breeze, tropical cyclone, Indian monsoon, ITCZ, heat flux, ENSO - El Nino, La Nina, Southern Oscillation, Indian Ocean Dipole	
2	Introduction to Chemical and Geological Oceanography	12 L
2.1	Chemical properties of seawater. Elemental composition of seawater. Salinity and chlorinity. Residence time. Dissolved gases. Nutrients. Carbonate system. pH and alkalinity. Calcium carbonate precipitation and dissolution. Carbonate compensation depth and lysocline. Radioactivity.	
2.2	Geological time scale. Origin of the oceans. Ocean basins. Plate tectonics and seafloor spreading. Ocean floor morphology. Marine minerals and sediments types.	
3	Introduction to Biological Oceanography	12 L
	Habitat - estuaries, mangroves, salt marshes, rocky and intertidal, coral reefs, seagrass, coastal and open ocean, hydrothermal vents and cold seeps. Marine zonation. Pelagic and benthic communities. Marine photosynthesis. Phytoplankton and primary production. Gross and net productivity. New and regenerated productivity, f-ratio. Pigments. Redfield ratio. Measurement and control of secondary production. Benthic-pelagic coupling. Bioturbation. Bioluminescence. Exclusive economic zone.	
Pedagogy:	Lectures/tutorials/assignments/self-study	
References/ Readings	The Ocean: Their Physics, Chemistry and Biology, 1962 - Sverdrup, H.U., Johnson, M.W. and Flemming, R.H., Asia Publ. House, New Delhi.	
	Descriptive Physical Oceanography: An Introduction, 1989 - Pickard, G.B. and Emery, W.J., Pergamon press, U.K	

	Munn, C., Marine Microbiology: Ecology and Applications, Garland Science, Taylor and Francis, N.Y	
	Meller, C. B., Wheeler, P. A., Biological Oceanography, WileyBlackwell Publishers.	
	Oceanography (5th ed), 1990 Grant Gross, M., Englewood Cliffs, N.J. Prentice Hall.	
	Introductory Oceanography (5th ed), 1988 Thurman, H.V., Columbus Mercill Publ. Co, Ohio.	
Learning outcomes	Provides brief knowledge on how marine physics, chemistry, biology and geology are interrelated. Understanding of how different physicochemical processes govern life in the ocean.	

Programme: M.Sc. (Marine Microbiology)

Course Code: MMC 104

Title of the Course: FUNDAMENTALS OF OCEANOGRAPHY - Practical

Number of Credits: 1

Effective from Academic Year: 2020-21

Prerequisites:	Basic understanding of the unique properties of water.	
Objective:	To study physicochemical and biological parameters of seawater.	
Content:		24 H
1.	Estimation of seawater salinity by titration method.	
2.	Determination of dissolved O ₂ of seawater using Winkler's method.	
3.	Determination of pH of seawater by potentiometric/spectrophotometric method.	
4.	Determination of nitrate, phosphate, silicate by spectrophotometric method.	
5.	Determination of chlorophylls and phaeo-pigments by spectrophotometric method.	
Pedology:	Laboratory experiments/ Field trips	
References/ Readings	Grasshoff, K., Ehrhardt, M. and Kremling, K., (1999). Methods of Seawater Analysis, Verlag Chem., Weinheim.	
	Ewing, G. W.; (1981) Instrumental Methods of Chemical Analysis. McGraw-Hill, New York.	
	Parsons, T. R., Maita, Y. and Lalli, C. M.; (1984). A Manual of Chemical and Biological Methods for Seawater Analysis, Pergamon Press, Oxford.	
	Strickland, J.D.H, and Parsons T.R., (1972). A practical handbook of seawater analysis, Fisheries Board of Canada bulletin.	
Learning outcomes	Students will know to carry out field surveys and analyse the physicochemical and biological parameters of the marine system.	

Programme: M.Sc. (Marine Microbiology)

Course Code: MMC 105

Title of the Course: MICROBIAL TAXONOMY AND SYSTEMATICS

Number of Credits: 3

Effective from Academic Year: 2020-21

Prerequisites:	It is required that students should have a basic understanding of binomial nomenclature, the basis of classification systems and be familiar with the distinguishing features of different groups of microorganisms.	
Objective:	This course introduces the development of taxonomy and systematics, the various characters used for this purpose, the rules governing the different taxonomy and classification systems and the salient features of the different microbial groups. It also focuses on the rapidly evolving nature of taxonomy and systematics.	
Content:		
1.		
1.1	Microbial taxonomy and systematics Concepts of taxonomy (characterization, classification and nomenclature) and systematics; classification of microorganisms, three domain, six-kingdom, 8-kingdom systems.	2 L
1.2	Phenotypic characters - Morphology, Biochemical tests (e.g. API, BIOLOG), Bacteriophage typing, Serotyping.	4 L
1.3	Chemotaxonomic markers - Cell wall components, lipid composition, cellular fatty acid (FAME analysis), isoprenoid quinones, protein profiles (e.g. MALDI-TOF).	6 L
1.4	Nucleic acid-based techniques – Terminal Restriction Fragment Length Polymorphism (TRFLP); G+C content (T_m and HPLC); pyrosequencing; 16S rRNA, 18S rRNA and ITS gene sequencing; phylogenetic analysis; DNA-DNA hybridization.	8 L
1.5	Concepts of species, numerical taxonomy and polyphasic taxonomy.	4 L
2.	Salient features of phylum, class and orders with representative examples of the following – Archaea, Eubacteria (bacteria, cyanobacteria, actinomycetes), Mycota, Protista (algae, protozoa, diatoms); and viruses.	12 L
Pedagogy:	Lectures/tutorials/assignments/self-study	
References/ Readings	Sneath, A. H. P., Mair, S. N. and Sharpe, E. M., Bergey's Manual of Systematic Bacteriology Vol. 2. Williams & Wilkins Bacteriology Symposium, Series No 2, Academic Press, London/New York.	
	Goodfellow, M., Mordarski, M. and Williams, S. T., The biology of the actinomycetes, Academic Press.	

	Goodfellow, M. and Minnikin, D. E., Chemical Methods in Bacterial Systematics, The Society for Applied Bacteriology. Technical Series No. 20, Academic Press.	
	Barlow, A., The prokaryotes: A Handbook on the Biology of Bacteria: Ecophysiology, Isolation, Identification, Applications, Volume 1, Springer-Verlag.	
	Kurtzman, C. P., Fell, J. W. and Boekhout, T., The Yeasts - A Taxonomic Study, Elsevier.	
	Prescott, L. M., Harley, J. P. and Klein, D.A., Microbiology. McGraw Hill, New York.	
	Norris, J. R. and Ribbons, D. W., Methods in Microbiology, Vol. 18 & 19, Academic Press.	
	Reddy, C. A., Methods for General and Molecular Microbiology, ASM Press.	
Learning outcomes	1. Apply knowledge of the standard rules of classification systems to categorize microorganisms. 2. Appreciate and explain the dynamic and ever developing nature of the field of microbial taxonomy and systematics.	

Programme: M.Sc. (Marine Microbiology)

Course Code: MMC 106

Title of the Course: MICROBIAL TAXONOMY AND SYSTEMATICS - Practical

Number of Credits: 1

Effective from Academic Year: 2020-21

Prerequisites:	It is required that students should have a basic understanding of the different types of marine microorganisms and their diversity.	
Objective:	This course provides opportunities for hands-on experience with the microbiological and biochemical techniques used for characterization of different microbial groups.	
Content:		24 H
1.	Morphological, physiological and biochemical characterization of bacteria.	
2.	Chemotaxonomic analysis of cell wall.	
3.	Characterization of actinomycetes (<i>Streptomyces</i> sp.).	
4.	Characterization of yeast (<i>Saccharomyces cerevisiae</i> , <i>Schizosaccharomyces pombe</i>).	
5.	Characterization of cyanobacteria.	
Pedagogy:	Experiments in the laboratory, data collection and processing.	
References/ Readings	Sneath, A. H. P., Mair, S. N. and Sharpe, E. M., Bergey's Manual of Systematic Bacteriology Vol. 2. Williams & Wilkins Bacteriology Symposium, Series No 2, Academic Press, London/New York.

	Norris, J. R. and Ribbons, D. W., Methods in Microbiology, Vol. 18 & 19, Academic Press.	
	Reddy, C. A., Methods for General and Molecular Microbiology, ASM Press.	
Learning outcomes	1. Application of techniques to characterize different groups of microorganisms.	

Program: M.Sc. Marine Microbiology

Course Code: MMC 107

Title of the Course: MATHEMATICS AND STATISTICS IN BIOLOGY

Number of Credits: 3

Effective from Academic Year: 2020-21

Prerequisites:	Basic ability to handle numbers and calculation.	
Objective:	The paper develops concepts about types of data observed in biological experiments, its handling and processing. It covers many mathematical techniques that are useful in understanding and predicting the behaviour of biological systems. It develops concepts of hypothesis and formulation of experiments. It gives understanding of various statistical operations needed to carryout and process the biological data.	
Content:		
1	Functions and analysis	10 L
1.1	Introduction to Calculus: Scaling parameters, Non-linear parameters; Rates of change and the derivative: Linearity rule, Product rule, Quotient rule, Chain rule; The Definite Integral: linearity rule, partition rule.	05 L
1.2	Fitting linear models to data, The Basic linear least squares method, Fitting the exponential model by linear least squares. Basic models of population growth: exponential and logistic. Nutrient uptake the Michaelis-Menten model; Droop model for internal nutrient stores and Monod model for growth and external nutrient supply. Analysis of population dynamics – models of production, growth and multiple reacting species, aquatic ecosystem in estuary and ocean viz. Lotka-Volterra Model.	05 L
2	Data collection and representation	05 L
2.1	Characteristics of biological data: Variables and constants, derived variables (ratio, index, rates), types of measurements of biological data (interval scale, ratio scale, ordinal scale, nominal scale, discrete and continuous data).	02 L
2.2	Data handling: Population and samples, random samples, parameter and statistics, accuracy and precision, accuracy in observations, Tabulation and frequency distribution, relative frequency distribution, cumulative frequency distribution. Graphical representation: types of graphs, preparation and their applications.	03 L
3	Statistical analysis	21 L
3.1	Measures of central tendency: characteristics of ideal measure, Arithmetic mean – simple, weighted, combined, and corrected mean, limitations of arithmetic mean; Median – calculation for raw data, for grouped data, for continuous series, limitations of median; Mode – computation of mode for individual series, by	04 L

	grouping method, in a continuous frequency distribution, limitations of modes; Relationship between mean, median and mode. Measure of dispersion: variability, Range, mean deviation, coefficient of mean deviation, standard deviation (individual observations, grouped data, continuous series), variance, coefficient of variance, limitation. Skewness, Kurtosis, Moments.	
3.2	Correlation analysis – Correlation, covariance, correlation coefficient for ungrouped and grouped data, Karl Pearson's Coefficient, Rank Correlation coefficient, scatter and dot diagram (graphical method). Regression analysis – simple and multiple, linear and non-linear; examples: DNSA conversion by reducing sugar, survival/growth of bacteria	03 L
3.3	Probability: Probability, Combinatorial Techniques, Elementary Genetics	02 L
3.4	Theoretical Distribution: Binomial, Poisson, Normal Distributions.	02 L
3.5	Hypothesis Testing – parameter and statistics, sampling theory, sampling and non-sampling error, estimation theory, confidence limits, testing of hypothesis, test of significance; Students' T-test, t-distribution, computation, paired t-test.	03 L
3.6	Chi-square test, F-test and ANOVA.	04 L
3.7	Non-parametric tests: Wilcoxon Signed Rank test, Mann-Whitney 'U' test, Kruskal-Wallis 'H' test	02 L
3.8	Introduction to Bioinformatics	01 L
Pedagogy:	Lectures/tutorials/assignments/self-study/Moodle/Videos

	Surya, R. K., Biostatistics, Himalaya Publishing House.	
	Edelstein-Keshet, L., Differential Calculus for the Life Sciences, The University of British Columbia, Open Book	
Learning outcomes	Able to collect, handle, process and present the Biological Data. Apply the principles of statistics on biological experiments.	

Program: M.Sc. Marine Microbiology

Course Code: MMC 108

Title of the Course: MATHEMATICS AND STATISTICS IN BIOLOGY - PRACTICAL

Number of Credits: 1

Effective from Academic Year: 2020-21

Prerequisites:	Basic ability to handle numbers and calculation.	
Objective:	Handling and processing of biological data for statistical analysis.	
Content:		24 H
1.	Excel spreadsheet and data analysis.	
2.	Linear equation analysis (regression analysis).	
3.	Normal distribution.	
4.	Hypothesis testing.	
5.	Working with Grapher and Surfer	
Pedagogy:	Data processing, computations	
References/ Readings:	Kothari, C. R., Quantitative Techniques, Vikas Publishing House.	
	Arora, P. N. and Malhan, P. K., Biostatistics, Himalaya Publishing House.	
	Danilina, N.I., Computational Mathematics, Mir Publishers.	
	Surya, R. K., Biostatistics, Himalaya Publishing House.	
	Edelstein-Keshet, L., Differential Calculus for the Life Sciences, The University of British Columbia, Open Book	
Learning Outcomes:	Ability to process data and statistical interpretation of microbiology-related experiments.	

Program: M.Sc. Marine Microbiology

Course Code: MMC 201

Title of the Course: TECHNIQUES AND INSTRUMENTATION IN MICROBIOLOGY

Number of Credits: 3

Effective from Academic Year: 2020-21

Prerequisites	The student should be familiar with the concepts in basic chemistry and should be able to use basic instruments in Microbiology.	
Objective	This course develops the concepts of methodology involved in studying the different components of microbial cell and various techniques and instruments involved in product analysis.	
Content		
1.		12 L
1.1	Chromatographic techniques: GC, HPLC, detectors, column/s matrix- Ion-exchange, affinity and molecular exclusion. (using examples for separation of microbial lipids, pigments, nucleic acids and proteins/enzymes).	
1.2	Chromatographic techniques: GC, HPLC, detectors, column/s matrix- Ion-exchange, affinity and molecular exclusion. (using examples for separation of microbial lipids, pigments, nucleic acids and proteins/enzymes). Centrifugation: Principles, methodology, application; Density gradient centrifugation; Ultracentrifugation (Separation of ribosomal subunits of bacteria).	
1.3	Spectrophotometry: Atomic Absorption Spectrophotometry (AAS), UV-Visible, fluorimetry, Fourier transformation infra-red spectroscopy (FTIR), NMR, MS.	
2.		12 L
2.1	Microscopy: Epifluorescence filter technique (DEFT), SEM, TEM, Confocal microscopy.	
2.2	Radio-isotope and tracer techniques: Isotope and types of isotopes, Radio-activity counters, Autoradiography	
2.3	Cell and tissue culture techniques: Primary and secondary/established cell lines, Monolayer and suspension cultures, Fluorescence activated cell sorting (FACS), Biohazards and Biosafety cabinet.	
3.		12 L
3.1	Electrophoretic technique: PAGE, IEF, PFGE, DGGE, TGGE, Single stranded conformation polymorphism (SSCP), Electroporator, Micro-array technique.	

3.2	Isolation of cell organelles: Different methods of cell lysis/ breakage and isolation and purification of various cell organelles - Cell surface structures, cell envelopes, plasma membranes, peptidoglycan, Outer membrane, ribosomes, protoplasts, spheroplast.	
3.3	Others: X-ray diffraction.	
Pedagogy:	Lectures/tutorials/assignments/self-study/Moodle/Videos

Learning outcomes	Ability to use techniques and instruments involved in the study of microorganisms and their products.	

Program: M.Sc. Marine Microbiology

Course Code: MMC 202

**Title of the Course: TECHNIQUES AND INSTRUMENTATION IN
MICROBIOLOGY - PRACTICAL**

Number of Credits: 1

Effective from Academic Year: 2020-21

Prerequisites	The student should be familiar with the concepts in basic chemistry and should be able to use basic instruments in Microbiology.	
Objective	This course develops the skills for techniques and instrumentation in microbiology.	
Content:		24 H
1.	Microscopy – compound, phase contrast – of bacterial cells.	
2.	Density gradient separation of microbial cells.	
3.	Cell disruption of pigmented bacteria/yeast by sonicator, efficacy of sonication and pigment profiling using UV-visible spectrophotometer.	
4.	Polyacrylamide gel electrophoresis (PAGE), Zymogram.	
5.	Molecular exclusion chromatography.	
Pedagogy:	Experiments in the laboratory	
References/ Readings:	Wilson, K. and Walker, J., Principles and Techniques of Biochemistry and Molecular Biology, Cambridge University Press, N.Y., USA.	
	Cooper, T. G., The Tools of Biochemistry, Wiley India Pvt. Ltd.

	Jayaraman, J., Laboratory Manual in Biochemistry, John Wiley & Sons Limited, Australia.	
Learning outcomes	Ability to use techniques and instruments for carrying out microbiological research work or in the industries.	

Programme: M.Sc. (Marine Microbiology)

Course Code: MMC 203

Title of the Course: INDUSTRIAL MICROBIOLOGY

Number of Credits: 3

Effective from Academic Year: 2020-21

Prerequisites	Basic knowledge about the types of microbes and their products of industrial relevance. Knowledge of microbial biochemistry, physiology, genetics and statistics.	
Objective:	Development of concepts in the processes, instruments, management, quality, etc. being used in the industries to produce the products using marine microorganisms.	
Content:		
1.	Upstream Processing	12 L
1.1	Industrial strains, Fermentation media, Asepsis and sterilisation	
1.2	Bioreactor design and operation: classification of reactors; designing parameters for reactors (stirred tank reactor, airlift reactor, plug flow reactor), rheology of fermentation broth, gas-liquid mass transfer, heat transfer, scale up	
1.3	Solid substrate fermentation (SSF): Principles and application with examples – penicillin, amylase; Immobilized enzymes and cell systems.	
2.	Process control and Downstream processing	12 L
2.1	Fermentation monitor and control: speed, temperature, gas, pH, Dissolved oxygen, foam, redox, air flow, weight, pressure, biomass; On-line and off-line analysis	
2.2	Layout and components of fermentation process for extracellular and intracellular microbial products, Recovery of biomass (cells and solid particles), cell disruption for recovery of intracellular products, primary isolation (extraction, sorption), precipitation, industrial processes for chromatography and fixed bed adsorption, membrane separations; drying, crystallisation, whole broth processing (Penicillin production).	
2.3	Formulation, packaging; QC/QA; IPR	
3.	Applications in industry	12 L
3.1	Industrially important marine microorganisms; Microbiological techniques in marine food industry – canning, freezing, drying	
3.2	Industrial production and application – enzymes (Proteases, Lipases, amylase, pectinase), carotenoids, eps, bioplastics, biopolymers – xanthan, pigments, Antibiotics-erythromycin, steroids, SCP, biofuels	

3.3	Entrepreneurship	
Pedagogy:	Lectures/tutorials/assignments/self-study/Moodle/Videos	
References/ Readings	Demain, A. L., Davies, J. E. and Atlas, R. M. Manual of Industrial Microbiology and Biotechnology, ASM Press.	
	Flickinger, M. C. and Drew S. W., The Encyclopedia of Bioprocess Technology: Fermentation, Biocatalysis and Bioseparation, Volumes 1 - 5, John Wiley Publisher.

	Melis A. and Happe T. (2001). Hydrogen production. Green algae as a source of energy. Plant Physiology 127, 740-748	
Learning Outcomes	1. Apply the principle of management and controls on the microbial processes in industrial settings. 2. Apply the principles of physiological understanding in improvement of the industrial processes. 3. Study the industrial processes for production of metabolites from marine microorganisms	

Programme: M.Sc. (Marine Microbiology)

Course Code: MMC 204

Title of the Course: INDUSTRIAL MICROBIOLOGY - Practical

Number of Credits: 1

Effective from Academic Year: 2020-21

Prerequisites	Knowledge of basic microbiology techniques	
Objective:	This course develops the skills for techniques and instrumentation in industrial microbiology.	
Content	Industrial Microbiology	24 H
1.	Exopolysaccharide production using marine microbial isolates	
2.	Rheology of substrate solutions.	
3.	Designing of fermentor – stirred tank reactor	
4.	Culturing spirulina (<i>Arthrospira platensis</i>)	
Pedagogy:	Experiments in the laboratory, data collection and processing.	
References/ Readings	Flickinger, M. C. and Drew S. W., The Encyclopedia of Bioprocess Technology: Fermentation, Biocatalysis and Bioseparation, Volumes 1 - 5, John Wiley Publisher.	
	Stanbury, P. F., Whitaker, A. and Hall, S.J., Principles of Fermentation Technology, Butterworth-Heinemann Publishers.

Learning Outcomes	Able to handle the instruments for carrying out microbiological research work or in the industries.	

Programme: M.Sc. (Marine Microbiology)

Course Code: MMC 205

Title of the Course: MICROBIAL GENETICS AND GENE REGULATION

Number of Credits: 3

Effective from Academic Year: 2020-21

Prerequisites	It is required that the students have a basic knowledge of DNA (structure and replication), Prokaryotic and eukaryotic genome organisation, mutation concept, basic knowledge transcription and translation.	
Objective:	This course develops concepts in molecular biology: DNA packaging, DNA damage and repair, gene structure, expression and regulation in both prokaryotes and eukaryotes	
Content:		Lectures
1	Chromosomes, Genomes and it's evolution	6 L
1.1	Fundamental functions of DNA. Chromosomal DNA and its packaging in the chromatin fibre. Chromatin structure, structural features (Telomere, Centromere and Repetitive sequences) of chromosomes and their functions. Gene duplication and mutations. Genomic islands.	
1.2	Structural chromosomal aberrations and their significance: Deletion, duplication, inversion, translocation. Aneuploidy and polyploidy.	
2	DNA Damage, DNA Repair and Recombination	18 L
2.1	Types of DNA damage (spontaneous and induced DNA damage). Mutagenesis, mutation and mutants: Somatic and germinal mutation, spontaneous and induced mutations, site specific using PCR/ cassette mutagenesis, and random mutagenesis. Types of mutation: silent mutation, missense mutation, nonsense mutation, Read through mutation, frameshift- insertion and deletion mutation, translocation, Inversion, suppressor mutation. Mutagenic chemicals and radiations and their mechanism of action: Base analogues (5-Bromouracil and 2-amino purines), EMS, acridines, NTG, Hydroxylamine; mutagenic radiations- UV, X-rays and gamma rays. Ames test; Auxotrophy.	
2.2	Mechanisms/pathways to remove damaged DNA: Excision repair, mismatch repair, recombination repair in <i>E. coli</i> and SOS Repair. Role of RecA in DNA damage repair, Photoreactivation repair in <i>E. coli</i> involving photolyase.	
2.3	Mechanisms of Genetic Recombination: General and site-specific recombination. Heteroduplex DNA formation (Homologous recombination). Synaptonemal Complex, Bacterial RecBCD system and its stimulation of chi sequences. Role of RecA protein, homologous recombination, Holliday junctions.	

3	Genomic rearrangements, Gene structure and control of gene expression in Prokaryotes and Eukaryotes	12 L
3.1	Mechanism of General and programmed DNA rearrangements, Antigenic and phase variation in bacteria. Transposons: IS elements – Composite transposons (Tn3, Tn10), Ty, Copia and P type, Mechanism of transposition. Role of transposons in DNA rearrangements and microbial genome evolution	
3.2	An overview of Gene expression control, DNA binding motifs in gene regulatory proteins, genetic switches and their role in control of gene expression. Post-transcriptional controls-transcriptional attenuation, Riboswitches, Alternate splicing, RNA editing, RNA Interference.	
Pedagogy:	Lectures/tutorials/assignments/self-study	
References/ Readings	Gardner, E. J., Simmons, M. J. and Snustad, D. P., Principles of Genetics, John Wiley & Sons.

	Davis, L. G., Dibner, M. D. and Battey, J. F., Basic Methods in Molecular Biology, Elsevier.	
	Gerhardt, P., Methods for General and Molecular Bacteriology, Elsevier.	
Learning Outcomes	Understanding of gene structure, expression, mutagenesis and regulation of gene expression in both prokaryotes and eukaryotes for application in molecular research and its significance in microbial evolution.	

Programme: M.Sc. (Marine Microbiology)

Course Code: MMC 206

Title of the Course: MICROBIAL GENETICS AND GENE REGULATION - Practical

Number of Credits: 1

Effective from Academic Year: 2020-21

Prerequisites	Basic knowledge about nucleic acids and replication	
Objective:	This course provides hands-on experience with DNA extraction, purification and electrophoretic techniques.	
Content		
	Microbial Genetics and Gene Regulation	24 H
1.	Isolation of genomic DNA of bacterial cells, estimation of quantity and purity of DNA by spectrophotometry, and agarose gel electrophoresis.	
2.	Isolation of genomic DNA from environmental sample (sediment/ seawater).	
3.	PCR / RT-PCR amplification of a specific gene using genomic DNA as a template and agarose gel analysis of PCR product to determine amplicon size.	
4.	UV mutagenesis and screening of pigment deficient mutants of <i>Serratia marcescens</i> .	
Pedagogy:	Experiments in the laboratory.	
References/ Readings	Davis, L. G., Dibner, M. D. and Battey, J. F., Basic Methods in Molecular Biology, Elsevier.	
	Gerhardt, P., Methods for General and Molecular Bacteriology, Elsevier.	
Learning Outcomes	To learn techniques involved in genomic DNA isolation and PCR amplification for use in molecular research.	

Programme: M.Sc. (Marine Microbiology)
Course Code: MMC 207
Title of the Course: MICROBIAL ECOLOGY
Number of Credits: 3
Effective from Academic Year: 2020-21

Prerequisites	Basic understanding of the marine environment and microorganisms.	
Objective:	Introduce the students to the marine environment, biodiversity and their interaction. Impart knowledge on the effect of climate change on microbial ecology.	
Content:		
1	Marine environment, biodiversity and its interaction	12 L
1.1	Marine microbial diversity. Ecosystem and food webs. Energy flow and cycling. Interaction between biotic and abiotic factors.	
1.2	Marine microbiome- Diversity, evolution and function, mutualism, commensalism, parasitism, microbial symbiosis, microbiomes from plankton, fish, coral, sponge, deep-sea invertebrate, and animals. Stress response and adaptation. Marine probiotics, prebiotics and its application.	
1.3	Biogeochemical cycles – carbon, nitrogen, phosphorus, sulphur, iron and manganese	
1.4	Oxygen minimum zones (OMZs), anaerobic microbial metabolism, OMZs in the world oceans, anthropogenic impact	
2	Microbes and Carbon Cycling	12 L
2.1	Marine carbon reservoirs, ocean carbon cycle, carbon pump-solubility, carbonate, biological, microbial, microbial loop, role of picoplankton.	
2.2	Production, transformations and fate of dissolved organic matter (DOM), Sources and composition of DOM, reactivity class of DOM, DOM release and microbial food webs, Extracellular enzymes, DOM release and global climate change, role of DOM in the ecosystem, chromophoric dissolved organic matter (CDOM), factors affecting CDOM and its role in the ecosystem. Carbon cycling in the anoxic environment and sediments.	
3	Marine Ecosystem and Global Climate Change	12 L
	Greenhouse gases. Warming potential. Changes in physical and biogeochemical properties: ocean acidification, global warming, deoxygenation. Causes, changing chemistry of the ocean. Physiological, population and community response in marine organisms. Impact on marine plankton, fishery, coral, humans. Changes in growth, distribution, energetics, food web, marine productivity, microbial loop, reproduction, survival, recruitment, prey-predator interaction. Thermal	

	limits and distribution of organisms. Climate change refugia and adaptation. Coastal and ocean species migration and change in the structure, Environmental and economic consequences. Multiple stressors and Synergistic effects.	
Pedagogy:	Lectures/tutorials/assignments/self-study	
References/ Readings	Mitchell, R. and Kirchman, D. L., Microbial Ecology of the Oceans, Wiley- Blackwell Publishers.	
	Nybakken, J. W. and Bertness, M. D., Marine Biology: an Ecological Approach, Benjamin Cummings, San Francisco.	
	Munn, C., Marine Microbiology: Ecology and Applications, Garland Science, Taylor and Francis, N.Y.	
	Elements of Marine ecology (4th ed) 1982 – Tait, R.V. and Dipper, F. Butterworth – Heinemann	
	Textbook of Marine Ecology, 1980 – Nair, N.B. &Thampy, D.M., Macmillan, 352 pp	
	Marine Biology, 1984, Thurman, H.V. and Webber, H.H., Harper Collins Publishers	
Learning outcomes	Students will understand the concept of the marine biodiversity and the factors governing them. Role of climate change in marine ecosystem.	

Programme: M.Sc. (Marine Microbiology)

Course Code: MMC 208

Title of the Course: MICROBIAL ECOLOGY - Practical

Number of Credits: 1

Effective from Academic Year: 2020-21

Prerequisites	Basic understanding of the unique features of marine environments and microorganisms.	
Objective	Enable the students to identify microbes and understand their role in the marine environment.	
Content		24 H
1.	Enumeration of plankton associated microbes.	
2.	Determination of particulate organic matter (carbon/ nitrogen/ phosphorus) from plankton/ seawater.	
3.	Determination of carbohydrates/proteins/lipids from plankton/ seawater/ sediments.	
4.	Estimation of CDOM from seawater by spectrophotometric method.	
5.	Determination of extracellular enzymes from plankton/ seawater/ sediments by MUF.	
6.	Determination of sulphide in seawater.	
Pedagogy:	Laboratory experiments/ Field trips	
References/ Readings	Parsons, T. R., Maita, Y. and Lalli, C. M.; (1984). A Manual of Chemical and Biological Methods for Seawater Analysis, Pergamon Press, Oxford.	
	Zoppini et al., (2005). Extracellular enzyme activity and dynamics of bacterial community in mucilaginous aggregates of the northern Adriatic Sea. Science of The Total Environment 353(1-3):270-86.	
	Strickland, J.D.H, and Parsons T.R., (1972). A practical handbook of seawater analysis, Fisheries Board of Canada bulletin. (2nd edition).	
	Padini et al., (2014). Contrasting phytoplankton community structure and associated light absorption characteristics of the western Bay of Bengal. Ocean Dynamics. 64:89–101.	
Learning outcomes	Understanding the role of microbes in the marine ecosystem and how to estimate it.	

Program: M.Sc. Marine Microbiology
Course Code: MMO 301
Title of the Course: MARINE VIROLOGY
Number of Credits: 3
Effective from Academic Year: 2020-21

Prerequisites	It is required that students have a basic knowledge of viruses- their structure, classification and also about marine environment-different habitats.	
Objective	This course develops concepts about viruses in marine environment, different approaches to study them, their role and significance in marine environment, few diseases of fishes, shrimps, shell-fishes.	
Content:		
1.	Virus Structure, Diversity and Assay	14 L
1.1	Marine Viruses - Introduction	
1.2	Marine phages and their host: Archaea, bacteria and cyanobacteria, phytoplanktons, algae	
1.3	Marine viruses and their hosts: fish and shrimp; Giant marine virus	
1.4	Metagenomic approaches to study the diversity of marine viruses	
2.	Multiplication and Assay of Phages and Viruses	08 L
2.1	Bacteriophage life cycles - lysogenic (latent) and lytic (virulent)	
2.2	Viral multiplication	
2.3	One step growth profile.	
2.4	Assay: plaque assay (PA); most-probable number (MPN)	
3.	Significance of viruses in marine ecosystem	14 L
3.1	Movement of viruses between biomes	
3.2	Effect of viruses on ecology of the marine ecosystem: Role of viruses in microbial loop, viral shunt	
3.3	Marine viruses and global climate change	
3.4	Viral pathogens of marine aquatic organisms: Lymphocystis virus, Infectious pancreatic necrosis virus (IPNV), Nervous necrosis virus (NNV), Salmon Alphavirus (SAV), Infectious haematopoietic necrosis virus (IHNV)	
3.5	Viruses in shell-fish and shrimps, and health hazards: Norwalk virus and Hepatitis virus A.	
Pedagogy:	Lectures/tutorials/assignments/self-study/Moodle/Videos	
References/ Readings:	Sano, E., Carlson, S., Wegley, L., Rohwer, F. (2004) Movement of Viruses between Biomes. Applied and Environmental Microbiology, 70: 5842–5846.

	Microbiology and Immunology – Online, Department of Pathology, Microbiology and Immunology, University of South Carolina School of Medicine.	
Learning outcomes	Explain the role of viruses in marine environment,, the effect of viruses on global climate change. Apply the knowledge of viral diseases in aquaculture, various techniques of studying them in research.	

Programme: M.Sc. (Marine Microbiology)

Course Code: MMO 302

Title of the Course: MARINE ZOOPLANKTON ECOLOGY AND MICROBIAL INTERACTIONS

Number of Credits: 3

Effective from Academic Year: 2020-21

Prerequisites	Knowledge of marine ecology with respect to different marine organisms found in seawater, metabolic diversity, various biological phenomena occurring in marine environment.	
Objectives	This course will introduce students to the biology of marine zooplankton which are the free-floating microscopic animals in the sea. Students will gain a deeper insight into the role of zooplankton in marine ecology and ecosystem functioning. They will also learn about global programs related to ocean observations.	
Content		
1	Introduction to Zooplankton and Associated Microbial Communities	12 L
1.1	Classification based on size, ecology, as per depth distribution, length of planktonic life; Distribution; Spatial Temporal variation, Seasonal changes in zooplankton abundance, Encounter rate, Reynold's number, particle-tracking velocimetry, microscale turbulence, changes in vertical distribution, migration	
1.2	Diversity and biomass size spectra: Sampling, Instruments, Laser optical plankton counter, ZooScan, ZooCAM; diversity indices	
1.3	Feeding mechanism: Passive ambush feeding, Active ambush feeding, Feeding-current feeding (Direct interception, Filter feeding, Scanning currents, Hovering versus cruising), Cruise feeding (small prey, marine snow) Detection of possible modes of selective feeding, Calculation of feed rates, Intraguild predation; impact of zooplankton food selectivity on plankton dynamics and nutrient cycling	
1.4	Zooplankton associated microbial communities – prokaryotes, eukaryotes; aerobes, anaerobes	
1.5	Zooplankton monitoring projects, Continuous plankton recorder surveys, The Scientific Committee on Oceanic Research (SCOR), Global Ocean Observing System (GOOS), JGOFS, Global Alliance of CPR Surveys (GACS), Global Ocean Ecosystem Dynamics (GLOBEC), Integrated Marine Biosphere Research (IMBeR), Ocean Biogeographic Information System (OBIS)	
2	Systematics, Genomics and Molecular Detection	12 L
2.1	Systematics and morphology of the major groups such as copepods, rotifers, chaetognaths, euphausiids, mysids, ostracods, tintinnids, cnidarians; Growth, Reproduction and development lifecycles; Protists (Mastigophora, Sarcodina, Ciliophora)	
2.2	Population genomics of marine zooplankton: Genomic resources, Mitogenomes, Transcriptomic resources, Genomic basis of adaptation, Metagenetics & metabarcoding, Case studies (<i>Calanus finmarchicus</i> ,	

	<i>Acartia tonsa</i> , <i>Euphasia superba</i> , <i>Spadella cephaloptera</i>); Molecular detection, Sandwich hybridization assay, Zooplankton diversity analysis through single-gene sequencing of community sample; Non-destructive genome skimming for aquatic copepods; Target Capture Sequencing for cross-species relevance; Single Cell Genomics approach for pico- and nano-sized protists	
3	Ecological Significance of Zooplankton and Trophic Interactions	12 L
3.1	Zooplankton indicators of water quality: in bays, in brackish coastal waters (Rotifer trophic state indices); Zooplankton toxicity test methods for marine water quality evaluations; Effect of water quality on structure of zooplankton assemblages – anthropogenic pressure	
3.2	Elemental stoichiometry of zooplankton, implications in nutrient cycling; microzooplankton stoichiometry plasticity	
3.3	Association between Vibrios and zooplankton Bacterial bioluminescence as a lure for marine zooplankton	
3.4	Studies on the Interrelationships of Zooplankton and Phytoplankton, Microcosm experiments for interactions between zooplankton, phytoplankton and microbial foodweb; Zooplankton impact on the trophic structure of phytoplankton, Implications of climate change	
3.5	Zooplankton grazing as an important source of mortality for harmful algal bloom species; zooplankton as toxin vectors or toxin sink; Relevance of marine chemical ecology to zooplankton	
3.6	Impact of climatic change on zooplankton: microzooplankton grazing rates due to changes in heterotrophic bacteria, zooplankton population dynamics influencing the recruitment success of pelagic fish stocks	
Pedagogy:	Lectures/tutorials/assignments/self-study/Moodle/Videos

	Single cell genomics yields a wide diversity of small planktonic protists across major ocean ecosystems, 2019 Sieracki, M.E., Poulton, N.J., Jaillon, O., Wincker, P., de Vargas, C., Rubinat-Ripoll, L., Stepanauskas, R., Logares, R., Massana, R., Nature Scientific Reports 9: 6025.	
Learning Outcomes:	<ol style="list-style-type: none"> 1. Explain the role of zooplankton in various oceanographic processes. 2. Apply the knowledge of different groups of zooplankton to study them in any marine pelagic environment. 3. Explain the application of modern genomics technology for their detection. 	

Programme: M.Sc. (Marine Microbiology)

Course Code: MMO 303

Title of the Course: MARINE ZOOPLANKTON - PRACTICAL

Number of Credits: 1

Effective from Academic Year: 2020-21

Prerequisites	Knowledge of marine ecology is a prerequisite.	
Objectives	To get practical knowledge of handling the sampling, microscopy and molecular identification of zooplankton.	
Content:		24 H
1.	Sampling of marine zooplankton	
2.	Identification of marine zooplankton up to different groups or order.	
3.	Methods of biomass estimation.	
4.	Grazing studies (dilution plot).	
5.	DNA extraction from zooplankton specimens for PCR.	
Pedagogy:	Field visit, laboratory experiments	
Reading/References:	Methods in Marine Zooplankton Ecology, 1984 Omori, W. and Ikeda, T. Wiley	
	Zooplankton Methodology Manual, 2000 - Harris, R., Wiebe, P., Lenz, J., Skjoldal, H.R., Huntley, M. (Eds), ICES Academic Press, San Diego, pp. 68	
	Atlas of Marine Zooplankton Straits of Magellan: Amphipods, Euphausiids, Mysids, Ostracods, and Chaetognaths, 1997 Guglielmo, L. New York Springer-Verlag	
Learning outcomes:	Practical knowledge of sampling, and identification of marine zooplankton and DNA isolation from the specimens for molecular identification.	

Programme: M.Sc. (Marine Microbiology)

Course Code: MMO 304

Title of the Course: ARCHAEA

Number of Credits: 3

Effective from Academic Year: 2020-21

Prerequisites	Basic knowledge of 3 domains of life, difference between prokaryotic cells, eukaryotic cells and archaea.	
Objective:	This course develops concept of Three domains of Life, Ecology, physiology and diversity of Archaea, cell structure and architecture of archaea, metabolism and energetics of archaea and Genetics of domain Archaea.	
Content:		
1.	Archaea – significance, ecology and cell organization	12 L
1.1	Significance of Archaea: Biotechnology, Biogeochemical cycling, Evolutionary developments	
1.2	Ecology, physiology and diversity of Archaea Global econiches: Deep Sea, Hydrothermal vent, Dead Sea, solar salterns, geothermal vents, solfataras, Antarctica, soda lake. Study of archaeal biodiversity; unculturable archaea by metagenomics. Archaeal culture retrieval methods, novel samplers. Preservation and maintenance of archaeal cultures. Nutrition, growth and growth kinetics and physiological versatility, Stress response of Methanogens (<i>Methanobacterium thermoautotrophicum</i>); Halophiles (<i>H. salinarum</i>); Thermophiles (<i>Thermoplasma acidophilum</i>); Thermoacidophiles (<i>Sulfolobus acidocaldarius</i>); Psychrophilic archaea (<i>Methanogenium frigidum</i> , <i>Methanococcoides burtonii</i>); Methanotrophs. Methylotrophs	
1.3	Cell structure and architecture of Archaea: Cellular organization: cell morphotypes, cell envelopes -archaeal membrane lipids and cell wall, appendages -pili, flagella, cannulae, hami. Novel bio-molecules: Glycerol diether moieties and macrocyclic lipid, novel enzymes, co-enzymes: methanopterin, formaldehyde activation factor, Component B, Coenzyme M, F420, F430, corrinoids.	
2.	Metabolism and energetics of Archaea	12 L
2.1	Modified anabolic pathways of carbohydrates and lipids; methanogenesis and acetoclastic reactions.	
2.2	Modified central metabolic pathways: EMP, ED, incomplete TCA; reverse Krebs cycle, carbon dioxide reduction pathways: reductive acetyl-CoA pathway, 3-hydroxypropionate pathway. Chemolithoautotrophy.	
2.3	Bioenergetics: ATP synthesis (i) respiration-driven (ii) light-driven, involving bacteriorhodopsin (iii) chloride-driven, involving halorhodopsin. Gibb's free energies of metabolic reactions of methanogens.	

3.	Genome of Archaea	12 L
3.1	Size of genome, G + C content, associated proteins, archaeal histones and nucleosomes, introns in archaea, archaeal RNA polymerases, reverse DNA gyrase.	
3.2	Plasmids, transposons -IS elements. Modifications in tRNA and rRNA structure. Novel 7S rRNA. DNA replication, translation and transcription in archaea.	
3.3	Gene organization in Archaea: (i) <i>his</i> operon (ii) <i>bob</i> operon (iii) <i>mcr</i> operon.	
Pedagogy:	Lectures/tutorials/assignments/self-study	
References/ Readings	Woese, C. R., Fox, G. E., (1977) Phylogenetic structure of the prokaryotic domain: the primary kingdoms. Proc Natl Acad Sci USA. 74: 5088–5090.

	Rothe, O. and Thomm, M., (2000) A simplified method for the cultivation of extreme anaerobic archaea based on the use of sodium sulfite as reducing agent, Extremophiles. 4: 247-252.	
Learning outcomes	<ol style="list-style-type: none"> 1. Explains the concept of third domain of Life Archaea. 2. Explains the Ecology, Physiology and Biochemistry of domain Archaea. 3. Principles of Archaeal Genetics and application. 4. Application of Archaea and archaeal bioactive compounds in Industry. 	

Programme: M.Sc. (Marine Microbiology)

Course Code: MMO 305

Title of the Course: ARCHAEA- Practical

Number of Credits: 1

Effective from Academic Year: 2020-21

Prerequisites	It is required that students have basic knowledge of 3 domains of life and basic microbiology techniques.	
Objective:	This course develops concepts in sampling and isolation of archaea from different econiches. Also identification of archaea and study of archaeal pigments.	
Content:		
1.	Isolation and culturing of archaea	24 H
2.	Identification of archaeal isolates	
2.1	Biochemical tests for archaea	
2.2	Extraction of archaeal pigment and characterization using UV-Vis spectroscopy	
2.3	Screening for archaeal enzymes	
Pedagogy:	Experiments in the laboratory	
References/ Readings	Munn, C., Marine Microbiology: Ecology and Applications, Garland Science, Taylor and Francis Group, N.Y.	
	Boone, D. R. and Castenholz, R. W., Bergey's Manual of Systematic Bacteriology: The Archaea and The Deeply Branching and Phototrophic Bacteria, Springer Science and Business Media.	
	Corcelli, A. and Lobasso, S., (2006) Characterization of Lipids of Halophilic Archaea. <i>Methods in Microbiology</i> , 35: 585-613.	
	Rothe, O. and Thomm, M., (2000) A simplified method for the cultivation of extreme anaerobic archaea based on the use of sodium sulfite as reducing agent, <i>Extremophiles</i> . 4: 247-252.	
Learning outcomes	1. Sampling from different Econiches of Archaea 2. Skill development for Isolation, culturing of Archaea and identification of archaea. 3. Bioprospecting of bioactive molecules from archaea.	

Programme: M.Sc. (Marine Microbiology)
Course Code: MMO 306
Title of the Course: GENETIC ENGINEERING
Number of Credits: 3

Prerequisites	Knowledge of bacterial and animal genetics, basic molecular and microbiology is a prerequisite.	
Objective:	This course aims to introduce the fundamental tools and techniques required for molecular cloning, with emphasis on DNA editing to protein expression in wide variety of hosts. Applications of genetic engineering in agriculture, therapeutics and industry will be covered.	
Content:		
1.	Introduction to genetic engineering and tools involved in genetic manipulation	12 L
1.1	Introduction to genetic engineering	
1.2	Tools and techniques involved in genetic manipulation I	
A.	DNA modifying enzymes: restriction endonucleases, exonucleases, DNA ligases (T4 DNA Ligase and <i>E.coli</i> DNA ligase), Terminal DNA transferase, DNA Polymerases (Taq, Amplitaq, vent, Exo-vent, Pfu, T4 etc), Reverse transcriptase, T4 polynucleotide kinases, Alkaline phosphatase, S-1 Nuclease, Mung bean nuclease, RNases.	
B.	Gene cloning systems/Hosts: Gene cloning in <i>E. coli</i> and other organisms such as <i>Bacillus subtilis</i> , <i>Saccharomyces cerevisiae</i> and other microbial eukaryotes. Retroviruses and retroposons, Genomic organization T4, Lambda Phage, TMV, SV40, Petite mutants of yeast, F plasmids and their use in genetic analysis R plasmids antibiotic resistance, Ti plasmid, 2 μ plasmid	
C.	Sequencing Vectors: pUC 19 and M-13 Phage vector.	
2.	Tools and techniques involved in genetic manipulation II	12 L
A.	Expression vectors: Prokaryotic (pET, pGEX-2T). Characteristics of expression vectors: strong bacterial and viral promoters (lac, trp, tac, SV 40, T7, T3) for induction of gene expression.	
B.	Cloning vectors: plasmid (pUC19, pBR 322), λ phage based vectors, cosmid vectors, Phasmid vectors, shuttle vectors, High capacity Cloning vectors (BAC and YACs).	
C.	Construction of cDNA molecule and its transfer to appropriate host (bacteria/yeast/plant cell/animal cell) using a suitable technique: transformation, electroporation, transfection, gene gun.	
D.	Other Recombinant DNA techniques: Use of radioactive and non-radioactive nucleotides for DNA probe preparation and detection of hybrids, Gel retardation assay, Restriction mapping, RFLP, PCR, RT-PCR, Real time PCR, Microarray, DNA sequencing using Sanger's Dideoxy chain termination method and automated sequencer; Illumina sequencing; chromosome walking.	
3		12 L
3.1	Application of genetic engineering in DNA diagnostics	

A.	Screening of Genetic diseases using DNA probes (DNA diagnostics).	
B.	Application of recombinant DNA technology in solving parental dispute and criminal cases (DNA finger printing).	
3.2	Application of genetic engineering production of recombinant drugs, vaccines and hormones	
A.	Production of recombinant proteins and drugs (insulin, tissue plasminogen activator, erythropoietin, human growth hormones, Antibodies (including bispecific antibodies), vaccines, interferons, DNA vaccines: merits and demerits, Edible vaccines- merits and demerits.	
B.	Genetic manipulation to increase recombinant protein stability and secretion using signal sequences.	
3.3	Genetic engineering of microbes for production of enzymes, biomolecules and fermentation products.	
A.	Genetic manipulation of microbes to over-produce industrially valuable enzymes.	
B.	Production of microbial SCPs.	
3.4	Genetic engineering of microbes for bioremediation and biomonitoring of toxic environmental pollutants, Biohydrometallurgy	
A.	Microbial bioremediation of xenobiotics by recombinant microbes.	
B.	Bioremediation of toxic heavy metals and organometals by recombinant microbes.	
C.	Biohydrometallurgy using recombinant microbes for recovery of precious metals.	
Pedagogy:	Experiments in the laboratory	
References/ Readings	Old, R. W. and Primrose, S. B., Principles of Gene Manipulation: An introduction to Genetic Engineering, University of California Press.	
	Glick, B. R., Pasternak, J. J. and Patten, C. L., Molecular Biotechnology: Principles and Applications of Recombinant DNA, ASM Press.

	Green, M. R. and Sambrook, J., Molecular Cloning: A Laboratory Manual, Cold Spring Harbor Laboratory, New York	
	Davis, L. G., Dibner, M. D. and Battey, J. F., Basic Methods in Molecular Biology, Elsevier.	
Learning Outcomes	1. Understanding of tools and techniques involved in molecular cloning. 2. Overall understanding about the importance of GMOs, GMPs and other engineered products in science and industry.	

Programme: M.Sc. (Marine Microbiology)

Course Code: MMO 307

Title of the Course: GENETIC ENGINEERING - Practical

Number of Credits: 1

Prerequisites	Theoretical understanding of chromosomal DNA, plasmid DNA, selection media and preparatory microbiology is needed.	
Objective:	To have a hand on experience on plasmid DNA isolation, modification and insertion; basically a DNA cut-copy-paste technology that forms the basis of any genetic engineering wet lab.	
Content:		24 H
1.	Plasmid extraction	
2.	Restriction mapping of bacterial plasmid and agarose gel analysis.	
3.	Preparation of competent cells and transformation of <i>E. coli</i> host with plasmid DNA using heat shock method and electroporator; confirmation of positive transformants.	
4.	Assessment of DNA ligation activity of T4 DNA ligase.	
Pedagogy:	Experiments in the laboratory	
References/ Readings	Green, M. R. and Sambrook, J., Molecular Cloning: A Laboratory Manual, Cold Spring Harbor Laboratory, New York	
	Davis, L. G., Dibner, M. D. and Battey, J. F., Basic Methods in Molecular Biology, Elsevier.	
Learning Outcomes	1. A practical understanding of how the DNA modifying enzymes work. 2. Hand-on experience with plasmid and bacterial host	

Programme: M.Sc. (Marine Microbiology)
Course Code: MMO 308
Title of the Course: MARINE MYCOLOGY
Number of Credits: 3
Effective from Academic Year: 2020-21

Prerequisites	The student should be familiar with the structural morphology of the fungus and their existence in the surrounding environment.	
Objective:	This course deals with detailed classification and identification of fungi, fungal ecology in marine and extreme habitats, fungal genetics and applications of fungal enzymes and various primary and secondary metabolites.	
Content:		
1.	Fungal diversity and distribution	14 L
1.1	Fungi: Phylogeny and detailed classification	
	Econiches of Marine Fungi: Polyhaline Coastal Environment (salt marsh, mangrove, estuarine and Oceans); Hypersaline environment (solar salterns, Salt Lake, Dead Sea); Deep Sea (Hydrothermal vents).	
1.2	Extremophilic Fungi	
	Halophiles, Xerophiles, Oligotrophs, Barophiles, Psychrophiles, Thermophiles.	
1.3	Techniques to study marine and extremophilic fungi	
	Sample collection and isolation procedures;	
	Identification - Morphotyping; Secondary metabolites; Molecular finger printing: FAME, Karyotyping, Gene sequencing.	
2.	Physiology and Genetics	12 L
2.1	Growth and development	
	Growth cycle. Fungal hormones- attractants, morphogenesis and differentiation. Secondary metabolites: pigments, mycotoxins.	
2.2	Fungal genetics	
	Cross over and tetrad analysis, gene conversion, mating type switching; Deuteromycotina: parasexuality, cytoplasmic inheritance.	
	Fungal associations: Saprophytes, parasites and symbionts on higher forms of marine life.	
3.	Threats and Applications	10 L
3.1	Mycoses	
	Diseases of fish, bivalves and corals	
3.2	Bioprospecting and bioremediation	
	Industrially important enzymes. Secondary metabolites: Natural products – nutraceuticals, antimicrobials, antitumour agents, pigments. Biodegradation and bioremediation.	
Pedagogy:	Lectures/tutorials/assignments/self-study	

References/ Readings	Alexopoulos, C. J., Mims, C. W. and Blackwell, M., Introductory Mycology, John Wiley & Sons.

	Seshagiri Raghukumar, Fungi in Coastal and Oceanic Marine Ecosystems, Springer Publishers. Doi: 10.1007/978-3-319-54304-8	
Learning outcomes	Apply the knowledge in fungal taxonomy, bioremediation and bioprospecting of secondary metabolites and industrially important fungal enzymes.	

Programme: M.Sc. (Marine Microbiology)

Course Code: MMO 309

Title of the Course: MARINE MYCOLOGY - Practical

Number of Credits: 1

Effective from Academic Year: 2020-21

Prerequisites	The student should know to cultivate the fungal cultures.	
Objective:	The course deals with sampling techniques for marine samples to isolate fungi and identify them	
Content:		24 H
1.	Study of representative fungal cultures: (a) Colony and (b) Morphological characteristics.	
2.	Isolation and identification of fungi from marine ecosystem	
3.	Biosorption of metal using marine fungal isolate.	
Pedagogy:	Lectures/tutorials/assignments/self-study	
References/ Readings	Alexopoulos, C. J., Mims, C. W. and Blackwell, M., Introductory Mycology, John Wiley & Sons.	
	Mehrotra, R. S. and Aneja K. R., An Introduction to Mycology. Wiley Eastern Limited.

	Kendrick, B., The Fifth Kingdom, Focus Publishers.	
	Borse, B. D., Bhat, J. D., Borse, K. N., Tuwar, N. S. and Pawar, N. S., Marine Fungi of India (Monograph), Broadway Publishing House.	
Learning outcomes	Apply the knowledge in fungal taxonomy, bioremediation and bioprospecting of secondary metabolites and industrially important fungal enzymes.	

Programme: M.Sc. (Marine Microbiology)

Course Code: MMO 310

Title of the Course: MARINE POLLUTION AND MONITORING

Number of Credits: 3

Effective from Academic Year: 2020-21

Prerequisites	Basic knowledge about marine environment and pollution.	
Objective	Introduce the students to various marine pollutants, its impact on marine ecosystems and humans and how to monitor it.	
Content		
1.	Sources and pathways of pollution	12 L
1.1	Marine environment, pollutants, toxicity, point and non-point sources of pollution.	
1.2	Oil spills, tarballs, polyaromatic hydrocarbons. Domestic sewage. Agricultural waste. Nutrients. Industrial and thermal power plants. Pesticides and persistent organic pollutants. Pharmaceuticals and personal care products. Antibiotics. Metals, metalloids and organo metals, Radioactive waste. Deep-sea mining. Ocean dumping.	
1.3	Marine Debris- sources, constituents, derelict of fishing gears, plastics/microplastics, garbage patch in the oceans.	
1.4	Acoustic pollution- sources and conservation of marine ecosystem	
2.	Threat to marine ecosystem, biodiversity, community structure and humans	12 L
2.1	Eutrophication. Anaerobiosis. Biofouling and bioinvasion. Biocorrosion. Bioaccumulation and biomagnification. Case studies.	
2.2	Impact on estuarine, mangroves, coastal and open ocean, coral reefs.	
	Effect of pollution on life cycle and health of phytoplankton, zooplankton, fish, shellfish, corals reefs, humans. Harmful algal blooms, red tides.	
	Effect of marine pollutants on productivity and sustainability of marine econiche.	
	Effect of marine pollution on humans: Minamata, itai itai diseases, neurological disorders, reproductive disorder, carcinogenesis and teratogenic effects.	
3.	Pollution Monitoring and Regulation	12 L
3.1	Ocean health index, maritime laws, law of the sea and exclusive economic zone. Green chemistry.	
3.2	Biomonitoring and bioremediation, microbial degradation, bio-attenuation, bioaugmentation bioindicators, role of foraminifera as a bioindicator, biotracers, biosensors, biomarker, genetically engineered organisms, quorum sensing, cleanups.	

3.3	Genomics in marine monitoring: Environmental DNA. DNA barcoding and metabarcoding. Metagenomics. Microarrays. RT-PCR. Short nucleotide polymorphisms. Transcriptomics.	
3.4	Remote sensing in pollution monitoring. Marine conservation, Marine protected areas, Marine parks and sanctuaries. Marine environment-related legislation in the world and in India. Marine pollution monitoring programs. Marine environmental impact assessment. Wastewater treatment plants: primary, secondary and tertiary treatment.	
Pedagogy:	Lectures/tutorials/assignments/case studies/self-study	
References/Readings	Satyanarayana, T., Johri, B. and Anil, T., Microorganisms in Environmental Management, Springer Publishers

	Naik, M. and Dubey, S. K. (2017). Marine Pollution and Microbial Remediation, Springer Publications	
	Prince, R. C., Bioremediation of Marine Oil Spills. In: Handbook of Hydrocarbon and Lipid Microbiology, Springer Publishers.	
Learning Outcomes	Knowledge on how marine pollutants can affect marine organisms and humans.	

Programme: M.Sc. (Marine Microbiology)

Course Code: MMO 311

Title of the Course: MARINE POLLUTION AND MONITORING - Practical

Number of Credits: 1

Effective from Academic Year: 2020-21

Prerequisites	Basic knowledge about marine environment and pollution.	
Objective	Estimate the pollutants from the marine environment	
Content		24 H
1.	Impact of lead/selenium/arsenic/chromium on the marine microbes.	
2.	Impact of naphthalene/anthracene on the marine microbes.	
3.	Determination of biochemical and chemical oxygen demand.	
4.	Size classification of marine debris/plastic.	
Pedology	Laboratory experiments/ Field trips	
References/ Readings	Grasshoff, K., Ehrhardt, M. and Kremling, K., Methods of Seawater Analysis, Verlag Chem., Weinheim.	
	Instrumental Methods of Chemical Analysis, 1981 – Ewing, G. W.; McGraw-Hill, New York.	
	Parsons, T. R., Maita, Y. and Lalli, C. M.; (1984). A Manual of Chemical and Biological Methods for Seawater Analysis, Pergamon Press, Oxford.	
	Strickland, J.D.H, and Parsons T.R., (1972). A practical handbook of seawater analysis, Fisheries Board of Canada bulletin. (2nd edition).	
Learning outcomes	Hands-on training to identify whether any marine ecosystem/organisms are polluted and measure it	

Programme: M.Sc. (Marine Microbiology)

Course Code: MMO 312

Title of the Course: ANALYTICAL TECHNIQUES IN PHYTOPLANKTON STUDIES

Number of Credits: 1

Effective from Academic Year: 2020-21

Prerequisites	Knowledge of marine ecology is a prerequisite.	
Objective:	To get a practical knowledge of handling the sampling, isolation and purification process of phytoplankton. The course will enable the students to identify phytoplankton and learn the bioprospecting of marine phytoplankton	
Content		24 H
1.	Sampling and collection of phytoplankton.	
2.	Estimation of phytoplankton biomass.	
3.	Identification of phytoplankton.	
4.	Culturing of phytoplankton (f/2, K medium).	
5.	Extraction and bioactivity (bioprospecting).	
Pedagogy:	On site sampling and laboratory experiments	
Reading/References	Sournia, A., UNESCO Monographs on Oceanographic Methodology, Vol. 6, Phytoplankton Manual, UNESCO Publishing, Paris.	
	Tomas, C.R. (Ed.) 1996. - Identifying Marine Diatoms and Dinoflagellates. Academic Press, Inc., N. York, 598 pp.	
	Tomas, Carmelo, R. 1997. Identifying Marine Phytoplankton. Academic Press	
Learning outcomes	Practical knowledge of sampling, isolation, identification of marine phytoplankton and bioprospecting for its commercial secondary metabolites	

Programme: M.Sc. (Marine Microbiology)

Course Code: MMO 313

**Title of the Course: MARINE EXTREMOPHILIC MICROORGANISMS:
CULTURING AND CHARACTERIZATION**

Number of Credits: 1

Effective from Academic Year: 2020-21

Prerequisites	Basic knowledge of extreme marine environments and their defining features is necessary.	
Objective:	This course aims to widen the students' understanding of the techniques involved in sampling extreme marine environments and processing and characterization procedures, for different categories of extremophiles.	
Content:		24 H
1.	Technique for isolation of psychrophiles/halophiles/oligotrophs/anaerobes/organic solvent-tolerant bacteria.	
2.	Effect of varying salt concentrations on growth of halophiles/halotolerant microbes.	
3.	Growth of bacterial isolates at varying nutrient levels.	
Pedagogy:	Experiments in the laboratory	
References/ Readings	Brock, T. D., Thermophilic Microorganisms and Life at High Temperatures, Springer, New York.	
	Horikoshi, K. and Grant, W. D., Extremophiles – Microbial Life in Extreme Environments, Wiley, New York.

	Ventosa, A., Nieto, J. J., Oren, A. (1998) Biology of moderately halophilic aerobic bacteria. Microbiology and Molecular Biology Reviews, 62: 504-544.	
Learning Outcomes	Skills in isolation and characterization of different groups of extremophiles.	

Programme: M.Sc. (Marine Microbiology)

Course Code: MMO 314

Title of the Course: ANALYSIS OF MICROBIAL PATHOGENS IN THE MARINE ENVIRONMENT

Number of Credits: 1

Effective from Academic Year: 2020-21

Prerequisites	It is required that students have basic knowledge about marine environment, climate change, pollutants in marine environment and basic microbiology techniques.	
Objective:	This course develops concepts in protocols/ strategies for characterization of pathogenic organisms from the marine environment and for determining the efficacy of sanitizers used in aquaculture.	
Content:		24 H
1.	Detection of different indicator and pathogenic organisms from marine environments such as <i>S. aureus</i> , <i>E. coli</i> , <i>V. cholerae</i> , <i>Salmonella</i> , <i>Shigella</i> , by conventional and rapid methods.	
2.	Characterization of pathogenic isolates - determination of salinity tolerance and antibiotic resistance.	
3.	Testing the efficacy of aquaculture sanitizer (phenol).	
Pedagogy:	Experiments in the laboratory	
References/ Readings	1.Hester, R. E., Harrison, R. M., Marine Pollution and Human Health, Vol. 33, Issues in Environmental Science and Technology, Royal Society of Chemistry. 2.Belkin, S. and Colwell, R. R., Oceans and Health: Pathogens in Marine Environment. Springer Publishers. 3.Noga E. J., Fish Disease: Diagnosis and Treatment, Wiley-Blackwell Publishers. 4.Rheinheimer, G., Aquatic Microbiology, John Wiley Publishers. 5.Clark, R. B., Frid, C., Attrill, M., Marine Pollution, Oxford University Press. 6.Wedemeyer, G. A., Meyer, F. P. and Smith, L., Environmental Stress and Fish Diseases, TFH Publications, Neptune, New Jersey. 7.Buller, N. B. and Plumb, J. A., Bacteria from Fish and Other Aquatic Animals: A Practical Identification Manual, CABI Publishing.	
Learning Outcomes	1) Students will learn to quantify and characterize bacterial pathogens and compare against relevant standard guidelines. 2) They will be able to formulate effective strategies for monitoring aquaculture systems.	

Programme: M.Sc. (Marine Microbiology)

Course Code: MMO 315

Title of the Course: MICROBIAL REMEDIATION - PRACTICAL

Number of Credits: 1

Effective from Academic Year: 2020-21

Prerequisites	It is required that students have basic knowledge about marine environment, marine pollutants, and xenobiotics. Basic microbiology techniques.	
Objective:	This course develops concepts in application of marine microorganisms in pollution abatement and sustainable development.	
Content:		24 H
1.	Use of hydrocarbon-degrading marine bacteria to test degradation of sodium benzoate.	
2.	Isolation of biosurfactant-producing microorganisms.	
3.	Isolation of selenite/tellurite resistant marine-derived bacteria for application in bioremediation.	
4.	Use of bacterial/fungal isolates for decolourization of dyes.	
Pedagogy:	Experiments in the laboratory	
References/ Readings	Satyanarayana, T., Johri, B. and Anil, T., Microorganisms in Environmental Management, Springer Publishers. Prince, R. C., Bioremediation of Marine Oil Spills. In: Handbook of Hydrocarbon and Lipid Microbiology, Springer Publishers. Judith, S.W., Marine Pollution: What Everyone Needs To Know. Oxford University Press. Munn, C., Marine Microbiology: Ecology and Applications, Garland Science, Taylor and Francis Group, N.Y. King, R. B., Sheldon, J. K. and Long, G. M. (1997) Practical Environmental Bioremediation: The Field Guide, Lewis Publishers. Kennish, M. J. (1996) Practical Handbook of Estuarine and Marine Pollution. CRC Press, Francis and Taylor. Naik, M. and Dubey, S. K., Marine Pollution and Microbial Remediation, Springer Publications.	
Learning Outcomes	1) Students will learn to apply different bioremediation approaches using marine microorganisms to deal with pollutants and xenobiotics.	

Programme: M.Sc. (Marine Microbiology)

Course Code: MMO 316

Title of the Course: MARINE MICROBIAL SCREENING FOR SECONDARY METABOLITES

Number of Credits: 1

Effective from Academic Year: 2020-21

Prerequisites	It is necessary that students should have a working knowledge of the techniques used for sampling and analysis of marine samples.	
Objective:	The course develops the techniques involved in processing of marine samples for bioprospecting.	
Content:		
1.	Sampling, isolation and screening for marine microbes from marine waters/sediments, marine organisms (bivalves/seaweeds/squid) for:	24 H
1.1	Pigments	
1.2	Antibiotics	
1.3	Plant growth hormones	
1.4	Siderophores	
Pedagogy:	Experiments in the laboratory	
References/ Readings	Kennish, M. J., Practical Handbook of Estuarine and Marine Pollution, CRC Press.	
	Goldman, E. and Green, L. H., Practical Handbook of Microbiology, CRC Press.

	Borkar, S., Bioprospects of Coastal Eubacteria, Springer Publishers.	
Learning outcomes	Skills in designing and conducting experiments in the marine environment for bioprospecting purposes.	

Programme: M.Sc. (Marine Microbiology)

Course Code: MMO 317

Title of the Course: MICROBIOLOGICAL ANALYSIS IN FISHERIES - Practical

Number of Credits: 1

Effective from Academic Year: 2020-21

Prerequisites	Knowledge of fishes, and microbial diversity.	
Objective:	Provides hands-on experience in the fish anatomy and its associated microbial flora, including human pathogens.	
Content:		24 H
1.	Sampling techniques for microbiological investigation of moribund fish.	
2.	Methods for examination and analyzing fish for health certification/diagnosis of disease condition, techniques for sample collection and processing for bacteriological agents	
3.	Isolation and identification of various human bacterial pathogens from fish samples (<i>Enterobacteriaceae</i> and <i>Vibrio</i>).	
Pedagogy:	Experiments in the laboratory.	
References/ Readings	Woo, P. and Bruno, D. Fish Diseases and Disorders, Vol 3: Viral, Bacterial and Fungal Infections, CABI Publishers.	
	Noga, E. C., Fish Disease: Diagnosis and Treatment. Wiley-Blackwell Publishers.	
	Leatherland, J. F. and Wook, P. K. T., Fish Diseases and Disorders, CABI Publishers.	
Learning outcomes	Apply the tools and techniques of microbiology to specifically assess the microbiological quality of fishes in terms of associated disease or as carrier for human pathogens.	

Programme: M.Sc. (Marine Microbiology)

Course Code: MMO 318

Title of the Course: MICROBIAL OCEANOGRAPHIC METHODS - Practical

Number of Credits: 1

Effective from Academic Year: 2020-21

Prerequisites	Basic understanding of the marine environments.	
Objective	Enable the students to identify microbes and understand their role in the marine environment.	
Content		24 H
1.	Use of fluorochromes for enumeration of bacteria from the marine environment using epifluorescence microscopy.	
2.	Enumeration of live and dead marine microbes using microscopy	
3.	Microscopic observation of cellular components using fluorochromes	
4.	Estimation of primary productivity using light and dark method.	
5.	Determination of dissolved organic carbon from seawater.	
6.	Determination of hydrolytic enzymes from plankton/seawater/sediments	
Pedagogy:	Laboratory experiments/ Field trips	
References/ Readings	Colin Munn (2011). Marine Microbiology Ecology & Applications. Taylor Francis Group.	
	A Manual of Chemical and Biological Methods for Seawater Analysis, 1984 – Parsons, T. R., Maita, Y. and Lalli, C. M.; Pergamon Press, Oxford.	
	A practical handbook of seawater analysis, 1972 - Strickland, J.D.H, and Parsons, T.R., Fisheries Board of Canada bulletin. (2nd edition).	
	Jeffrey, S.W and Vesk, M., Introduction to Marine Phytoplankton and Their Pigment Signatures. In: Phytoplankton Pigments in Oceanography. UNESCO Publishing, Paris.	
Learning Outcomes	Knowledge on how to study microbes in the ocean using different sampling strategies, techniques and instrumentation.	

Programme: M.Sc. (Marine Microbiology)
Course Code: MMO 319
Title of the Course: FIELD TRIP/ STUDY TOUR
Number of Credits: 1
Effective from Academic Year: 2020-21

Prerequisites	Knowledge about microbiology-related institutes and industries in Goa.	
Objective:	To provide knowledge about the on-going research in various national research institutes, and the functioning of marine microbiology/oceanography related industries and industrial processes.	
Content:		24 H
1.	Visit to national research institutes: National Centre for Polar and Ocean Research [NCPOR], National Institute of Oceanography [NIO] and ICAR – Central Coastal Agricultural Research Institute [ICAR – CCARI].	
2.	Visit to industries	
3.	Report writing based on the visits	
4.	Presentation and group discussion based on the visits	
Pedagogy:	Visits to research institutes and industries. Demonstration of equipment available with respective laboratories, interaction with personnel working in the field of microbiology in the respective institutes.	
References/ Readings	As suggested by the demonstrator to the participating students.	
Learning Outcomes	Exposure to research being carried out in the field of marine microbiology/oceanography in research institutes and industries using/or related to the applications of microbial principles.	

Programme: M.Sc. (Marine Microbiology)

Course Code: MMO 320

Title of the Course: TRAINING IN AN INSTITUTE/INDUSTRY/UNIVERSITY

Number of Credits: 1

Effective from Academic Year: 2020-21

Prerequisites	Knowledge about the basic techniques in microbiology.	
Objective:	To provide hands-on experience in the application of microbiological techniques in research institutes/industries/universities. To experience the workings of microbiology-related departments in commercial industries.	
Content:		24 H
	The student shall be required to 1. Undertake training for a minimum period of 10 working days or its equivalent. 2. Submit to the School of Earth, Ocean and Atmospheric Sciences (SEOAS), Goa University, a certificate of attendance signed by the Training Coordinator of the respective Institute/ Industry/University. 3. Submit to the SEOAS, a Report of the work undertaken. 4. Make a Presentation of the work carried out, to the Marine Microbiology faculty, for evaluation.	
Pedagogy:	Short-term internship (minimum 10 days) at an institute/industry/university	
References/ Readings	As suggested by the demonstrator to the participating students.	
Learning Outcomes	Apply the tools and techniques of microbiology to a range of situations.	

Programme: M.Sc. (Marine Microbiology)
Course Code: MMO 401
Title of the Course: POLAR MICROBIOLOGY
Number of Credits: 3
Effective from Academic Year: 2020-21

Prerequisites	An in-depth understanding of the concepts of marine microbiology is necessary.	
Objective:	This course highlights the unique characteristics of polar environments (the Arctic, Antarctic and the Southern Ocean), with emphasis on their microbial ecology, diversity, community interactions, and response to climate change.	
Content:		
1.	Polar environments (Arctic region, Antarctic region and the Southern Ocean), polar niches (dry valleys, ornithogenic soils, permafrost, cryoconites, sea ice, glaciers, lakes); microbial ecology, strategies to isolate and characterize polar microorganisms.	12 L
2.	Microbial diversity and factors influencing microorganisms in polar environments: Archaea – <i>Thaumarchaeota</i> ; Bacteria – <i>Glaciecola psychrophila</i> , <i>Pseudoalteromonas haloplanktis</i> , <i>Marinomonas primoryensis</i> ; cyanobacteria – <i>Oscillatoria</i> ; fungi and yeast - <i>Glaciozyma psychrophila</i> , and diatoms - <i>Fragilariopsis cylindrus</i> ; cellular, structural and physiological characteristics, community interactions and food webs, geochemical cycling. Biotechnological importance of polar microorganisms: psychroenzymes, anti-freeze proteins, novel antibiotics and other bioactive compounds.	12 L
3.	The effects of global warming and ocean acidification on polar ecosystems. Melting of glaciers, freshening of Arctic waters, intrusion of Atlantic waters into the Arctic region. Effects of iron fertilization on productivity and carbon export in the High-Nutrient-Low-Chlorophyll (HNLC) regions of the Southern Ocean and its impact on the Antarctic region.	12 L
Pedagogy:	Lectures/tutorials/assignments/self-study/case-studies	
References/ Readings	Bathmann, U. (2005) Ecological and biogeochemical response of Antarctic ecosystems to iron fertilization and implications on global carbon cycle, Ocean and Polar Research, 27(2): 231-235.

	D'Amico, S., Collins, T., Marx, J. C., Feller, G., Gerday, C. (2006) Psychrophilic microorganisms: challenges for life, EMBO Reports, 7(4): 385-389.	
	Duarte, C. M., Impacts of global warming on polar ecosystems, Fundacion BBVA.	
	Margesin, R., Miteva, V. (2011) Diversity and ecology of psychrophilic microorganisms, Research in Microbiology, 162: 346-361. Miller, R. V. and Whyte, L. G., Polar Microbiology: Life in a Deep Freeze, ASM Press, Washington, DC.	
	Smetacek, V., Nicol, S. (2005) Polar ocean ecosystems in a changing world, Nature Insight Reviews, 437: 362-368.	
Learning Outcomes	1. Explain the uniqueness of the polar environment. 2. Apply the concepts learned to understand the sensitivity of polar environments to climate change.	

Program: M.Sc. Marine Microbiology
Course Code: MMO 402
Title of the Course: DEEP SEA MICROBIOLOGY
Number of Credits: 4
Effective from Academic Year: 2020-21

Prerequisites	It is required that students have a basic knowledge of marine environment- different coastal habitats, pelagic waters and also about some oceanographic processes such as tides, gyres, El Nino Southern Oscillation.	
Objective	This course develops concepts in microbiology of the various habitats in deep marine environment, their role in the ecology of that environment.	
Content:		
1.	The deep sea environment Basic and in-depth conceptualization of deep marine subsurface; dark ocean biosphere/aphotic pelagic ocean habitats beneath the ocean water column, such as marine sediments, oceanic crust, abyssopelagic/abyssal, hadal plains and hydrothermal vents. Types of deep sea habitats and resident microbiota: marine trenches, ridges, deep permafrost sediments, Antarctic Ocean and Southern Ocean deep environments; piezophilic/ barophilic microorganisms in the deep sea.	12 L
2.		12 L
2.1	Sampling equipment Deep sea sampling equipment: submersibles, remotely operated underwater vehicles Techniques for collecting water and sediment samples, corers: gravity, piston and multiple corers (MUC), giant box corer (GBC); drilling techniques, MEBO sea floor drill rig.	
2.2	Culturing of deep sea microbes Introduction to anaerobic and pressure culture chambers/systems; techniques for isolation and culturing deep sea microorganisms under <i>in situ</i> and simulated deep sea conditions.	
3.	Deep sea ecosystems: Hydrothermal vents - Metals at hydrothermal vents, food webs, chemosynthesis, microbial communities – archaea, bacteria; and fungi; diversity of higher organisms including the tube worm <i>Riftia pachyptila</i> , sponges, corals; Cold seeps.	12 L
4.		12 L
4.1	Marine deposits Sapropel, carbonates, phosphorite, ancient halite, metallic nodules, marine basalts.	
4.2	Biogeochemical cycling, enzymes and energetic Nutrient cycling, oxidation of complex organic matter to carbon dioxide via Fe (III) oxide reduction or fermentation; <i>Nitrosopumilus maritimus</i> .	

Pedagogy:	Lectures/tutorials/assignments/self-study/Moodle/Videos	
References/ Readings:	Munn, C. Marine Microbiology: Ecology and Applications, Garland Science, Taylor and Francis Group, N.Y.

	Sharma, R. (2017) Deep-Sea Mining Resource Potential, Technical and Environmental Considerations. Springer International Publishing.	
	Kallmeyer, J., Wagner, D. (2012) Microbial Life of the Deep Biosphere. De Gruyter. eISBN: 9783110300130	
	Orcutt, B.N., Sylvan, J.B., Knab, N.J., Edwards, K.J. (2011) Microbial ecology of the dark ocean above, at, and below the seafloor. Microbiology and Molecular Biology Reviews, 75: 361-422.	
	Seibold, E., Berger, W. (2017) The Sea Floor An Introduction to Marine Geology. 4 th Edition. Springer International Publishing.	
Learning outcomes	1. Explain marine environment and various oceanographic processes, variation in microorganisms in different habitats, different marine deposits. 2. Explain microbial loop, biogeochemical cycling, biological carbon pump and its role in global climate change.	

Programme: M.Sc. (Marine Microbiology)
Course Code: MMO 403
Title of the Course: CORAL MICROBIOLOGY
Number of Credits: 3
Effective from Academic Year: 2020-21

Prerequisites	It is required that students have a basic knowledge of corals- their structure, classification and ecology	
Objective:	This course focuses on the various characteristics of coral ecosystems including the physico-chemical variables, evolution, survival strategies and associated microbial diversity.	
Content:		
1.	Introduction of Corals	12 L
1.1	Coral reef biology	
	Types of corals, composition, ecology, structure- anatomy and physiology.	
	Types of coral reefs and their global distribution.	
1.2	Factors affecting coral reefs	
	Abiotic factors - pH, temperature, salinity, sedimentation, wave action, weather conditions, nutrient availability, pollution, aerial exposure, light	
	Biological factors – competitors, disease, predators, symbiotic relationships, nutrient flux,	
	Natural and human disturbances to reefs and their impacts.	
1.3	Importance of coral reefs	
	Fisheries and marine products associated with coral reefs.	
	Ecological importance of coral reefs. Cultivation and conservation of corals.	
	Law and policy for conservation and management of corals in India	
2.	Microbial interaction with coral communities	12 L
2.1	Coral evolution and development	
	Subsidence theory, Glacial Control Theory, Stand Still Theory, Cycle of Erosion theory.	
	Coral communities and trophic structure. Primary producers (zooxanthellae, turf algae, coralline algae, endolithic algae, phytoplankton, benthic diatoms), consumers, food webs, productivity in coral reefs	
2.2	Coral and microbiome dynamics.	
	Internal nutrient cycling, Adaptive bleaching hypothesis, Coral probiotic hypothesis, Rosenberg's hologenome hypothesis	
	Symbiotic associations: Algal-coral associations, bacterial symbiosis, Multi-partner symbiosis.	
3.	Diagnosis and recovery of diseased/damaged corals	12 L
3.1	Microbial causative agents associated with coral diseases	

	Bacterial infections (Black band disease, Yellow band disease, White band disease, White plague, White patch disease, Lethal Orange Disease, bacterial bleaching); Fungal infections (Aspergillosis); Viral infections; Protozoic infections (Brown band disease, Skeletal eroding band).	
	Non-biotic stressors - thermal bleaching, ocean acidification. Growth anomalies.	
3.2	Coral disease spread assessment, treatment and recovery	
	Coral disease survey and monitoring protocols. Disease response plan. Outbreak management. Use of antibiotics and anti-oxidants for treating diseased corals. Phage therapy. Coral Restoration and Health Consortium (CRHC).	
Pedagogy:	Lectures/tutorials/assignments/self-study/case-studies

Learning outcomes	<ol style="list-style-type: none"> 1. The biology and biodiversity of corals 2. Thorough understanding of coral microbiome dynamics 3. Ecology of microbial infections and recovery of corals 	

Programme: M.Sc. (Marine Microbiology)
Course Code: MMO 404
Title of the Course: BIOINFORMATICS DATABASES
Number of Credits: 2
Effective from Academic Year: 2020-21

Prerequisites:	Knowledge of molecular taxonomy.	
Objectives:	This course will introduce students to various databases used for analysis of molecular data and evolution-related concepts under bioinformatics. This will provide students with theoretical knowledge of use of common computational tools and databases that facilitate investigation of molecular biology.	
Content:		
1	Introduction to Bioinformatics data and databases:	6 L
	Types of Biological data:- Genomic DNA, Complementary DNA, Recombinant DNA, Expressed sequence tags, Sequence Tagged Sites, Genomic survey sequences; Primary/Genomic Databases:- GenBank, EMBL, DDBJ; Composite Databases:-NRDB, OWL, UniProt; Bioinformatics Resources:- NCBI, EBI, ExPASy, RCSB. Multiple sequence alignment and phylogenetic tree building.	
2	Genome Databases:	6 L
	Viral genome database:-ICTVdb; Bacterial Genomes database:- Ensembl Bacteria, Microbial Genome Database-MBGD; Genome Browsers:- Ensembl, VEGA genome browser, NCBI-NCBI map viewer, KEGG, MIPS, UCSC Genome Browser; Eukaryotic genomes with special reference to model organisms:- Yeast (SGD) Phylogenetic database – eggnog, HOGENOM, OrthoDB.	
3	Protein Sequence Databases:	4 L
	Swiss-Prot, TrEMBL, UniProt, UniProtKB, UniParc, UniRef, UniMES; Sequence motifs Databases:- Prosite, ProDom, Pfam, InterPro, Gene Ontology; Polymorphism and mutation database- introduction to BioMuta, dbSNP- Database of short Genetic Variation	
4	Structure and derived databases:	8 L
	Primary structure databases:- PDB, NDB, MMDB; Secondary structure databases:-Structural Classification of Proteins – SCOP, Class Architecture Topology Homology –CATH, Families of Structurally Similar Proteins –FSSP, Catalytic Site Atlas –CSA;	

	Molecular functions / Enzymatic catalysis databases:- KEGG ENZYME database; Protein-Protein interaction database:- STRING, BioGRID, MINT; Chemical Structure database:- Pubchem, DrugBank, ChEMBL; Gene Expression database:- GEO, SAGE.	
Pedagogy:	Lectures/tutorials/assignments/self-study/Moodle/Videos	
Reading/References:	Lesk, A.M., 2005, Introduction to bioinformatics, Oxford University Press	
	Jean-Michel, C., 2005, Bioinformatics: a beginner's guide, Wiley Dreamtech India	
	Shanmughavel, P., 2005, Principles of bioinformatics, Jaipur Pointer Publishers	
	Jeremy, J.R., 2004, Bioinformatics: an introduction, Springer India	
	Rastogi, C., 2004, Bioinformatics: concepts, skills & applications, New Delhi CBS Publishers	
	Mount, D., 2000, Bioinformatics: sequence and genome analysis, New York Cold Spring Harbor Laboratory Press	
	Baxevanis, A., 2001, Bioinformatics: a practical guide to the analysis of genes and proteins, New York John Wiley & Sons	
	Srinivas, V.R., 2005, Bioinformatics: a modern approach, New Delhi Prentice Hall of India	
	Ignacimuthu, S., 2008, Basic Bioinformatics, New Delhi Narosa Publishing House	
	Khan, I.A., 2005, Elementary Bioinformatics, Hyderabad Pharma Book Syndicate	
Learning Outcomes:	Describe properties of important bioinformatics databases. Apply the knowledge to perform text- and sequence-based searches. Apply the knowledge to perform multiple sequence alignment. Use bioinformatics tools in research.	

Programme: M.Sc. (Marine Microbiology)
Course Code: MMO 405
Title of the Course: MARINE PHYTOPLANKTON
Number of Credits: 2
Effective from Academic Year: 2020-21

Prerequisites	Knowledge of marine ecology	
Objective:	This course will introduce students to the biology of marine photosynthetic phytoplankton, identifying and classifying phytoplankton from marine and estuarine habitats and recognizing its role in ocean biogeochemical cycles, harmful algal blooms, commercial products derived from phytoplankton and climate change effects on phytoplankton.	
Content		
1.	Phytoplankton evolution, diversity and ecology	12 L
1.1	Evolution of phytoplankton	
	Introduction to phytoplankton. Energy and elemental requirements for life, Chloroplasts and endosymbiosis, Phytoplankton evolution through geological time	
1.2	Phytoplankton classification and diversity	
	Major organelles and structural variations, morphological adaptations, Division of phytoplankton based on size, Phytoplankton groups (marine diatoms, dinoflagellates, microflagellates), Prokaryotic algae (cyanobacteria), Chlorophytes, Heterokontophytes (emphasis on diatoms), Prymnesiophytes, Dinophytes, Cryptophytes, Raphidophytes, Rhodophytes, Distribution and abundance of phytoplankton, Measuring diversity and remote sensing,	
1.3	Phytoplankton nutrition, physiology and ecological significance	
	Biogeographic zones of distribution, Nutrient requirements (N,P,Si), Margalef mandala, Photoautotrophic production, Light acclimation and adaptation, adaptation to other physical and biological factors, Grazing defences (morphological features- colony formation, silica shell; changes in life-cycle/behaviour – escape response; physiological – bioluminescence, toxin/ infochemical production), Marine food webs, Marine primary productivity, Role in biogeochemical cycles, (Biological carbon pump, Microbial loops), Phytoplankton and zooplankton interaction, Phytoplankton-bacteria interactions	
2.	Phytoplankton genomics, commercial value, phytoplankton blooms	12 L
2.1	Phytoplankton genomics	
	Genetic diversity, Whole-genome sequences and transcriptomics, Environmental genomics (the meta-omics),	

	Genetic manipulations of phytoplankton, Barcoding and other tools, Transgenic phytoplankton and its applications	
2.2	Applications of Phytoplankton	
	CO ₂ sequestration in climate change, DMS production, Biofuels and other commercial products made from algae; Aquaculture, secondary metabolites	
2.3	Phytoplankton blooms and climate change	
	Ocean fertilization, Climate change effects on phytoplankton, Harmful algal blooms and toxin production, characterisation and causes of bloom formation - Red tides, Spring bloom, occurrences (some examples), solutions for bloom occurrence	
Pedagogy:	Lectures/tutorials/assignments/self-study/Moodle/Videos	
Reading/ References	Falkowski, PG and Knoll, AG (Editors). Evolution of Primary Producers in the Sea, Elsevier Academic Press (2007).

	Raymont, J.E.G., Plankton and productivity in the oceans (Vol. 1 & 2), 1983 –Pergamon Press.	
Learning outcomes	1) The biology and biodiversity of marine phytoplankton 2) The role phytoplankton play in the biological carbon pump as well as in the cycles of other important elements 3) Ecology of harmful algal bloom formation and toxin production 4) Commercial products derived from algae including biofuels 5) The predicted effects of climate change on phytoplankton abundance and distributions	

Programme: M.Sc. (Marine Microbiology)

Course Code: MMO 406

Title of the Course: MARINE EXTREMOPHILIC MICROORGANISMS

Number of Credits: 3

Effective from Academic Year: 2020-21

Prerequisites	Basic knowledge of extreme marine environments and their defining features is necessary.	
Objective:	This course develops concepts relating to the ability of organisms to thrive in extreme marine ecosystems, their adaptations and biotechnological potential.	
Content:		
1.	Concept of extremophiles versus conventional microbial forms and archaea.	1 L
2.	Extreme marine niches: marine trenches and ridges, submarine vents, deep sea basins and Antarctic sea ice and lakes.	2 L
3.	Key Molecular components, Unique Physiological features, Adaptation strategies, significance in biogeochemical cycles of the following:	
3.1	Anaerobes: <i>Anaerobranca horikoshi</i> , <i>Methanobacterium thermoautotrophicus</i> . Barophiles/ Piezophiles: <i>Colwellia</i> , <i>Photobacterium</i> .	7 L
3.2	Cryophiles/Psychrophiles and Thermophiles: <i>Polaromonas</i> , <i>Shewanella</i> , <i>Desulphovibrio</i> , <i>Bacillus infernus</i> , <i>Aquifex</i> , <i>Geobacillus</i> , <i>Rhodothermus</i> .	8 L
3.3	Oligotrophs, Osmophiles, Halophiles and Xerophiles: <i>Caulobacter</i> , <i>Pelagibacter</i> ; <i>Rhodotorula</i> ; <i>Marinococcus</i> , <i>Walleimia</i> .	6 L
3.4	Alkaliphiles, Acidophiles: <i>Ferroplasma</i> , <i>Rhodotorula</i> .	4 L
3.5	Radiophiles, Metallophiles & Xenobiotic utilizers: <i>Deinococcus</i> , <i>Geobacter</i> , <i>Pseudomonas</i> .	6 L
3.6	Biotechnological potential of extremophiles.	2 L
Pedagogy:	Lectures/tutorials/assignments/self-study	
References/ Readings	Brock, T. D., Thermophilic Microorganisms and Life at High Temperatures, Springer, New York.	
	Horikoshi, K. and Grant, W. D., Extremophiles – Microbial Life in Extreme Environments, Wiley, New York.

	Ventosa, A., Nieto, J. J., Oren, A. (1998) Biology of moderately halophilic aerobic bacteria. Microbiology and Molecular Biology Reviews, 62: 504-544.	
Learning Outcomes	Apply the concepts learned to understand the occurrence and ecology of marine extremophiles.	

Programme: M.Sc. (Marine Microbiology)

Course Code: MMO 407

Title of the Course: MARINE MICROBIAL PROSPECTING AND TECHNOLOGY

Number of Credits: 3

Effective from Academic Year: 2020-21

Prerequisites	It is necessary that students should have a working knowledge of the relevance of marine environments as a source of bio-active compounds.	
Objective:	The course explores the role of the marine environment as a source of novel compounds having various potential applications in biotechnology, the range of strategies employed to detect and study them, and the regulatory frameworks that are in place to regulate their usage. Relevant case studies are discussed to understand these concepts.	
Content:		
1.	Bioprospecting: Concept of exploiting marine microbial resource and their cellular components from marine environment and marine invertebrates.	12 L
2.	Sampling and search strategies for novel targets under: enzymes, therapeutics, antimicrobials and biofuels.	
3.	Legal framework for collection and conservation of marine niches and microbes. Convention on Biological Diversity, Rio (1992/1994). Bioethics and Biosafety, Quarantine regulations, Biopiracy, Cartagena & Montreal, FAO International Treaty (2001-2004), Bonn Declaration on Access and Benefit-sharing (ABS).	
4	Conventional and high throughput screening strategy:	12 L
4.1A	Conventional: Plating, Enrichment, Extinction culturing; Micro manipulations, Optical tweezers, Microautoradiography.	
4.1B	Novel: Function based screens (proteomics and metabolomics), Sequence based screens (genomics), substrate induced gene expression screens (SIGEX) catabolic gene expression screens. Metagenomics, Microarrays, Combinatory chemistry, combinatory biosynthesis and biochemistry assays. Data bases, Natural product libraries.	
4.2	Deposition of microbes and biomolecules:	
	Culture collection/ Repository, deposition of sequences of nucleic acids, proteins and structures of biomolecules.	
5.	Case studies on marine products and process development using microbes: archaea, cyanobacteria and proteobacteria; microbial products; MEOR and such others.	12 L
Pedagogy:	Lectures/tutorials/assignments/self-study	
References/ Readings	Kennish, M. J., Practical Handbook of Estuarine and Marine Pollution, CRC Press.	

	Goldman, E. and Green, L. H., Practical Handbook of Microbiology, CRC Press.

	Borkar, S., Bioprospects of Coastal Eubacteria, Springer Publishers.	
Learning outcomes	1. Apply the knowledge gained to designing and understanding bioprospecting studies 2. Explain the legal frameworks in place for the regulation of trade linked to marine bioprospecting.	

Programme: M.Sc. (Marine Microbiology)

Course Code: MMO 408

Title of the Course: MARINE ENVIRONMENT AND PUBLIC HEALTH

Number of Credits: 3

Effective from Academic Year: 2020-21

Prerequisites	It is required that students have basic knowledge about marine environments, climate change, pollutants in marine environment.	
Objective:	This course develops the concepts of the effects of marine pollution and , climate change on human health, the challenges for monitoring and control of pollution, long-term strategies in public health management; advances in disease control in the marine environment.	
Content:		
1.		12 L
1.1	Environmental variables related to marine, coastal and aquatic ecosystems; Water quality and sediment characteristics; Climate change and impact on human health – migration of <i>Vibrio</i> , flooding of coastlines; influence of El Nino Southern Oscillation on cholera outbreaks; disaster management (outline); Understanding marine ecosystem and human health with DPSIR model.	
1.2	Overview of marine and coastal pollution; effects on the biota and environment. Water pollution - microbial changes induced by inorganic and organic pollutants, industrial effluents and domestic sewage. Effects on aquaculture systems and fisheries. Challenges for monitoring and control of pollution and overfishing; Standards for various types of water.	
2.		12 L
2.1	Biological indicators and indices of water quality; Microbial indicator systems – Fecal Indicator Bacteria (FIB), uses and limitation of FIB, development of ideal indicator systems (<i>Clostridium</i> , <i>Cryptosporidium</i> , <i>adenoviruses</i> , <i>Bacteroides</i> , Coliphages) – status, uses and limitation. Sanitation in aquaculture systems.	
2.2	Human pathogens - autochthonous and allochthonous pathogens, pathogen distribution; bacterial pathogens and diseases transmitted through marine and coastal water, faecal contamination, <i>Vibrio</i> , Wound sepsis, entero-viruses. Disease monitoring and surveillance.	
2.3	Algal blooms and environmental microflora, their effect on fish production and human health, mechanical, chemical and biological control of algal blooms, microbial toxins.	
3.		12 L

3.1	Bioinvasion; transport of pathogens through ballast water - impact, monitoring, rules and regulations, quarantine, certification and import risk analysis.	
3.2	Application of health management protocols and biosecurity principles in aquaculture; long-term strategies in health management; Advances in disease control and management; Principles of SPF/SPR. Biosecurity in aquaculture.	
Pedagogy:	Lectures/tutorials/assignments/self-study	
References/ Readings	<p>1.Hester, R. E., Harrison, R. M., Marine Pollution and Human Health, Vol. 33, Issues in Environmental Science and Technology, Royal Society of Chemistry.</p> <p>2.Belkin, S. and Colwell, R. R., Oceans and Health: Pathogens in Marine Environment. Springer Publishers.</p> <p>3.Noga E. J., Fish Disease: Diagnosis and Treatment, Wiley-Blackwell Publishers.</p> <p>4.Rheinheimer, G., Aquatic Microbiology, John Wiley Publishers.</p> <p>5.Clark, R. B., Frid, C., Attrill, M., Marine Pollution, Oxford University Press.</p> <p>6.Wedemeyer, G. A., Meyer, F. Learning Outcomes	<p>1) Understand the linkage between marine pollutants, climate change and their effects on marine biota and humans; the role of Ballast water in spreading diseases globally; and management strategies to deal with the same.</p> <p>2) Applying long-term strategies in public health management and understanding the advances in disease control in the marine environment.</p>	

Programme: M.Sc. (Marine Microbiology)
Course Code: MMO 409
Title of the Course: MARINE MICROBIAL REMEDIATION
Number of Credits: 2
Effective from Academic Year: 2020-21

Prerequisites	It is required that students have basic knowledge about marine environment, marine pollutants and xenobiotics.	
Objective:	This course develops the concept of using marine microorganisms as a tool for remediation of diverse pollutants.	
Content:		
1.	Concept of bioremediation, various bioremediation strategies including bio-augmentation, bio-stimulation, co-metabolism, use of microbial consortia and genetically-modified microorganisms.	2 L
2.	Bioremediation of metals mediated by marine microbes: Heavy metal resistant microbes from coastal waters, solar salterns, marine sediments hydrothermal vent and marine microbes associated with bivalves and sponges. Marine bacteria/fungi/archaea which can be harnessed for bioremediation technologies e.g. Efflux mechanism, intracellular bioaccumulation, extracellular sequestration and surface biosorption, bioprecipitation, biotransformation and redox reaction, volatilization.	5 L
	Bioremediation of hydrocarbons in marine environments, oil spill/tar ball management. Biodegradation – reactions, enzymes and pathways. Biosurfactants (bioemulsifier), co-metabolism, bio-augmentation, bio-stimulation.	5 L
3.	Biodegradation of Complex Polysaccharide (CP)-containing algal waste by marine microorganisms: description and characteristics of algal waste, CP-degrading enzymes – agarase, alginate lyase, carragenase, cellulase, and their role in degradation of algal waste.	3 L
4.	Biodegradation of seafood waste by bacteria: description and characteristics of seafood waste, biodegradation of seafood waste by microorganisms – calcium carbonate-solubilizing bacteria, phosphate-solubilizing bacteria; the role of chitinase and protease enzymes in seafood waste degradation, use of microbial consortia, application of seafood waste for ethanol production. Case studies with fish, prawn and crab waste.	5 L
5.	Bioremediation of xenobiotics and pollutants in hypersaline environments using Sulfate-Reducing Bacteria (SRB) and archaea: pollutants in hypersaline environments – metals, xenobiotics, remediation strategies involving SRB, application in remediation of industrial effluents. Case studies with metals.	4 L
Pedagogy:	Lectures/tutorials/assignments/self-study

Learning Outcomes	1) Application of marine microorganisms towards pollution abatement.	

Programme: M.Sc. (Marine Microbiology)

Course Code: MMO 410

Title of the Course: OCEAN OBSERVATIONS AND TECHNIQUES

Number of Credits: 3

Effective from Academic Year: 2020-21

Prerequisites	Basic understanding of the marine environments.	
Objective	Introduce the students to analytical techniques and instrumentations used for oceanographic and remote sensing studies.	
Content		
1.	Platforms and instruments used in Oceanography	12 L
1.1	Marine environment domains, observation strategies, <i>in situ</i> observation, Lagrangian and Eulerian measurements, remote sensing. Indian oceanographic research vessels and their facilities.	
1.2	Platform and Instruments: Gliders, Argo, floats, Mooring and moored profilers, buoy, Acoustic Doppler Current Profiler, XBT, Radar, Current Meters, Radars, Marine Magnetometer, Echo Sounder, SONAR, Hydrophone and Geophone, Multibeam bathymetry. Underwater robots and vehicles, Submersible Incubation Device, Camera Systems. Animal tagging, bio-telemetry, bio-logging.	
1.3	Samplers: Conductivity-Temperature-Depth (CTD) sensors, Rosette sampler. Bongo paired Zooplankton Net, BIOMAPER, Video Plankton Recorder, Zooplankton Sampler, Acoustic Recording Package, Multiple Plankton Net. Grab sampler, Gravity corer, Box corer, Piston corer, Hydraulically damped gravity corer.	
2.	Techniques in Microbial Oceanography	12 L
2.1	Traditional methods. Use of microscopy for enumeration of microbes. Microbial staining. Preservation methods. Tools to study marine microbial diversity: flow cytometry, FlowCAM. Methods to estimate primary production. Phytoplankton pigments by fluorometry, spectrophotometry, HPLC. <i>In vivo</i> fluorescence - Fluorescence induction and relaxation and Fast Repetition Rate fluorometer. Respiration measurements of planktons. Tracer technique- ¹³ C and ¹⁵ N. Isotope labelled substrate uptake. Enzymatic assays.	
2.2	Respiration measurements of plankton. Respiratory quotient to estimate carbon-flux. Community level physiological profiling (CLPP). Fluorometric assessment of enzymatic activity using 4-Methylumbelliferyl (MUF) substrate. Confocal laser scanning microscopy for study of biofilms. Changes in redox potentials using fluorescent stain.	
2.3	Carbon measurement methods: CHNS elemental analyzer. Total inorganic carbon by Coulometer. Dissolved organic carbon using high temperature combustion method. Sediment traps	

	(Moored arrays/drifting traps). ²³⁴ Thorium as a tracer for POC export estimates.	
2.4	Genomic and metagenomics approach. Environmental DNA. Molecular probes	
3	Marine Bio-optics and Remote Sensing	12 L
3.1	Marine bio-optics. Electromagnetic radiation. Photosynthetically active radiation. Optically active components. Photosynthetically active radiation (PAR). Optical properties. Ocean color. Chromophoric dissolved organic matter (CDOM). Bio-optical instruments. Fundamentals of remote sensing. Polar-orbiting and geosynchronous satellites. Spatial, temporal and spectral resolution. Satellite sensors.	
3.2	Applications and societal benefits: Primary productivity, sea surface temperature, salinity, wind speed and direction, Ocean currents, ocean-atmosphere heat exchange, bloom dynamics, biogeochemical cycles, assessment of carbon reservoirs and fluxes, potential fishing zones, pelagic and migratory fish, species conservation (e.g. whales, turtles), coastal eutrophication and pollution, Environmental Impact Assessment (EIA), natural and man-made hazards, ocean color and climate change.	
Pedagogy:	Lectures/tutorials/assignments/self-study/case-studies

Learning Outcomes	Knowledge on different instruments and techniques used to study oceanography and microbes in the ocean.	

Programme: M.Sc. (Marine Microbiology)
Course Code: MMO 411
Title of the Course: FISHERY MICROBIOLOGY
Number of Credits: 3
Effective from Academic Year: 2020-21

Prerequisites	Knowledge of microbial diversity.	
Objective:	Develop the knowledge of fishes, fisheries, aquaculture in India. Develop the concepts of various infectious diseases present in fishes and spread through fishes.	
Content:		
1.	Introduction to Indian Fisheries	15 L
1.1	Type of fishes, shellfishes and other coastal aquatic and marine living resources present in Indian Ocean, Arabian Sea and Bay of Bengal, concept of aquaculture and marine culture of fishes. Use of Probiotics in aquaculture. Concept of blue economy.	
1.2	Microbiology of Raw fish and processed fish. Adverse effects of microbial spoilage and PHFL on blue economy. Various methods for processing of fishes; Biopreservation, food processing, fermentation and aquaculture; effect of heat, chilling, freezing and chemical preservatives on bacteria, yeasts and fungi associated with fishes.	
1.3	Quality control and regulations for microbial quality of fishes, shellfish and marine living resources used for food and drugs.	
2.	Microbes associated with fish and shellfish	10 L
2.1	Commensals and pathogens; Classification of diseases; Methods of disease prevention; Detailed study of bacteria pathogenic to finfish and shellfish with emphasis on morphology, epidemiology, pathogenesis, treatment and control:	
2.2	<i>Flavobacterium, Edwardsiella, Vibrio, Aeromonas, Renibacterium, Yersinia, Mycobacterium.</i>	
2.3	Viral infections of finfish.	
3	Marine toxins and Human bacterial pathogens	11 L
3.1	Human bacterial pathogens associated with fishes and their products - <i>Clostridium perfringens, Listeria spp., Plesiomonas, Vibrio cholerae, Vibrio parahaemolyticus, Vibrio vulnificus</i> and common <i>Enterobacteriaceae</i> .	
3.2	Marine toxins – Paralytic Shellfish Poisoning (PSP) Toxins, Amnesic Shellfish Poisoning (ASP) Toxins, Diarrhetic Poisoning Toxins, Lipophilic Shellfish Toxins (LST), Neurotoxin Shellfish Poisoning (NSP) Toxins, Venerupin shellfish poisoning, Ciguatera toxins, tetrodotoxins, Azaspiracids, Cyclic Imines and their origin.	
Pedagogy:	Lectures/tutorials/assignments/self-study/case-studies	

References/ Readings	Fernandes, R., Microbiology Handbook: Fish and Seafood, RSC Publishing

	Leatherland, J. F. and Wook, P. K. T., Fish Diseases and Disorders, CABI Publishers.	
Learning outcomes	<ol style="list-style-type: none"> 1. Knowledge of wide diversity of marine and coastal ecosystems in terms of fishes, shrimps, etc. 2. Apply the principles of microbiology to a range of interactions between microorganisms and fishes 	

Goa University
P.O. Goa University, Taleigao Plateau, Goa 403 206, India
Syllabus of M. Sc. (Marine Sciences) Programme

**The Academic council in its meeting held on 15/11/2018, approved the minutes of the meeting of
Board of studies in Marine Sciences held on 26/10/2018.**

A brief description of the course

Purpose: To provide trained manpower in different branches of Marine Sciences.

Prerequisites: Degree of Bachelor of Science of this University or an examination of any other University recognized as equivalent thereto, with at least seven units of 100 marks in the first, second and third years taken together. Eligibility is B.Sc. Physics, Mathematics, Electronics, Computer Science, IT, Chemistry, Industrial Chemistry, Analytical Chemistry, Pharmaceutical Chemistry, Botany, Zoology, Microbiology, Biotechnology, Biosciences, Fisheries, Aquatic Sciences, Earth Sciences, Geology and equivalence.

Credits (theory, practical): 1 credit (theory) shall be equivalent to 12 clock hours of contact teaching. 12 clock hours are inclusive of lectures/group discussion/seminars/problem solving/tutorials/assessment, 1 credit (practical) shall be equivalent to 24 clock hours of contact teaching, i.e. 12 practical of 2 clock hours duration each. The assessment of the courses shall be fully internal and the evaluation of the courses shall be by continuous assessment. The weightage of marks for intra and semester-end examinations in both theory and practical courses shall be 40:60. Each Internal Semester assessment (ISA) shall be evaluated for 20% of the total marks of the course. Total number of ISA for each Course shall be two irrespective of the number of credits. An additional assessment irrespective of number of credits of course carries, will be provided on the request of students to improve the grade, in which case the assessment with the least score shall not be considered for ISA. However, for 1 credit course, a single ISA shall be conducted and evaluated for 40% of total marks of the course. The duration of all comprehensive written Semester End Assessment (SEA) examinations carrying 25 marks or less, shall be of one hour; SEA carrying above 25 marks up to 50 marks shall be two hours; SEA carrying above 50 marks shall be of three hours.

Number of semesters and how the courses are distributed: The students will be eligible for the Master's degree on the successful completion of courses equivalent to 64 credits. Student shall not be allowed to register for less than 10 credits and more than 25 credits in a semester. A student must obtain 48 credits from the parent Department remaining 16 credits may be earned by the student by opting for courses (optional) either from the parent Department or from any other Department of the University.

Dissertation: Dissertation is optional. Topics will be assigned at the end of 2nd semester and the study will begin from starting of 3rd semester. There will be a continuous internal monitoring by the guiding/supervising teacher.

Field Studies: M. Sc. Marine Sciences involves regular onboard training on research vessel / boat.

Course Structure for M.Sc. Marine Science with effect from June, 2018-19

Semester I

Course code	Course Title	L-T-P hrs/week	Credits	Page no.

SEMESTER I

Programme: M. Sc. (Marine Sciences)

Course Code: MSC 161

Title of the Course: Physical Oceanography I

Number of Credits: 03

Effective from AY: June, 2018-19

Prerequisites for the course:	Degree of Bachelor of Science of this University or an examination of any other University recognized as equivalent.	
Objective:	Students with any branch in science at their graduation level are eligible to get admission to PG in Marine Science. Ocean, being a dynamic ecosystem, to know the biology, geology and chemistry of the Ocean, it is imperative to know different physical process responsible to drive the system.	
Content:	Oceanographic explorations - Evolution of theoretical ideas – Units used in Oceanography- The role of observations in Oceanography –Ocean and seas - Dimensions of the ocean- Physical properties of water- Influence of dissolved salts-Physical properties of seawater-Salinity – Temperature-Density-Distribution of temperature - salinity and density in space and time- Oceanic mixed layer and thermocline – Measurement of temperature and salinity - Sound in the sea. Propagation of sound in the sea-Light in the sea – The Oceanic heat budget.	12 hours
	The earth in space – Atmospheric wind systems – Composition of atmosphere - Vertical extent of atmosphere -Planetary boundary layer – Measurement of wind – Calculations of wind stress - Coriolis force- General circulation of atmosphere-Atmospheric temperature -Temperature system and scales - Atmospheric humidity - Vapour pressure - Circulation – Wind- driven and thermo-haline circulations – Importance of deep circulation – Theory for deep circulation.	12 hours
	Equatorial processes - El Nino – El Nino tele-connection - Southern Oscillation and Indian Ocean Dipole (IOD) - Indian Ocean Circulation. T.S.V. diagram- T.S. diagram - Oceanic fronts -Upwelling - Water masses in the ocean - Bottom water - Deep water - Antarctic intermediate water - Central water - Lagrangian and Eulerian methods for measuring currents.	12 hours
Pedagogy:	The course is being taught adopting conventional method of class room teaching using chalk and board. However, after each module an integral picture is drawn to them through power point presentation. In addition students are given seminar topics related to the course.	
References/ Readings	<ol style="list-style-type: none"> 1. The Ocean: Their Physics, Chemistry and Biology, 1962 - Sverdrup, H.U., Johnson, M.W. and Flemming, R.H., Asia Publ. House, New Delhi. 2. Pal Arya, Vol 79 in International geophysics Series, Academic press. 	
Learning Outcomes	Getting a larger picture of a coupled ocean – atmosphere and the different process involved in controlling the ecosystem.	

Programme: M. Sc. (Marine Sciences)

Course Code: MSC 162

Title of the Course: Marine Chemistry I

Number of Credits: 03

Effective from AY: June, 2018-19

Prerequisites for the course:	Degree of Bachelor of Science of this University or an examination of any other University recognized as equivalent.	
Objective:	This course develops concepts about the chemistry of the marine environment that concerns the study of the properties and interactions of the substances present in the marine environment.	

Content:	Symbols and units used in chemical oceanography – Major and minor elements in seawater – Geochemical balance of the oceans, residence times, chemical speciation.	12 hours
	Constancy of relative ionic composition of seawater, conditions under which major elements may not be conservative, factors affecting the distribution of trace elements in the sea, interaction of trace elements with marine organisms, enrichment factor, Chlorinity and salinity: definition and significance, practical salinity scale, Radioactive nuclides in the sea.	12 hours
	Dissolved gases (other than CO ₂) in seawater – Basic concepts : solubility of gases in seawater, air – sea gas exchange, processes affecting their distribution, dissolved oxygen in the ocean – Dissolved gases (CO ₂) in seawater – Carbon dioxide equilibria in seawater; pH, alkalinity and buffering capacity of oceans: components of CO ₂ system in seawater – Percentage composition of inorganic carbon; calcium carbonate precipitation and dissolution phenomena – Lyso-cline and carbonate compensation depth.	12 hours
Pedagogy:	Lectures/ tutorials/ assignments/ self-study	
References/ Readings	<ol style="list-style-type: none"> 1. Introduction to Marine Chemistry, 1971 – Riley, J.P. and Chester, R., Academic Press. 2. Chemical Oceanography (Vol.1, 2, 3 & 8), 1975 – Riley, J.P. & Skirrow, G., Academic Press. 3. Marine Chemistry, 1969 – Horne, R.A., Wiley-Interscience 4. Seawater: Its composition, properties & behaviour, 1989, 1995, 2004 – The Open University. 5. Marine Chemistry (Vol.2), 1970 – Martin, D.F., Marcel Dekker, NY. 6. Oceanography of the Indian Ocean, 1992 – B. N. Dessai (Ed.), AA Balkema. 15. Chemical Oceanography of the Indian Ocean, North of Equator. 1984, Sengupta and Naqvi, Deep Sea Res. 31A, 671-706. 16. Chemical Oceanography, 1996, 2006 – F. J. Millero, CRC Press. 17. The Sea Surface and Global Change, 1997, 2005 – P.S. Liss and R. Duce., Cambridge University Press. 18. Ocean Biogeochemistry: The role of the ocean carbon cycle in Global change, 2003 – M.J.R. Fasham, Springer. 19. An Introduction to Marine Biogeochemistry, 2nd edition, 2009 – S.B.Libes, Wiley. 20. Marine Chemistry and Geochemistry, 2010 – K. K. Turekian, Academic Press. 21. An Introduction to the Chemistry of the Sea, 2nd edition, 2013 – M.E.Q. Pilson, Cambridge University Press. 	
Learning Outcomes	<ol style="list-style-type: none"> 1. Provide a comprehensive understanding of the properties and interactions of the substances present in the marine environment. 2. Explain the key processes operating in the marine environment. 3. Explain the importance of dissolved O₂, the marine carbon cycling and the CO₂ problem. 4. Explain the biogeochemical cycling of the trace metals from the perspective of the global biogeochemical cycling of elements. 	

Programme: M. Sc. (Marine Sciences)

Course Code: MSC 163

Title of the Course: Marine Biology I

Number of Credits: 03

Effective from AY: June, 2018-19

Prerequisites for the course:	Degree of Bachelor of Science of this University or an examination of any other University recognized as equivalent.
Objective:	This course addresses the introduction of Marine life, biological processes to elucidate the ecosystem function. Further, it also provides an insight on larval ecology, trophic levels and their role in supporting life in marine environment.

Content:	Introduction to marine biology, history, classification, theories, hypothesis testing; life and non life, Origin and evolution of life, life processes, abio-genesis, theories of natural selection, models and hypothesis of organic evolution, primordial soup hypothesis, organic molecules, chemical evolution, iron sulfide and black smoker's theory, RNA world hypothesis, theory of evolution and panspermia.	12 hours
	Biotic structure, Invertebrate larvae and their biology, larval types and strategies, theories of bi-phased life history, Marine and coastal environment, biological zonation, inter-tidal ecosystem, rocky, sandy and protected sand flats, zonation pattern, physical and biological factors and processes affecting biotic communities and their adaptations.	12 hours
	Sea as a biological environment, physiological changes, regulators and conformers, scope for growth, temperature and metabolic rates, comparison among marine and terrestrial environment, Organic matter production, Marine primary productivity, photo-autotrophic production, mechanism, light and dark reaction, intermediate products, role of pigments, methods of assessment, factor and processes affecting primary productivity, transformation of organic matter, vertical profile of primary productivity and SCM, turbulence and MLD.	12 hours
Pedagogy:	lectures/ tutorials/assignments/self-study

(Eds), ICES Academic Press, San Diego, pp. 68 	
Learning Outcomes	Provides fundamental knowledge related to marine life and processes and also the strategies adopted by these groups for survival in marine environment.	

Programme: M. Sc. (Marine Sciences)

Course Code: MSC 164**Title of the Course:** Marine Geology I

Number of Credits: 03

Effective from AY:June, 2018-19

Prerequisites for the course:	Degree of Bachelor of Science of this University or an examination of any other University recognized as equivalent.
Objective:	This course introduces concepts of Marine Geology andhelps to understand ocean basins – their dimensions, tectonics and evolution; sediment components and processes with special reference to near-shore and beach dynamics; ocean mineral resources –application of fossils in paleoclimate and monsoon.

Content:	The earth and the solar system-origin and age of the earth - internal structure -Geological time scale – Size and shape of the ocean basins: Pacific, Atlantic and Indian – Morphology and structure of continental margins, mid oceanic ridges and deep sea floor – Origin of ocean basins – Continental drift, sea floor spreading and plate tectonics – Evolution of the Indian ocean.	12 hours
	Sediment, sediment grade scale and analysis – Classification, composition, distribution and source of sediments with emphasis on near shore areas – Surveying, sampling and laboratory techniques for the study of coastal and estuarine sediments – Analysis of sedimentological data and interpretation – Instruments used in marine geology. Beach and beach profile, variations in beach morphology and its significance – Near shore geological processes: erosion, transportation and deposition.	12 hours
	Sea bed minerals with emphasis on Indian ocean – Polymetallic nodules, phosphorites, carbonates, placer deposits and petroleum resources, gas hydrates – Fossilization process – Types of microfossils and classification, technique for paleoclimate reconstruction with respect to oxygen isotope studies, role of microfossils in paleo – oceanography, paleoclimate, marine archaeology, petroleum exploration and monitoring marine pollution.	12 hours
Pedagogy:	Lectures / Assignments / Seminars / Discussion	
References/ Readings	<ol style="list-style-type: none"> 1. Introductory oceanography (5th ed), 1988 Thurman, H.V., Columbus Mercill Publ. Co, Ohio. 2. Oceanography (5th ed), 1990 Grant Gross, M., Englewood Cliffs, N.J. Prentice Hall. 3. Coastal and estuarine sediment dynamics, 1986 Dyer, K. R., John Wiley & Sons, Wiley, Chichester. 4. Earth resources, 1969 Skinner, B. J., Englewood Cliffs, N.J., Prentice Hall. 5. Marine Geology and Oceanography of the Arabian Sea and coastal Pakistan, 1984 Haq. B. U. and Milliman, J. R., Cambridge Univ. Press., U.K. 11. Marine geology and oceanography of the Arabian Sea and coastal Pakistan, 1984 Haq. B.U. and Milliman, J. D., Van Norstrand Reinhold Co. 12. Marine Geology, 1982 James P. Kennet., Prentice Hall INC Englewood, Cliffs, N. J. 07632. 	
Learning Outcomes	<ol style="list-style-type: none"> 1. Understanding earth processes, evolution and mineral resources associated with ocean basins. 2. Ability to reconstruct paleoclimate and paleomonsoon 	

Programme: M. Sc. (Marine Sciences)

Course Code: MSC 165

Title of the Course: Physical Oceanography Practical I

Number of Credits: 01

Effective from AY: June, 2018-19

Prerequisites for the course:	Degree of Bachelor of Science of this University or an examination of any other University recognized as equivalent.		
Objective:	Develop skills of preparing graphs and estimate ocean/atmosphere properties that enable study of ocean/atmospheric phenomena.		
Content:	1. Analysis of vertical profiles of temperature, salinity and density to understand the physical processes in different regions at low, mid and high latitude of the world ocean (6hrs; Ref 1) 2. Analysis of vertical profiles of a) temperature, b) salinity and c) density in upwelling and non-upwelling regions of the world ocean (3hrs; Ref 1) 3. Generating vertical section of temperature to study the physical processes along a transect (6hrs; Ref 1, 2) 4. Generating vertical section of salinity to study the physical processes along a transect (6hrs; Ref 1, 2) 5. Generating vertical section of density to study the physical processes along a transect (6hrs; Ref 1, 2)		24 hours

	6. Estimation and analysis of heat content in different parts of World Ocean (3hrs; Ref 3, 4)	
Pedagogy:	Tutorials/assignments/practical/fieldstudy	
References/ Readings	<ol style="list-style-type: none"> 1. Seawater: Its Composition, Properties and Behaviour, 1995 - Second Edition, Open University Press, 2. Ocean Circulation, 2001 - Second Edition, Open University Press, Walton Hall, Milton Keynes, MK76AA, UK 3. Algorithms for computation of fundamental properties of seawater, 1983. UNESCO TECHNICAL PAPERS IN MARINE SCIENCE, Endorsed by UNESCO/SCOR/ICES/IAPSO/ Joint Panel on Oceanographic Tables and Standards and SCOR Working Group 51, Unesco, Place de Fontenoy, 75700, Paris, France 4. Principles of physical oceanography, 1996 – Pierson, W.J. and Newmann, G.S., Prentice Hall Inc., New Jersey, U.S.A.. 5. Introduction to Dynamic Oceanography, 1983 - Pond, S. and Pickard, G.H., Pergamon Press, U.K. 6. Tropical Pacific near-surface currents estimated from altimeter, wind, and drifter data. 1999 - Gary S. E. Lagerloef, Gary T. Mitchum, Roger B. Lukas, Pearn P. Niiler., Journal of Geophysical Research, <u>Volume 104, Issue C10</u>, pages 23313–23326. 7. Meteorology Today: An introduction to weather, climate and the environment (2nd edition), 1985 - Ahrens, St. Paul, West Publ. House. 8. Meteorology-Understanding the atmosphere, 2012 - Steven A A 	
Learning Outcomes	Explain processes responsible for behaviour of conservative properties of ocean. Understand the importance of sound in sea and know its implications for underwater communication. Know ocean processes along meridional section.	

Programme: M. Sc. (Marine Sciences)

Course Code: MSC 166 **Title of the Course:** Marine Chemistry Practical I

Number of Credits: 01

Effective from AY: June 2018-19

Prerequisites for the course:	Degree of Bachelor of Science of this University or an examination of any other University recognized as equivalent.	
Objective:	This course deals with the Analytical Chemistry of Seawater.	
Content:	<ol style="list-style-type: none"> 1. Introduction to good laboratory practices in Chemical Lab and introduction to sampling, sub-sampling, storage and analysis of dissolved trace constituents of seawater (6 hrs; Ref 1) 2. Estimation of salinity of seawater by the Mohr- Knudsen chlorinity titration method (6 hrs; Ref 1) 3. Determination of dissolved O₂ of seawater by Winkler's iodometric titration method (6 hrs; Ref 1) 4. Determination of pH of seawater by potentiometric method using pH meter and determination of total alkalinity of seawater by potentiometric titration using pH meter (6 hrs; Ref 1) 5. Spectrophotometry: Verification of Beer's law (6 hrs; Ref 2) 	24 hours
Pedagogy:	Laboratory experiments/ field studies	
References/ Readings	<ol style="list-style-type: none"> 1. Methods of Seawater Analysis, 1983, 1999 – Grasshoff, K., Ehrhardt, M. and Kremling, K.; Verlag Chemie, Weinheim. 2. Instrumental Methods of Chemical Analysis, 1981 – Ewing, G. W.; McGraw-Hill, New York. 3. A Manual of Chemical and Biological Methods for Seawater Analysis, 1984 – Parsons, T. R., Maita, Y. and Lalli, C. M.; Pergamon Press, Oxford. 	
Learning Outcomes	<ol style="list-style-type: none"> 1. Develop analytical skills to determine the concentrations of various chemical parameters, such as salinity, dissolved O₂, pH and alkalinity in seawater/aqueous systems and to use spectrophotometer for the analysis of colored solutions. 2. Apply techniques to seawater/natural waters to study the biogeochemistry of the marine environment/aquatic systems. 	

Programme: M. Sc. (Marine Sciences)

Course Code: MSC 167

Number of Credits: 01

Effective from AY: June, 2018-19

Title of the Course: Marine Biology Practical I

Prerequisites for the course:	Degree of Bachelor of Science of this University or an examination of any other University recognized as equivalent.	
Objective:	This course provides information on the sampling devices used for collection of marine organisms from the environment and thereafter identification of biological samples of some of the major groups.	
Content:	1.Introduction to standard sampling devices / instruments employed for collection and analysis of biological parameters in water and sediments used in oceanographic studies (2 hrs; Ref 2) 2.Design and execution of field / sampling surveys for collection and analysis of biological communities (water and sediment), their preservation and storage techniques using standard methods (2 hrs; Ref 3) 3.Identification of marine phytoplankton, their life cycle and role in food chain (2 hrs; Ref 1) 4.Identification of marine zooplankton, their life cycle and role in food chain (2 hrs; Ref 10,11) 5.Identification of mangroves, their life cycle and few biological characteristics (2 hrs; Ref 5)	24 hours
Pedagogy:	Identification of sampling devices, marine flora and fauna	
References/ Readings	1. Phytoplankton Identification Catalogue - Saldanha Bay, South Africa, April 2001, 2013 - Botes, L. (2003), GloBallast Monograph Series No. 7. IMO London. 2. Drawing Techniques for Publication, 2013 - Bowstead D. & Eccles T. M. 3. Museum of Natural History, Oxford University, 23 pp. 4. Available at: http://www.oum.ox.ac.uk/collect/Drawing%20Techniques.pdf 5. Monograph of Shallow-Water Indo-West Pacific Echinoderms, 1971 - Clark A. M. & Rowe F. E. W, Trustees of the British Museum of Natural History, London, 238 pp.	
Learning Outcomes	Develop ability to identify the biological specimens at species level.	

Programme: M. Sc. (Marine Sciences)

Course Code: MSC 168**Title of the Course: Marine Geology Practical I**

Number of Credits: 01

Effective from AY: June, 2018-19

Prerequisites for the course:	Degree of Bachelor of Science of this University or an examination of any other University recognized as equivalent.	
Objective:	This course introduces to experiments to measure parameters to understand near-shore and beach dynamics; bathymetry and heavy minerals.	
Content:	1. Field survey (Beach) - locating a station using compass and GPS; Beach profile measurement and sediment sample collection from different parts of the beach (4 hrs; Ref 2) 2. Plotting station locations on the base map and beach profile; volume computation from the given data (2hrs; Ref 2) 3. Coning and quartering, pre-treatment of sediment sample to remove calcium carbonate, organic matter and ferruginous material (2hrs; Ref 1, 6) 4. Grain size analysis (sand) using Ro-tap sieve shaker – batch I (8 hrs; Ref 1, 6) 5. Computation of weight and cumulative percentages, plotting frequency and probability graphs, computation of modes of transport and grain size parameters and interpretation (4 hrs; Ref 1, 6) 6. Heavy mineral separation from different fractions of sand and interpretation (4 hrs; Ref 1, 9) 7. Plot bathymetry lines and interpret geomorphology (4 hrs; Ref 4)	24 hours
Pedagogy:	Field surveys and sampling / Laboratory experiments / Computations / Plotting and Interpretations	

References/ Readings	<ol style="list-style-type: none"> 1. Exercises in sedimentology, 1982 Freidman, G. M. and Johnson K. G., John wiley and sons. 2. Beach processes and sedimentation, 1976 Komar, P. D., Prentice Hall 3. Flume studies on the transport of sediments in estuarine shoaling processes-A report, 1962 Hydraulic 4. Practical manual of sedimentary petrology, 1987 Babu, S. K. and Sinha, D. K., CBS, Publishers and Distributors, Delhi. 5. The mineral sources of the sea, 1965 Mcro, J. L., Elsevier, Amsterdam. 	
Learning Outcomes	<ol style="list-style-type: none"> 1. Conducting field survey and sampling 2. Conducting laboratory experiments 3. Ability to interpret data sets to understand processes. 	

SEMESTER II

Programme: M. Sc. (Marine Sciences)

Course Code: MSC 261

Title of the Course: Computational Methods in Oceanography

Number of Credits: 04

Effective from AY: June, 2018-19

Prerequisites for the course:	Degree of Bachelor of Science of this University or an examination of any other University recognized as equivalent.	
Objective:	To impart mathematical, statistical and programming skills that are useful in oceanography	
Content:	Programming FORTRAN (90/95): constants, variables, arithmetic operations, arithmetic expressions – assignment statements – input – output statement - library functions – Hierarchy of operation – mixmode operations- relational operators, precedence of operators. IF-THEN - ELSE statement – ELSEIF structures – NESTED IF blocks – DO LOOP – NESTED DO LOOP – Intrinsic DO LOOP.	12 hours
	Applications of basic Mathematics to oceanography: Indices, Logarithms, linear and parabolic functions – Permutation and combinations – Arithmetic and geometric progression – Differentiation, application of differentiation – Velocity, acceleration, related rates. Application of integration to growth and decay problems - Matrices: addition, subtraction, multiplication, inverse by adjoint method.	12 hours
	Descriptive statistics: population sample – measures of central tendency: Arithmetic , Geometric and Harmonic means, Median and Mode.Measures of dispersion:Range - inter-quartile range, quartile deviation, coefficient of quatilr deviation, mean deviation and standard deviation – skewness, kurtosis – linear correlation, Karl - Pearson’s coefficient of correlation, concurrent deviation method, method of least squares (regression) – regression equation.	12 hours
	Introductory probability- Normal and binomial distribution – Inferential statistics: standard error – significance level – hypothesis testing: students t-test: test of significance for attributes, large samples and small samples, Z test, Ψ^2 (chi square) test, F test, Analysis of Variance.	12 hours
Pedagogy:	Lectures/Tutorials/ assignments	
References/ Readings	<ol style="list-style-type: none"> 1. A biologist’s basic mathematics, 1983 – Causton, D.R., Edward Arnold, London, Edward Arnold Publishers Ltd. 2. Statistical Methods in Atmospheric Sciences. 2nd edition., 2011 - Daniel S. Wilks, Academic Press 3. Introduction to mathematics for life scientists, 1971 – Batchelet, E., Springer 4. Mathematics for biological sciences, 1980 – Newby J.C., Oxford University Press, U.K. 5. College algebra, 1966 - Bardell, R.H. and Spitzbart, A., Addison-Wesley, Massachusetts, U.S.A. 6. Introduction to algebra, 1966 – Perlis S., Blaisdell Publ. Co., London. 7. Differential equations, 1985 - Wylic, C.R., McGraw Hill Publ., Singapore. 8. Statistics: Theory methods and applications, 1988 – Samchetr, D.C. and Kapoor, V.K., Sultan Chand and Sons, New Delhi. 9. Biometry, 1981 – Sokal, R.R. and Rohlf, F.J. Freeman & Co. San Fransisco. 	

	10. Statistical methods, 1967 – Snedecore, G.W. and Cochran, W.G., Allied Pacific Pvt. Ltd., Mumbai. 11. Multivariate statistical methods, 1990 – Morrison, D.F., Mc.Graw, Hill Publ., Singapore. 12. Fundamental computer concepts, 1986 - Davis, W.S. Mc.Graw Hill Publ., Singapore. 13. Theory and problems of data processing, 1982 – Lipschutz, M.M. and Lipschutz, S., McGraw Hill Book Co., Singapore. 14. Fortran 77 and numerical methods, 1994 Xavier, C., Wiley-Eastern Ltd., New Age International Ltd., New Delhi. 15. Computer Programming in FORTRAN 90/95, 1997. V. Rajaraman, Prentice Hall of India, New Delhi. 16. FORTRAN 90/95 for Scientists & Engineers, 1998 - S.J. Chapman, Mc-Graw Hill.	
Learning Outcomes	Apply techniques of mathematics, statistics in oceanography/meteorology. Acquire computational and programming knowledge to deal with large data sets and generate programs. Plot global ocean/atmosphere data.	

Programme: M. Sc. (Marine Sciences)

Course Code: MSC 262

Title of the Course: Computational Methods in Oceanography Practical

Number of Credits: 02

Effective from AY: June, 2018-19

Prerequisites for the course:	Degree of Bachelor of Science of this University or an examination of any other University recognized as equivalent.	
Objective:	To use mathematical /statistical knowledge to estimate ocean/atmospheric parameters and to learn to make computer programs for application in oceanography.	
Content:	<p>Module - I</p> <ol style="list-style-type: none"> 1. Programs illustrating use of Numeric constants & variables, Arithmetic operators & expressions, simple input and output statements, hierarchy of operations. (6hrs; Ref 1,2,3,4) 2. Programs illustrating use of logical expressions, integer, real & mix mode operations & library functions (6hrs; Ref 1, 2,3, 4) 3. Programs illustrating use of IF-ENDIF, IF-ELSE-ENDIF and IF-ELSEIF-ELSE-ENDIF (4hrs; Ref 1,2,3,4) 4. Programs illustrating use of DO loops, nested DO loops (4hrs; Ref 1, 2, 3, 4) 5. Programs illustrating use of one and two dimensional arrays (6hrs; Ref 1, 2, 3, 4) 6. Programs illustrating use of different types of FORMATS (4 hrs; Ref 1, 2, 3, 4) <p>Module -II</p> <ol style="list-style-type: none"> 1. Programs illustrating subroutines and reading/writing data from files - hard disk. (6hrs; Ref 1, 2, 3, 4) 2. Programs for computation of statistical parameters for analysis of oceanographic data. (6hrs; Ref 1 2, 3, 4, 5) 3. Writing programs for sample data extraction and validating (6hrs; Ref 1, 2, 3, 4) 4. Use of statistical software for estimation of statistics/parameter of sample/population (2hrs; Ref 5) 5. Writing programs for data extraction, validating & generating horizontal sections of oceanographic property using software with different gridding method to ascertain the most suitable gridding method. (6hrs; Ref 1, 2, 3, 4 & Surfer software manual) 6. Writing programs for data extraction, validating & generating contour map for analysis of vertical & surface properties (4hrs; Ref 1, 2, 3, 4 & Surfer software manual). 	<p>24 hours</p> <p>24 hours</p>
Pedagogy:	Tutorials/ assignments/practical	
References/ Readings	<ol style="list-style-type: none"> 1. Computer Programming in FORTRAN 90/95, 1997. V. Rajaraman, Prentice Hall of India, New Delhi. 2. Fundamental algorithms, 1985 – Knuth, D.E., Narosa Publ. House, New Delhi. 3. Theory and practice of programming, with FORTRAN, 1986 – Lipschutz, S & Poe, A., McGraw Hill Book Co., Singapore. 4. FORTRAN 90/95 for Scientists & Engineers, 1998 - S.J. Chapman, Mc-Graw Hill. 5. Statistical Methods, 2009 - S C Gupta, Sixth edition, Himalaya publishing House 	
Learning Outcomes	Make computer programs involving mathematics, statistics methods for applications in oceanography/meteorology. Acquire computational and programming knowledge to deal with	

	large data sets and generate programs. Plot global ocean /atmosphere data for specific spatial and temporal ranges.

Programme: M.Sc. (Marine Sciences)

Course Code: MSC 263

Title of the Course: Law of the Sea and Coastal Regulation Zone

Number of Credits: 02

Effective from AY: June 2018-19

Prerequisites for the course	Students who have undergone courses of semester I of Marine Sciences.	
Objective	This course introduces the law of the Sea and the concept of coastal regulation zone.	
Content	Law of the Sea – Territorial Sea – Contiguous zone – Straits used for international navigation – Archipelagic states – Exclusive economic zone – Continental shelf – High seas – Regime of islands – enclosed or semi-enclosed seas – Right of access of land-locked states – Protection and preservation of marine environment – Scientific and technical assistance – international rules and national legislation to prevent, reduce and control pollution of the marine environment.	12 hours
	Coastal Regulation Zone – Demarcation – Prohibited activities – Regulation of permissible activities – Procedure for monitoring and enforcement – Classification of Coastal Regulation Zone – Category I (CRZ-I) – Category II (CRZ-II) – Category III (CRZ-III) – Category IV (CRZ-IV) – Norms for regulation of activities – CRZ-I – CRZ-II – CRZ-III – CRZ-IV – Guidelines for development in the designated areas of CRZ-III – Permitted petroleum products for storage in CRZ.	12 hours
Pedagogy	Lectures / Assignments / Seminars / Discussion	
References / Readings	<ol style="list-style-type: none"> 1. United Nations Convention on the Law of the Sea 1982 A Commentary, 2011 volume 7, Nordquist M. N., Martinus Nijhoff Publishers. 2. Coastal Regulation Zone 2011 and Island Protection Zone 2011 notifications issued 6.1.2011, Ministry of Environment and Forests. 4. Coastal Regulation Zone notification 1991 under E(P)A, 1986 – 19.2.91 5. Coastal Regulation Zone and Island Protection Zone notifications 2011, ICZM project, Ministry of Environment, Forests and Climate change, July 11, 2016. 	
Learning Outcomes	<ol style="list-style-type: none"> 1. Understanding of the laws applicable for navigation in sea. 2. Knowledge of international and national legislation to control marine pollution. 3. Understanding coastal regulation zone to prevent the deterioration of coast. 	

Programme: M. Sc. (Marine Sciences)

Course Code: MSO 264 **Title of the Course:** Remote sensing and its applications

Number of Credits: 04

Effective from AY: June, 2018-19

Prerequisites for the course:	Students undergoing course in any branch of Marine Sciences.
Objective:	All the coastal process is transient in nature. They are of either diurnal/weekly time scale. To deal with such variability the requirement is a method that would provide a synoptic coverage of the coastal and offshore regions. This is possible only by means of Remote sensing. Hence this emerging technology has been introduced as a course.

Content:	Principles of Electromagnetic radiation– Energy matter interactions — Rayleigh scattering – Mie scattering – Non selective scattering - Radiative transfer in the atmosphere – Stefan’s and Wien’s displacement laws –Zenith and azimuth angles.	12 hours
	Optical remote sensing – bio-optical properties of sea water - Inherent and apparent optical properties - scattering - absorption-attenuation - diffuse attenuation – Remote sensing reflectance - Case I and Case II waters - radiative transfer in the water column.	12 hours
	Sun photometry - Beer-lambert’s law - spectral variation of aerosol optical thickness - atmospheric correction - interpretation of ocean colour - spectral response of water as a function of organic and inorganic constituents - Analysis of suspended minerals, chlorophyll <i>a</i> and dissolved organic matter through OCM/MODIS data.	12 hours
	Thermal infrared remote sensing- Thermal infrared properties - Atmospheric windows - Thermal radiation laws - Emissivity - sea surface temperature retrieval through IR sensors - Active and passive microwave remote sensing - Satellite altimetry of sea surface topography. Sensor characteristics – MSS, GOES, AVHRR, CZCS, SeaWiFS, IKONOS, MODIS, OCM I and OCM - II, LISS -I, LISS-II, WIFS and PAN – Fundamentals of digital image processing – Image rectification – Image enhancement – linear stretching – supervised and unsupervised classification - Introduction to Geographic Information system.	12 hours
Pedagogy:	Being a new and an emerging field, it is necessary to have class room contact hours. Hence, it is a class room taught course. In addition, to get acquainted with the course, seminar topics on the applications of remote sensing are given to the students at the beginning.	
References/ Readings	<ol style="list-style-type: none"> 1. Physical principles of remote sensing, 1990 – Rees, W.G., Cambridge Univ. Press, U.K. 2. Remote sensing optics and optical systems, 1980 – Slater, P.N., Addison Wesley Publ. Co. 3. Remote sensing and image interpretation (2nd edn), 1987 – Lillesand, T.M. and Kiefer, R.W., John Wiley and sons. 4. Remote sensing: Principles and interpretations (2nd edn), 1987 – Floyd and F. Sabnis Jr. W.H. Freeman and Co., New York. 5. Theory and application of optical remote sensing, 1989 – Asrar G., John Wiley & Sons. 6. Introduction to satellite oceanography, 1985 – Maul, G.A., Martinus Nijhoff Publ. 7. Advanced remote sensing from theory to applications (vol.1, 2 & 3), 1981 – Chlamys, F.T., Addison wisley Publ. Co. Inc., Canada. 8. Oceanography from space, 1987- Gover, J.A.R., Plenum Press, New York. 9. Remote sensing of atmospheres and oceans, 1980 - Deepak A., Academic press. 10. Satellite oceanography, 1985 - Robinson, I.S., John Wiley & Sons 	
Learning Outcomes	Since the country is in advanced stage in the field of space Technology, the students opting for this course will be trained Manpower to carry forward Nation’s need for human resources in the field of Remote sensing.	

Programme: M. Sc. (Marine Sciences)

Course Code: MSO 265

Title of the Course: Remote Sensing and its applications Practical

Number of Credits: 02

Effective from AY: June, 2018-19

Prerequisites for the course:	Students undergoing course in any branch of Marine Sciences.
Objective:	This course is the practical component of the theory students learn. This involves satellite data processing for various applications of Ocean/earth/ atmosphere. In this course, students will be exposed to different satellite data, various corrections to be applied and finally image processing for a finished geophysical product.

Content:	<p>Module - I</p> <ol style="list-style-type: none"> 1. Field survey and laboratory analysis to generate apparent optical properties from case II waters using in-water radiometer, and profiles of salinity and temperature using conductivity, temperature and Depth (CTD) sensor, (16 hrs; Ref 1) 2. Generation of Inherent Optical properties (IOP) of optically active substances (OAS), namely absorption of chlorophyll-<i>a</i> (Chl-<i>a</i>), Chromophoric Dissolved Organic Matter (CDOM) and Total Suspended Inorganic Matter (TSM) from water samples collected during the field survey of case II waters (10 hrs; Ref 1) 3. Simulation of remote sensing reflectance and water leaving radiance from case II waters (4 hrs; Ref 2) <p>Module – II</p> <ol style="list-style-type: none"> 1. Simulation of remote sensing reflectance for each optically active substance and delineation of range of wavelengths susceptible to each OAS and development of empirical algorithms (10 hrs; Ref 3) 2. Generation of aerosol optical depth using sun-photometer and analysis of aerosol optical depth to estimate atmospheric turbidity parameter and Angstrom exponent (8 hrs; Ref 4,5,8) 3. Satellite data processing to map chlorophyll <i>a</i>, using ERDAS IMAGINE SeaDAS (12 hrs; Ref 6, 7 and 8) 	<p>24 hours</p> <p>24 hours</p>
Pedagogy:	This course is done through various programming to estimate Parameters followed by usage of different image processing packages. One such package student's use is SeaDAS software.	
References/ Readings	<ol style="list-style-type: none"> 1. Regional validation of MERIS CHLOROPHYLL products in North coastal waters (REVAMP) Protocol, based on NASA and colors protocols, 2002 - Tilstone, G.H, Moore, G.F, Sorensen. K, Doerffer. R, Rottgers, K.G, Ruddick. R, Psterkamp, P.V and Jorgensen, ENVISAT – 1 2. Physical principles of remote sensing, 1990 – Rees, W.G., Cambridge Univ. press, U.K. 25 3. Remote sensing: Principles and interpretations (2nd edn), 1987 – Floyd and F. Sabnis Jr, W.H. Freeman & Co., New York. 4. Theory and applications of optical remote sensing, 1989 – Asrar, G., John Wiley & Sons. 5. Introduction to satellite oceanography, 1985 – Maul, G.A., Martinus Nijhoff Publ. 6. SBE plus CTD, User's manual www.seabird.com/pdf_documents/manuals/9_plus_017.pdf 10. Regional Oceanography, an Introduction, 2nd edition, 2003 - Tomczak, Mattias and Stuart Godfrey J, , Daya Publishing house, Delhi. 	
Learning Outcomes	Students will be thoroughly trained in different process of satellite Data so as to generate various geophysical products.	

Programme: M. Sc. (Marine Sciences)

Course Code: MSO 266**Title of the Course:** Analytical Chemistry of Sea water and

Number of Credits: 04 **Instrumental Techniques**

Effective from AY: June, 2018-19

Prerequisites for the course:	Degree of Bachelor of Science of this University or an examination of any other University recognized as equivalent.
Objective:	<ol style="list-style-type: none"> 1. The course is aimed at understanding the collection sea water, sediment and biological samples by using different field equipments. 2. To adopt suitable techniques for preservation water, sediment and biological samples for their chemical analyses. 3. The course work is so designed to understand the errors generally occur in the analyses of samples by different techniques. 4. To study different techniques used for extraction of various inorganic chemicals (fresh water, salt, bromine, calcium, magnesium and potassium) and organic chemicals (Agar, Carrageenan and Alginic acid) and 5. To study instruments used (Spectrophotometer, spectrofluorimeter, and flame photometer, AAS, ICP, GC and HPLC) for analyses of different chemical constituents in sea water.

Content:	Sampling – Collection and preservation of water, sediment and biological samples. General Errors, Accuracy and Precision. Filtration and Storage - Criteria of an ideal filtering medium- Glass fiber, membrane and Nucleopore filters. Storage for analysis of water for major elements, nutrients, dissolved phosphate, total phosphorous, nitrogen compounds silicates, and trace metals. Chemical separation methods: Pre-concentration methods: Co-precipitation, Co-crystallization, ion exchange and solvent extraction methods, their principles and applications.	12 hours
	Fresh water recovery by various methods of desalination, Low temperature thermal desalination, Distillation, solar evaporation, Membrane process, scale formation and its prevention. Chemical recovery process- Chemistry of salt manufacture, Different grades of salt, washing of sea salt, salt for industries, up-gradation of sea salt, solar evaporation, forced evaporation of brine, Grainer process, Alberger process, Open pan evaporation and vacuum pan evaporation methods. Recovery of bromine from salt bittern, Dow process, Steaming out process for the manufacture of bromine. Recovery of magnesium, magnesium metal from sea water, Dow process and IG-MEL process for the production of magnesium. Recovery of potassium from sea water, Balard and Niccoli Processes for the production of potassium from sea water.	12 hours
	Extraction of Agar, Alginates and Carrageenan from seaweeds - their structures, production, uses and toxicology. Extraction of marine drugs: Chemical and Pharmacological Aspects- Prostaglandins, Steroids, Terpenes and Nitrogenous compounds, Antibiotic compounds from sponges, Cephalosporins and Fish and Shellfish toxins.	12 hours
	Chromatographic methods: Gas liquid and high performance liquid chromatograph Basic principles and application to marine samples. Spectroanalytical methods: Photometry and Spectrophotometry, Fluorimetry, Flame photometry, Atomic absorption spectrophotometry, Flameless AAS and Inductively coupled plasma emission spectrometry - Basic principles, instrumentation and applications in the analyses of marine samples.	12 hours
Pedagogy:	Lectures/ Tutorials/ assignments/self study.	
References/ Readings	<ol style="list-style-type: none"> 1. A text book of qualitative Inorganic Analysis including Elementary Instrumental analysis, Vogel - 1978. The English Language book society. 2. Standard methods for the examination of water and waste water analysis (22nd edition), 2012. Rice, E.W and Bridgewater L. American Public health association, Washington DC. 3. Methods of seawater analysis, 1983 - Grosshoff, Verlag Chemie, Weinheim. 4. Manual for geochemical analysis of marine sediments and suspended particulate matter, 1992 - Loring and Rantala, Earth Science Review. 5. Chemical Oceanography, 1975 – Riley, J.P and Skirrow, G (eds.), Vol. 3, 1975. Academic Press, London. 6. Environmental Chemistry, 1995 - Anil Kumar De, Wiley Eastern Limited and New age international limited, New Delhi. 7. Marine drugs: chemical and Pharmaceutical aspects. In Chemical Oceanography - H.W. Young Y. Shimizu, In Chemical Oceanography, volume 4, Riley, J.P, and Chester, G (eds.). 8. Marine natural products, 1983 - Scheuer, P.J (ed), Chemical and Biological prospective, Academic Press, London. 9. Marine natural products, 1973 - Scheuer, P.J. Academic Press, London. 10. Quantitative analysis, 2001 - Day, R.A and Underwood, A. L .Prentice-Hall of India, New Delhi. 11. Instrumental methods of Chemical analysis, 4th edition. 1981 - Ewing, G.W., Mc Graw Hill. 	
Learning Outcomes	<ol style="list-style-type: none"> 1. These studies would help for accurate measurement of chemical parameters by taking care of necessary precautionary steps during the chemical analyses. 2. Different techniques used for desalination of sea water and inorganic and organic chemicals were known. 3. Pharmacological actions of many drugs obtained from the sea are understood. 4. Instruments used for chemical analyses of sea water and their working principles are well known. 	

Title of the Course: Analytical Chemistry of Sea water and Instrumental Techniques Practical

Prerequisites for the course:	Degree of Bachelor of Science of this University or an examination of any other University recognized as equivalent.	
Objective:	<ol style="list-style-type: none"> 1. The chemical analysis of water provides considerable insight into the health of oceans. 2. The analyses of trace metals in sea water helps in understanding of water's interactions with Earth's geologic materials, and given insight into the impact of human activities on water bodies. 3. The bulk analyses of metals in sediment gives information about the total metal content in a particular environment and it does not give information about the speciation. 4. The sequential extraction procedure described in this course provides an insight into the speciation of a particular element in an environment and their predominant form in the marine environment. 	
Content:	<p>Module – I</p> <ol style="list-style-type: none"> 1. Pre concentration of sea water for estimation of dissolved trace metals by AAS technique. (8 hrs; Ref 1, 2, 3, 4) 2. Digestion of particulate matter for estimation of trace metals (6 hrs; Ref 5) 3. Estimation of dissolved and particulate Mn in seawater by Flame AAS method. (6 hrs; Ref 2, 3) 4. Estimation of dissolved and Particulate Co in seawater by Flame AAS method (5 hrs; Ref 2, 3) 5. Estimation of dissolved and particulate Fe in seawater by Flame AAS method (5 hrs; Ref 2, 3) <p>Module II</p> <ol style="list-style-type: none"> 1. Sediment digestion. (10 hrs; Ref 5) 2. Estimation of Mn in sediments by Flame AAS method. (5 hrs; Ref 2, 3, 4, 5) 3. Estimation of Co in sediments by Flame AAS method. (5 hrs; Ref 2, 3, 4, 5) 4. Estimation of Fe in sediments by Flame AAS method. (5 hrs; Ref 2, 3, 4, 5) 5. Speciation of metals in sediments (Exchangeable and carbonate bound metals) (5 hrs; Ref 5) 	<p>24 hours</p> <p>24 hours</p>
Pedagogy:	Lectures/ Demonstrations/ Lab experiments.	
References/ Readings	<ol style="list-style-type: none"> 1. Standard methods for the examination of water and waste water analysis (22nd edition), 2012. Rice, E.W and Bridgewater L. American Public health association, Washington DC. 2. Analytical chemistry of seawater, 1975 – Riley J. P. In Chemical Oceanography, J.P. Riley and G. Skirrow (eds.), Vol. 3, Academic Press, London. 3. Methods of Seawater analysis, 1983 – Grasshoff K., M. Ehrhardt and K. Krembling (eds.), Verlag Chemie, Weinheim, 419. 4. Manual for geochemical analysis of marine sediments and suspended particulate matter, 1977 – Loring, D. H. and Rantala, R. T. T., Fish. Mar. Serv. Dev. Technical Report 700. 	
Learning Outcomes	<ol style="list-style-type: none"> 1. The results of metal analyses of seawater samples are used to estimate the current levels of different trace metals in sea water. This would help in assessing the quality of water for sea life. 2. The results of speciation of metals in sediments give an insight into a particular metal and its association with different fractions of sediment components and this would help in understanding the major form in which a particular metal is associated with a particular fraction of sediment. 	

Title of the Course: Aquaculture

Prerequisites for the course:	Degree of Bachelor of Science of this University or an examination of any other University recognized as equivalent.
Objective:	This course focuses on provision of basic concepts of farming of aquatic organisms. This also educates students to learn different methods of culture, involving preparation of pond to harvesting. Further, it also provides an insight on the national and international status.

Content:	Principles of aquaculture, global scenario, status and prospects of coastal aquaculture in India, traditional aquaculture practices.	12 hours
	Basic considerations, site selection, water quality management, species selection, feasibility and technique applied for mussel, pearl oyster, fish, lobster and seaweed culture practices.	12 hours
	Shrimp aquaculture, types of culture practices, traditional, modified traditional, extensive, modified extensive, semi intensive and intensive, critical requirements, site selection and pond preparation, selection of candidate species, brood stock procurement, hatchery production and management, nutrition, live feed culture and formulated feed preparation, water quality management in hatchery.	12 hours
	Reproduction, induced maturation by eye stalk ablation, role of X organ, sinus gland system, status and prospects of brood stock, domestication and genetic improvement, shrimp diseases, pathology and parasitological, prophylactic and therapeutic measures, Coastal aquaculture Act, 2005.	12 hours
Pedagogy:	lectures/ tutorials/assignments/self-study	
References/ Readings	<ol style="list-style-type: none"> 1. Stickney, R. R. 2009. Aquaculture: An Introductory Text. 2nd edition. CABI. 304 pages 2. Parker, R. 2011. Aquaculture Science. 3rd Edition. Cengage Learning. 672 pages 3. Aquaculture, 1989 – Pillai, T.V.R. 4. Fish and fisheries of India, 1982 – Jhingran, V.G., Hindustan Publ. Corp. India Ltd. New Delhi 5. Diseases of Marine animals – Marine Ecology (Vol 4), 1983 – Kinne, O., Wiley 6. Crustacean aquaculture, 1983 Mckey, J.P. CRC series. 7. Aquaculture, 1972 – Bardach, J. E, Wiley-Inter-science 8. Prawn and prawn fisheries of India, 1976 – Kurian, C.V. & Sebastian, V.O. Hindustan Pub. Corp. 9. Environmental management for aquaculture, 1998 – Midlen, A., Springer, Netherlands 10. Nutrition and feeding of fish, 1999 – Lovell, T. Springer Science & Business Media 	
Learning Outcomes	Provision of knowhow to take up culture of aquatic organisms, harvesting, diseases identification, prophylactic measures, harvesting and marketing.	

Programme: M. Sc. (Marine Sciences)

Course Code: MSO 269 **Title of the Course:** Aquaculture Practical

Number of Credits: 02

Effective from AY: June, 2018-19

Prerequisites for the course:	Degree of Bachelor of Science of this University or an examination of any other University recognized as equivalent.	
Objective:	This course aims to identify the cultivable species, their reproductive biology and methods of estimation of water quality parameters for cultivation. It also provides an exposure to the students for the demonstration of commercial practices of culture and hatchery practices.	
Content:	Module – I <ol style="list-style-type: none"> 1. Methods of estimation of dissolved oxygen, BOD, suspended solids, dissolved and particulate organic carbon and ammonia (14 hrs; Ref 1 & 2) 2. Identification of cultivable fishes of shrimps, mussels, oysters, fish, crabs and sea weeds (4 hrs, Ref 3) 3. Reproductive system of shrimp (2 hrs; Ref 4), 4. Identification of larval stages of shrimp of commercial importance (4 hrs; Ref 3). 	24 hours
	Module – II <ol style="list-style-type: none"> 1. Visit to shrimp hatchery and grow out farms for demonstrations (12 hrs, Ref 3 & 4) 2. Fabrication of biological filter in aquarium tank (6 hrs, Ref 5) 3. Fabrication of raft, transplantation of spat for mussel culture (6 hrs). 	24 hours
Pedagogy:	Field visits, laboratory analysis and identification	

References/Readings	<ol style="list-style-type: none"> 1. Methods of Seawater Analysis, 1983, 1999 – Grasshoff, K., Ehrhardt, M. and Kremling, K.; Verlag Chemie, Weinheim. 2. A Manual of Chemical and Biological Methods for Seawater Analysis, 1984 – Parsons, T. R., Maita, Y. and Lalli, C. M.; Pergamon Press, Oxford. 3. FAO species identification guide for fishery purposes. The living marine resources of the Western Central Pacific, 1988b - Carpenter K.E. & Niem V.H. <i>Volume 2. Cephalopods, crustaceans, holothurians and sharks.</i> (Food and Agricultural Organization, Rome), pp. 687-1396. 4. Crustacean aquaculture, 1983 Mckey, J.P. CRC series. 5. Design and Selection of Biological Filters for Freshwater and Marine Applications, 8-11 November 2004, Honolulu, Hawaii, Edited by C. S. Lee Volume 34, Issue 3, Pages 141-420 	
Learning Outcomes	Provides scope to understand various biological aspects of cultivable species and on sight experience of the operation of hatchery and culture systems.	

Programme: M. Sc. (Marine Sciences)

Course Code: MSO 270

Title of the Course: Physical Oceanography II

Number of Credits: 01

Effective from AY: June, 2018-19

Prerequisites for the course:	Degree of Bachelor of Science of this University or an examination of any other University recognized as equivalent.	
Objective:	Students with any branch in science at their graduation level are eligible to get admission to PG in Marine Science. Ocean, being a dynamic ecosystem, to know the biology, geology and chemistry of the Ocean, it is imperative to know different physical process responsible to drive the system.	
Content:	Equipment used for physical oceanographic studies: Mechanical bathythermograph, Expendable bathythermograph, Reversing thermometers, CTD, Current meter, Acoustic Doppler Current Profiler (ADCP), Autosol. Equipment used for atmospheric studies: Psycho meter, anemometer, radio sonde, sun-photometer, Radiation meter, Automatic Weather Station - Research vessels: O.R.V. Sagar Kanya, R.V. Sagar Sampada.	12 hours
Pedagogy:	The course is being taught using the conventional method of class room teaching using chalk and board. However, after each module an integral picture is drawn to them through power point presentation. In addition students are given seminar topic related to the course.	
References/Readings	<ol style="list-style-type: none"> 1. The Ocean: Their Physics, Chemistry and Biology, 1962 - Sverdrup, H.U., Johnson, M.W. and Flemming, R.H., Asia Publ. House, New Delhi. 2. Descriptive Physical Oceanography: An Introduction, 1989 - Pickard, G.B. and Emery, W.J., Pergamon press, U.K. 3. Principles of physical oceanography, 1966 - Pierson, W.J. and Newmann, G.S., Prentice Hall, Inc., New Jersey, U.S.A. 	
Learning Outcomes	Getting a larger picture of different equipments necessary for Physical Oceanographic and atmospheric studies	

Programme: M. Sc. (Marine Sciences)

Course Code: MSO 271

Title of the Course: Physical Oceanography Practical II

Number of Credits: 01

Effective from AY: June, 2018-19

Prerequisites for the course:	Degree of Bachelor of Science of this University or an examination of any other University recognized as equivalent.	
Objective:	Delineate and identify regions of a) watermasses, b) Most efficient sound channel in sea c) estimate ocean currents and measure atmospheric parameters.	

Content:	1. Identification of water masses and determination of stability of water column using T-S diagram (6hrs; 1-4) 2. Estimation of sound speed and determination of SOFAR channel in different parts of the world ocean (6hrs; Ref 1, 4) 3. Analysis of physical oceanographic processes from Horizontal sections using in-situ data (3hrs) (Ref 2) 4. Computation and Analysis of dynamic topography (6hrs; Ref 2, 5) 5. Measurements of atmospheric pressure, humidity, minimum and maximum temperature, computation of absolute humidity, specific humidity – Mixing ratio (3hrs; Ref 7) 6. Field observations of physical oceanographic parameters-use of meteorological instruments (6hrs; Ref 7, 8)	24 hours
Pedagogy:	Tutorials/assignments/practical/field study	
References/ Readings	1. Seawater: Its Composition, Properties and Behaviour, 1995 - Second Edition, Open University Press, 2. Ocean Circulation, 2001 - Second Edition, Open University Press, Walton Hall, Milton Keynes, MK76AA, UK 3. Algorithms for computation of fundamental properties of seawater, 1983. UNESCO TECHNICAL PAPERS IN MARINE SCIENCE, Endorsed by UNESCO/SCOR/ICES/IAPSO/ Joint Panel on Oceanographic Tables and Standards and SCOR Working Group 51, Unesco, Place de Fontenoy, 75700, Paris, France 4. Principles of physical oceanography, 1996 – Pierson, W.J. and Newmann, G.S., Prentice Hall Inc., New Jersey, U.S.A.. 5. Introduction to Dynamic Oceanography, 1983 - Pond, S. and Pickard, G.H., Pergamon Press, U.K. 6. Tropical Pacific near-surface currents estimated from altimeter, wind, and drifter data. 1999 - Gary S. E. Lagerloef, Gary T. Mitchum, Roger B. Lukas, Pearn P. Niiler., Journal of Geophysical Research, <u>Volume 104, Issue C10</u> , pages 23313–23326. 7. Meteorology Today: An introduction to weather, climate and the environment (2 nd edition), 1985 - Ahrens, St. Paul, West Publ. House. 8. Meteorology-Understanding the atmosphere, 2012 - Steven A A	
Learning Outcomes	Detect watermasses. Understand the importance of sound in sea and know its implications for underwater communication/ detection of objects. Know ocean processes along surface and study ocean circulation. Measure atmospheric parameters.	

Programme: M. Sc. (Marine Sciences)

Course Code: MSO 272

Title of the Course: Marine Chemistry II

Number of Credits: 01

Effective from AY: June 2018-19

Prerequisites for the course:	Degree of Bachelor of Science of this University or an examination of any other University recognized as equivalent.	
Objective:	This course develops concepts about the chemistry of the marine environment that concerns the study of the properties and interactions of the substances present in the marine environment.	
Content:	Micro-nutrient elements (P, N and Si) in seawater – Forms in seawater, distribution and cycle, N:P ratios – Stoichiometry of the uptake and regeneration of the nutrient elements and of oxygen – Chemical oceanography of the seas around India – Instruments used in chemical oceanography. Atmospheric chemistry and air-sea interactions – Composition of the atmosphere, steady state or equilibrium, sources of gases in the atmosphere, reactivity of trace gases in the atmosphere, acid rain, ozone hole; chemistry of sea surface microlayer – Origin, thickness and collection of surface material, properties of the sea surface micro-layer.	12 hours
Pedagogy:	Lectures/ tutorials/ assignments/ self-study	

References/ Readings	<ol style="list-style-type: none"> 1. Introduction to Marine Chemistry, 1971 – Riley, J.P. and Chester, R., Academic Press. 2. Chemical Oceanography (Vol.1, 2, 3 & 8), 1975 – Riley, J.P. & Skirrow, G., Academic Press. 3. Marine Chemistry, 1969 – Horne, R.A., Wiley-Interscience 4. Seawater: Its composition, properties & behaviour, 1989, 1995, 2004 – The Open University. 5. Marine Chemistry (Vol.2), 1970 – Martin, D.F., Marcel Dekker, NY. 6. Environmental Chemistry, 1994 - De, A.K., Wiley – Eastern Ltd. 13. Geosphere – Biosphere Interactions and Climate, 2001 – L.O.Bengtsson and C.U.Hammer., Cambridge University Press. 14. Oceanography of the Indian Ocean, 1992 – B. N. Dessai (Ed.), AA Balkema. 15. Chemical Oceanography of the Indian Ocean, North of Equator. 1984, Sengupta and Naqvi, Deep Sea Res. 31A, 671-706. 16. Chemical Oceanography, 1996, 2006 – F. J. Millero, CRC Press. 17. The Sea Surface and Global Change, 1997, 2005 – P.S. Liss and R. Duce., Cambridge University Press. 18. Ocean Biogeochemistry: The role of the ocean carbon cycle in Global change, 2003 – M.J.R. Fasham, Springer. 19. An Introduction to Marine Biogeochemistry, 2nd edition, 2009 – S.B.Libes, Wiley. 20. Marine Chemistry and Geochemistry, 2010 – K. K. Turekian, Academic Press. 21. An Introduction to the Chemistry of the Sea, 2nd edition, 2013 – M.E.Q. Pilson, Cambridge University Press. 	
Learning Outcomes	<ol style="list-style-type: none"> 1. Provide a comprehensive understanding of the properties and interactions of the substances present in the marine environment. 2. Explain the key processes operating in the marine environment. 3. Explain the importance of dissolved O₂, the marine carbon cycling and the CO₂ problem. 4. Explain the biogeochemical cycling of the nutrients from the perspective of the global biogeochemical cycling of elements. 	

Programme: M. Sc. (Marine Sciences)

Course Code: MSO 273 **Title of the Course:** Marine Chemistry Practical II

Number of Credits: 01

Effective from AY: June 2018-19

Prerequisites for the course:	Degree of Bachelor of Science of this University or an examination of any other University recognized as equivalent.	
Objective:	This course deals with the Analytical Chemistry of Seawater.	
Content:	<ol style="list-style-type: none"> 1. Spectrophotometric determination of dissolved inorganic phosphate in seawater by ammonium molybdate – ascorbic acid method (6 hrs; Ref 1) 2. Spectrophotometric determination of nitrite in seawater by sulphanilamide – diamine method (6 hrs; Ref 1) 3. Spectrophotometric determination of nitrate in seawater by reduction to nitrite using copper – coated cadmium reduction column (6 hrs; Ref 1) 4. Spectrophotometric determination of ammonia in seawater by indophenol blue method (6 hrs; Ref 1) 5. Spectrophotometric determination of dissolved inorganic silicate in seawater by ammonium molybdate – ascorbic acid – oxalic acid method (6 hrs; Ref 1) 	24 hours
Pedagogy:	Laboratory experiments/ field studies	
References/ Readings	<ol style="list-style-type: none"> 1. Methods of Seawater Analysis, 1983, 1999 – Grasshoff, K., Ehrhardt, M. and Kremling, K.; Verlag Chemie, Weinheim. 2. Instrumental Methods of Chemical Analysis, 1981 – Ewing, G. W.; McGraw-Hill, New York.A 3. Manual of Chemical and Biological Methods for Seawater Analysis, 1984 – Parsons, T. R., Maita, Y. and Lalli, C. M.; Pergamon Press, Oxford. 	

Learning Outcomes	1. Develop analytical skills to determine the concentrations of micro-nutrient elements (P, N and Si) in seawater/aqueous systems. 2. Apply techniques to seawater/natural waters to study the biogeochemistry of the marine environment/aquatic systems.	
--------------------------	--	--

Programme: M. Sc. (Marine Sciences)

Course Code: MSO 274

Title of the Course: Marine Biology II

Number of Credits: 01

Effective from AY: June, 2018-19

Prerequisites for the course:	Degree of Bachelor of Science of this University or an examination of any other University recognized as equivalent.	
Objective:	This course focuses on provision of basic concepts of marine biological and ecological processes. This also educates students to learn different aspects of food chains and their coupling in the marine environments.	
Content:	Marine productivity - heterotrophic processes and pathways, herbivory and grazing, zooplankton sampling, constraints, methods of biomass estimation, ontogeny and vertical migrations, mud bank formation, processes and fisheries.	12 hours
Pedagogy:	lectures/ tutorials/assignments/self-study	
References/ Readings	1. Marine Biology. 8 th Edition – 2009 Castro, P. and Huber, M. McGraw Hill Education. 461 pp. 2. Introduction to Marine Biology. 4 th Edition. – 2012, Krleskint, G., Turner, R., Small, J., Cengage Learning. 576 pp 3. Biological oceanography 1999 – Lalli, C.M., Elsevier Ltd. 4. Methods in Marine Zooplankton Ecology, 1984 Omori, W. and Ikeda, T. Wiley 5. The Invertebrates (3 rd Edn.), 1986 – Barnes, R.S. K. Blackwell Science 6. Zooplankton Methodology Manual, 2000 - Harris, R., Wiebe, P., Lenz, J., Skjoldal, H.R., Huntley, M. (Eds), ICES Academic Press, San Diego, pp. 68	
Learning Outcomes	Provision of knowhow to marine biological processes related to secondary production and fisheries.	

Programme: M. Sc. (Marine Sciences)

Course Code: MSO 275

Title of the Course: Marine Biology Practical II

Number of Credits: 01

Effective from AY: June, 2018-19

Prerequisites for the course:	Degree of Bachelor of Science of this University or an examination of any other University recognized as equivalent.	
Objective:	This course focuses on some of the morphological features of the marine organisms for the purpose of identification.	
Content:	1. Morphometric measurements and meristic counts of the Indian Mackerel, <i>Rastrelliger kanagurta</i> and elasmobranchs (4 hrs; Ref 3, 4, 5) 2. Identification of few commonly occurring teleosts (ray-finned fishes) and their biological characteristics (8 hrs; Ref 3, 4, 5) 3. Identification of brachyuran crabs using morphology and gonopod characteristics, sex determination and their biological importance (6 hrs; Ref 1) 4. Identification of prawns and shrimps using external characteristics, sex determination and biological aspects (6 hrs; Ref 1)	24 hours
Pedagogy:	Identification of marine fauna and fish morphometry	

References/ Readings	<ol style="list-style-type: none"> 1. FAO species identification guide for fishery purposes. Bony Fishes Part 4 (Labridae to Latimeriidae), estuarine crocodiles, sea turtles, sea snakes and marine mammals</i>. (Food and Agricultural Organization, Rome), pp. 3381-4218. 	
Learning Outcomes	Provides basic information towards the identification of few marine groups.	

Programme: M.Sc. (Marine Sciences)

Course Code:MSO 276

Title of the Course: Environmental Impact Assessment

Number of Credits: 01

Effective from AY:June2018-19

Prerequisites for the course	Students who have undergone courses of semester I of Marine Sciences.	
Objective	This course introduces concept of environmental impact assessment.	
Content	Environmental impact assessment (EIA) - Nexus between development and environment – Socio-economic impacts - purposes of EIA - aid to decision-making - formulation of development actions - sustainable development - EIA in project planning and implementation - EIA process - evaluation of proposed actions - scoping EIA methodologies - impact prediction- mitigation measures - monitoring - Environment Management Plan - planning - selection of appropriate procedures.	12 hours
Pedagogy	Lectures / Seminars involving presentation of environmental impact assessment studies carried out at national and international levels.	
References / Readings	<ol style="list-style-type: none"> 1. Introduction to environmental impact assessment 2005, Glasson J., Therivel R., Chadwick A, Routledge, Taylor & Francis Group, London and New York. 2. Methods of Environmental Impact Assessment 2009, Morris P., Therivel R., 3rd edition, Routledge, Taylor & Francis Group, London and New York. 3. Methods of Environmental Impact Assessment 2001, Morris P., Therivel R., 2nd edition, Spon Press, Taylor & Francis Group, London and New York. 4. Environmental Impact Assessment 2011, Eccleston C. H., CRC Press, Taylor & Francis Group. 	
Learning Outcomes	<ol style="list-style-type: none"> 1. Ability to carry out environmental impact assessment study. 2. A potential candidate for recruitment in the EIA consultancy firms. 	

Programme: M.Sc. (Marine Sciences)

Course Code:MSO 277

Title of the Course: Environmental Impact Assessment Practical

Number of Credits: 01

Effective from AY:June2018-19

Prerequisites for the course	Students who have undergone courses of semester I of Marine Sciences.	
Objective	This course introduces field survey, sampling and experiments to assess impact on the environment.	

Content	<ol style="list-style-type: none"> 1. Introduction to national and international standard values for ambient air, noise, water, sediments and industrial effluents (4 hrs; Ref 1,2) 2. On board trawler field trip to an estuary to get familiar with field study methods for collection of water, sediment and biological samples (10 hrs; Ref 3) 3. Determination of total dissolved solids in water (5 hrs; Ref 4, 5) 4. Determination of total suspended matter in water (4 hrs; Ref 6) 5. Determination of biogenic silica from sediments (6 hrs; Ref 7, 8) 6. Comparison of determined data with the national standard value (4 hrs; Ref 1, 2) 7. Analysis of environmental impact assessment reports available (4 hrs; Ref 1, 2) 	24 hours
Pedagogy	Field survey and sampling / Laboratory experiments / Interpretations	
References / Readings	<ol style="list-style-type: none"> 1. Environmental standards for ambient air, automobiles, fuels, industries and noise. Central pollution control board, Ministry of environment and forests, India, July 2000. 2. Learning Outcomes	<ol style="list-style-type: none"> 1. Ability to conduct field survey and sampling for environmental impact assessment study. 2. Conducting laboratory experiments and interpretation of data. 	

Programme: M. Sc. (Marine Sciences)

Course Code: MSO 278

Title of the Course: GIS Applications in Marine Science Practical - I

Number of Credits: 01

Effective from AY: June, 2018-19

Prerequisites for the course:	Students who have undergone semester I of Marine Sciences.	
Objective:	To use GIS techniques in the field of oceanography / meteorology	
Content:	<ol style="list-style-type: none"> 1. GIS, GIS software familiarization and image properties (8 hrs; Ref 1&2) 2. Data acquisition and integration in GIS software (6 hrs; Ref 1&3) 3. Image edge detection, Transects, spectra and time series images (6 hrs; Ref 3) 4. Contrast stretching, Colour palettes, smoothing satellite images (4 hrs; Ref 3 & 4) 5. Digitizing Vector maps (6 hrs; Ref 6) 	24 hours
Pedagogy:	Tutorials/ assignments/practicals/field study	
References/ Readings	<ol style="list-style-type: none"> 1. Practical Handbook of Digital Mapping: Terms and Concepts Arlinghaus, 1994 Sandra L., - CRC Press. 0-8493-0131-9 2. Coastal Management Source books 3. 2004. Edmund P. Green, Peter J. Mumby, Alasdair J. Edwards and Christopher D. Clark, UNESCO, Paris. 4. Principles of Geographic information systems- An introductory text book, 2009 - Eds: Otto Huisman and Roff A. de By (ed.) International Institute for Geo-Information and Earth Observation, Netherlands. 5. Essentials of Geographic Information Systems, 2011 - Jonathan Campbell, Michael Shin 	

	Publisher: Flat World Knowledge 6. GRASS GIS: a multi-purpose Open Source GIS . Environmental Modelling & Software. 2012 - Neteler, M., Bowman, M.H., Landa, M. and Metz, M.	
Learning Outcomes	Characterize data into line/ point / polygon feature. Geo-reference and image, integrate data into GIS, Digitization of Vector maps, identification of line from specific distance from high tide line,	

Programme: M. Sc. (Marine Sciences)

Course Code: MSO 279

Title of the Course: GIS Applications in Marine Science Practical -II

Number of Credits: 01

Effective from AY: June, 2018-19

Prerequisites for the course:	Students who have undergone semester I of Marine Sciences.	
Objective:	To use GIS techniques in the field of oceanography / meteorology	
Content:	1. The Importance of Acquiring satellite Images of the Appropriate resolution (4 hrs; Ref 3 & 5) 2. CRZ mapping (6 hrs; Ref 2,3 &4) 3. Estimating coral bleaching potential from SST (6 hrs; Ref 1 & 3) 4. Mangrove Leaf-Area Index (LAI) using imageries (6 hrs; Ref 1&3) 5. Geospatial Analysis of Vector data (8 hrs; Ref6)	24 hours
Pedagogy:	Tutorials/ assignments/practicals/field study	
References/ Readings	7. Practical Handbook of Digital Mapping: Terms and Concepts Arlinghaus, 1994 Sandra L., - CRC Press.0-8493-0131-9 8. Coastal and marine geospatial technologies. 2010. Ed. David R Green, Springer, ISBN 978-1-4020-9719-5 9. <i>Remote Sensing Handbook for Tropical Coastal Management</i> . Coastal Management Source books 3.2004. Edmund P. Green, Peter J. Mumby, Alasdair J. Edwards and Christopher D. Clark, UNESCO, Paris. 10. Principals of Geographic information systems- An introductory text book, 2009 - Eds :ottoHuisman and Roff A. de By (ed.) International Institute for Geo-Information and Earth Observation, Netherlands. 11. Essentials of Geographic Information Systems, 2011 - Jonathan Campbell, Michael Shin Publisher: Flat World Knowledge 12. <i>GRASS GIS: a multi-purpose Open Source GIS</i> . Environmental Modelling & Software. 2012 - Neteler, M., Bowman, M.H., Landa, M. and Metz, M.	
Learning Outcomes	Utilization of appropriate resolution for raster image analysis, Delineation of specific zones such as CRZ and the features/parts of feature within that zone, estimating possible impact of ocean warming on corals, capture vegetation in coastal zone.	

Programme: M. Sc. (Marine Sciences)

Course Code: MSO 280

Title of the Course: Marine Chemistry Practical III

Number of Credits: 01

Effective from AY: June 2018-19

Prerequisites for the course:	Students who have undergone semester I of Marine Sciences.
Objective:	This course deals with the Analytical Chemistry of Seawater.

Content:	<ol style="list-style-type: none"> 1. Determination of sulphate in seawater gravimetrically by precipitation of BaSO₄ using BaCl₂ in the presence of picric acid (6 hrs; Ref 1) 2. Determination of thiosulphate in seawater by iodometric titration with the removal of sulphide using zinc acetate (6 hrs; Ref 1) 3. Determination of bromide in seawater by oxidizing to bromate using hypochlorite followed by iodometric titration (6 hrs; Ref 1) 4. Spectrophotometric determination of urea in seawater by diacetyl monoxime – semicarbazide method (6 hrs; Ref 1) 5. Spectrophotometric determination of carbohydrates in seawater by 3- methyl-2-benzothiazoline hydrazone (MBTH) method (6 hrs; Ref 1) 	24 hours
Pedagogy:	Laboratory experiments/ field studies	
References/ Readings	<ol style="list-style-type: none"> 1. Methods of Seawater Analysis, 1983, 1999 – Grasshoff, K., Ehrhardt, M. and Kremling, K.; Verlag Chemie, Weinheim. 2. Organic Reaction Mechanisms, 1997 - Knipe, A. C. and Watts, W. E., John Wiley and Sons, New York. 3. A Manual of Chemical and Biological Methods for Seawater Analysis, 1984 – Parsons, T. Learning Outcomes	<ol style="list-style-type: none"> 1. Develop analytical skills to determine the concentrations of various chemical parameters, such as nitrate, ammonia and Al in seawater/aqueous systems. 2. New analytical technique for nitrate and ammonia is adopted. 3. Laboratory simulations are conducted to understand the mechanisms of reactions. 4. Apply techniques to seawater/natural waters to study the biogeochemistry of the marine environment/aquatic systems. 	

SEMESTER III

Programme: M. Sc. (Marine Sciences)

Course Code: MSO 361 **Title of the Course:** Geophysical Fluid Dynamics

Number of Credits: 04

Effective from AY: June, 2018-19

Prerequisites for the course:	Students undergoing course with Physical Oceanography specialization. However, it is flexible to those having interest to learn basics of fluid dynamics.	
Objective:	This course is introduced to impart students an insight into different scales of motion in fluids (which includes both atmosphere and ocean) and how to understand them by applying basic theorems and laws of fluid dynamics.	
Content:	Basic concepts: fluid continuum, fluid properties, ideal fluid, types of flows; Scales of motions; Importance of rotation and stratification; Distinction between Atmosphere and Oceans; statics: pressure surface and body forces on a fluid element; fundamental equation of fluid statics: application to compressible and incompressible fluids, hydrostatic equation along the vertical, application to the atmosphere, Units of measurement – Newtonian and non – Newtonian fluids – Coriolis, rotating frame of reference, Kinematics.	12 hours
	Kinematics: Lagrangian and Eulerian methods of description of fluid flow-Lagrangian and Eulerian method- stream lines, streak lines and trajectories, steady and non-steady flow, decomposition of the field of motion in the vicinity of a point, translation, rotation, divergence and deformation, Principles of Prandtl's mixing length theory, Momentum budget, salt and moisture budget, Summary of governing equations, Boussinesq approximation, typical flow patterns, stream function, divergence and vorticity in different co-ordinate systems, material, local and convective derivatives.	12 hours
	Dynamics - I: equation of continuity and its applications, non-viscous incompressible flow, Eulerian equations of motion, inertial and rotational frames of reference, Coriolis force, irrotational flow, velocity potential, integration of the equations of motion, Bernoulli's theorem and its applications.	12 hours
	Dynamics – II: Circulation and vorticity, Stoke's theorem, Kelvin's theorem, Helmholtz theorem, barotropic and baroclinic fluids, absolute and relative circulation; V. Bjerknes circulation theorem and its interpretation, potential vorticity-conservation, Eddy coefficients, Important dimensionless number, Turbulent diffusion; Combination of advection and diffusion, Geostrophic flow and vorticity dynamics, laminar flow of viscous incompressible fluids; Turbulence in stratified flows; Reynold's number and dynamic similarity of flows, physical significance of Reynold's number, low and high Reynold's number.	12 hours
Pedagogy:	Since the above course is theory component which includes basic theory and derivations, total syllabus is taught in the class. However to get a feeling of the application to natural ecosystem, assignments are given to students thus developing the art of presentation and generating a thought process in the students.	
References/ Readings	<ol style="list-style-type: none">1. Hydraulics and fluid mechanics, 1985 – Modi, P.N. and Seth., Standard Book House, Delhi.2. Foundation of fluid mechanics, 1969 – Yuan, S. W., Prentice Hall, New Delhi.3. An introduction to fluid mechanics, 1967 – Batchelor, G.K., Cambridge Univ. Press, UK.4. Hydrodynamics, 1975 – Lamb, H., Cambridge Univ. Press, U.K.5. Introduction to fluid mechanics, 1976 – Rathy, R.K., Oxford and IBH Publ. Co., New Delhi.6. The physics of marine atmosphere, 1965 – Roll, H.U., Academic Press, London.7. Atmosphere – Ocean Dynamics, 1982 - Gill, Adrian E, International Geophysics, 30 Academic press, New York.	
Learning Outcomes	Apply the knowledge gained to solve real life problems confronting the environment.	

Programme: M. Sc. (Marine Sciences)

Course Code: MSO 362

Number of Credits: 02

Effective from AY: June, 2018-19

Title of the Course: Geophysical Fluid Dynamics Practical

Prerequisites for the course:	Physical Oceanography, with flexibility to those having interest to learn basics of fluid dynamics.	
Objective:	This is introduced to acquaint students with a hands-on-experience on what they learned in the theory. It involves field based observations and numerical techniques.	
Content:	<p>Module – I</p> <ol style="list-style-type: none">1. Kinematics analysis of wind and ocean current – Isotach and isogen analysis and construction of streamline patterns (10 hrs; Ref1)2. Construction of trajectories of air parcels from successive synoptic charts (8 hrs; Ref1)3. Computation of divergence and vorticity in horizontal flow (12 hrs; Ref2) <p>Module – II</p> <ol style="list-style-type: none">1. Construction of stream lines for simple types of flow (7 hrs; Ref2)2. Field observations and analysis of Physical Oceanographic parameters of estuarine waters using conductivity temperature and depth (CTD) instrument (15 hrs; Ref1,3)3. Analysis of aerosol trajectory using HYSPLIT (HYbrid Single – Particle Lagrangian Integrated Trajectory) model. (8 hrs; Ref4)	<p>24 hours</p> <p>24 hours</p>
Pedagogy:	This involves field observations (time series) and associated numerical techniques to differentiate different components of vector velocity.	
References/ Readings	<ol style="list-style-type: none">1. Introduction to Physical Oceanography, 2008 – Robert H. Stewart, Department of Oceanography Texas, A&M University, oceanworld.tamu.edu/resources/ocng_textbook/PDF_files/book.pdf2. Ocean Circulation and Climate (2nd Ed), 2013 - A 21st Century perspective eds. Siedler, G, Griffies, S, Gould, J, and Church, J, ISBN- 978-0-12-391851-2, Academic press.4. HYSPLIT- Hybrid Single Particle Lagrangian integrated Trajectory Model, Air Resources Laboratory, http://www.arl.noaa.gov/ . NOAA technical memorandum ERL, ARL-224, Roland R. Draxler and Hess, G.D5. The physics of marine atmosphere, 1965 – Roll, H.U., Academic Press, London.6. Atmosphere – Ocean Dynamics, 1982 -- Gill, Adrian E, International Geophysics, 30 Academic press, New York.	
Learning Outcomes	Apply the knowledge gained to solve issues confronting the coastal regions specifically coastal dynamics leading to erosion.	

Programme: M. Sc. (Marine Sciences)

Course Code: MSO 363

Number of Credits: 04

Effective from AY: June, 2018-19

Title of the Course: Ocean - Atmosphere Coupling and Climate

Prerequisites for the course:	Physical Oceanography and Marine Biology	
Objective:	To learn exchange of mass and energy across air-sea interface and its role in global climate.	

Content:	Wind generation, forces acting on wind, Geostrophic winds, thermal winds. Wind wave generation, scale of interaction, General character of sea surface as a lower boundary of air flow – Geometry of the sea surface – The wind field in the maritime frictional layer. Drag coefficient.	12 hours
	General consideration of air sea interaction – Planetary boundary layer - Laminar boundary layer, surface layer and spiral layer. Variation of air sea fluxes with special reference to upwelling – Transfer of heat and water vapour – Determination of air – sea fluxes – Fronts and water masses interaction -Profile method and non profile methods.	12 hours
	Energy exchange and global climate – Radiation and its role on tropical circulation – Indian Summer Monsoons: cause, inter-seasonal and intra-seasonal variability, Monsoon Trough, LLJ, Tibetan Low, Mascarenhas High, TEJ, El-nino, La nina.	12 hours
	Tropical cyclones: Cyclone structure, Generation, growth and decay. Temperature, pressure field and wind speed and direction. Cyclones in North Indian Ocean, – Instruments used in marine meteorology – Concepts in climatology, fundamental oceanic processes influencing climate – climate change.	12 hours
Pedagogy:	Lectures/Tutorials/ assignments	
References/ Readings	<ol style="list-style-type: none"> 1. Monitoring & prediction of tropical cyclones in Indian Ocean & climate change, 2014 - U. C. Mohanty, M. Mohaptra, O.P Singh, B. K Bandhopadhyay & L. S. Rathore. 2. Hot Spots in the climate system, 2016 - Nakamura H., Isobe A., Minobe S., Mitsudera, H. Nonaka M., Suga, T. (Eds.), Springer. 3. Climate of South Asia, 1997 – Pant and Kumar, John wiley. 13. The Dvorak Tropical Cyclone Intensity Estimation Technique: A Satellite-Based Method that Has Endured for over 30 Years, 2006 - Velden, Christopher, and Co-authors, <i>Bull. Amer. Meteor. Soc.</i>, 87, 1195–1210. 	
Learning Outcomes	Explain exchange of momentum, and energy and their role in climate. Explain southwest monsoon and tropical cyclones. Generation of waves, El Nino and La Nina.	

Programme: M. Sc. (Marine Sciences)

Course Code: MSO 364

Title of the Course: Ocean Atmosphere Coupling and Climate Practical

Number of Credits: 02

Effective from AY: June, 2018-19

Prerequisites for the course:	Physical Oceanography	
Objective:	To analyze air-sea fluxes and the factors responsible, relationship between SST and southwest Indian monsoon, analyze El Nino and La Nina events	
Content:	<p>Module – I</p> <ol style="list-style-type: none"> 1. Data extraction from global data sets of Short Wave Radiation and analysis of its distribution (6hrs; Ref 1, 2, 3,4) 2. Data extraction from global data sets of Long Wave Radiation and analysis of its distribution (6hrs; Ref 1, 2, 3,4) 3. Data extraction from global data sets of Sensible Heat flux and analysis of its distribution (6hrs; Ref 1, 2, 3,4) 4. Data extraction from global data sets of Latent Heat Flux and analysis of its distribution (6hrs; 	24 hours

	<p>Ref 1, 2, 3,4)</p> <p>5. Estimation of Net heat flux from above extracted data sets and analysis of its distribution (6hrs; Ref 1, 2, 3,4)</p> <p>6. Analysis of fluxes over Central Pacific during Normal, El-Nino and La Nina events (6hrs; Ref5)</p> <p>Module – II</p> <p>1. Arabian Sea SST and Indian Summer rainfall correlation (6hrs; Ref6)</p> <p>2. Central Pacific SST and Indian Summer rainfall correlation (6hrs; Ref6)</p> <p>3. Cyclone intensity estimation using Dvorak technique for satellite images (8hrs; Ref 6,7)</p> <p>4. Determination and analysis of cyclone tracks in Arabian Sea and Bay of Bengal (6hrs; Ref6)</p> <p>5. Analysis of annual variations of N and S hemispheric air temperature (4hrs; Ref3)</p>	24 hours
Pedagogy:	Tutorials/ assignments/practicals	
References/ Readings	<ol style="list-style-type: none"> 1. The Physics of marine atmosphere, 1965 –Roll, H.U., Academic Press, London. 2. Oceanography for meteorologists, 1945 –Sverdrup, H.U., George Allen & Unwin, London, U.K. 3. Climate change, 1995 –Houghton, J.T., Cambridge Univ. Press, U.K. 4. Air-sea fluxes from ICOADS: the construction of a new gridded dataset with uncertainty estimate, 2011 - Berry, D. I., and E. C. Kent, International Journal of Climatology, 31, 987-1001: DOI: 10.1002/joc.2059. 6. Tropical Meteorology, 2005 - Asnani G C. 7. The Dvorak Tropical Cyclone Intensity Estimation Technique: A Satellite-Based Method that Has Endured for over 30 Years, 2006 - . Velden, Christopher, and Co-authors, <i>Bull. Amer. Meteor. Soc.</i>, 87,1195–1210. 	
Learning Outcomes	Examine statistical relationship between El Nino and southwest Indian Monsoon, Explain spatiotemporal variability of fluxes and the possible governing factors.	

Programme: M. Sc. (Marine Sciences)

Course Code: MSO 365

Title of the Course: Marine Pollution

Number of Credits: 04

Effective from AY: June, 2018-19

Prerequisites for the course:	Marine Biology and Marine Chemistry	
Objective:	<ol style="list-style-type: none"> 1. To understand the type of pollutants discharged into sea as a result of human activities, their sources and impact on marine life. 2. To study the addition of conservative (radioactive pollutants, trace metals and pesticides), non conservative pollutants (Oil and other organic wastes) and nutrient salts, their implications on human health and food resources and commercial interest. 3. Quantification of pollutant studies through suitable indicator organisms. 4. To study monitoring strategies of marine pollution through different approaches and assessment of pollution damage in order to understand 	
Content:	Marine Pollution: Definition, categories of additions, Pollutant and its classification. Organic wastes: BOD, COD, dilution factor, Fluctuations in DO, Consequences of organic discharges to estuaries with examples; Thames and Mersey estuary; Consequences of sludge dumping at sea with reference to Thames and Firth of Clyde. Sewage treatment: Primary, Secondary and Tertiary treatment processes. Solid waste pollution: Classification and disposal of solid wastes.	12 hours
	Industrial pollution: sources, nature and their treatment processes with reference to wastes from paper and pulp and soap manufacturing industries. Marine corrosion: Definition, corrosion reactions, classification of corrosion, factors affecting corrosion of metals in sea water and prevention of marine corrosion. The state of some seas in the world (pollution aspect); The North sea, The Mediterranean sea and the Baltic sea.	12 hours
	Oil spills and cleanup: sources, major accidental spills, fate of spilled oil on the sea, consequences	

	<p>of oil spills and treatment of oil spills. Pesticide pollution: inputs, fate in the sea, factors affecting the bioaccumulation of pesticides, DDT-the most wide spread molecule, Impact of pesticides on the Environment, Mode of poisoning of pesticides, Methods to minimize pesticide pollution. Conservative pollutants: Measures of contamination, toxicity, measurement of toxicity, acute and chronic exposure, Detoxification. Metal pollution in coastal waters (Hg, Pb, Cd, Cu, Zn and Fe). The present status of coastal pollution in India and future strategies. Radioactive Pollution: Sources, Classification and effects of radiation; Protection and control from radiation: Maximum permissible dose concept, dose limits, Disposal of radioactive wastes; Beneficial aspects of radiation and food safety.</p> <p>Indicator organisms: Criteria for selection of indicator organism: Quantification of pollution load, basic pre-requisites, response to different pollution load and time integration capacity, Macro algae, crustaceans and mollusks as indicator organisms for monitoring of trace metal pollution; Red tides : distribution, types of poisoning, effects and methods to minimize red tides in the sea. Monitoring strategies of marine pollution: Critical pathway approach and Mass balance approach. Standards in water quality: Assessment of pollution damage: The need, seriousness of damage, assessment of damage and problems of measuring impact.</p>	<p>12 hours</p> <p>12 hours</p>
Pedagogy:	lectures/ tutorials/assignments/self-study	
References/ Readings	<ol style="list-style-type: none"> 1. Chemical Oceanography (Vol: 3), 1975 - Riley J.P and Skirrow, G. (eds.), Academic press, New York. 2. The health of the oceans, 1976 - Goldberg, E.D. UNESCO Press. 3. Marine Pollution, 1986 - Clark, R.B. Oxford science Publications. 4. Quantitative aquatic biological indicators, 1980 - Phillips J.D.H. Applied Science Publishers. 5. Thermal and radioactive pollution, 1994 - Sharma, B.K and Kaur, H. Krishna Prakasham Mandir, Meerut. 6. Water Pollution, 1994 - Sharma, B. K and Kaur, H. Krishna Prakasham Mandir, Meerut. 7. Marine and offshore corrosion, 1985 - Chandler, K.A. Butter Worths, London. 	
Learning Outcomes	<ol style="list-style-type: none"> 1. The course helps in understanding the impact of various pollutants on marine ecosystem; it analyses the factors responsible for degradation and suggests suitable corrective measures around the world. 2. To create awareness among student, by information by educating them to safeguard the marine environment 3. The course further identify the factors responsible for causing marine pollution , to suggest policy measures to prevent marine pollution, to create sustainable marine environment and 4. To provide advisory and technical service to government and industry for pollution abatement. 	

Programme: M. Sc. (Marine Sciences)

Course Code: MSO 366

Title of the Course: Marine Pollution Practical

Number of Credits: 02

Effective from AY: June 2018-19

Prerequisites for the course:	Marine Chemistry and Marine Biology	
Objective:	<ol style="list-style-type: none"> 1. The objective of this course understands the concentration of various pollutants in the seawater and their effect on marine life. 2. The analyses of BOD and COD are used to understand the impact organic pollution on water bodies. 3. Different pollutants like Fluoride and Hydrogen sulphide in sea water it greatly influence the quality of water for marine life including man. 	
Content:	<p>Module – I</p> <ol style="list-style-type: none"> 1. Determination of dissolved oxygen in polluted waters. (6 hrs; Ref1) 2. Determination of biochemical oxygen demand in polluted waters. (6 hrs; Ref1) 3. Determination of chemical oxygen demand in polluted waters. (6 hrs; Ref2) 4. Determination of fluoride. (6 hrs; Ref3) 5. Determination of hydrogen sulphide. (6 hrs; Ref3) 	24 hours
	<p>Module – II</p> <ol style="list-style-type: none"> 1. Pre-concentration of water by solvent extraction method (6 hrs; Ref 5,6,7) 2. Digestion of biological samples for estimation of toxic metals. (6 hrs; Ref8) 3. Estimation of Cd in polluted waters and biological sample. (6 hrs; Ref 5,6,7) 	24hour

	4. Estimation of Cu in polluted waters and biological samples. (6 hrs; Ref 5,6,7) 5. Estimation of Pb in polluted waters and biological samples. (6 hrs; Ref 5,6,7)	s
Pedagogy:	Demonstrations/ Lab experiments.	
References/ Readings	1. Marine chemistry Vol. 1, 1972 - Martin, D.F. . Academic Press, London. 2. Standard methods for the examination of water and waste water analysis (22nd edition), 2012. Rice, E.W and Bridgewater L. American Public health association, Washington DC. 3. Methods of Seawater analysis, 1983 - Grasskhoff, K, M. Ehrhardt and K. Kremling (eds.), Verlag Chemie, Weinheim. 4. A practical hand book of seawater analysis, 1972 - Strickland, J.D.H, and Parsons, T.R., Fisheries Board of Canada bulletin. (2nd edition). 5. Analytical chemistry of seawater, In Chemical Oceanography, 1975 - Riley, J.P. and Skirrow, G. (eds.), Vol. 3. Academic Press, London. 6. Chemical Analysis. In: Methods in plant Ecology, 1976 - Allen, S. E., Grimshaw, H. M., Parkinson, J. A., Quarmby, C. and Roberts, J.D. 1976. S. B. Chapman (eds.), Blackwell Scientific Publications, Oxford, Chapter 8.	
Learning Outcomes	1. The results of analyses of different pollutants in sea water and marine organisms can be used to assess the effectiveness of existing regulatory activities. 2. These concentrations will be compared with the daily intake of, or exposure to a pollutant by organism/man and it can lead to acceptable concentration of pollutant in organism. 3. These studies would help to regulate the release of a particular pollutant in the marine environment.	

Programme: M.Sc. (Marine Sciences)

Course Code:MSO 367

Title of the Course: Bioaccumulation and Phytoremediation

Number of Credits: 03

Effective from AY:June2018-19

Prerequisites for the course	Students undergoing course in any branch of Marine Sciences.	
Objective	This course introduces concept of bioaccumulation of metals and remediation of metal pollution by mangroves.	
Content	Metal sources to marine environment - natural - anthropogenic - metal retention in sediments -role of grain size - organic matter - Fe-Mn oxides - sulphides - Definition and significance of metal speciation - forms of metals - bioavailable - residual - bioavailability of metals -definition - driving factors for desorption of metals from the bioavailable fraction of the sediments - ionic composition – pH – Eh - organic matter degradation – metal toxicity assessment – SQUIRT - RAC.	12 hours
	Bioaccumulation of metals – definition - metal accumulation in benthic biota - Arsenic bioaccumulation in biota of the Sundarban Mangrove Wetland – a case study - Bioaccumulation factor (BAF) - concept of Bioconcentration – Bioconcentration factor (BCA) - harmful effects of bioaccumulation of metals on biota - Biomagnification in trophic levels – risk to human health.	12 hours
	Metal accumulation in mangroves – pneumatophores – leaves - stem - remediation of metal contamination – phytoremediation – application of mangrove species - Translocation factor (TF) - techniques of phytoremediation – Phytoextraction – Rhizofiltration – phytovolatilization - phytostabilization, phytodegradation - Rhizodegradation/Phytostimulation - Advantages and disadvantages of Phytoremediation.	12 hours
Pedagogy	Lectures / Assignments / Seminars / Discussion	
References / Readings	1. Trace metals in a tropical mangrove wetland, 2018 Sarkar, S. K., Springer Nature Singapore Pte Ltd. 2. Trace elements in terrestrial environments, 2001 Adriano, D.C., Springer Science+Business Media, LLC. 3. Bioaccumulation in marine organisms, 2002 Neff, J. M., Elsevier Ltd. 4. The biology of mangroves and seagrasses, 2015 Hogarth P. J., Oxford University press. 5. Sequential extraction procedure for the speciation of particulate trace metals, 1979 Tessier, A., Campbell, P. G. C. and Bisson, M., Analytical Chemistry, American Chemical Society.	
Learning Outcomes	1. Understanding of accumulation of metals by biota and mangroves. 2. Knowledge of application of mangroves in remediation of metal pollution.	

Programme: M.Sc. (Marine Sciences)

Course Code:MSO 368

Title of the Course: Bioaccumulation and Phytoremediation Practical

Number of Credits: 01

Effective from AY:June2018-19

Prerequisites for the course	Students undergoing course in any branch of Marine Sciences.	
Objective	This course introduces experiments to determine metal concentration in sediments, biota and mangroves to understand metal accumulation process and metal remediation potential of mangroves.	
Content	1. Digestion and chemical speciation of metals in sediments (Exchangeable, carbonate, Fe-Mn oxide, organic/sulphide and residual bound metals) (13 hrs; Ref 3, 4, 5) 2. Estimation of Mn, Co, Ni in sediments by flame AAS method (6 hrs; Ref 1, 2, 3, 4, 5) 3. Digestion of tissues of biota (5 hrs; Ref 5, 6, 7) 4. Estimation of Mn, Co, Ni in biota by flame AAS method (6 hrs; Ref 5, 6, 7) 5. Digestion of mangrove tissues (5 hrs; Ref 5, 8, 9) 6. Estimation of Mn, Co, Ni in mangrove tissue samples (6 hrs; Ref 5, 8, 9)	24 hours
Pedagogy	Field studies / Laboratory experiments / Interpretations	
References / Readings	1. Analytical chemistry of seawater, 1975 – Riley J. P. In Chemical Oceanography, J.P. Riley and G. Skirrow (eds.), Vol. 3, Academic Press London. 2. Methods of seawater analysis, 1983 – Grasshoff K., M. Ehrhardt and K. Kremling (eds.), Verlag Chemie, Weinheim, 419. 3. Manual for geochemical analysis of marine sediments and suspended particulate matter, 1977 Loring, D. H. and Rantala, R. T. T., Fish. Mar. Serv. Dev. Technical Report 700. 4. Sequential extraction procedure for the speciation of particulate trace metals, 1979 Tessier, A., Campbell, P. G. C. and Bisson, M., Analytical Chemistry, 51(7):844-851, American Chemical Society. 5. Trace metals in a tropical mangrove wetland, 2018 Sarkar, S. K., Springer Nature Singapore Pte Ltd. 6. Temporal and spatial variation on heavy metal concentrations in the bivalve <i>Perna perna</i> (Linnaeus, 1758) on the northern coast of Rio de Janeiro state, Brazil, 2004 Ferreira, G.A., Machado, A.L.S., Zalmin, I.R., Brazilian Archives of Biology and Technology 47:319-327. 7. Heavy metals in <i>Patella caerulea</i> (mollusca, gastropoda) in polluted and non-polluted areas from the Iskenderun Gulf (Mediterranean Turkey), 2010 Yuzeroglu, T. A., Gok, G., Cogun, H. Y., Firat, O., Aslanyavrusu, S., Maruldali, O. and Kargin, F. Environmental Monitoring and Assessment 167(1-4):257-264. 8. Assessment of sediment quality in <i>Avicennia marina</i> -dominated embayments of Sydney Estuary: The potential use of pneumatophore (aerial roots) as a bio-indicator of trace metal contamination, 2014, Nath, B., Birch, G. and Chaudhuri, P., Science of the Total Environment 472:1010-1022. 9. Toxicity, growth and accumulation relationships of copper lead and zinc in the grey mangrove <i>Avicennia marina</i> (Forsk.) Vierh, 2002, MacFarlane, G. R. and Burchett, M. D., Marine Environmental Research 54:65-84.	
Learning Outcomes	1. To understand field survey and sampling. 2. Ability to interpret data and link bioavailability with bioaccumulation. 3. To understand phytoremediation process.	

Programme: M. Sc. (Marine Sciences)

Course Code: MSO 369

Title of the Course: Aerosol and Climate

Number of Credits: 03

Effective from AY:June2018-19

Prerequisites for the course:	Students undergoing course in any branch of Marine Sciences.	
Objective:	This course is introduced as an attempt to make students understand the significant role of aerosol on regional climate in particular and Global climate in general.	

Content:	Introduction to aerosols – Aerosol motion – Stoke's law and settling velocity - Sun photometry – Multi-wavelength radiometer -estimation of aerosol optical depth (AOD)- Brownian motion and diffusion deposition-Brownian coagulation- Angstrom turbidity formula – Particle sizes and functions used to fit aerosol size distribution – The lognormal- gamma and power law functions- aerosol measurement network – ARFI and AERONET- Aerosol water uptake-Solubility and hygroscopicity - Hygroscopicity and cloud condensation nuclei (CCN) activity – Aerosol optical properties and Mie theory for spherical particles.	12 hours
	Light absorbing black Carbon (BC) aerosol- Aerosol light scattering-absorption and extinction- Aethalometer - Quartz crystal microbalance (QCM) for size analysis – Identification of planetary boundary layer – In-situ production of aerosol -Shear and turbulence- estimation of Richardson number (Ri) - estimation of heat flux - sensible and latent- maritime and continental aerosol- land and sea breeze - Long range transport of aerosol. Retrieval of aerosol optical depth from satellite data. Estimation of aerosol radiative forcing and atmospheric heating rate- implications to climate - present status of aerosol research in India and in the world.	12 hours
	Atmosphere: Chemical and photochemical reactions in the atmosphere. Atmospheric trace constituents: Oxygen, sulphur containing compounds: sulfur dioxide, dimethyl sulphide, and carbonyl sulphide. Nitrogen containing compounds: nitrous oxide, nitrogen oxides and ammonia. Carbon containing compounds: hydrocarbons, volatile organic compounds, carbon monoxide and carbon dioxide. Halogen containing compounds: Methyl chloride, methyl bromide. Green house effect/Global warming; biomass burning and air pollution.	12 hours
Pedagogy:	Since it is a theory component, entire course is taught in the class. However, to get a strong understanding seminar topics, other than from the syllabus are given to students.	
References/ Readings	<ol style="list-style-type: none"> 1. Atmospheric Chemistry and Physics, 2006 - From air pollution to Climate change. Seinfeld. John H; Pandis, Spyros N, John Wiley. 2. Radiation and cloud processes in the atmosphere, 2006 - Theory, Observation and modeling, Kuo-Nan Liou, Oxford University Press. 3. Atmospheric aerosol properties, 2006 - Kondratyev, K.Y, Ivlev L.S, Krapivin, V.F, Varostos C.A, Springer Praxis Book. 4. An Introduction to Boundary Layer Meteorology, 1999 – Roland B. Stull, Kluwer, Academic Publishers. 5. Environmental Chemistry, 2006- Anil Kumar Dey, New Age International publishers, West Bengal. 	
Learning Outcomes	The knowledge they gain from the course will be an investment for their post-PG research as aerosol science/research is an emerging field.	

Programme: M. Sc. (Marine Sciences)

Course Code: MSO 370

Title of the Course: Aerosol and Climate Practical

Number of Credits: 01

Effective from AY: June 2018-19

Prerequisites for the course:	Students undergoing course in any branch of Marine Sciences.	
Objective:	<ol style="list-style-type: none"> 1. In the present course, trace metals and nutrients will be analysed from PM₁₀ particulate matter collected from respirable dust sampler. 2. The main objective of this course is to study the atmospheric composition of aerosols. 3. These studies would help to understand the affect of rapid urbanisation and industrialisation on air quality. 	
Content:	<ol style="list-style-type: none"> 1. RDS sampler - principle and instrumentation (6 hrs; Ref: 1, 2, 3) 2. Method to collect dry deposited material by using PM 10 (6 hrs; Ref. 1, 2, 3) 3. Estimation of mass loadings of PM 10 (06 hrs; Ref: 1, 2, 3) 4. Estimation of water soluble metals (Fe, Zn, Cu and Pb) in dry deposited material (06 hrs; Ref: 4, 5, 6, 7) 5. Estimation of total metals (Fe, Zn, Cu and Pb) in dry deposited material (06 hrs; Ref: 4, 5, 6, 7) 	24 hours
Pedagogy:	Demonstations/ Lab experiments.	

References/ Readings	<ol style="list-style-type: none"> 1. Methods for air sampling and analysis (2nd edition), 1977 – Katz M, APHA Press Inc. 2. Methods of air sampling and analysis (3rd edition), 1989 - Lodge Jr., Lewis Publishers: Michigan. 3. Guidelines for the measurement of ambient air pollutant (Vol. 1), 2012 - NAAQMS series/36/2012-13. 4. Manual for geochemical analysis of marine sediments and suspended particulate matter, 1977 - Loring, D. H. and Rantala, R. T. T, Fish. Mar. Serv. Dev. Technical Report, 700. 5. Methods of Seawater analysis, 1983 - K. Grasshoff, M. Ehrhardt and K. Kremling (eds.), Verlag Chemie, Weinheim, 6. Analytical chemistry of seawater, 1975 - Riley, J.P., In Chemical Oceanography J.P. Riley and G. Skirrow (eds.), Vol. 3. Academic Press, London. 7. Standard methods for the examination of water and wastewater (20th edition), 1998 - APHA, Washington. D. C. 	
Learning Outcomes	<ol style="list-style-type: none"> 1. The main outcome of the study is to understand the quality of air through the analysis of dust, trace metal levels and nutrients in particulate (PM₁₀) and fine matter (PM_{2.5}). 2. The effect of different metals on the environment is studied based on their concentrations in the atmosphere. 3. These studies also would help for identification of hot spots near industrial or urban conglomerates. 4. Can be assessed through their possible sources and their implication on coastal waters of Goa. 5. Such studies along with crustal elements would be more informative about the sources and would suggest remedial measures to be adopted for their control. 	

Programme: M. Sc. (Marine Sciences)

Course Code: MSO 371 **Title of the Course:** Marine Microbial Ecology I

Number of Credits: 03

Effective from AY: June 2018-19

Prerequisites for the course:	Students who have undergone courses of Semester I and II of Marine Sciences.	
Objective:	To provide basic information and concepts of marine microbiology and its importance. Further, also enables identification of microbes from the marine environments.	
Content:	Marine Microbiology its importance, existence and need; History of marine microbiology; Instruments and sampling methods; Modern methods; Microbial habitats and major types (producers, consumers, symbionts, probionts, etc.) in relation to their habitats; Evolution of sampling strategies and methods for assessment of microbial biodiversity .	12 hours
	Characteristics of marine microbes; Distribution and abundance and their adaptations to pressure, depth, salt, temperature; Integrated effects of nutrient dynamics; Chemosynthesis and microbial heterotrophic metabolism ; Effect of ions of major and trace elements; Toxicity and mechanism of tolerance in marine microbes; Biochemical characterization of marine prokaryotes.	12 hours
	Microbial role in cycling of N, P, S, and C; Concept of microbial loop in relation to marine food web dynamics ; Role of micro-organisms in DOM production and consumption; Microbial mineralization and oxidation of organic matter; Role of marine microbes in production of RDOC and sequestering of carbon dioxide; Pollution indicator and pathogenic marine microbes.	12 hours
Pedagogy:	lectures/ tutorials/assignments/self-study	

References/Readings	<ol style="list-style-type: none"> 1. Microbial Ecology of the oceans (2nd Edition), 2010 - Kirchman, D. L., John Wiley & Sons. 616 pages 2. Learning Outcomes	Develop and provide information on the marine microbial ecology and enables applications of microbiology to understand ecological processes.	

Programme: M. Sc. (Marine Sciences)

Course Code: MSO 373

Title of the Course: Marine Microbial Ecology Practical I

Number of Credits: 01

Effective from AY: June 2018-19

Prerequisites for the course:	Students who have undergone semester I and II of Marine Sciences.	
Objective:	This course elucidates the basic concepts and techniques applied in the Marine Microbiology	

Content:	<ol style="list-style-type: none"> 1. Sterilization techniques, preparation of bacterial media, nutrient, broth & agar preparation of slants (6 hrs; Ref 1); 2. Method of sample collection (water) from marine environment (4 hrs; Ref 2), 3. Estimation of bacterial, fungal population and isolation (6 hrs; Ref 4) 4. Preservation of cultures, isolation of pure cultures microscopy: wet mounts (4 hrs; Ref 4), 5. Isolation of pathogenic organisms from water and sediments (4 hrs; Ref 5) 	24 hours
Pedagogy:	Microbial laboratory techniques	
References/ Readings	<ol style="list-style-type: none"> 1. Bergeys manual of systematic bacteriology (Vol. I), 1984 - (William & Willcens, Baltimore, MD, 518 pg 2. Marine and estuarine microbiology laboratory manual, 1975 – Rita R. Colwell – University Park Press, 1975, 96 pgs. 3. Marine microbiology, a monograph & hydro-bacteriology, 1946 - C.E. Zobell, – Chronica botanica Compare, 240 pgs. 4. Laboratory methods in microbiology, 1966 - W.F. Harigan, M.E. Mc Cance, Academic press 1966, 362 pgs. 5. Manual of environmental microbiology, 1997 - G. J. Hurst , G. R. Knudsen, AsM Press, 894 pgs. 	
Learning Outcomes	To acquaint with some of the basic methods/techniques to study the microbiology of marine environment.	

Programme: M. Sc. (Marine Sciences)

Course Code: MSO 374 **Title of the Course:** Marine Microbial Ecology Practical II

Number of Credits: 01

Effective from AY: June 2018-19

Prerequisites for the course:	Students who have undergone semester I and II of Marine Sciences.	
Objective:	This course elucidates the basic concepts and techniques applied in the Marine Microbiology	
Content:	<ol style="list-style-type: none"> 1. Identification of marine bacteria (4 hrs; Ref 3) 2. Separation of mixed culture, isolation, maintenance and preservation of pure culture (4 hrs; Ref 3) 3. Characterization, biochemical tests (4 hrs; Ref 1) 4. Staining of bacteria and cell morphology (4 hrs; Ref 1) 5. Marine microbes from different ecological niches (water column and sediments) with reference to physico-chemical conditions (8 hrs; Ref 5) 	24 hours
Pedagogy:	Identification, isolation and staining of marine microbes	
References/ Readings	<ol style="list-style-type: none"> 1. Bergeys manual of systematic bacteriology (Vol. I), 1984 - (William & Willcens, Baltimore, MD, 518 pg 2. Programme: M. Sc. (Marine Sciences)

Course Code: MSC 375

Number of Credits: 02

Effective from AY: June 2018-19

Title of the Course: Marine Geochemistry I

Prerequisites for the course:	Should have studied core courses of first and second semester of M.Sc. Marine Sciences along with respective practical. It is assumed that the students have basic knowledge of different branches of Marine Sciences and have ability to apply to understand the processes.	
Objective:	This course introduces concepts of Marine Geochemistry and help to understand processes associated with energy and material transfer from land to sea.	
Content:	Geochemical classification of elements - distribution and abundance of elements in lithosphere – Principle geochemical cycle, Chemical weathering. Suspended matter – Methods of collection and analysis, spatial and temporal variation of total suspended particulate matter in the ocean – Component composition and settling rates of suspended matter – Particle flux in the ocean and various techniques of measurement, Particulate organic matter in the sea: its origin, nature, composition and methods of measurements.	12 hours
	Sedimentation – physicochemical factors in sedimentation – ionic potential, hydrogen ion concentration, redox potential and colloids – Behaviour of major and trace elements during sedimentation – Significance of organic content in sedimentation – Component composition and geochemistry of deep sea sediments – Application of major and minor elements in the reconstruction of marine paleo-environment.	12 hours
Pedagogy:	Lectures / Assignments / Seminars / Discussion	
References/ Readings	<ol style="list-style-type: none">1. Introduction to geochemistry, 1967 Krauskopf, K. B., Mc.Graw-hill.2. Geochemistry, 1962 Goldschmidt, V. M., Clarendon press.3. Principles of geochemistry, 1956 Mason, B. and Moore, B., John Wiley & Sons, Inc.4. Chemical oceanography (Vol. 1 & 3), 1975 Riley, J. P. and Skirrow, G., Academic Press, New York5. Introduction to geochemistry, 1995 Krauskopf, K. B. and Bird, Mc-Graw Hill.6. The geochemistry of natural waters, 1982 Drever, J. I., Prentice-Hall, Inc., Englewood Cliffs, N.J.7. Estuarine chemistry, 1976 Burton, J.D. and Liss, P. S., Academic Press.8. Ocean chemistry and deep sea sediments, 1989 Open University Course Material.9. Aquatic chemistry, 1996 Stumm, W. and Morgan, J.J., Wiley Interscience, New York.10. Aquatic surface chemistry, 1987 Stumm, W., Wiley Interscience, New York.11. Marine Chemistry, 1969 Home, R. A., Reinhold Publishing Corporation, New York.	
Learning Outcomes	<ol style="list-style-type: none">1. Understanding material transfer from land to sea through geochemical processes and geochemical processes within sediment column in the oceans.	

Programme: M. Sc. (Marine Sciences)

Course Code: MSO 376

Number of Credits: 01

Effective from AY: June 2018-19

Title of the Course: Marine Geochemistry II

Prerequisites for the course:	Marine Geology and Marine Chemistry	
Objective:	<ol style="list-style-type: none">1. To study the input of DOM from various sources into the Sea (atmosphere, rivers and marine sediments).2. To understand the processes by which DOM is removed from sea water.3. To study the complex formation of different metals with DOM in sea water.	
Content:	Chemical and biological aspects of dissolved organic matter in the sea – Sources of supply and processes of removal of dissolved organic matter. Radioactivity – Classification – Primary, cosmogenic and artificial radio nuclides; distribution and occurrence of radionuclides, their properties in the marine environment and their decay series – Sampling and storage of radionuclides, radio chemical separation- Applications of radionuclides to the geochronology of marine sediments and rocks – Carbon dating methods in marine sediments, oceanic mixing and residence time.	12 hours
Pedagogy:	Lectures/ Tutorials/ assignments/self study.	

References/Readings	<ol style="list-style-type: none"> 1. Introduction to geochemistry, 1967 - Krauskopf, K.B., Mc.Graw-hill, Kogasuksha Ltd, International student edition. 2. Geochemistry, 1962 – Goldschmidt, V.M., Clarendon press. 3. Principles of geochemistry 1966 – Mason, B. 3rd edition published by John Wiley and Sons, Inc, New York. 4. Chemical oceanography (Vol. 1 & 3), 1975 – Riley, J.P. and Skirrow, G.(eds). Academic Press, New York. 5. Introduction to geochemistry, 1995 – Krauskopf, K.B. and Bird, Mc-Graw Hill, Kogasuksha Ltd, International student edition. 6. The geochemistry of natural waters, 1982 – Drever, J.I. 3rd Edition, Prentice Hall. 7. Estuarine chemistry, 1976 – Burton, J.D. and Liss, P.S., Academic Press, New York. 8. Ocean chemistry and deep sea sediments, 1989 – Open University Course Material. 9. Aquatic chemistry, 1996 – Stumm, W. and Morgan, J.J., Wiley - Interscience, New York. 10. Aquatic surface chemistry, 1987 – Stumm, W., Wiley – Interscience, New York. 11. Marine Chemistry, 1969 – Horne, R.A. Wiley - Interscience. 	
Learning Outcomes	<ol style="list-style-type: none"> 1. These studies would help to understand the rate at which DOM and removed from sea water by various processes. 2. These studies give an insight into how DOM can influence the state of inorganic compounds in sea water and 3. These studies would help in identification of organisms which use DOM as a source of an alternate food in the absence of essential nutrients. 	

Programme: M. Sc. (Marine Sciences)

Course Code: MSO 377

Number of Credits: 01

Effective from AY: June 2018-19

Title of the Course: Marine Geochemistry III

Prerequisites for the course:	Should have undergone the course Marine Chemistry (MSC 162).	
Objective:	This course develops concepts about the geochemistry of the marine environment that concerns chemistry of solid-solution interface and surface phenomena in aquatic systems.	
Content:	The solid-solution interface – Electro-kinetic phenomena, The electrical double layer, the structure of water at the solid solution interface, surface chemistry of oxides, hydroxides and oxide minerals; the colloidal state, origin of surface charge, aggregation of colloids, the role of coagulation in natural waters – Surface phenomena – Langmuir and Freundlich Adsorption isotherms, trace metal partitioning on solid-solution phases, particle concentration effects.	12 hours
Pedagogy:	Lectures/ tutorials/ assignments/ self-study	
References/Readings	<ol style="list-style-type: none"> 1. Introduction to Geochemistry, 1967 - Krauskopf, K.B., Mc.Graw-hill. 2. Geochemistry, 1962 – Goldschmidt, V.M., Clarendon Press. 3. Principles of Geochemistry 1956 – Mason, B. and Moore, B., John Wiley. 4. Chemical Oceanography (Vol. 1 & 3), 1975 – Riley, J.P. and Skirrow, G., Academic Press. 5. Introduction to Geochemistry, 1995 – Krauskopf, K.B. and Bird, Mc-Graw Hill. 6. The Geochemistry of Natural Waters, 1982, 2002 – Drever, J.I., Prentice Hall. 7. Estuarine Chemistry, 1976 – Burton, J.D. and Liss, P.S., Academic Press. 8. Ocean Chemistry and Deep Sea Sediments, 1989, 1991 – Open University Course Material. 9. Aquatic Chemistry, 1996 – Stumm, W. and Morgan, J.J., Wiley- Interscience, New York. 10. Aquatic Surface Chemistry, 1987 – Stumm, W., Wiley – Interscience, New York. 11. Marine Chemistry, 1969 – Horne, R.A., Wiley Interscience. 12. Text Book of Physical Chemistry, 1981, Glasstone, S., Macmillan India Press. 13. Marine Chemistry and Geochemistry, 2010 – K.K.Turekian, Academic press. 	
Learning Outcomes	<ol style="list-style-type: none"> 1. Explain the importance of surface phenomena in the geochemistry of marine environment/aquatic systems. 2. Develop mathematical basis for adsorption isotherms applicable to trace metals in natural waters. 3. Explain the importance of the role played by colloids in trace metals cycling in marine environment/natural waters. 	

Programme: M. Sc. (Marine Sciences)

Course Code: MSO 378 **Title of the Course:** Marine Geochemistry Practical I

Number of Credits: 01

Effective from AY: June 2018-19

Prerequisites for the course:	Should have undergone the course Marine Chemistry Practical I (MSC 166).	
Objective:	This course deals with the Analytical Chemistry of Seawater.	
Content:	1. Determination of dissolved organic N in seawater by alkaline - persulphate oxidation followed by spectrophotometric technique (6 hrs; Ref 1) 2. Determination of dissolved and particulate organic P in seawater by acid - persulphate oxidation followed by spectrophotometric technique (6 hrs; Ref 1) 3. Spectrophotometric determination of dissolved Fe in seawater by TPTZ – ascorbic acid method (6 hrs; Ref 1) 4. Spectrophotometric determination of dissolved Mn in seawater by formaldoxime method (6 hrs; Ref 1) 5. Spectrophotometric determination of dissolved B in seawater by curcumin method (6 hrs; Ref 1)	24 hours
Pedagogy:	Laboratory experiments/ field studies	
References/ Readings	1. Methods of Seawater Analysis, 1983, 1999 – Grasshoff, K., Ehrhardt, M. and Kremling, K.; Verlag Chemie, Weinheim, 419. 2. A Manual of Chemical and Biological Methods for Seawater Analysis, 1984 – Parsons, T. R., Maita, Y. and Lalli, C. M., Pergamon Press, Oxford.	
Learning Outcomes	1. Develop analytical skills to determine the concentrations of various chemical parameters, such as organic N, organic P, Fe, Mn and B in seawater/aqueous systems. 2. Apply techniques to seawater/natural waters to study the biogeochemistry of the marine environment/aquatic systems.	

Programme: M. Sc. (Marine Sciences)

Course Code: MSO 379 **Title of the Course:** Marine Geochemistry Practical II

Number of Credits: 01

Effective from AY: June 2018-19

Prerequisites for the course:	Marine Geology and Marine Chemistry	
Objective:	1. The primary purpose of geochemistry is on one hand to determine quantitatively the composition of Earth and on the other hand to discover laws which control the distribution of individual elements. 2. The chemical analysis of sediment provides information about the concentration of different constituents. 3. The course work involves estimation of organic carbon and phosphorus and trace metals in sediments collected from different regions of marine environment.	
Content:	1. Determination of Organic carbon in sediment. (6 hrs; Ref 1) 2. Determination of phosphorus in sediment. (6 hrs; Ref 1, 2,3) 3. Sediment digestion procedure (8 hrs; Ref 1) 4. Estimation of Cr in sediment (5 hrs; Ref 4, 5) 5. Estimation of Zn in sediment (5 hrs; Ref 4, 5)	24 hours
Pedagogy:	Demonstrations/Laboratory experiments	

References/Readings	<p>1. Methods of Seawater Analysis, 1983, 1999 – Grasshoff, K., Ehrhardt, M. and Kremling, K.; Verlag Chemie, Weinheim, 419.</p> <p>2. A Manual of Chemical and Biological Methods for Seawater Analysis, 1984 – Parsons, T. R., Maita, Y. and Lalli, C. M., Pergamon Press, Oxford.</p> <p>3. Manual for geochemical analysis of marine sediments and suspended particulate matter, 1992 - Loring, D. H. and Rantala, R. T. T., <i>Earth. Science. Rev.</i> 32: 235-283.</p> <p>4. Chemical Analysis. In: Methods in plant Ecology, 1976 - Allen, S. E., Grimshaw, H. M., Parkinson, J. A., Quarmby, C. and Roberts, J.D. 1976., S. B. Chapman (eds.), Blackwell Scientific Publications, Oxford, Chapter 8, 411-466.</p> <p>5. Methods of Seawater analysis, 1983 - Grasshoff, K.K. Grasskhoff, M. Ehrdardt and K. Krembling (eds.), Verlag Chemie, Weinheim, 419.</p> <p>6. Analytical chemistry of seawater, 1975 - In Chemical Oceanography J.P. Riley and G. Skirrow (eds.), Vol. 3. Academic Press, London.</p> <p>7. Standard methods for the examination of water and waste water analysis (22nd edition), 2012. Rice, E.W and Bridgewater L. American Public Health Association, Washington DC.</p>	
Learning Outcomes	<p>1. The analysis of organic carbon and phosphorus in sediment gives information about the nutrient status of sediment and its possible sediment composition.</p> <p>2. The results of metal analyses in marine sediments would help in understanding the possible sources of these metals by considering local factors.</p>	

Programme: M. Sc. (Marine Sciences)

Course Code: MSO 380 **Title of the Course:** Marine Ecology

Number of Credits: 04

Effective from AY: June 2018-19

Prerequisites for the course:	Students who have undergone courses of Semester I and II of Marine Sciences.	
Objective:	This course develops concepts in different aspects of marine ecology processes and ecosystem function associated with marine life.	
Content:	Marine ecosystems (pelagic and benthic ecosystem of open seas), Mangrove ecosystem species composition, distribution, adaptations, primary productivity, heterotrophic production, secondary communities and energy flow, Coral reef – formation, calcification, reef morphology, nutrition and symbiosis, Salt marsh ecosystem – species composition, distribution, nutrient dynamics, primary productivity and ecological processes and fate of salt marsh plant, Deep sea – sampling, constraints, adaptations.	12 hours
	Marine food chains – role of DOM, POM, microbial loop, heterotrophic flagellates, bacteria, viruses in trophic transfer, microhabitats and recent concept of ecological efficiency, community structure diversity and ecosystem function, factor regulating community structure, Fish migrations and spawning.	12 hours
	Ecology of harmful algal blooms – causative species, bloom formation and dynamics, propagation, decomposition and its impact on ecosystem function, behavioral adaptations, physical processes, cyst and dormant stages, shellfish poisoning and human health.	12 hours
	Fouling communities – larvae and their adherence to substratum, mechanism, implications and control, Introduced species and marine bio-invasion – concept, alien species and effect on local ecosystem function, Benthic autotrophic production and metabolism.	12 hours
Pedagogy:	lectures/ tutorials/assignments/self-study	

References/Readings	<ol style="list-style-type: none"> 1. Marine Ecology: Processes, systems and impacts (2nd edition), 2011 - Kaiser, J.M., OUP Oxford. 501 pages. 2. Trait, R.V., 2013. Elements of Marine Ecology (3rd Edition), 2013 – Trait R. V., Elsevier. 366 pages 3. Marine biology: An ecological approach (6thed), 1988 – Nybbakken, J.W. and Bertness, M. D. Pearson/Benjamin Cummings 4. Biological Oceanographic Processes, 1984 – Parsons, T.R., Pergamon Press. 5. Marine Biological Processes (2nd ed), 1995 - Valiela, I., Springer Verlag Press. 6. Plankton and productivity in the oceans (Vol. 1 & 2), 1983 – Raymont, J.E.G., Pergamon Press. 7. Deep sea demersal fish and fisheries, 1997 – Merrett, N.R. Chapman and Hall, Springer 8. Reef fisheries, 1996 – Polunin, R.S.V. Springer Science & Business Media 9. Marine Ecological Processes, 1995 – Valiela Evans, Springer Verlag, New York, 686. 	
Learning Outcomes	Explain the marine biological processes in different ecosystems including tropical and polar waters. Also addresses marine ecological issue like HAB, sediment communities and processes related to these ecosystems.	

Programme: M. Sc. (Marine Sciences)

Course Code: MSO 381**Title of the Course:** Marine Ecology Practical

Number of Credits: 02

Effective from AY: June 2018-19

Prerequisites for the course:	Students who have undergone courses of Semester I and II of Marine Sciences.	
Objective:	This course focuses on the methods of estimating water quality parameters and the use of different techniques to address various issues in Marine Ecology.	
Content:	<p>Module – I</p> <ol style="list-style-type: none"> 1. Estimation of primary production by using light and dark bottle method (6hrs; Ref 7) 2. Estimation of chlorophyll and phaeo-pigments in seawater sample using a spectrophotometric method (6hrs; Ref 14) 3. Quantitative estimation of phytoplankton using stereoscopic microscope and an analysis of sea water sample for phytoplankton cell count (6hrs; Ref 19) 4. Qualitative estimation of zooplankton using stereoscopic microscope and an analysis of sea water sample for zooplankton count (6hrs; Ref 6) <p>Module – II</p> <ol style="list-style-type: none"> 1. Quantitative estimation of zooplankton using volume displacement, wet weight and dry weight method (3hrs; Ref 6) 2. Preparation of permanent slides of few phytoplankton and zooplankton using DPX (6hrs, Ref 8) 3. Designing of an experimental set-up to study uptake of oxygen by fish in the laboratory (9hrs; Ref 12) 4. Computation of species diversity (H', J and D) indices using the data of phytoplankton and zooplankton analysis and their implications in ecological studies (6hrs; Ref 2) 	<p>24 hours</p> <p>24 hours</p>
Pedagogy:	Laboratory techniques, designing of experiments, computations and data interpretations	

References/Readings	<ol style="list-style-type: none"> 1. A Manual of Chemical and Biological Methods for Seawater Analysis, 1984 - Parsons T.R., Maita T. & Lalli C.M., Oxford and New York: Pergamon Press, 184pp. 2. Population ecology. A unified study of plants and animals, (3rd Edition), 1996 - Begon M., Mortimer M. & Thompson D.J., Blackwell Science Ltd. 247 pp. 3. Zooplankton Methodology, collection and identification – A field manual, 2004 - Goswami S.C., National Institute of Oceanography, 16 pp. 4. Plankton and productivity in the oceans (Vol. 1 & 2), 1983 – Rayment, J.E.G., Pergamon Press. 8. A Simple Method for the Preparation of Permanent Slides from Cell Cultures, <u>Stain Technology</u> (2009), Volume 59, 1984 - <u>Issue 6</u> by <u>Lina Wasserman & Gania Kessler-Icekson</u>, Pages 353-354. 	
Learning Outcomes	Ecological methods for evaluation of water quality and assessment of productivity. Also guides to formulate and design the experimental setup to provide insight in the specific issues.	

Programme: M. Sc. (Marine Sciences)

Course Code: MSO 382 **Title of the Course:** Sedimentology

Number of Credits: 04

Effective from AY: June 2018-19

Prerequisites for the course:	Fundamental courses in all the branches of Marine Sciences of this University or any other University recognized as equivalent.	
Objective:	This course introduces sediment types and their distribution, concept of facies, heavy mineral zones, sedimentary depositional environments, sedimentary rocks and diagenesis.	
Content:	Distribution and genesis of terrigenous, biogenous, chemogenous, volcanogenic, authigenic and extra terrestrial (cosmogenous) sediments in the world ocean – Rate of sedimentation in the oceans.	12 hours
	Concepts of sedimentary facies, facies construction and interpretation, factors controlling the nature and distribution of facies – Provenance – Heavy minerals, rock particles and clay minerals – Mineral stability – Goldich stability series, sediment maturity, heavy mineral zones - X ray diffraction technique and its use in mineral and sediment study.	12 hours
	Sedimentary depositional environments – Aeolian, lacustrine, glacial desert, fluvial, coastal shallow marine and deep sea – Sedimentary and faunal markers of paleoenvironmental conditions.	12 hours
	Sedimentary rocks – Classification, properties, origin and importance – Sandstone, limestone, mudstones and evaporites – Sedimentary structures formed by unidirectional water flows, water waves, airflows, liquefaction and current drag, diapirism and differential loading, desiccation and shrinkage structure – Diagenesis: general considerations, terrigenous clastic sediments, carbonate sediments, evaporates and hydrocarbons, Diagenesis of silica, iron and Manganese.	12 hours
Pedagogy:	Lectures / Assignments / Seminars / Discussion	

References/ Readings	<ol style="list-style-type: none"> 1. Sedimentation in the world ocean, 1972 Lisitzin, A. P., Soc. Of E. C. Paleontologists. 2. Sedimentology, 1982 Leeder, M. J., Potter, P.E. and Siever, R., Springer Verlag. 	
Learning Outcomes	<ol style="list-style-type: none"> 1. Understanding sediment processes, paleo-environments, formation. 2. Ability to reconstruct paleo-climate and paleo-environments 	

Programme: M. Sc. (Marine Sciences)

Course Code: MSO 383 **Title of the Course:** Sedimentology Practical

Number of Credits: 02

Effective from AY: June 2018-19

Prerequisites for the course:	Fundamental courses in all the branches of Marine Sciences of this University or any other University recognized as equivalent.	
Objective:	This course introduces to experiments to analysis to understand depositional environments and processes.	
Content:	<p>Module – I</p> <ol style="list-style-type: none"> 1. Grain size analysis – sand, silt, clay using pipette method – estimation and interpretation – at least ten samples from a sediment core (12 hrs; Ref 1,5) 2. Determination of organic carbon – at least ten samples from a sediment core (4 hrs; Ref 1, 4,6) 3. Heavy mineral identification (4 hrs; Ref 1,2) 4. Study of stratigraphic correlation (4 hrs; Ref 5) 5. Study of paleo-current analysis (8 hrs; Ref 4) <p>Module – II</p> <ol style="list-style-type: none"> 1. Measurement of sphericity and roundness of sediment grains - at least 30 grains (8 hrs; Ref 1,2) 2. Identification of sedimentary rocks (4 hrs; Ref 3,7) 3. Identification of sedimentary structures (4 hrs; Ref 3,4) 4. Study of sedimentary facies (4 hrs; Ref 4,5) 5. Preparation of samples for X-ray diffraction analysis (4 hrs; Ref 4,6) 6. XRD analysis for clay minerals (4 hrs; Ref 4,6) 7. Clay mineral identification and estimation of Semiquantitative percentages and interpretation (4 hrs; Ref 4,6) 	<p>24 hours</p> <p>24 hours</p>
Pedagogy:	Laboratory experiments / Computations / Plotting and Interpretations and analysis	

References/ Readings	<ol style="list-style-type: none"> 1. Exercises in sedimentology, 1982 Freidman, G. M. and Johnson K. G., John wiley& sons. 2. W., CBS Publication and Distributors. 8. Rutley's elements of mineralogy, 1984 Read, H. H., CBS Publication and Distributors. 	
Learning Outcomes	<ol style="list-style-type: none"> 1. Conducting laboratory experiments. 2. Analysis of data to understand paleo-current direction, facies, stratigraphic correlation, sedimentary structure, depositional environments. 3. Ability to interpret data sets to understand processes. 	

Programme: M. Sc. (Marine Sciences)

Course Code: MSC 461 **Title of the Course:** Estuarine and Coastal Physical Oceanography

Number of Credits: 01

Effective from AY: June 2018-19

Prerequisites for the course:	Students undergoing course in any branch of Marine Sciences.	
Objective:	The course is introduced to impart knowledge about the hydrodynamics of inland and coastal waters. Such a knowhow is imperative to design any activity related to environmental impact assessment.	
Content:	Sea level set up and buoyancy driven flows. Definition of estuaries, Physical characteristics of estuaries – Classification on the basis of fluid dynamics principles – Tides and tidal currents in estuaries – Tide producing forces – tidal theorem, tidal analysis and prediction – salinity intrusion – gravity driven freshwater flow – estuarine circulation and mixing – stratification and entrainment – Salt – balance technique , Conservative pollutants, non - conservative pollutants, coupled non-conservative pollutants, Fronts in estuaries.	12 hours
Pedagogy:	The course is taught as a theory and many case studies are given to present as class seminar. This is to get an idea about the numerous problems confronting the coastal waters both due to anthropogenic and natural processes.	
References/ Readings	<ol style="list-style-type: none"> 1. Physical processes in Estuaries, 1988 – John Dronkers and Wim Van Leussen, Springer Verlag. 2. Physical Oceanography, Vol 2, 1960 – A. Defant., Pergamon press. 3. Waves, Tidal and Shallow water processes, 1989 – The Open University, Walton Hill, Pergamon press. 4. Coastal oceanography, 1982 – H. G. Gade, A Edward and H. Svendsen, plenum press. 5. Estuaries – a physical introduction (2nd edition), 1997 – K. R. Dyer, John Wiley and sons. 6. Regional Oceanography – an Introduction (2nd edition), 2003 – Daya publishing house – New Delhi. 	
Learning Outcomes	This would equip the students to plan and execute any studies related to coastal and estuarine ecosystem.	

Programme: M. Sc. (Marine Sciences)

Course Code: MSC 462 **Title of the Course:** Estuarine Chemistry

Number of Credits: 01

Effective from AY: June 2018-19

Prerequisites for the course:	Should have undergone the course Marine Chemistry (MSC 162).	
Objective:	This course develops concepts about the chemistry of the estuarine environment that concerns the study of the properties and interactions of the substances present in the estuarine environment.	
Content:	Salinity distribution in estuaries – a chemical perspective, flushing time, mixing and diffusion dispersal of pollutants in estuaries and near shore areas – Conservative and non – conservative properties of dissolved constituents during estuarine mixing – Behaviour of dissolved oxygen, pH and major elements in estuarine water.	12 hours

Pedagogy:	Lectures/tutorials/assignments/self-study.	
References/Readings	<ol style="list-style-type: none"> 1. Estuarine Chemistry, 1976 - Burton, J.D. and Liss, P.S., Academic Press. 2. Practical Estuarine Chemistry, 1985 – Head, P.C., Cambridge University Press. 3. Chemistry and Biogeochemistry of Estuaries, 1980 – Olausson, E. and Cato, I., John Wiley & Sons. 4. Chemical Oceanography (Vol.7), 1978, Riley, J.P. and Chester, R., Academic Press. 5. Waves, Tides and Shallow-Water Processes, 1991, 2005 – The Open University. 6. Coastal and Estuarine Sediment Dynamics, 1986 – Dyer, K.R., Wiley. 7. Estuarine Hydrography and Sedimentation, 1980 – Dyer, K.R., Cambridge University Press. 8. Biogeochemistry of Marine Dissolved Organic Matter, 2002–D.A.Hansell and C. A. Carlson., Academic Press. 9. Biogeochemistry of Estuaries, 2007 – Thomas S. Bianchi, Oxford University Press. 10. Treatise on Estuarine and Coastal Science - Vol. 4: Geochemistry of Estuaries and Coasts, Vol. 5: Biogeochemistry, 2012, E. Wolanski and D. McClusky, Elsevier Inc. 	
Learning Outcomes	<ol style="list-style-type: none"> 1. Provide a comprehensive understanding of the properties and interactions of the substances present in the estuarine environment. 2. Explain the key processes operating in the estuarine environment. 3. Explain the importance of dissolved O₂, pH and the CO₂ problem. 4. Explain the biogeochemical cycling of major seawater constituents from the perspective of the global biogeochemical cycling of elements. 	

Programme: M. Sc. (Marine Sciences)

Course Code: MSC 463 **Title of the Course:** Estuarine Biology

Number of Credits: 01

Effective from AY: June 2018-19

Prerequisites for the course:	Marine Biology and Marine Ecology	
Objective:	This course develops concepts pertaining to carbon dioxide cycle in the estuarine and coastal environment and elucidate role of anthropogenic inputs on the carbon cycle.	
Content:	Primary productivity in coastal and estuarine waters, Oceanic carbon cycle, production and transformation of organic matter, external and internal sources of carbon, Dissolved Organic Matter – sources, aerobic and anaerobic environments, losses, decomposition, labile and refractory phase, fermentation, nitrate and sulfate reduction, methanogenesis, DOM as biological activity.	12 hours
Pedagogy:	lectures/ tutorials/assignments/self-study	
References/Readings	<ol style="list-style-type: none"> 1. Estuarine Ecology. 2nd Edition. – K. R. Dyer, John Wiley and Sons. 568 pages. 2. The Biology of Estuarine Management. Wilson, J. 2012. Springer science and business media. 204 pages 3. Elements of Marine ecology (4th Edition), 1982 – Tait, R.V. and Dipper, F. Butterworth-Heinemann. 4. An introduction to Marine Sciences, 1988 – Meadows, P.S. and Campbell, J.J. John Wiley and Sons. 5. Textbook of Marine Ecology, 1989 – Nair, N.B. and Thampy, D.M. Macmillan 6. Advances in marine biology, Vol. 20, 1982 - Academic Press Ltd. New York. 7. Advances in marine biology, Vol. 36, 1999 – Press, New York 8. Marine Biology – An ecological approach 6th ed), 2005 – Nybbakken, J. W and Bertness, M. D. Pearson/Benjamin Cummings 	
Learning Outcomes	Processes related to the carbon cycle and productivity in the marine environment	

Programme: M. Sc. (Marine Sciences)

Course Code: MSC 464 **Title of the Course:** Estuarine and Coastal Geology

Number of Credits: 01

Effective from AY: June 2018-19

Prerequisites for the course:	Fundamental courses in all the branches of Marine Sciences of this University or any other University recognized as equivalent and courses defined in semester III.	
Objective:	This course introduces estuarine and coastal Geology with respect to sub-divisions, morphological units and processes including sediment distribution and depositional environments.	
Content:	Estuaries: Classification based on tide - geological classification and evolution – sub-environments in estuaries: mudflats, salt marsh, mangrove, salt pans - sediment source, transportation and deposition – bed and suspended sediment sampling and analysis – mineralogy and geochemistry of estuarine sediments. Coasts: classification, types of coast with reference to Indian coast line – evolution of the Indian coast - global sea level changes: eustatic, tectonic and isostatic. Coastal signature of sea level changes.	12 hours
Pedagogy:	Lectures / Assignments / Seminars / Discussion	
References/ Readings	<ol style="list-style-type: none"> 1. Estuarine chemistry, 1976 Burton, J. D. and Liss, P. S., Academic Press, New York and London. 2. Practical estuarine chemistry, 1985 Head, P. C., Cambridge: Cambridge University Press Wiley Chichester. 3. Chemical oceanography (Vol.7), 1978 Riley, J. P. and Chester, R., Academic Press, London. 4. Waves, tides and shallow-water processes, 1991 The Open University. 5. Coastal and estuarine sediment dynamics, 1986 Dyer, K. R., John Wiley & Sons. 6. Estuarine hydrography and sedimentation, 1986 Dyer, K. R., John Wiley & Sons. 7. Beach processes and sedimentation, 1976 Komar, P. D., Prentice Hall. 8. Sea-level rise and coastal subsidence: causes, consequences and strategies, 1966 Milliman, J.D. and Haq, B. U., Kluwer Academic. 9. Introduction to geochemistry, 1967 Krauskopf, K. B., McGraw-Hill. 10. Elements of ecology (3rd edition), 1982 Tait, R. V., Springer. 11. An introduction to Marine Sciences, 1988 Meadows, P. S. and Campbell, J. J., Campbell BSc, FRES. 12. Textbook of Marine Ecology, 1989 Nair, N. B. and Thampy, D. M. The Open University Butterworth. 	
Learning Outcomes	<ol style="list-style-type: none"> 1. Understanding Geology of estuarine and coastal sedimentary environments, processes and evolution. 2. Ability to understand and reconstruct estuarine and coastal environments 	

Programme: M. Sc. (Marine Sciences)

Course Code: MSC 465 **Title of the Course:** Dynamic Oceanography – I

Number of Credits: 02

Effective from AY: June 2018-19

Prerequisites for the course:	Physical Oceanography, Geophysical Fluid Dynamics and Ocean Atmosphere Coupling and Climate courses.	
Objective:	To understand the laws that govern ocean motion and formulate the laws that describes this motion.	
Content:	<p>Basic physical laws used in oceanography – Classification of forces and motion – Equation of continuity – static stability – double diffusion – Equation for the mean or average motion – Non-linear terms in the equation of motion – Eddy viscosity.</p> <p>Currents without friction – Vorticity: relative vorticity, planetary vorticity, absolute vorticity, potential vorticity – Geostrophic flow – Hydrostatic equilibrium – Geopotential – Geopotential surfaces and isobaric surfaces – Geostrophic methods for calculating relative velocity – Thermal wind equation – Relation between isobaric and isopycnal surfaces.</p>	<p>12 hours</p> <p>12 hours</p>
Pedagogy:	Lectures/Tutorials/ assignments	

References/Readings	<ol style="list-style-type: none"> 1. Introductory Dynamical Oceanography, 1983 – Pond, S and Pickard, G.H., Pergamon Press, U.K. 2. Principles of Physical Oceanography, 1966 – Newman, G. and Pierson, W.J., PrenticeHall, Inc., New Jersey, U.S.A. 3. Physical Oceanography (Vol.1) 1961 – Defant, A., Oxford pergamon press, U.K. 4. The dynamics of the upper ocean (2nd edition) 1977 – Phillips, O.M., Cambridge Univ. Press, U.K. 5. Modeling and prediction of the upper layers of the ocean, 1977 – Krous, E.B. (Ed.). 6. Modeling of marine systems, 1986 – Nihoul, J.C.J., Elsevier Scientific Publ. Co., Oxford, U.K. 7. Atmosphere – ocean Dynamics, 1982 - Gill, Adrian E, International Geophysics, 30 Academic press, New York. 	
Learning Outcomes	Formulate equations that describe the ocean motion, explain the motion resulting at molecular level, explain types of vorticity and its role in ocean circulation.	

Programme: M. Sc. (Marine Sciences)

Course Code: MSC 466 **Title of the Course:** Dynamic Oceanography – II

Number of Credits: 02

Effective from AY: June 2018-19

Prerequisites for the course:	Students undergoing course in any branch of Marine Sciences.	
Objective:	This course is introduced to train the students in the application of various aspects of Physics and those learned under geophysical fluid dynamics in the III semester to Ocean dynamics. One of the country's requirements in the field of ocean and atmospheric research is numerical modelers, who model various dynamics of different time scales. Especially when the country's economy is agrarian for which monsoon is in important ingredient. Hence fundamentals of numerical modeling too are included in the syllabus.	
Content:	Currents with friction – The equation of motion with friction: Transport and upwelling – Bottom friction and shallow water effects – Ekman's solution to the equations of motion with friction .Limitation to Ekman's theory – Sverdrup's solution for the wind driven circulation – Stommel's contribution – The planetary wind field, upwelling and sinking with special reference to the Indian ocean — Westward intensification – equatorial current system – Munks equation - Boundary layer approach to obtain a solution to Munk's equation – The mixed layer of the ocean.	12 hours
	Co-ordinate system – Governing equations – Boundary conditions layer averaged equations – Staggered grid systems – Finite difference method- Model spin up time-Model stability condition.	12 hours
Pedagogy:	Though the course is taught in class room, a significant component of ocean dynamics (especially important publications) used to be presented in student's seminar.	
References/Readings	<ol style="list-style-type: none"> 1. Introductory Dynamical Oceanography, 1983 – Pond, S and Pickard, G.H., Pergamon Press, U.K. 2. Principles of Physical Oceanography, 1966 – Newman, G. and Pierson, W.J., Prentice Hall, Inc., New Jersey, U.S.A. 3. Physical oceanography (Vol.1) 1961 – Defant, A., Oxford Pergamon press, U.K. 4. The dynamics of the upper ocean (2nd edition) 1977 – Phillips, O.M., Cambridge Univ. Press, U.K. 5. Modeling and prediction of the upper layers of the ocean, 1977 – Krous, E.B. (Ed.), Pergamon press 6. Modeling of marine systems, 1986 – Nihoul, J.C.J., Elsevier Scientific Publ.Co. Oxford, U.K. 7. Atmosphere – Ocean Dynamics, 1982 - Gill, Adrian E, International Geophysics, 30 Academic press, New York. 	
Learning Outcomes	Trained manpower in the field of Ocean dynamics with good Knowledge in the modeling aspect.	

Programme: M. Sc. (Marine Sciences)

Course Code: MSC 467 **Title of the Course:** Physical and Inorganic Chemistry of Seawater

Number of Credits: 04

Effective from AY: June 2018-19

Prerequisites for the course:	Should have undergone the course Marine Chemistry (MSC 162).	
Objective:	This course develops concepts in understanding the detailed nature of the structure and physical chemistry of liquid water and aqueous electrolytic solutions that are central to marine chemistry. Also, this course develops a theoretical basis of chemical reactions and processes – acid-base reactions, oxidation-reduction reactions, complex formation, and precipitation and dissolution reactions – that occur in natural waters.	
Content:	The structure of liquid water – Theories of water structure, colligative properties of seawater with the thermodynamic derivations of expressions for boiling point elevation and freezing point depression, electrostriction – The Thermodynamics of seawater – Ideal and real solutions.	12 hours
	Equation of state for pure water and seawater, thermodynamics of PVT changes in seawater, activities, activity coefficients; Debye - Huckel theory and the Debye - Huckel limiting law; heats of solution, dilution, and mixing.	12 hours
	Acids and bases – basic concepts, proton condition and the electroneutrality of solutions; pH as a master variable – log C – pH diagram for monoprotic and diprotic acid – base system; buffer pH, buffer intensity – Oxidation and Reduction Reactions – Redox equilibria, electron activity and pE – Peters-Nernst equation; pE-pH diagram for the aqueous chlorine system, pE – pc diagram for Fe (II) - Fe (III) system, Kinetics of redox processes (Oxidation of Fe (II) and Mn (II) only).	12 hours
	Metal Ions in Aqueous solutions – hydrolysis of metal ions, formulation of stability constants, the stability of hydrolysis species, chelates and the chelate effect; Precipitation and dissolution – Heterogeneous equilibria, solubility product and saturation; the solubility of oxides and hydroxides – carbonate system closed to atmosphere and in equilibrium with CO ₂ (g); the stability of hydroxides and carbonates; crystal formation – The initiation and production of the solid phase – Solubility of silicates, gibbsite and iron (oxy) hydroxides.	12 hours
Pedagogy:	Lectures/ tutorials/ assignments/ self-study	
References/ Readings	<ol style="list-style-type: none"> 1. Marine Chemistry, 1969 – Horne, R.A., Wiley – Interscience, London. 2. Aquatic Chemistry, 1981, 1996 – Stumm, W. and Morgan, J.J., Wiley-Interscience, New York. 3. Water Chemistry, 1980 – Snoeyink, V.L. and Jenkins, D., John Wiley & Sons, New York. 4. Principles of Aquatic Chemistry, 1983 – Moral, E.M.M., Wiley Interscience 5. Chemical Kinetics and Process Dynamics in Aquatic Systems, 1994 – Brezonik, P.L., Lewis Publ., London. 6. Aquatic Chemistry, 1995 – Huang, C.P., O'Melia, C.R. and Morgan, J.J. American Chemical Society, Washington, DC. 7. Aquatic Surface Chemistry, 1987 – Stumm, W., Wiley Interscience, New York. 8. Chemical Oceanography (vol. 1), 1975 – Riley, J.P. and Chester R., Academic Press. 9. Text Book of Physical Chemistry, 1981 - Glasstone, S., Macmillan Indian Press. 10. The Geochemistry of Natural Waters, 1982, 2002 - Drever, J.I., Prentice Hall. 11. Introduction to Geochemistry, 1995 – Krauskopf, K.B. and Bird, Mc.Graw Hill. 12. Water Chemistry – An Introduction to the Chemistry of Natural and Engineered Aquatic Systems, 2011 – P. L. Brezonik and W. A. Arnold, Oxford University Press. 	
Learning Outcomes	<ol style="list-style-type: none"> 1. Provide a comprehensive understanding of the seawater as an aqueous electrolytic solution. 2. Illustrate numerical applications of PVT relationships for seawater and the changes in thermodynamic properties of seawater. 3. Explain the key reactions and processes occurring in aquatic environment. 4. Apply the general concepts to aquatic systems of interest such as ocean waters, estuaries, rivers, lakes, ground waters, and soil water systems, as well as in water technology. 	

Programme: M. Sc. (Marine Sciences)

Course Code: MSC 468**Title of the Course:** Marine Biodiversity, Conservation and practices

Number of Credits: 04

Effective from AY: June 2018-19

Prerequisites for the course:	Marine Biology and Marine Ecology	
Objective:	Addresses basic concepts of biodiversity, Intellectual Property Right, values and its implications on the environment and human life with regard to the global warming and climate change.	
Content:	Biodiversity, definition, concept, types; Biodiversity measurements - taxic, phylo-genetic and molecular approaches; Intra-specific Genetic variance and factors affecting, biodiversity and intra-specific variations, dominance and over-dominance hypothesis, adaptive polymorphism, Genetic variations, loss and increase.	12 hours
	Marine Biodiversity and ecosystem functions, competition, predation and heterogeneity as biodiversity determinants; ecosystem approach, functions and keystone species, engineer organisms, diversity-stability, rivet, drivers and passenger, idiosyncratic hypothesis, co-operative relations, top down and bottom up theories, cascade effect, dynamics of biological diversity, conceptual models, hypothesis proposed in deep sea biodiversity.	12 hours
	Biodiversity and Intellectual Property Rights (IPR) and bio-piracy, life patenting and implications, impact of GATT on farmer's right, indigenous, traditional knowledge and IPR, biodiversity conservation and IPR, Bio-invasion, Indian fisheries and responsible shrimp farming, fishing through the food webs.	12 hours
	Semi-intensive shrimp culture and mangroves, environmental costs, problems associated with conservation of mangroves and shrimp culture, banned fishing practices, coastal tourism, Biodiversity conservation - corals, turtles, dugong, holothurians and shark, Biological diversity Act, sanctuaries, marine parks, protected areas and marine biosphere reserves of India - Bhitarkanika wildlife sanctuary, Gulf of Kachch Marine National Park and Sanctuary, Gulf of Mannar biosphere reserve, Wandoor Marine National Park.	12 hours
Pedagogy:	lectures/ tutorials/assignments/self-study	
References/ Readings	1. Marine Biodiversity Conservation: A practical approach, 2014 - Hiscock, K. Routledge. 318 pages 2. Marine Biodiversity: Patterns, processes, assessment, threats, management conservation, 2007 - Queiroga, H., Cunha, M.R., Cunha, A., Moreira, Q. V., Rodrigues, A. M., Serodio, J., Warwick, R. M., Springer science and business media. 353 pages. 3. Marine Biodiversity - Pattern and Processes, 1997 - Rupert F.G. Ormond, John.D.Gage and Martin.V. Angel (eds.), Cambridge University press: 449pp. 4. Biodiversity and Environment, 2004 - Arvind Kumar, S. B. Nangia, A.P.H. Publication Corporation, New Delhi, 659 pp. 5. Biodiversity Conservation, 1994 - Vandana Shiva (eds.), Publication of Indian National Trust for Art and Cultural Heritage, New Delhi, 315 pp.	
Learning Outcomes	Provides a holistic view of the Marine Biodiversity with emphasis on Intellectual Property Right and conservation policies and laws.	

Programme: M. Sc. (Marine Sciences)

Course Code: MSC 469

Title of the Course: Tectonics, Geophysics and Structural Geology

Number of Credits: 04

Effective from AY: June 2018-19

Prerequisites for the course:	Fundamental courses in all the branches of Marine Sciences of this University or any other University recognized as equivalent and courses defined in semester III
Objective:	This course introduces tectonics – Earthquakes, Volcanoes, Mountain chains, geophysical methods – Gravity, Magnetic and Seismic, and Structural Geology with respect to concepts and applications in Earth processes.

Content:	Earth Quakes - classification, magnitude, epi-centre, recoding - seismographs, shadow zone, important earth quakes, causes. Volcanoes - magma, lava, volcanic land forms, famous eruptions. Mountains and mountain chains	12 hours
	Principles of geophysical methods: Gravity, magnetic and seismic – Elucidation of the structure of the earth using seismic model. Instruments used in marine geophysics – Gravimeter, magnetometer for marine studies, echosounder, side scan sonar and sparker. Hydrography – position fixing, depth measurement and sea bed mapping technique, hydrographic chart.	12 hours
	Computation, plotting and interpretation of gravity variations, identification of anomalies and interpretation of the data set. Computation of depth of ore body using half anomaly method. Apply gravity corrections and observations. Computation, plotting and interpretation of magnetic variations, identification of anomalies and interpretation of the data set. Computation of depth of a single pole using half anomaly and peter's slope methods. Computation and interpretation of seismic data variations to understand depth of horizontal sedimentary bed using both reflection and refraction methods. Study of seismic profiles, sections and interpretation of features. Integrated interpretation of geophysical data, Application of geophysical methods in offshore exploration for oil natural gas and other minerals.	12 hours
	Structural Geology - Folds - parts of fold, nomenclature, types, causes; Faults - nomenclature, types; Joints. Minerals and their physical properties, Rocks - classification and properties. Ground water and saline water intrusion on the coastal plain and ground water.	12 hours
Pedagogy:	Lectures / Assignments / Seminars / Discussion	
References/ Readings	<ol style="list-style-type: none"> 1. Introductory oceanography (5thed), 1988 Thurman, H.V., Columbus Mercill Publ. Co, Ohio. 2. Oceanography (5thed), 1990 Grant Gross, M., Englewood Cliffs, N.J. Prentice Hall. 3. Marine Geology and Oceanography of the Arabian Sea and coastal Pakistan, 1984 Haq. B. U. and Milliman, J. D., Van Norstrand Reinhold Co. 4. Marine Geology, 1982 James P. Kennet, Prentice Hall INC Englewood, Cliffs, N. J. 07632. 5. Earth Science, 1985-Mamowitz and Spaulding, Heath and Company, Heath. 6. Principles of Geophysical Prospecting, 1976 Dobrin, M. B., Mc.Graw Hill. 7. Geophysical Prospecting for Oil, 1976 Nettleton, L. L., McGraw Hill. 8. Exploration Seismology (Vol. 1 and 2) 1982, 1983 Sheriff, R. E. and Geldant, L. P., Cambridge Univ. Press, U.K.36 9. Developments in Solid Earth Geophysics (Vol.5) Spectral analysis in geophysics, 1974 Bath Markens. 10. Seismic Prospecting Instruments (Vol.1) 1972 Evenden, B. S., Stone, D. R. and Anstey, Gebrudev Borntraege, Berlin. 11. Structural Geology, 1972 M.P. Billings, Third Edition, Prentice Hall College Div. 	
Learning Outcomes	<ol style="list-style-type: none"> 1. Understanding tectonics, geophysical methods and structural geology – their concepts and application in understanding earth processes. 2. Ability to use concepts to understand earth processes and reconstruct tectonics and paleoenvironments. 	

Programme: M. Sc. (Marine Sciences)

Course Code: MSD 480 **Title of the Course:** Dissertation

Number of Credits: 08

Effective from AY: June, 2018-19

Prerequisites for the course:	Students who have undergone semester I and II of Marine Sciences.	
Objective:	This course facilitates undertaking of project work based on the knowledge acquired in the subject, thereby developing an aptitude for research to address specific problems in Marine Sciences.	
Content:	Project work based on the interest of the student and the expertise and facilities available in the Department.	192 hours
Pedagogy:	Discussions/literature collection/design/field trip/analysis and interpretations.	
References/ Readings	The candidate will carry out a detailed review of literature related to the project work assigned by the concerned teacher.	

Learning Outcomes	Ability to design and undertake scientific suveys, plan and execute the objectives of the project work. To develop an analytical mind to elucidate the existing lacunae in the area and to undertake research and to inculcate the art of scientific writing.

INTEGRATED MBA HOSPITALITY TRAVEL AND TOURISM

SYLLABUS

SYLLABI OF CORE COURSES IN THE AREA OF HOSPITALITY

FOOD & BEVERAGE SERVICE 1: (4 Credits)

Objective:

Understand the development of the food service industry in India and to classify the food service sectors with examples and appreciate the features in each sector, To identify various types of Restaurant and understand their features. Appreciate, know the organisation and duties and responsibilities of Food & beverage Personnel. To categorize the food service equipments, understand its uses and its maintenance. To identify the styles of service and suggest service styles for an outlet, To know the sequence of French Classical menu and design an a la carte menu and To be able to lay covers and identify accompaniments for select dishes.

Contents:

Food Service Industry: Development of food service industry in India, Classify the food service sectors with examples, features of each sector, Types of restaurants and its features, Employment opportunities

F&B Department: Importance of the F&B department, functions, Organization, F&B Staff of a Hotel, Intra and Inter department coordination, Qualities required for staff

Food service equipment: Classification, types of furniture, sizes, Various kinds of Linen & specification, Types of cutlery, crockery & glassware its uses, purchase considerations, storage.

Ancillary Sections: Stillroom, silver room, washup, Hotplate, Pantry, Linen store, dispense bar, Understand the location, function, equipment used and importance of each ancillary section.

Styles of Food Service : Waiter service, self service & assisted service. Features of each group & methods, advantages and limitations of each service, suggest suitable styles for an F&B outlet, factors influencing the styles)

Menu Knowledge & Planning: Origin, types of Menus, French Classical menu, A la Carte sequence.

Cover and Accompaniments for selected dishes

Pedagogy: With the help of Case studies, presentations making students understand the types and sectors of food & beverage service. Group discussions to familiarize students with the concept of restaurant preparation procedure and social skills.

Minimum depth coverage will be at the level of the following books:

1. Food and Beverage Service, Singaravelavan, Oxford.

2. Dennis Lillicrap and John Cousins, Food and Beverage Service, Book Power, Eight Edition.
3. Sudhir Andrews, Food and Beverage Service Training Manual, Tata McGraw Hill Publishing Company Limited, Second Edition.
4. Bobby George, Sandeep Chatterjee, Food and Beverage Service and Management, Jaico Publishing House

FOOD & BEVERAGE SERVICE PRACTICALS 1 (4 Credits)

Objective:

At the end of the course the student will be able to

Identify equipments and understand its uses, capacity and storage, Fold napkins in various ways to enhance table setups, Comprehend the service procedure followed in a la carte and table d hote lunch and dinner and Gain insight into the flow of activities in a restaurant .

Contents:

Appraising restaurant equipments, Categorize the food service equipments with examples, identify the cutlery, crockery, glassware, know their sizes & uses.

Learn the art of folding Napkins

Understand the points to be observed while Laying and relaying of table cloth

Activities involved in Mise en place and Mise en scene

Setting up sideboard

Handling of cutlery, crockery, glassware, Service gears, Trays.

Handling Restaurant reservations, Greeting & Seating the Guest.

Planning of a 4-5 course menu and preparing the table set up accordingly.

Service procedures of Table d hote and al la carte orders. Rules to be observed while waiting at the table.

Clearance and Crumbing of a table after maincourse

Order taking of Food (appetizers, main course & desserts)

Presenting and settling of bills and seeing off the guest

Rota Service

Pedagogy: Role play, practical involving demonstration and practice of aspects of food & service.

Minimum depth coverage will be at the level of the following books:

1. Edgar D'souza, Food & Beverage, a practical guide, Rupa Publications
2. Dennis Lillicrap and John Cousins, Food and Beverage Service, Book Power, Eight Edition.

FOOD & BEVERAGE SERVICE 2 (4 Credits)

Objective:

At the end of the course the student will be able to:

Classify beverages and gain an insight into the production of various alcoholic and non alcoholic beverages and understand the service procedures. Classify wines, understand the viticulture and vinification process, pair wines with foods, suggest wines for various types of dishes and know how to prepare a wine list

Contents:

Non Alcoholic Beverages (Classification, production, service)

Alcoholic Beverages (Classification, Production, Proof, Alcoholic strengths)

Wine (Classification, Faults in wine, Wine tasting, Characteristics)

Winemaking : Methods of making still wine, various methods of making Sparking wine, understand method champenoise, Styles of champagnes, terms used on champagne labels to identify various types of producers, List brand names.

Fortified Wines (Sherry, Port, Madeira, Marsala, Malaga): Define and give examples, gain insight into the production methods, types & service of fortified wines.

Vermouth & Bitters: Production, styles, brands, service

Wines of France :Wine laws, Wine producing regions, understand wine labels , Brands.

Wine Regions of the world (Italy, Germany, Spain, Portugal, USA, Australia, India)

Food and Wine: Guidelines for pairing wine & food, problem dishes, Wine list

Fermented Beverages: Beer (Ingredients, Production, Classification, Faults, storage, Brands), Cider & Perry

Whisky, Brandy, Gin, Rum, Vodka, Tequila & Other spirits (Intro, Production, Categories, Brand names, service)

Liqueurs (Production, Types – flavour, colour, base, origin)

Pedagogy: Case studies, Group discussions, Field Trip and Presentations on production, service of different types of alcoholic beverages.

Minimum depth coverage will be at the level of the following books:

1. Food and Beverage Service, Singaravelavan, Oxford
2. Dennis Lillicrap and John Cousins, Food and Beverage Service, Book Power, Eight Edition.
3. Sudhir Andrews, Food and Beverage Service Training Manual, Tata McGraw Hill Publishing Company Limited, Second Edition.

FOOD & BEVERAGE SERVICE PRACTICALS 2 (2 Credits)

Objective:

By the end of the course the student will be able to perform service of alcoholic and non-alcoholic beverages using standard operating procedures been followed in hospitality outlets. They will also be able to plan menus and suggest wines to pair along with the meal ordered.

Contents:

Order taking- Aperitifs, Spirits, wines, Appetizers, Main Course, Desserts. Suggestive Selling & Up selling techniques.

Service of tobacco: Standard operating procedures for service of Cigar & Cigarettes.

Service of non alcoholic beverages such as tea, coffee, water, aerated beverages etc

Opening a wine bottle and Service of Red Wines and White wines. Opening & Service of sparkling Wines

Service Procedures of Beer, Whisky, Brandy, Gin, Vodka, Rum, Tequila with mixers and service of Liqueurs. Ordertaking of Alcoholic beverages and service on a table.

Service temperatures of various beverages

Guidelines for pairing wine and food, traditional methods of paring wines and food, understand the factors influencing wine and food paring, suggest wines for various types of dishes.

Planning of menus and suggest accompanying wines

Pedagogy: Practicals on ordertaking & service of beverages. Preparing menus with appropriate wines. Suggesting appropriate wines with foods ordered.

Minimum depth coverage will be at the level of the following books:

1. Edgar D'Souza, Food & Beverage a practical guide, Rupa Publications.
2. Dennis Lillicrap and John Cousins, Food and Beverage Service, Book Power, Eight Edition.
3. Sudhir Andrews, Food and Beverage Service Training Manual, Tata McGraw Hill Publishing Company Limited, Second Edition.

FOOD & BEVERAGE SERVICE 3- (4 Credits)

Objectives:

At the end of the course the student will be able to comprehend Gueridon service, Perform Room Service operations, Bar Operations, Banquet Operations & Function Catering, Lounge Service Operations and Setting up of breakfast , brunch & buffet teas including staffing for areas and set ups.

Content:

Classify breakfast and plan the breakfast menus for Continental, American, English and Indian breakfast. Set up breakfast buffet

Understand what brunch is and suggest dishes for brunch

Full afternoon and high tea menus, their covers and service procedure

Setting up of buffet tea and assigning work to the staff

Room service organisation, Room service Ordertaking, Service sequence in Room Service

Gueridon service procedures: identify the equipments used on the trolley, select the dishes for gueridon service, handling of food on the trolley, understand the food preparation techniques in gueridon service.

Understand tobacco curing process, differentiate between and understand the composition of Cigar & cigarettes, Storage and service of Cigars and Cigarettes

Understand the parts of a bar and its functions, procedures involved in bar operations

Appreciate various control methods and procedures in bar operations, identify possible frauds that may occur in the bar.

Function catering: types of functions, equipment and facilities planning, calculate the area requirements for various types of table plans

Banquet Organisation, service procedures during formal & informal functions

Execution of outdoor catering functions

Pedagogy: Role Play, Presentations.

Minimum depth coverage will be at the level of the following books:

1. Food and Beverage Service, Singaravelavan, Oxford
2. Dennis Lillicrap and John Cousins, Food and Beverage Service, Book Power, Eight Edition.
3. Sudhir Andrews, Food and Beverage Service Training Manual, Tata McGraw Hill Publishing Company Limited, Second Edition.

FOOD & BEVERAGE PRACTICAL 3 : (2 Credits)

Objectives:

At the end of the course the student will be able to perform the practical aspects of Room Service operations, Mixology procedures and setting up Banquet rooms for various functions

Content:

Understand the various methods of making cocktails and mocktails, identify the bar stock required. Prepare cocktails made from various spirits.

Understand the components of cocktail and develop new cocktails & mocktails

Room Service Operations practicals, take order of room service and set up a room service tray & trolley accordingly, know the order delivery procedure.

Know the order delivery procedure, sequence of room service, settlement of bills.

Control mini bar stock, stacking up of a mini bar

Prepare flambéing dishes in front of the guest. Recipes such as banana flambé.

Set up banquet room for various functions, staff requirement calculations, service procedures for formal & informal functions, prepare seating plans, appreciate function menus

Pedagogy: Practical demo and practice by all students the correct procedure of preparation and service of cocktails, room service trays and trolley setups, Banquet room set ups.

Minimum depth coverage will be at the level of the following books:

1. Edgar D'Souza, Food & Beverage a practical guide, Rupa Publications
2. Dennis Lillicrap and John Cousins, Food and Beverage Service, Book Power, Eight Edition.

FOOD AND BEVERAGE MANAGEMENT : (4 Credits)

Objective:

At the end of the course the student will have ability to perform supervisory functions in food service operations, set up a new restaurant and Identify the control process throughout the food and beverage control cycle

Contents:

Consider the various aspects for menu planning and compile a la carte and table d hotel menus, Understand how menu works as a sales tool, Understand the concept of Menu Engineering

Appreciate the importance of checking systems in the food service operations, prepare bills and the restaurant sales summary

Deal with various situations in the dining area (spillage, lost property, illness, Alcohol over consumption, Lost children, Unsatisfactory appearance, accidents, dealing with suspicious items, bomb threat, guest with special needs

Perform Supervisory functions in food service operations

Understand the importance of customer relations and how to develop customer relationships

Perform feasibility study, project planning, facility planning, envisage equipment requirement, man power planning for setting up a new restaurant

Identify the control process throughout the food and beverage control cycle. Identify thefts, frauds, pilferages and areas of control in Purchase, Receiving, Stores, Issuing, Production & Service.

Pedagogy: Discussions and exercises on menu planning, supervisory functions and control procedures.

Minimum depth coverage will be at the level of the following books:

1. Food and Beverage Service, R. Singaravelan, Oxford.
2. Sudhir Andrews, Textbook of Food & Beverage Management, Tata McGraw Hill.
3. Food & Beverage Management , John Cousins & David Coskett, Pearson Education.

FOOD PRODUCTION 1(4 Credits)

Objective:

At the end of the subject, student will have the ability to gain an insight into the organisation of a Professional kitchen, Identify ingredients, the basic methods of cooking, and their application.

Contents:

Organisation of a Professional kitchen,culinary history, career opportunities.

Guidelines and requirements of personal hygiene and food safety standards, avoiding food contamination, uniform and protective clothing.

Usage of knives, hand tools, heavy equipment in the kitchen, setting up of a workstation, safety procedures in handling of equipment.

Vegetables-classification of vegetables, pigment and colour changes, effect of different cooking methods on vegetables, controlling changes in texture, flavor, nutrient loss, cuts of vegetables. Classical dishes made using vegetables. Classification, uses of fruits in cooking, usage of processed fruits.

Meats-Physical and chemical characteristics of meat, cuts of Chicken,Beef, Pork, Lamb, how to arrive at final yield after processing meats.Eggs-Structure, classification and grading of eggs, selection, storage and uses of eggs in food.Usage of seeds, nuts and spices in food,Cereals and their usage in food. Flours, pasta, breakfast cereals,rice products, selection of cereals and pulses.Dairy products- production, varieties and usage of milk, cream, butter, ghee, cheese, curd. Application of cooking methods- blanching, poaching,boiling steaming, stewing, braising, roasting, grilling, sautéing, frying.Mother sauces and their derivatives- Bechamel, Hollandaise, Mayonnaise, Tomato sauce, Brown sauce, Veloute.

Pedagogy:Presentations, assignments, tests to check understanding.

Minimum depth coverage will be at the level of the following books:

1. Thangam E. Philip, Modern cookery,Orient Blackswan Private Limited,Fourth Edition, Vol.1
2. Modern cookery, Vol.2Thangam E. Philip, Orient Blackswan
3. Food Production Operations, P.Bali,Oxford

FOOD PRODUCTION PRACTICAL 1 (3 Credits)

Objective:

The student will have the ability to:

Apply basic techniques and cooking methods of food production, have the ability to select ingredients and differentiate products based on quality .

Contents:

Basic Preparation techniques- cuts of vegetables(Jardiniere,Brunoise, Julienne, Paysanne,Macedoine,Chiffonade) Cuts of chicken, fillet of fish,Methods of cooking (Blanching, boiling, sautéing, grilling, roasting, frying),Cuts of vegetables(Jardinere,Brunoise, Julienne, Paysanne,Macedoine,Chiffonade), cuts of chicken, fish, Stock preparations (Chicken stock, Fish stock , vegetable stock)Sauce preparation(Bechamel, Hollandaise, Mayonnaise, Tomato sauce)Soup preparation (Mushroom, chicken, green peas soup, Mulligatwany,Beetroot soup) Cooking methods and dishes made using Blanching, Poaching, Boiling, stewing, Braising, Roasting, Grilling, Sauteing, Frying.Menus to be prepared in the practical sessions: Potage St. Germain, Chicken Stroganoff, Spaghetti Aglio Oglio e Pepperoncini, Fruit custard,Mulligatwany soup, Chicken Shahjahani, Subz Pulao, Gajar ka Halwa,chicken chowder, Poisson Colbert, Beurre maitre d'hotel, Crème caramel, Caldo verde,Fish curry, Beans foogath, Coconut pancakes, all dishes demonstrating the basic cooking methods, cooking techniques, and application of theory.

Pedagogy: Preparation of dishes using basic preparation techniques and methods of cooking.

Minimum depth coverage will be at the level of the following books:

1. Thangam E. Philip, Modern cookery,Orient Blackswan Private Limited,Fourth Edition, Vol.1
2. Modern cookery, Vol.2 Thangam E. Philip, Orient Blackswan
3. Food Production Operations, P.Bali,Oxford

FOOD PRODUCTION 2 (4 credits)

Objective:

At the end of the course the student will have the ability to understand the history and evolution of Indian cuisine, ingredients used in Indian food, the philosophy of Indian food, and be able to suggest dishes reflecting the diversity of Indian cuisine.

Contents:

Indian cuisine, philosophy of Indian food, concept of Ayurveda.

Influence of Greeks, Mughals, Mongolian and Chinese, Portuguese, British on Indian cuisine, regional and religious influences in Indian cuisine.

Cooking equipments used in Indian cuisine, techniques used in Indian cooking, blending of spices and ingredients in Indian cuisine, dry masalas, wet masalas, blending of spices and masalas, pastes and souring agents used in Indian cooking. Regional North Indian, South Indian Cuisine, East & West Indian Cuisine, regional variation in cuisine, speciality cuisine on festivals and occasions, seasonal availability of ingredients, staple diet, historical background, special ingredients used, use of thickening agents, souring agents, spicing agents, basic gravies and their importance in the set-up of an Indian kitchen, ingredients used, equipment used, spices, Indian breads, snacks and desserts.

Pedagogy: Presentations and Group discussions on types of Indian regional cuisines.

Minimum depth coverage will be at the level of the following books:

1. Thangam E. Philip, Modern cookery, Orient Blackswan Private Limited, Fourth Edition, Vol.1
2. Thangam E. Philip, Modern cookery, Orient Blackswan Private Limited, Fourth Edition, Vol.2
3. Quantity Food Production, and Indian cuisine, P. Bali, Oxford.

FOOD PRODUCTION PRACTICALS 2 (4 CREDITS)

Objective:

At the end of the course, the student will prepare food from different Indian Regional cuisines, compile menus and do food presentation. The student will become familiar with the work involved in preparing menus of Indian Regional cuisine.

Contents:

Basic gravies and masalas used in Indian cuisine: Onion Tomato masala, Korma Gravy, Makhani gravy, Brown gravy, Haryali gravy, Garam masala, Kebab masala, Paanch phoran, Rasam masala, Rasam powder, Sambhar powder, Recheado masala, Xacuti, Balchao, Vindaloo, Tandoori masala, Salan masala.

Food Production Menus based on Regional Cuisines of India: Punjab, Kerala, Bengali, Goan, Maharashtrian cuisine Jeera Pulao, Subz Pulao, Biryani, Raita, Yakhni Pulao, Missi Roti, Laccha paratha, Malabari Paratha, Naan, Kulcha, Pudina paratha, Cheese garlic naan, Tandoori Murgh, Paneer Makhani, Aloo Mutter, Butter chicken, Rajma Masala, Pindi chana, Chole Bhature, Dal Makhani, Aloo Gobhi, Akuri, Dhansaak, Patrani Macchi, Salli Murgi, Tareli Macchi, Masala bhaat, Kolhapuri mutton curry, Xacuti, Cafreal, Prawn Balchao, Mutton vindaloo, Tambda Rassa, Pandhra Rassa, Bharleli vangi, Ambti, Varan, Misal pav, Jowar bhakri, Koshimbir, Panchamrut, Sabudana vada, Shrikhand poori, Puran poli, Sol kadhi, Bharleli bhendi, Basundi, Kadhi, Kand batata poha, Avial, Chicken Chettinad, Doodhi Pachadi, Nandan curry, Ishtu, Sambhar, Chutney, Idli, Aloo tikki, Pani puri, Kachori, Pakora, Moong dal vada, Bonda, Dhokla, Pav bhaji, Upma, Vada pav, Rasmalai, Gulab Jamun, Shahi tukda, Payasam.

Pedagogy: Practicals on Regional Cuisines of India, with emphasis on a set 4 course menu prepared within 3 hours.

Minimum depth coverage will be at the level of the following books:

1. Modern Cookery 1, Thangam Philip Publisher: Orient Blackswan
2. Modern Cookery 2, Thangam Philip Publisher: Orient Blackswan
3. Quantity Food Production Operations and Indian cuisine, P. Bali Publisher: Oxford

FOOD PRODUCTION 3 (4 credits)

Objective:

At the end of the course the student will get an insight into the functioning of a larder kitchen and its importance, recognize differentiate between international cuisines and suggest dishes based on a given theme and understand concepts related to Food production management.

Contents:

Layout and organisation of the larder section of the kitchen, including charcuterie, sandwiches and appetizers. Concept of charcuterie, smoking, curing, and preparation of charcuterie products, tools and equipment used for making sausages, components of charcuterie products- main meat, binders, sweeteners, seasoning agents, dry curing, wet curing, cold smoking, hot smoking, preservatives, forcemeats, types of sausages. Production and types of cold cuts from around the world.

Preparation, storage and service of sandwiches served in hotels, components of sandwiches, bread, spread, filling, garnish, cold sandwiches, hot sandwiches, grilled sandwiches, toasted sandwiches. Appetizers and dishes served in fine dining restaurants, identification and usage of herbs and wines in cooking, pairing of wine with food, International cuisines-Italian, Regions of Italy, special ingredients used, varieties of cheeses, pastas, popular dishes from Greek, Scandinavian, Spanish, Moroccan, Turkish, Oriental food. Production planning, scheduling, quality control, forecasting, budgeting, menu costing, yield management.

Pedagogy: Presentations and assignments on International Cuisines.

Minimum depth coverage will be at the level of the following books:

1. Thangam E. Philip, Modern cookery, Orient Blackswan Private Limited, Fourth Edition, Vol.1
2. Thangam E. Philip, Modern cookery, Vol.2
3. International cuisine and Food Production Management, P. Bali, Oxford.

FOOD PRODUCTION PRACTICALS 3 (4 CREDITS)

Objective:

At the end of the course the student will be able to prepare menus from international cuisines.

Prepare foods using techniques unique to Western, Middle eastern, European and Oriental cuisines

Contents:

Understand the usage of different types of ingredients pertaining to International cuisines.

International Cuisine Menus pertaining to Italy, Greek, Spanish, French, Chinese, Japanese, Thai cuisines: Bruschetta, Penne Arabiatta, Calzone, Canneloni, Carbonara, Pollo Cacciatore, Pollo Parmigiana, Fettucine, Pesto, Insalata Cesare, Lasagna, Linguine, Panini, Pasta Primavera, Ravioli, Risotto, Spaghetti Bolognese, Tagliatelle al Ragu, Cassatta, Tiramisu, Semi freddo, Granita, Tzatziki, Souvlaki, Pita bread, Rosemary Onion focaccia, Hummus, Falafel, Grilled red snapper, Gyros, Spanakopitas, Pad thai, Chili garlic noodles, Satay, Nasi Goreng, Massaman curry, Tom Yum, Som thai, Pad thai, Kung pao chicken, Dim sum, Fajitas, Quesadilla, Tacos, Burritos. International Salads- Caesar Salad, Waldorf Salad, Greek salad, Panzanella, Watermelon feta salad, Pasta salad, Salade Nicoise, Insalata mista, Insalata Caprese, Watermelon feta salad, Salad Mimosa, Tuna Salad.

Croque Monsieur, Club sandwich, Burgers, Hot dogs, Tuna sandwich,

Pedagogy: Practical demonstrations and practice sessions on methods of preparing various International Cuisine Menus.

Minimum depth coverage will be at the level of the following books:

1. Thangam E. Philip, Modern cookery, Orient Blackswan Private Limited, Fourth Edition, Vol.1
2. Thangam E. Philip, Modern cookery, Vol.2
3. International cuisine and Food Production Management, P. Bali, Oxford.

BAKERY AND CONFECTIONERY: (4 CREDITS)

Objective:

At the end of the course, the student will have the ability to organise and set up a bakery and have the ability to use the basic knowledge of breads, cakes, pastries and desserts to organize production in a professional bakery

Content

Introduction to Bakery, Organisation of a Professional Bakery, Origins of baking, Hygiene in the bakery ,bakery hand tools and equipments, baking ingredients and their functions,steps involved in bread production,bread making methods-selection of method, fault identification in breads.Bread variations in different countries- Baguette, Brioche, Croissant, Danish pastries, Ciabatta, Focaccia, Grissini, Pugliese, Bread loaf.

Principles of sponge and cake making, Components of a cake and their importance,Icings , fillings used for cakes

Technique used in preparing pastry goods and importance of each with regard to the texture of the product.Types of pastries-Short crust pastry, Sweet dough laminated pastries techniques involved in making pastries.

Techniques used in making cakes and pastries including fault identification

Chocolate as an ingredient in cakes and desserts – types and techniques

Hot, Cold desserts,Puddings, soufflés, tarts and pies, pancakes, crepes,fruit based, custard and cream based desserts.

Pedagogy

Class presentations, Demonstrations and practice sessions.

Minimum depth coverage will be at the level of the following books:

- 1.Food Production Operations Parvinder Bali (Oxford)
- 2.International cuisine and Food Production Management, P. Bali, Oxford.
3. Thangam E. Philip, Modern cookery, Vol.2

FRONT OFFICE OPERATION 1 (4 Credits)

Objective:

At the end of the course the student will be able to:

Familiarise with the need for organisation in hotels, organisation of various departments, major departments of the hotel – their organisation and functioning, the front office department and its function areas, Sections and lay out of front office, Duties and responsibilities of the front office employees. Establish the basis of charging room tariff. Define meal plans offered by hotels and room tariff methodology. Explain the stages of a guest cycle and the role of front office in taking the guest through each of these stages. Types, modes, sources, systems of reservation and the importance of reservation.

Contents:

Introduction to the hospitality industry: The Hospitality Industry – Origin & Growth, Tourism Industry, Importance of Tourism, Industries related to Tourism, Evolution & Growth of Hotels, Hotel: Definition and core areas

Classification of Hotels: The need for classification, Classification of Hotels on the basis of Size, Location, Clientele, Duration of stay, level of service, ownership, Heritage Hotels & alternative accommodation

Hotel Tariff Plans, Types of Guest Rooms

Hotel Organization: Need, Vision, Mission, Organization Chart

Major Departments of a Hotel: Front Office, Housekeeping, F&B Service, Kitchen, Engineering, Accounts, Human Resource, Security, sales & marketing, Purchase

Front Office Organization: Function areas, Sections and layout of Front Office

Duties and Responsibilities of Front Office Personnel, Qualities of Front Office Personnel.

Room Tariff: Room rate designation, meal plans, Room tariff card.

Guest Cycle and Room Reservation: The Guest cycle – Pre-arrival, arrival, Stay, Departure and Post Departure. Reservations – Types (Tentative, Waitlisted & Confirmed), Modes of Reservation Inquiry, Sources of Reservation

Systems of reservation: Manual & Automatic, Processing Reservation Request, Amending & Cancellation, Reservation Report, Importance of Reservation for Hotel & Guest.

Pedagogy: Presentations, Discussions, Assignments & Projects

Minimum depth coverage will be at the level of the following books:

1. Jatashankar R Tewari, Hotel Front Office Operations and Management, Oxford
2. S.K.Bhatnagar, Front Office Management, Frank Bros & Co.
3. Sudhir Andrews, Text Book of Front Office Management & Operations, Tata McGraw Hill.

FRONT OFFICE OPERATIONS 2: (4 Credits)

Objectives:

At the end of the course the student will be able to

Analyse the activities associated with the stages of guest cycle, Perform functions of guest services, Understand the purpose and usefulness of night audit, duties and responsibilities of night auditor, Analyse the role of hotel staff in ensuring the safety and security of the guests

Content:

Registration: Pre-registration, registration, records and process

Check-in procedures: Check-in in manual/ semi automated Hotels and in fully automated hotels

Guest services: Handling Guest mail: Message Handling, Custody and Control of Keys, Guest paging, Safe deposit lockers, Guest Room Change, Left Luggage Handling & Wake up calls

Guest complaints: Types of complaints, Handling guest complaints

Check out and Settlement: Departure Procedure in fully automated system, Mode of settlement of Bills- Foreign Exchange, Cash settlement & Credit Settlement.

Potential Check out Problems and Solutions: Late check-outs, Long queues at the cashier, Improper posting of charges

Front Office Accounting: Types of Accounts- Vouchers, Folios and Ledgers, Front Office Accounting Cycle – Creation, maintenance and Settlement of accounts.

Night Auditing: Night Audit, Night Auditor, Duties and Responsibilities

Night Audit Process: Establishing end of the day, Completing Outstanding Postings, Verifying Transactions, Verifying No shows, preparing reports, updating the system.

Safety and Security: Hotel security staff and system, Role of Front office, Control of Room Keys, Fire safety, Accidents in Hotels, accident Report, First aid

Handling emergencies and unusual situations: Terrorist Activities and Bomb threat, Robbery and theft, Guest in drunken state.

Pedagogy: Presentations, Discussions, Case Studies

Minimum depth coverage will be at the level of the following books:

1. Jatashankar R Tewari, Hotel Front Office Operations and Management, Oxford
2. S.K.Bhatnagar, Front Office Management, Frank Bros & Co.
3. Sudhir Andrews, Text Book of Front Office Management & Operations, Tata McGraw Hill.

FRONT OFFICE PRACTICALS : (2 CREDITS)

Objective:

At the end of the course, the student will understand and practise interpersonal skills which are critical to front office operations. Identify various vouchers, Telephone etiquettes and manners. Front desk grooming and other essentials – body language, speech modulation which includes articulation, variation control of pitch and tonal quality.

Students will be able to handle Reservations, Cancellation & Amendments independently. Student will also learn the features of front office software.

Content

Practising effective verbal and nonverbal communication (facial expressions, posture, body language)

Practising telephone etiquette.

Learning various vouchers

- Registration Card
- Reservation Form
- Amendment Slip
- Cancellation Slip
- Arrival/departure notification slip
- VIP amenities voucher
- Miscellaneous charge voucher
- Allowance voucher
- Paid out voucher
- Message slip

Live examples of situation handling

Handling reservations

Amendment and cancellation of reservation

Using MIS (hotel front office software)

Pedagogy

Experiential activities, mock situations, group discussions

Demonstration and use of software.

Minimum depth of coverage will be at the level of the following books/readings:

Jatashankar Tewari, Hotel Front Office Operations and management, Oxford

Body Language Alan Pease

Hotel Front office software (Fidelios or IDS)

ACCOMMODATION OPERATIONS 1 (4 Credits)

Objective:

At the end of the course students will be able to
Appreciate the placement of housekeeping as an important support department in the organisation of hotel departments, understand the importance of housekeeping in hotels and grasp the responsibilities of the department, Lay down the standard for cleaning, list the principles of cleaning, and describe the various procedures for cleaning and bed making. Understand the importance for cleaning and maintaining the public areas.

Content:

Hotel Industry an over view : Classification, Star ratings, Hotel Departments

Housekeeping Department: Importance, Responsibilities of Housekeeping department, Organisational Structure, Housekeeping personnel, attributes of Housekeeping staff, layout of the department, Coordination with other department.

Planning Housekeeping Operations: The planning process – Frequency schedules, Equipment and Operating supply inventory level, Work schedules

Housekeeping Inventories : Cleaning equipment, Cleaning agents, Guest supplies, Linen, Uniforms

Composition Care and cleaning of different surfaces: Metals, Glass, Ceramics, Wood, Stone, Leather, Rubber

Hotel Guestrooms: Importance, Types of rooms, guestroom status, Guest floor rules

Standard Contents of a Guestroom: Furniture, Fixtures, fittings, Beds, mattresses, beddings, Guestroom accessories, Placement of Guest supplies.

Cleaning Guest rooms: Types and nature of soil, Standards of cleaning, The cleaning process.

Cleaning Public areas: Entrances, Lobbies, Front Desk, Elevators, Staircases, Corridors, Restrooms, Banquet halls, Dining Rooms, Leisure areas.

Pedagogy: Group discussions on understanding housekeeping, its importance and its functions. Practising the arrangements of rooms.

Minimum depth coverage will be at the level of the following books:

1. G. Raghubalan, Smritee Raghubalan, Hotel Housekeeping Operations and Management, Oxford University Press, Second Edition.
2. Malini Gingham, Jaya B. George, Housekeeping Operations, Design and Management, Jaico Publishing House.
3. S.K. Kaushal, S.N. Gautam, Accommodation Operations Management, Frank Bros. & Co.

ACCOMODATION OPERATIONS PRACTICALS (2 Credits)

Objective:

Students will be prepared for performing housekeeping operations in guest rooms, public areas, handle turn down and second service, Daily Cleaning of Rooms and Bath Rooms, Weekly Cleaning, Special/Periodic cleaning, Message/Departure/Maintenance Register & follow ups. They will be familiarised with laundry operations, flower arrangements and also interior decoration.

Content:

Identification Of Equipment: Classify and discuss the types, uses, maintenance, storage and selection of diverse cleaning equipment.

Review the types, use, storage and selection of cleaning agents used by housekeeping staff

Standard operating procedure for Dusting

Standard operating procedure for Glass Polishing

Standard operating procedure for Brass Polishing

Standard operating procedure for Cleaning Of Fans And Tube Lights

Standard operating procedure for Toilet Cleaning

Cleaning Of Telephones

Standard operating procedure for Bed Making

Standard operating procedure for Daily Cleaning

Washing, Ironing, Folding

Flower Arranging

Interior Decoration.

Handling Room Transfers & Difficult Situations

Identification Of various formats and registers.

Pedagogy: Practicals on understanding accommodation operations.

Minimum depth coverage will be at the level of the following books:

1. G. Raghubalan, Smritee Raghubalan, Hotel Housekeeping Operations and Management, Oxford University Press, Second Edition.
2. Malini Gingham, Jaya B. George, Housekeeping Operations, Design and Management, Jaico Publishing House.
3. S.K. Kaushal, S.N. Gautam, Accommodation Operations Management, Frank Bros. & Co.

ACCOMMODATION OPERATIONS 2 : (4 Credits)

Objective:

After completing the course students will be able to
Describe the documental tools used in managing housekeeping personnel, Appreciate the crucial role of a supervisor, Students will be able to understand with activities of the linen and uniform room and laundry and also be familiarised with interior designing, interior decoration, flower arrangement etc.

Content:

1. Managing Housekeeping Personnel: Documents for personnel management, Determining staff strength.
2. Recruitment, Selection And Training, Scheduling, Motivating employees, Performance appraisals, Time and motion studies and job analysis, Team work and leadership, Employee Welfare And Discipline,
3. Contract And Out Sourcing: When are they considered, Contract services in HK. Hiring Contract providers, Pricing of Contracts, Advantages and Disadvantages of outsourcing.
4. Planning Housekeeping Operations: The planning process – Division of work document, Area Inventory List, performance standards, Productivity Standards.
5. Supervision In Housekeeping: Role of a supervisor, Functions of a Supervisor.
6. Budgeting In Housekeeping: Types of budgets, HK expenses, Budget planning process, Income statement of the Room division, Controlling expenses
7. Inventory Control And Stock Taking, Purchasing
8. Linen And Laundry Operations: The Linen and Uniform room, Storage of Linen, Linen exchange, Par stock, Linen control, Discards and re-use, The Laundry, Stain removal, Dry cleaning, Handling guest laundry
9. Uniforms, Sewing Room: Selection & Design of Uniforms, Establishing par levels, Issuing & Exchanging of Uniforms. Activities in the Sewing rooms, Equipments.
10. Safety And Security: Safety awareness and accident prevention, Fire prevention & fire fighting, First aid, Crime preventions, Dealing with emergencies, Lost & Found.
11. Interior Designing, interior decoration and flower arrangements.

Pedagogy: Presentations, Role plays.

Minimum depth coverage will be at the level of the following books:

1. G. Raghubalan, Smritee Raghubalan, Hotel Housekeeping Operations and Management, Oxford University Press, Second Edition.
2. MaliniGingh, Jaya B. George, Housekeeping Operations, Design and Management, Jaico Publishing House.
3. S.K. Kaushal, S.N. Gautam, Accommodation Operations Management, Frank Bros. & Co.

MANAGEMENT INFORMATION SYSTEMS IN FRONT OFFICE. (2 credits)

Objectives: At the end of the course the students will have the ability to perform various front office related tasks on a Front Office Operating system

Content:

S.No.	Topic
01	HMS Training – Hot Function keys
02	How to put message
03	How to put a locator
04	How to check in a first time guest
05	How to check in an existing reservation
06	How to check in a day use
07	How to issue a new key
08	How to print and prepare registration cards for arrivals
09	How to make a reservation
10	How to create and update guest profiles
11	How to update guest folio
12	How to print guest folio
13	How to feed remarks in guest history
14	How to add a sharer
15	How to make add on reservation
16	How to amend a reservation
17	How to cancel a reservation
18	How to make group reservation
19	How to make a room change on the system
20	How to process a guest check out
21	How to check out a folio
22	How to process deposit for arriving guest
23	How to process deposit for in house guest
24	How to check room rate variance report
25	How to process part settlements
26	How to post payment
27	How to print checked out guest folio
28	Check out using foreign currency

Pedagogy: Hands on practice of computer applications on PMS front office procedures such as: Night audit, Income audit, Accounts, Situation handling – handling guests & internal situations requiring management tactics/strategies

Minimum depth will be covered using any of the popular Hotel management softwares such as :

Fidelios, IDS, Ezee Technology, Opera, Amadeus, Champagne (Fourth Dimension)

MANAGEMENT INFORMATION SYSTEMS IN F&B SERVICE. (2 Credits)

Objectives: The students will have the ability in reservation handling, efficient table management operations and integration into Point-of-Sale systems to deliver exceptional levels of quality service by operating reservation and table management system designed specifically for service-oriented hotel, resort and destination properties.

Content:

Placing Orders through POS

Kitchen Routing & Printing

Settlement of bills,

Manage employee shifts with timed sessions and counter operations

Reporting and MIS for analytics

Differential Pricing

Table Layout & Guest Seating

Manage normal recipe creation

Table Merging & Dutch Billing

Loyalty & Promotions handling.

Pedagogy: Hands on practice of computer applications on PMS & POS.

Minimum depth will be covered using any of the popular F&B management softwares such as :

Fidelios-Micros, IDS, Ezee Technology, Champagne (Fourth Dimension)

CORE COURSES TOURISM

TOURISM CONCEPTS (4 Credits)

Objective:

At the end of the subject, the student will deal with Tourism as a System rather than as a set of disparate entities or processes. The student will deal with Tourism reality as well as other Tourism subjects that follow this subject in this manner.

Contents:

Overview of Tourism: What is Tourism? Components of Tourism and Tourism Management. Basic Approach to the study of Tourism, Economic Importance, Benefits and Costs of Tourism

Tourism through the Ages: Early beginnings, Early tourist attractions, The first travel agents, Historic Transportations, Chronologies of Travel

Organization of Tourism: International Organizations, Development Organizations, Regional Organizations

Passenger Transportation: Airline Industry, Rail Industry, Motorcoach Industry, The Automobile, The Cruise Industry, Other modes

Attractions, Entertainment, Recreation: Intro, Attractions, Gaming, Recreation, Entertainment, Festivals and Events, Shopping, Education, Publishing, Marketing and Publicity Organizations.

Understanding Travel Behaviour: Motivation for Pleasure Travel, Cultural and International Tourism for Life's Enrichment, Sociology of Tourism

Tourism Supply, Demand, Policy, Planning and Development: Tourism Components and Supply, Measuring and Forecasting Demand, Tourism's Economic Impact, Tourism Policy: Structure, Content and Process, Tourism planning, development and social considerations. Tourism and the Environment

Essentials of Tourism Research and Marketing: Travel and Tourism Research, Tourism Marketing

Future of Tourism: The nature of future growth, New Horizons, The changing nature of Tourism Products, managing the future effectively.

Pedagogy: The systems thinking will be developed through comprehensive case studies and industry based assignments.

Minimum depth of coverage will be at the level of the following books.

1. Goeldner, Charles R. and J. R. Brent Ritchie, 'Tourism: Principles, Practices, Philosophies', 9th Edition, Wiley, 2002 or later editions.

TOUR OPERATIONS MANAGEMENT. (2 CREDITS).

Objective:

At the end of the subject, the student will have the ability to effectively design and implement tour programmes for inbound and outbound tourists.

Contents:

1. The meaning of tourism from the operations standpoint and the 5 A's of tourism Marketing Holidays.
2. Tourism Geography: The various countries on the world map, physical geography, airline geography and comprehend their importance to creating and operating a successful tour
3. Identify and analyse different types of package tours and how they are used to create holidays for individual customers as well as groups.
4. Techniques that create a tour in terms of its itineraries and costing
5. Various travel formalities rules and regulations that are in use today and that are needed to operate a successful tour
6. Various travel formalities that are in use today and that are needed to operate a successful tour.
7. The concept of the tourism product in respect of the tours that they have learnt to create. comprehend and analyse the tourism product from its operating sectors
8. Future of Tour Operations Industry.

Pedagogy:

The subject will be handled through tour operations case studies, industry based assignments and by making the students design an innovative prototype package tour in Goa.

Minimum depth of coverage will be at the level of the following books.

1. Tourism: Operations and Management, Sunetra Roday, Archana Biwal & Vandana Joshi
2. Laws, Erick, 'Managing Packaged Tourism', Thomson Business Press, UK, 1997
3. Godfrey, Kerry and Jackie Clarke, 'The Tourism Development Handbook', Continuum, London 2000

ECONOMICS OF TOURISM . (4 CREDITS)

Objective:

At the end of the course, the student will have competence in explaining through economics the growth and development of tourism in particular contexts ,economic behaviour of firms involved in tourism, predicting behaviour of firms and tourism in a particular context to some extent and in suggesting policy and firm level interventions, explaining through economics the growth and development of tourism in particular contexts ,economic behaviour of firms involved in tourism and predicting behaviour of firms and tourism in a particular context to some extent and in suggesting policy and firm level interventions

Contents:

Tourism demand - Concept of Demand & supply in tourism: Demand, Supply Holiday Choice. Consumer decision making process, Determinants & indicators of demand. Measurement of demand. Tourism supply, tourism product. Process of product development. Tourism supply and costs-Pricing in tourism: Determinants of Price. Types of price in tourism, pricing a new product project feasibility study. Cost benefits analysis. SWOT Analysis, check list. Tourism market structure. Structure, performance and conduct of tourism firms. Five forces analysis in understanding competitive advantage for firms. Impact of New Economy. Impact of tourism: Economic impacts. Social Impacts, Environmental Impacts, Multiplier effects in tourism, Environment impact assessment (EIA) Generic Strategies for Firms. Macroeconomic environment of tourism. Public and Private sector in tourism. Government role in tourism. Community and tourism. Need for Public – Private sector co- operation in tourism. Regular role of government in tourism. Tourism and externalities: Environment, sustainability. Emerging areas in economics of tourism. Tourism's contribution in the global economy and in Indian Economy. Tourism demand forecasting, sources of finance for tourism, TFCl.

Pedagogy:

The subject will be handled through exercises in economically interpreting contemporary tourism news items as well as articles on tourism industry in different parts of the world. Students will be required to make industry and firm level analysis of the firms in which they work or attached for Internship.

Minimum depth of coverage will be at the level of the following books.

1. Lundberg, Donald E., M. Krishnamoorthy and Mink H. Stavenga, 'Tourism Economics', John Wiley & Sons, Inc., New York, 1995
2. Sinclair M. Thea and Mike Stabler, 'The Economics of Tourism', Routledge, London, 1997
3. Tribe, John, 'Economics of Leisure and Tourism', Butterworth Heinemann, Oxford, 1999
4. Cullen, Peter, 'Economics for Hospitality Management', Thomson Business Press, UK, 1997
5. Journals such as the Annals of Tourism Research, Journal of Travel Research, etc. and materials from newspapers, popular magazines and the Internet

MARKETING TOURISM AND HOSPITALITY. 2 CREDITS

Objective:

At the end of the subject, the student will have the ability to Identify consumption needs of tourists, Segment tourists, Design the marketing Ps to meet the needs, Implement marketing strategies and Build long term relationship between the firm and the tourists

Contents:

Service Characteristics of Hospitality and Tourism Marketing, Understanding of Marketing. Marketing: Concept and definition and its significance in tourism industry. Basic concept of need and want; demand, product, service, market and sales. Significance of service and characteristics of service marketing, differentiation of product marketing and service marketing. Defining marketing mix, the 8 P's of marketing mix. Marketing in Strategic Planning. Marketing Environment. Marketing Information Systems and Marketing Research. Understanding of marketing research, Concept of primary data, secondary data, qualitative and quantitative data and marketing information system (MIS) and its function. Consumer Markets and Consumer Buying Behaviour. Factors influencing the buying behaviour of consumers. Organizational Buyer Behaviour of Group Markets. Market Segmentation and bases for segmenting consumers markets, targeting and positioning and market strategies. Designing and Managing Products and Services. Adventure tourism issues and challenges .Emerging trends in Rural & Agro tourism, Inbound & Outbound Tourism. Key Concepts for Effective Tourism Development - Negative Impacts of Tourism, Carrying Capacity, Destination Life Cycle, Doxey's Irridex. Sustainable Tourism: Principles & Guidelines Pull Factors affecting Tourism Destination.

Pedagogy:

Discussion of case studies, articles, brainstorming etc.

Reading indicating minimum depth of coverage:

Tourism Principles, Practices, Philosophies, Charles R. Goeldner, Wiley.

Emerging Trends of International Tourism in India, Mohammad Saleem Mir, Lambert Publishing

Emerging Trends in Tourism, Anil Verma.

Articles from academic and popular journals on tourism and related industries

HOTEL LAW 2 CREDITS

Objective:

At the end of the course the student will be able to know the inter relationship of Hotel laws with other Laws prevailing in India and abroad, liquor laws and its licensing in Goa and throughout India, Labour laws, Environmental law protection and its effect on hotel industry, Hotel law(Insurance, and Law of contract).

Contents:

Business Contracts-Law of contract- Definition of contract under Indian contract act, essentials of Indian contract, bailment, pledge, guarantee,types of contracts, partnership, parties competent to contract.

Doing Business in India

Labour laws- workmens compensation, hotel insurance, strike, lockout, trade union, Hotel Licences and Regulations, Labour Laws

Liquor Licensing -Liquor laws and licensing,Impact of hotel industry on environment

Hotel Insurance ESI- definition of ESI and its usefulness for hotel employees

Environmental laws, effect on Hotel industry, laws dealing with CRZ, waste management, hotel waste, setting up of treatment plants.

Food Legislation

Supreme court judgement regarding hotel industry- Ramdas resort case, Marriott case, CRZ

Introduction to the Indian Hospitality Industry

Introduction to Hotel Laws

Hospitality Law

Pedagogy:

Presentations, cases on different types of laws in Business and Catering.

Minimum depth coverage will be at the level of the following books:

1. Amitabh Devendra, Hotel Law, Oxford
2. M.C.Kuchhal, Mercantile law, Vikas Publishing House, Sixth Edition.

FACILITY PLANNING 2 CREDITS

Objectives:

At the end of the course the student will be able to identify with hotel designs and Architectural layout planning patterns and star classifications of hotels.

Content:

Hotel design: Introduction, Design considerations, Systematic layout planning, Thumb rule for allocation of space in a hotel

Formulation of Project Report/ Feasibility Report

Architectural and systematic layout planning patterns,

Star classifications of hotel,

Layout and design of operational areas.

Restaurant Design: types of restaurant & restaurant themes, design and planning of a Restaurant, Bar design

Kitchen Design: Basis of physical layout, Layout of kitchen, Area required, Commercial kitchen configuration, Environmental Conditions, Developing Kitchen plans

Specifications for Equipment, Care and Maintenance of equipments, Ventilation & Kitchen safety

Storage facility, Layout & Design: Food Store, Layout of Food store, Cellar facilities

Masterpieces in Facilities design (Hotels)

Pedagogy:

Presentations, Group Discussions.

Minimum depth coverage will be at the level of the following books:

Tarun Bansal, Hotel Facility Planning, Oxford University Press.

FOOD SCIENCE AND NUTRITION (2 Credits)

Objective:

At the end of the course the student will have the ability to Understand the relationship between various processes and food quality, Appreciate the importance of food systems, calories and constituents of food, Understand the physical properties of food, and classifications. To become familiar food groups, and their classification, functions, absorption and digestion. Appreciate the relation of food systems in obtaining high quality food products.

Contents:

Food science, Colloidal systems in foods.

Constituents of food:

Protein, Introduction , classification of protein, denaturation, Functions of specific proteins like gelatine, milk. Functional uses of meal ,commercial uses of proteins, TVP.

Carbohydrates, its availability , uses , and need for this nutrient. Classification, functions, requirements, excess and deficiency.

Lipids, vitamins, Minerals, effects of cooking and processing of different foods.

Fats and oils-Introduction , structure and its properties, saturated and unsaturated or polyunsaturated , rancidity and its types – hydrolytic and oxidative rancidity

Effect of heat on fats and oils, polymerization , care of fats and oils, extraction of fats and oils

Added flavours, sweeteners, flavour enhancers, use of flavours in food preparation,

Browning reactions-introduction, types of browning reaction, use and harmful effects of it.

Minerals-introduction,classification,functions,calcium, iron, iodine,fluorine, potassium, magnesium

Pedagogy:

Case studies, Presentations on food systems, constituents of food, and its importance.

Minimum depth coverage will be at the level of the following books:

1. B. Srilakshmi, Food Science, New Age International.
2. Sunetra Roday, Food Science & Nutrition, Oxford University Press

OPTIONAL NON BUSINESS COURSES

CHARACTER DEVELOPMENT (4 Credits)

Objective:

At the end of the course the student will be able to

Have a holistic outlook towards life, to face and solve the challenges in their day to day life by strengthening their Emotional intelligence. Using their Talents to develop their personality and using this to bring happiness in their life and career.

Changing their behaviour by becoming passionate and positively energized in doing their studies, job and life. Help them to become productive, proactive and persevere in all that they do in their lives and to become good Managers and professionals.

Contents:

Talents you are born with, using Talents to enhance your personality and succeed.

Using the E – Enthusiasm. Using this to build your passion and positive Energy.

E - Efforts – Persevere and reach your goals.

In Efficiency - un Productive and not planned or not Pro active .

Dealing with their negative Self Awareness, Self Regulation, Motivation, Empathy and Social Skill.

E - Positive Emotional Intelligence to reach your goals.

Negative Attitude with regards to oneself, family and Friends.

Positive Attitude

Pedagogy: Use of Presentations, Activities, Discussions

Minimum depth coverage will be at the level of the following books:

1. Rich Dad Poor Dad – Robert Kiyosaki . Warner books
2. Think and grow Rich – Napoleon Hill. The Ralston Society
3. The Power of now- Eckhart tolle. Namaste Publishing

THE POWER OF POSITIVE THINKING (2 Credits)

Objective:

At the end of the course the student will be able to

Understand what are the students Sincere Negative Attitude with regards to themselves, family and Friends. To understand the Sincere attitude of a successful person and how when one sincerely look after the needy and old it develops your management skills, patience and leadership quality. To understand what are their Sincere positive attitude and their self Esteem with regards to themselves, family and friends. Dealing with their Positive and negative Self-Motivation with regards to themselves, family and Friends.

Contents:

Students Sincere negative Attitude towards not respecting and helping out in society and College activities

Sincere positive attitude and Self Esteem

Self-Image Positive and Negative

Dealing with their Social Skills

Self-Motivation negative and Positive

Pedagogy: Use of Presentations, Case Study, Videos, Activities, Discussions & Role Plays

Minimum depth coverage will be at the level of the following books:

The Power of positive thinking - Norman Vincent Peale. Prentice Hall

Power of positive thinking in business- Scott W. Ventrella. Simon and Schuster

Remove negative thinking – Helga Kloplic. 2014 edition Createspace independent Publishing

APPRECIATION AND UNDERSTANDING OF THEATRE (4 CREDITS)

Objective:

At the end of the course the student will be able to

Appreciate Theatre, Understand different Genres of Theatre, Get an insight into the influences of Theatre on Society, Learn about Play Production, Understand the process and requirements of an Actor & Read excerpts from some famous plays

Contents:

An Overview of the course, introduction to Theatre and its impact on Society

A description and evolution of different Genres of Theatre with script samples of some genres

What are the requirements for producing a play

Reading scenes from different plays by Shakespeare and watching them enacted

How does an actor approach Auditions, His Role and the Production as a whole

Reading scenes from different plays by Neil Simon and watching them enacted

Learning and practicing various theatre exercises for Voice, Body Movement, Stage Presence and Acting skills

Discovering the fascinating world of a Stage Director with case studies

Understanding the basics of playwriting, production, directing and acting through theoretical and practical methods

A visit to the Kala Academy Complex

Pedagogy: Use of Presentations, Case Study, Videos, Activities, Discussions & Role Plays

Minimum depth coverage will be at the level of the following books:

An actor prepares- Konstantin Stanislavski Bloomsbury

The Actor's scenebook - Michael Schulman & Eva Mekler Bantam books

The Book of Broadway – Eric Grode Voyageur books

DIET MEAL PLANNING (2 Credits)

Objective:

At the end of the course the student will have the ability to plan and suggest menus for different types of dietary requirements.

Contents:

1. Introduction to diet planning and therapy menu planning.
2. Nutritional requirements for adults-requirements, energy , protein , fats,vitamins, minerals.low cost balanced diets, dietary guidelines to reduce the cost of a meal
3. Nutritional requirements for infants:- what is infancy?,food requirements, breast feeding , advantages of b. Feeding (nutritional , physiological and economic benefits)advantages to the infant and mother.
4. Nutritional and food requirements for preschool children1-6 years
5. Nutritional and food requirements for school children(6-12 year) - nutritional requirements, dietary guidelines
6. Nutritional and food requirements during adolescence-nutritional requirements, food habits ,dietary guidelines
7. Nutritional and food requirements for expectant mothers – introduction, dietarymodifications, general dietary problems by Jarvis
8. Nutritional and food requirements during old age- nutritional requirements, energy protein,, carbohydrates, vitamins, water, fiber, food requirements, and modifications of diet planning during old age
9. Nutrition related problems, osteoporosis, obesity , neurological dysfunction, anaemia, malnutrition, constipation, degenerative diseases, dietary guidelines to be followed in case of diseases such as Anaemia, Gastrointestinal diseases,Kidney diseases.

Pedagogy:

Case studies, Presentations on dietary requirements according to age and condition.

Minimum depth coverage will be at the level of the following books:

3. B. Srilakshmi, Dietetics, New Age International.
4. SunetraRoday, Food Science & Nutrition, Oxford University Press

HYGIENE AND SANITATION 2 CREDITS

Objectives:

At the end of the course, the student will be able to identify hygiene hazards, and be aware of the safety procedures to be followed when handling food.

Practice safety and hygiene at the workplace

Content:

Importance of hygiene and sanitation in the hospitality industry

The 5 groups of organisms, Growth curve of microbial organisms, harmful effects and beneficial uses of m.o in the food industry

How can foods get spoilt, classification of foods according to the ease with which it gets spoilt, spoilage indicators of food, conditions that can lead to food spoilage.

Need for food storage, dry , refrigerated, and freezer storage. Guidelines for food storage. Storage of various food items.

Importance of hygiene procedures in preparing food, cooking food, holding food. Left over food, preparations of specific foods and faults in food preparation.

Rules for serving and displaying food, Service of hot foods and cold foods, bartending , protective display of food.

Procedures for cleaning , Sanitizing, Cleaning agents, Importance of cleaning operations, Water-hard water , soft water.

Different types of waste, methods to store and dispose of the waste.

Sanitary regulations and standards.

Importance of safety regarding equipment, sprains and strains in the kitchen

Pedagogy:

Presentations, Group Discussions.

Minimum depth coverage will be at the level of the following books:

Hygiene and Sanitation by S. Roday

Introduction to Cookery by P.S. Bali

INTERIOR DECORATION 2 CREDITS

Objectives:

At the end of the course the student will have

Holistic understanding of Hotel through its infrastructure and Interior Decorations ie appreciate interior designing, the methodology involved in designing , to read the Architectural and Interior drawings, Learning to communicate with professionals with respect to development of hotel infrastructure & Interior Decoration.

Understanding the various areas of Hotel Services in detail and their requirement to create the correct ambience and functional approach with respect to Interior Decoration

Content:

Introduction to interior decoration through visual presentation and various elements / aspects of interior decorations

Awareness of facilities in hotel and learn in detail in relation to interior decoration

Classification for hotel & identify the criteria for the star rating and the agencies involved in granting these Star Ratings.

Interpretation of Hotel Architectural / Interior drawings.

Concept & themes of various hotels developed worldwide and correlation of the concept & design.

Pedagogy:

Presentations, Group Discussions.

Minimum depth coverage will be at the level of the following books:

Tarun Bansal, Hotel Facility Planning, Oxford University Press.

INTEGRATED MBA HOSPITALITY TRAVEL & TOURISM

CORE SUBJECTS

Front Office Practicals 2

Credits: 2

Objective	At the end of the course, the student will be able to perform front desk and bell desk duties using standard operating procedures followed in the hospitality industry.
Contents	Pre-register a guest (10 practical sessions of 3 hours duration) Registration: Reserved guest Registration: Walk- in guest Registration: Group Role play: Arrivals Role play: Luggage handling Role play: Message and mail handling Role play: Paging Guest History Daily transactions
Pedagogy	lectures/ tutorials/ practical/ field work/ outreach activities/ project work/vocational training/viva/ seminars/ role plays/assignments/ presentations/ self-study/ Case Studies etc. or a combination of some of these. Sessions shall be interactive in nature to enable peer group learning.
References	1. Jatashankar Tewari, Hotel Front Office Operations and management, Oxford. Latest edition 2. S.K. Bhatnagar, Front Office Management, Frank Bros & Co.(Publishers) Ltd. Latest edition

Accommodation Operations Practical 2**(2 Credits)**

Objective	Students will be prepared for Servicing checked out/ vacant/ occupied rooms, Inspection of guest rooms, Handling of chamber maid's trolley, mini bar and guests' requests and Linen room and laundry operations
Contents	Servicing checkout room (10 practical sessions of 3 hours duration) Servicing occupied room Servicing vacant room Chamber Maid's Trolley Guest room inspection Mini bar management Guest handling Guest Room Supplies and Position Layout of Linen and Uniform Room/Laundry Laundry Machinery and Equipment
Pedagogy	lectures/ tutorials/laboratory work/ field work/ outreach activities/ project work/vocational training/viva/ seminars/ term papers/assignments/ presentations/ self-study/ Case Studies etc. or a combination of some of these. Sessions shall be interactive in nature to enable peer group learning.

22	ECO 226	Advanced Econometrics	4

Programme: M. A. Economics

Course Code: ECC 111

Title of the Course: Microeconomics-1

Number of Credits: 4

Total Contact Hours:48

Effective from AY: 2018-19

<u>Prerequisites for the course:</u>	Students must have basic knowledge of microeconomics. Knowledge of mathematics will be an added advantage	
<u>Objective:</u>	To introduce the students to modern treatment of microeconomics with applications	Contact Hours
<u>Content:</u>	<p>.</p> <p>1.Theory of Consumer Behaviour Consumer's tastes: Indifference Curves-Consumer's choice and equilibrium-Income and substitution effects- Derivation of demand curve Applications of Indifference curves - Revealed preference theorem- market demand models-constant elasticity and distributed lag models.</p> <p>2.Theory of Production and Costs Technology of production-production-Production function-short run and long run-isoquants-Elasticity of substitution-Homogenous and Homothetic -Cobb Douglas Production function - CES,VES production functions-Recent developments-Technical progress and production function-</p> <p>Returns to scale - Choice of least cost combination of inputs. Costs- Short and long run-The L shaped cost curve. Derivation of cost function -Duality of cost and production function.</p> <p>4. The Theory of Competitive Market Perfect competition - short run and long run equilibrium of the firm and industry. Dynamic changes and industry equilibrium: demand changes, cost changes and government taxation. Efficiency in a competitive market.</p> <p>5.Theory of Imperfect Market: Monopoly Monopoly-price and output determination in monopoly-short and long run-price discrimination-degrees of price discrimination-Bilateral monopoly-monopoly and welfare loss-Control of monopoly-</p> <p>6.Monopolistic Competition Monopolistic Competition-product differentiation-Chamberlin's model-price competition and free entry-monopolistic competition and excess capacity.</p>	<p>10</p> <p>14</p> <p>8</p> <p>10</p> <p>6 hours</p>
<u>Pedagogy:</u>	lectures/ case analysis/assignments/class room interaction

Programme: M. A. Economics

Course Code: ECC 211

Title of the Course: Microeconomics-1I

Number of Credits: 4

Total Contact Hours:48

Effective from AY: 2018-19

<u>Prerequisite for the course:</u>	Microeconomics-1	
<u>Objective:</u>	To expose the students to the modern theories of firm, the analytical tools and complex decision making under non competitive conditions	Contact Hours
<u>Content:</u>	<p>1.Oligopoly Market Structure Non Collusive Oligopoly models - Cournot, Bertrand, Chamberlin, Sweezy and Stackelberg models-Collusive models-Cartels and Price leadership models.</p> <p>2.Manageiral Theories of Firm Baumol's sales revenue maximisation- Marris maximum rate of growth and profits hypothesis-Williamson's discretion model -Behavioural model of Cyert and March-</p> <p>3.Theory Of Games Framework of Game theory- two person zero sum game- Dominant Strategies- Non-zero sum games: Prisoners dilemma-Nash equilibrium- sequential games- repeated games-.</p> <p>4. General Equilibrium Factor shares-Technological progress and factor shares- Product Exhaustion theorems-General Equilibrium- General equilibrium in production and exchange -Walrasian Model- Existence, uniqueness and stability of General Equilibrium.</p> <p>5.Information Economics Information Economics-Adverse Selection and Moral hazards- Market for Lemons-Pooling and separating equilibrium- signalling and screening-Principal-agent Problem.</p> <p>6.Linear Programming Linear Programming-linear programming problem-Feasible solution, objective function and optimal solution- Simplex method and iterative procedure.</p>	<p>10</p> <p>10</p> <p>8</p> <p>8</p> <p>6</p> <p>6</p>
<u>Pedagogy:</u>	lectures/ case analysis/assignments/class room interaction	

<u>References/Readings</u>	<ul style="list-style-type: none"> • Baumol W.J (1987), <u>Economic Theory and Operations Analysis</u>, Prentice Hall of India, New Delhi. • Cowell A Frank (2006) <u>Microeconomics: Principles and Analysis</u>, Oxford University Press, New York • Gravelle Hugh and Ray Rees (2008), <u>Microeconomics</u>, Pearson Education Inc.and Dorling Kindersely Publishing Inc., New Delhi • Heathfield and Wibe,(1987),<u>An Introduction to Cost and Production Functions</u>, Macmillan, London. • Hirshleifer,J, A.Glozer and D Hirshleifer (1997), <u>Price Theory and Applications</u>, Cambridge University Press, New York • Jehle Geoffrey A and Philip J Reny (2008), <u>Advanced Microeconomic Theory</u>, Pearson Education Inc.and Dorling Kindersely Publishing Inc., New Delhi • Koutsoyannis,A(1983),<u>Modern Microeconomics</u>, Macmillan, London. • La manna Manfredi M.A(1997), <u>Readings in Microeconomic Theory</u>, The Dryden Press, London. • Landsburg E Stevan (2008), <u>Pricing</u>, South Western and Centage Learning, New Delhi • Maddala G.S and Ellen Muller(1989), <u>Microeconomics: Theory and Applications</u>, McGraw Hill, Singapore. • MasColell Andreu, Michel D Whinston and Jerry R.Green(1995), <u>Microeconomic Theory</u>, Oxford University Press, Oxford. • Pashigian B. <u>Learning Outcomes</u>	<p>The students will be equipped with the modern extensions and modifications of the competitive model.</p>	

Programme: M. A. Economics

Course Code: ECC 112

Title of the Course: Macroeconomics-1

Number of Credits: 4

Total Contact Hours:48

Effective from AY: 2018-19

<u>Prerequisites for the course:</u>	Nil	
<u>Objective:</u>	To understand the role of effective demand in determining employment, output and interest rates.	Contact Hours
<u>Content:</u>	<ol style="list-style-type: none">National Accounts System: UN system of accounts, India's Accounting system, Green AccountingClassical System: Classical model introduction – Employment, labour, supply – Equilibrium output and employment Money prices and interest under classical system –Keynesian system: Simple Keynesian Model – Equilibrium income and changes in equilibrium income. Consumption function &. Investment function IS-LM model Policy effects on IS-LM model. Open Economy Macroeconomics (Mundell-Fleming model).Monetarists, New Classical Economics and New Keynesian: Restatement of quantity theory, National Rate of Unemployment Theory-- Philips Curve – short run and long run, Rational Expectations Theory. New Keynesian Model – Sticky price, efficiency wage and Insider – Outsider model.Convergence & New Growth Theories: Logic of convergence and explanations of why different countries grow at different rates. Empirical evidence. Endogenous Growth Models of Human Capital, Endogenous Technology and Product, Innovation- Increasing Returns to Scale.	6 12 16 7 7
<u>Pedagogy:</u>	<ol style="list-style-type: none">Chalk and talk aided by power-point lecturesPC lab exercisesAssignments and presentationsGroup activityMOOC (or similar) Component	
<u>References/Read</u>	<ul style="list-style-type: none">Charles Jones 2014, Macroeconomics, W.W. Norton.	

<u>ings</u>	<ul style="list-style-type: none"> • N. Gregory Mankiw, 2015, Macroeconomics Macmillan • R. Dornbusch, S. Fishser, R.Startz, 2010, Macroeconomics McGraw Hill • R.T. Froyen (2014) Macroeconomics: Theories and Policies, Pearson • Frederic S. Mishkin, 2016, Macroeconomics: Policy & Practice. Pearson 	
<u>Learning Outcomes</u>	By the end of the course, successful students are expected to understand how critical macroeconomic variables like income, employment, and prices are determined and what are the factors that influence them.	

Programme: M. A. Economics

Programme: M. A. Economics

Course Code: ECC 212

Title of the Course: MACROECONOMICS- II

Number of Credits: 4

Total Contact Hours:48

Effective from AY: 2018-19

<u>Prerequisites for the course:</u>	Students should have completed Macroeconomics 1 or similar course	
<u>Objective:</u>	To acquaint the students with the role of money and monetary policy in determining employment, output and interest rates.	Contact Hours
<u>Content:</u>	<ol style="list-style-type: none">1. Money and Monetary transmission mechanism Money-Functions. Channels of transmission mechanism- money and credit transmission mechanism.2. Demand for Money Fishers quantity theory of money-Cambridge equation-Keynesian theory of demand for money-post Keynesian developments-Baumol and Tobin-Quantity theory of money a restatement-Milton Friedman-Empirical evidence on demand for money3. The Supply of Money Money supply-money multiplier-model of money supply determination-Money supply in India- RBI definitions-Non Banking Financial Intermediaries and money supply4. Money and the Theory of Interest Rates Theories of interest rates-Classical, neoclassical, and Keynesian, Term structure of interest rates-Yield curve-Theories of term structure of interest rates-Expectation, Market segmentation, and Preferred habitat theories.5. Monetary Policy Goals and targets-strategies for monetary policy-Targeting monetary aggregates-Interest rate targeting-Intermediate targeting- Money stock versus interest rates.	6 12 12 10 8
<u>Pedagogy:</u>	<ol style="list-style-type: none">6. Chalk and talk aided by power-point lectures7. Assignments and presentations8. Group activity9. MOOC (or similar) Component	
<u>References/Readings</u>	<ul style="list-style-type: none">• M Lewis & P Mizen, 2005, Monetary Economics Cambridge University Press• ,C Walsh, 2010, Monetary Theory and Policy, MIT Press	

	<ul style="list-style-type: none"> • R Aliber and C Kindleberger, 2015, Manias, Panics and Crashes: A History of Financial Crises, Palgrave Macmillan 	
<u>Learning Outcomes</u>	By the end of the course, successful students are expected to understand how money and monetary policy influences income determination and aggregate prices.	

Programme: M. A. Economics

Course Code: ECC 113

Title of the Course: Public Economics

Number of Credits: 4

Total Contact Hours:48

Effective from AY: 2018-19

<u>Prerequisites for the course:</u>	NIL	
<u>Objective:</u>	To familiarize the students with concepts of welfare economics, market failure, tax , public expenditure, etc.	Contact Hours
<u>Content:</u>	<p>1. General Equilibrium and Welfare Economics Perfect Competition and Pareto Optimality. Social Welfare Functions. Fundamental Theorems of Welfare. Compensation Tests.</p> <p>2. Market Failure Externalities and Market Processes. Market Failure and the Theory of the Second Best. Information asymmetry and Third Best Policies.</p> <p>3. Theory of Public Goods Voting Models - Public goods allocation mechanism and Efficiency Conditions</p> <p>4. Theory of Taxation Principles of Taxation –Principle of Fiscal Neutrality, Excess Burden, Doctrine Principle of Equity, Benefit Principle, Bowen and Lindhal Models, Ability to pay Principle</p> <p>5 Application of Taxation Principles in Developing Countries Meaning, Types and Measurement of Taxable Capacity. Incidence of Tax- Issues in Efficiency and Equity, Deadweight losses. Theory of Optimal taxation.</p> <p>6. Theory of Public Expenditure: Criterion for Public Expenditure- Cost Benefit Analysis, Social Rate of Discount, Shadow Prices.</p>	<p>08</p> <p>08</p> <p>08</p> <p>08</p> <p>08</p> <p>08</p>
<u>Pedagogy:</u>	lectures/ case analysis/assignments/class room interaction	
<u>References/Read ings</u>	<ul style="list-style-type: none">• Atkinson, A. & J. Stiglitz (1980) Lectures in Public Economics, McGraw Hill,London.• Aurebach, A. & M. Feldstein (eds) (1987) Handbook of Public Economics, Vol.I & II, Elsevier, New York.	

	<ul style="list-style-type: none"> • Baumol, W. J. (Ed.) (2001), Welfare Economics, Edward Elgar Publishing Ltd. U.K • Cornes, R. & T. Sandler (1986) The Theory of Externalities, Public Goods and Club Goods, Cambridge University Press, Cambridge • Cullis, J & P. Jones (1999) Public Finance & Public Choice, McGraw Hill, London. • Dasgupta, P. & A. Sen and S. Marglin (1972) Guidelines for Project Evaluation, Unido, Vienna. • Hindriks J and Gareth D. Myles (2006) Intermediate Public Economics, Prentice-Hall Of India, Delhi. • Jha, Raghavendra (1998) Modern Public Economics, Routledge, London. • Mundle, S. (ed.) (1970), Readings in the Economics of Taxation, George Alien and Unwin, London • Myles, G. (1997) Public Economics, Cambridge University Press, London. • Nicholas, B. (Ed.) (2001), Economic Theory and the Welfare state, Edward Elgar, U.K. • Singh S.K. (1986) Public Finance in Developed and Developing Countries, S.Chand, New Delhi. 	
<u>Learning Outcomes</u>	The students will be able to understand the fundamental theories of public economics, reasons for market failure and taxation	

Programme: M. A. Economics

Course Code: ECC 114

Title of the Course: Development Economics

Number of Credits: 4

Total Contact Hours:48

Effective from AY: 2018-19

<u>Prerequisites for the course:</u>	: Nil	
<u>Objective:</u>	To provide students with the essential tools and concepts of development economics and to enhance the students' knowledge of economic problems facing developing countries.	Contact Hours
<u>Content:</u>	<p>.</p> <p>1. Growth and Development Meaning and Criteria – Measures of development – Per Capita Income – Index of Human Development</p> <p>2. Theories of Economic Development Rostow's Stages of Growth- Big Push- Balanced and Unbalanced Growth- Critical Minimal Effort- Ranis Fei</p> <p>3. Inequality and Development Measures of Inequality – Inequality, Savings and Growth – Kuznets Curve</p> <p>4. Poverty and Development Conceptual issues – Poverty, credit and insurance – Poverty, nutrition and labour markets – Poverty and the household .</p> <p>5. Population and Development The determinants of fertility – The costs of children –The Optimum Population – The low-level equilibrium trap.</p> <p>6. Land and Labour in Developing Economies Land market : Principal-Agent Model - Risk, Tenancy and Share Cropping - Land size and productivity Labour Market: Role of poverty, nutrition and labour markets</p> <p>7. Credit and Insurance in Developing Economies Credit Market -Sources of demand for credit – Rural credit markets - Inter-linked markets - Micro-Finance Insurance Market -Basic concepts - Role of information and enforcement.</p>	<p>05</p> <p>12</p> <p>06</p> <p>08</p> <p>06</p> <p>06</p> <p>05</p>
<u>Pedagogy:</u>	The course will be taught using lectures, discussions, seminars and assignments.	
<u>References/ Readings</u>	<u>References:</u> <ul style="list-style-type: none">• Behrman,S. and T.N.Srinivasan (1995), <u>Handbook of Development Economics</u>, Elsevier, Amsterdam.• Cyphez and Dietz James L. And Smith S.C., (2012), <u>Economic Development</u>, Pearson, India 	
<u>Learning Outcomes</u>	On satisfying the requirements of this course, students will be able to critically evaluate economic problems of developing countries.	

Programme: M. A. Economics

Course Code: ECC 115

Title of the Course: Mathematics for Optimisation

Number of Credits: 4

Total Contact Hours:48

Effective from AY: 2018-19

<u>Prerequisites for the course:</u>	Nil	
<u>Objective:</u>	To learn the mathematical tools and concepts that aid in analysing economic optimisation.	Contact Hours
<u>Content:</u>	<p>1. Vectors and Matrices</p> <p>Vectors, Vector Spaces, Linear Dependence, Basis. Elementary operations with Matrices, Equivalence, Determinants, Inverse of Matrix, Rank of a Matrix, Cramer's Rule. Introduction to Input-Output techniques.</p> <p>2. Functions & Limits:</p> <p>Limit of a function, continuity, Necessary and sufficient conditions.</p> <p>3. Differentiation</p> <p>Rules of differentiation: Total derivatives and Partial derivatives. Maxima and minima, points of inflexion.</p> <p>4. Optimisation – Unconstrained & Constrained</p> <p>Application to economics: cost curves, demand curves, Theory of the consumer and Theory of the Firm under Perfect and Imperfect Competition.</p> <p>5. Integration:</p> <p>Reimann integral, Fundamental Theorem of the calculus, Techniques of integration and Definite integrals. Applications in economics: Theory of the firm (cost) & Growth</p>	<p>16</p> <p>4</p> <p>10</p> <p>10</p> <p>8</p>
<u>Pedagogy:</u>	<p>10. Chalk and talk aided by power-point lectures</p> <p>11. PC lab exercises</p> <p>12. Android based activity</p> <p>13. Assignments and presentations</p> <p>14. Group activity</p> <p>15. MOOC (or similar) Component</p>	
<u>References/Readings</u>	<ul style="list-style-type: none">• A.C. Chiang, (1995) Fundamental Methods in Mathematical Economic McGraw Hill, New York• Simon, Carl P. & L. Blume(1994) Mathematics for	

	<p>Economists W.W. Norton, New York</p> <ul style="list-style-type: none"> • Sydsaeter and Hammond (2004), Mathematics Of Economics Analysis, Pearson. 	
<u>Learning Outcomes</u>	By the end of the course, successful students are expected to understand how mathematical concepts aid in understanding optimisation in economics.	

Programme: M. A. Economics

Course Code: ECC 116

**Title of the Course: STATISTICS FOR ECONOMIC
ANALYSIS**

Number of Credits: 4

Total Contact Hours:48

Effective from AY: 2018-19

<u>Prerequisites for the course:</u>	Nil	
<u>Objective:</u>	To learn the statistical techniques and concepts that aid economic analysis.	Contact Hours
<u>Content:</u>	<p>1. Probability Sample Space, Random Variable, Addition and multiplication theorem-Conditional Probability, Bayes Theorem, Distribution Function, Mathematical Expectation, Measures of central tendency and variance.</p> <p>2. Probability Distributions : Discrete, Continuous and Sampling Distributions: Binomial, Poisson, Normal, Standard Normal, Student-t, Chi-Square, F-distribution.</p> <p>3. Testing of Hypotheses: Concepts & Applications Testing of Hypothesis; Null and Alternative Hypothesis, Type I & II errors. Levels of Significance. Testing mean, proportion -single and two populations. Testing t, z, F, chi-square test.</p> <p>5. Correlation & Regression: Covariance, Correlation, Rank Correlation. Introduction to Two Variable Regression.</p>	<p>12</p> <p>12</p> <p>12</p> <p>12</p>
<u>Pedagogy:</u>	<p>16. Chalk and talk aided by power-point lectures</p> <p>17. PC lab exercises</p> <p>18. Android based activity</p> <p>19. Assignments and presentations</p> <p>20. Group activity</p> <p>21. MOOC (or similar) Component</p>	
<u>References/Readings</u>	<ul style="list-style-type: none">• Mark L. Berenson, David M. Levine, Kathryn A. Szabat (2015), Basic Business Statistics, Pearson publication• David M. Levine, Kathryn A. Szabat, David F. Stephan, Statistics For Managers Using Ms Excel,	
<u>Learning Outcomes</u>	By the end of the course, successful students are expected to understand basic statistical techniques and be in preparation for learning Econometrics	

Programme: M. A. Economics

Course Code: ECO 117

Title of the Course: Labour Economics

Number of Credits: 4

Total Contact Hours:48

Effective from AY: 2018-19

<u>Prerequisites for the course:</u>	NIL	
<u>Objective:</u>	To develop students' abilities in acquiring a better understanding of the functioning of labour markets.	Contact Hours
<u>Content:</u>	<p>1. The Supply of Labour</p> <p>Supply of labour by an individual, by a household to an economy – A Household model of labour supply – A bargaining model of family labour supply – Changes in work participation over time: The decline in male participation rates; the increase in female participation rates – Labour force growth during recessions: The Added Worker Effect-The Discouraged Worker Effect - Classical Theory of Job Choice - Modern Theory in terms of investment in Human Capital - Migration.</p> <p>2.The Demand for Labour</p> <p>The individual firm's demand for labour in the short run - The individual firm's demand for labour in the long run - Industry demand for labour - Elasticity of demand for labour.</p> <p>3.The Labour Market</p> <p>Definition of the labour market – Differences between Labour Markets and Commodity Markets - Labour Market Structure: Structured Labour markets- Unstructured Labour Markets-Internal and External Labour markets- Primary and Secondary Labour Markets.</p> <p>4. Theories of Labour Market Discrimination</p> <p>Types of discrimination – Taste-for- discrimination model – Market Power: The Monopsony model – Theory of Statistical discrimination – The Crowding model.</p>	<p>10</p> <p>07</p> <p>04</p> <p>07</p> <p>06</p>

	<p>5. Employment</p> <p>Types of unemployment – The measurement of unemployment – Causes of unemployment: Job Search (The Stigler model, The McCall model)-Rigid wages- Efficiency wages.</p> <p>6. Wage Determination</p> <p>Wage determination in a perfectly competitive market – Wage determination in a Monopsony market – Minimum wage – Minimum wage in a perfectly competitive market – Minimum wage in a monopsony market – The minimum wage and efficiency wage theory – Segmentation and Dual Labour Market Theory.</p> <p>7. Productivity</p> <p>Concept - Measurement – Importance of productivity increases - Factors influencing labour productivity - Productivity and inflation - Productivity and employment .</p>	<p>08</p> <p>06</p>
<u>Pedagogy:</u>	The course will be taught using lectures, discussions, seminars and assignments.	
<u>References/Readings</u>	<p><u>References :</u></p> <ul style="list-style-type: none"> • Ashenfelter Orley C., David C., (2010), <u>Handbook of Labour Economics</u>, Vol. 3C, North Holland, U.K. • Basu Kaushik, (Ed.)(2002), <u>International Labour Standards: History, Theories and Policy Options</u>, Wiley-Blackwell • Bauder Harold,(2006), <u>Labour Movement: How Migration Regulates Labour Markets</u>, OUP, USA • Bloom G.F. and Northrup H.R., (1977), <u>Economics of Labour Relations</u>, Richard D. 	<p><u>Fundamentals of Labour Economics</u>, South – Western College Publishing, USA.</p> <ul style="list-style-type: none"> • Jacobson J., Skillman G., (2002), <u>Labour Markets and Employment Relationships: A Comprehensive Approach</u>. • Kaufman B.E. and Hotchkiss J.L.(2006), <u>Labour Market Economics</u>, Cengage Learning, India. • Laing Derek, (2011), <u>Labour Economics: Introduction to Classic and the New Labour Economics</u>, W.W. Norton and Co., USA. • McConnell, C.R. and S.L.Brue and Macpherson, (2010), <u>Contemporary Labour Economics</u>, McGraw Hill Irwin, New York. • Reynolds L.G. (1998), <u>Labour Economics and Labour Relations</u> , Prentice Hall, USA • Sapsford David,(1983), <u>The Economics of the Labour Market</u>, George Allen and Unwin Ltd., London. • Smith S.W.(2003), <u>Labour Economics</u>, Routledge, London. • Sloane Peter et al (2012), <u>Modern Labour Economics</u>, Routledge, U.S.A. 	
<u>Learning Outcomes</u>	Students will be able to think independently on various issues related to labour markets.	

Programme: M. A. Economics

Course Code: ECO 118 **Title of the Course:** Industrial Relations And Social Security

Number of Credits: 4 **Total Contact Hours: 48**

Effective from AY: 2018-19

<u>Prerequisites for the course:</u>	NIL	
<u>Objective:</u>	To familiarise the students with the issues related to Industrial Relations and Labour Welfare.	Contact Hours
<u>Content:</u>	<p>1.Industrial Relations</p> <p>Concept – Importance of Industrial Relations – Scope and Aspects of Industrial Relations – Factors Affecting Industrial Relations</p> <p>2. Industrial Disputes</p> <p>Concept – Classification of Industrial Disputes - Causes of Industrial Disputes - Steps to achieve industrial peace - Methods of settlement of industrial disputes.</p> <p>3. Worker’s Participation in Management</p> <p>Concept – Objectives – Forms of Participation – Levels of Participation – Forms of Worker participation in India</p> <p>4. Theories of the Labour Movement</p> <p>Karl Marx, The Webbs, Perlman, KDHM (Kerr, Dunlop, Harbison and Myers)</p> <p>5. Trade Unions in India</p> <p>Concept of a trade Union – features and functions -Growth and structure of Trade Unionism in India – Problems of Trade Unions</p> <p>5. Social Security and Labour Welfare</p> <p>Concept of Social Security and Labour Welfare in India - Important labour legislations in India : Industrial Disputes Act - Trade Unions Act, Factories Act and Employees State</p>	<p>06</p> <p>10</p> <p>09</p> <p>08</p> <p>07</p> <p>08</p>

	Insurance Act	
<u>Pedagogy:</u>	The course will be taught using lectures, discussions, seminars and assignments.	
<u>References/Readings</u>	<u>References :</u> <ul style="list-style-type: none"> • Agarwala Ramgopal et al, (2004), <u>Reforms, Labour Markets and Social Security</u>, OUP, New Delhi. • Addison J.T., Schnabei C., (2003), <u>International Handbook of Trade Unions</u>, Edward Elgar. • Budd John W. <u>Learning Outcomes</u>	The students will know about the origin of labour movement, industrial disputes resolution and important labour legislations in India.	

Programme: M. A. Economics

Course Code: ECO 119

Title of the Course: Financial Economics

Number of Credits: 4

Total Contact Hours: 48

Effective from AY: 2018-19

<u>Prerequisites for the course:</u>	Basic Knowledge of Microeconomics and Mathematics	
<u>Objective:</u>	To provide students with an understanding of financial markets and related theories.	Contact Hours
<u>Content:</u>	1. Indian Capital Market Stock Markets- Mutual funds-Venture Capital- Regulatory mechanism: Role of SEBI	10
	2. Valuation of financial assets Time value of money-Money and asset pricing- Risk and return-Shares-Bonds	04
	3. Asset Pricing Theories Portfolio theory-Capital asset pricing model-Arbitrage pricing theory	04
	4. Futures Market Mechanics of futures and forward markets-Determination of forward and futures prices- Hedging-Stock futures, index futures- Interest rate futures	15
	5. Options Market Mechanics of options market-Call option-Put option-Pricing of stock options-Black-Scholes model- Hedging using options	15
<u>Pedagogy:</u>	lectures/ case analysis/assignments/class room interaction study the actual IPO'S,	
<u>References/Readings</u>	<ul style="list-style-type: none">• D.E. Fisher and R.J. <u>Learning Outcomes</u>	After completing the course the students will be able to design, implement and evaluate HRD programmes.	

Programme: M. A. Economics

Course Code: ECO 121

Title of the Course: Agricultural Economics

Number of Credits: 4

Total Contact Hours:48

Effective from AY: 2018-19

<u>Prerequisites for the course:</u>	NIL	
<u>Objective:</u>	To introduce the students to the functioning of Agricultural Markets	Contact Hours
<u>Content:</u>	1. Agriculture and Economic Development Traditional vs. Modern Agriculture. Role of agriculture in economic development; Interdependence between agriculture and industry	10
	2. Demand for agricultural commodities Special characteristics - Effects of population, prices, and income on demand.	04
	3. Supply of agricultural commodities Special characteristics - Supply of individual commodities and aggregate supply - Effects of price on supply	04
	4. Agricultural prices Peculiar characteristics - Cob web cycle price income problem - Farmers dilemma - Administered prices : types and determination - Price Quotations.	08
	5. Agricultural production Production decisions by a rational farmer -Risk and uncertainty. Resource use and efficiency; production function analyses in agriculture; Factor combination and resource substitution	05
	6. Land and Capital Markets Characteristics - Lease market - Capital market - Role of credit and peculiarities	04
	7. Labour Markets Characteristics and structure.	05
	8. Agricultural Marketing Characteristics - Free trade - Cooperative Markets - Regulated Markets.	
<u>Pedagogy:</u>	lectures/ case analysis/assignments/class room interaction

Programme: M. A. Economics

Course Code: ECO 123

Title of the Course: Indian Public Finance

Number of Credits: 4

Total Contact Hours:48

Effective from AY: 2018-19

<u>Prerequisites for the course:</u>	NIL	
<u>Objective:</u>	To understand the policies, institutions and components of Indian Public Finance.	Contact Hours
<u>Content:</u>	<p>1. Allocation of Resources and the Budgetary Process Indian System of allocation- Constitutional and other mechanisms. Changes in devolution systems and role of budget in providing framework for growth and stabilisation. Government Budgeting, Budget -meaning and components, presentation and execution of Budget. Economic classification of Budget. Revenue and capital account. Budget deficit and their implications.</p> <p>2. Black Economy Estimates of black economy in India. Its impact on income, prices and effectiveness of economic policy.</p> <p>3. Indian Tax System: Alternative Sources of Taxation of Goods and Services in India: Direct and Indirect taxes.</p> <p>4. Deficits and Debt Impact on growth, prices and employment. Central and State-level distribution of borrowings- impact on growth (National and Regional).Deficit Financing - Meaning and Objectives of Deficit Financing. Trends in Different Types of Deficits Since 1991-Deficit Financing in India. Effects of Deficit Financing on Indian Economy. Assessment of the Recent Central Government Budget.</p> <p>5. Indian Expenditure System: Revenue & Capital, Development and Non-development, Plan and Non-plan: Trends and impacts. Changes in structure of expenditure of the Centre and states- consequences on growth and welfare.</p> <p>6. Fiscal Federalism: Logic of devolution of resources between different tiers of Government . Allocation of financial responsibilities of revenue and expenditure.</p>	<p>08</p> <p>08</p> <p>08</p> <p>08</p> <p>08</p> <p>08</p>
<u>Pedagogy:</u>	lectures/ case analysis/assignments/class room interaction	
<u>References/Readings</u>	<ul style="list-style-type: none">• Chelliah, R. (1995) Sustainable Economic Growth, Oxford University Press, Delhi.• Kumar, A.(2001), The Black Economy of India,	

	<p>Penguin, Harmondsworth.</p> <ul style="list-style-type: none"> • Rao, M. <u>Learning Outcomes</u>	Upon completion of this course students should be able to discuss the important models, theories and implications of the alternative approaches to growth.	

Programme: M. A. Economics

Course Code: ECO 125 **Title of the Course:** ENVIRONMENTAL ECONOMICS

Number of Credits: 4 **Total Contact Hours:**48

Effective from AY: 2018-19

<u>Prerequisites for the course:</u>	Nil	
<u>Objective:</u>	To Learn the implications of production and consumption outcomes on the environment and how market and non-market tools can be used in policy-making to move towards sustainable development.	Contact Hours
<u>Content:</u>	<p>Total Contact hours: 48</p> <p>1. Environment & Economy</p> <p>Inter-linkages and Trade-offs, Poverty, Environment and Development debate. Issues of Climate Change – Adaptation and Mitigation</p> <p>2. Theory of Externalities & Environmental Policy</p> <p>Missing Markets, Non-convexity, Non-linearity, Public Goods, Common Property Resources, Coase Theorem and Issues in Property Rights; Pigouvian Taxes, Subsidies, Tradable Permits, Price v/s Quantity tools</p> <p>3. Sustainable Development</p> <p>Renewable and Non-renewable Resources - Optimal Use under different market Structures.</p> <p>4. Issues in Valuation</p> <p>Costs and Benefits. Use Values, Non-use Values, Option Values, Discount Rates</p>	<p>12</p> <p>12</p> <p>12</p> <p>12</p>
<u>Pedagogy:</u>	22. Chalk and talk aided by power-point lectures 23. PC lab exercises 24. Assignments and presentations 25. MOOC (or similar) Component	
<u>References/Readings</u>	<ul style="list-style-type: none">• Tom Tietenberg (2007), Environmental Economics and Policy, by, Pearson• Hanley, Nick, Shogren, Jason, White, Ben (2007) Environmental Economics In Theory & Practice , Pearson• Stagl, Sigrid, Common, Michael (2005) Ecological Economics An Introduction, Cambridge University Press	
<u>Learning Outcomes</u>	Successful students will learn to integrate environmental concerns with economic development	

Programme: M. A. Economics

Course Code: ECO 126

Title of the Course: Introduction to Econometrics

Number of Credits: 4

Total Contact Hours:48

Effective from AY: 2018-19

<u>Prerequisites for the course:</u>	Students must have basic knowledge of Statistical and Mathematical methods	
<u>Objective:</u>	To provide students exposure to econometric theory, model building and data analysis	
<u>Content:</u>	<p>. 1. Two-Variable Regression Analysis: Introduction to Econometric Software: Statistical/ Econometric Software for data analysis. Sample and Population Regression Function. Linearity in variables and coefficients. Ordinary Least Squares (OLS) - Gaussian Classical model. Assumptions and Properties of OLS Estimates; The Co-efficient of determination - R^2, Testing of Hypothesis</p> <p>2. Multiple regression analysis: Problems of Estimation - The three - variable model Interpretation - Partial Regression Coefficients - Multiple co-efficient of determination R^2 (R bar square) Functional forms of regression models; Omitted variables, Specification tests, Ramsey RESET test, Wald, LM test</p> <p>3. Autocorrelation: OLS Estimation in the presence of Autocorrelation; Consequences - Detection - Remedies.</p> <p>4. Heteroscedasticity: OLS Estimation in the presence of Heteroscedasticity – Tests of Heteroscedasticity- Remedies.- Methods of Generalised Least Squares (GLS);</p> <p>5. Multi-collinearity: Estimation in the presence of perfect and imperfect multi-collinearity - practical consequences of multi-collinearity - detection - remedies.</p> <p>4. Regression on Dummy Independent Variables The nature of dummy variables - Regression using quantitative variable and qualitative variable-Application of Dummy Variables' approach</p>	<p>10</p> <p>10</p> <p>8</p> <p>4</p> <p>10</p> <p>6</p>
<u>Pedagogy:</u>	lectures/ case analysis/assignments/class room interaction/lab	

<p><u>References/Readings</u></p>	<p><u>References</u></p> <ul style="list-style-type: none"> • Asteriou Dimitrious,(2006), <u>Applied Econometrics</u>, Palgrave Macmillan, New York • Cameroon Samuel (2005), <u>Econometrics</u>, McGraw Hill, New York. • Davidson, J. <u>Learning Outcomes</u>	Upon completion of this course students will be able to analyze a nation's balance of payment, foreign exchange marks, international monetary standards and explain financial crises in emerging economies, their causes and solutions	

Programme: M. A. Economics

Course Code: ECO 226

Title of the Course: Advanced Econometrics

Number of Credits: 4

Total Contact Hours:48

Effective from AY: 2018-19

<u>Prerequisites for the course:</u>	Introduction to Econometrics-1	
<u>Objective:</u>	The objective of the course is to familiarize the students with advanced econometric analysis using time series and panel data.	Contact Hours
<u>Content:</u>	1. Auto Regressive and Distributed Lag Models Estimation of distributed lag models - Adaptive Expectations models - Stock adjustment models - ARDL Models- Method of instrumental variables	10
	2. Simultaneous Equation Models Nature of Simultaneous Equation Models. Problems of Bias, Identification and Simultaneity -The method of indirect Least Squares - Method of two-stage least squares	12
	3. Time Series Analysis Spurious Regression, Random Walk Model, Stationarity, Unit Root, Co-integration, ARIMA, Introduction Causality test. Introduction to VAR Models.	8
	4. Panel Data Analysis Cross Section and Time Series data analysis- Fixed Effects and Random Effects Models. Applications of Panel Data	10
	5. Qualitative Dependent variable Regression LPM, Logit, Probit and Tobit models.	8
<u>Pedagogy:</u>	lectures/ case analysis/assignments/class room interaction/lab practical's	
<u>References/Readings</u>	References <ul style="list-style-type: none">• Baltagi (2005), <u>Econometric Applications of Panel Data</u>, John Wiley and Sons, England• Davidson, J. (2000) <u>Econometric Theory</u>, Blackwell, USA• Gourieroux, C(2000) <u>Econometrics of Qualitative Dependent Variables</u>, Cambridge University Press, Cambridge.• Greene, W. MBC008

Business Research Methods

2 Credits

<u>Prerequisites for the course:</u>	Nil	
<u>Objective:</u>	To introduce research methods used to arrive at business decisions	
<u>Content:</u>	<p>Introduction Research Problem, Framing of Research Question, Research Design, Qualitative Design, Descriptive Design, Experimental Design, Constructs, Variables, Statement of Hypotheses. Measurement and Scaling, Nominal, Ordinal, Interval, Ratio.</p> <p>Data Collection Questionnaire Design, Data Collection, Nature of Sampling, Steps in Sampling, Probability Sampling, Non probability Sampling, Determination of sample size</p> <p>Data Management and Basic Analysis Coding and Entering of Data, Managing Data, Methods of Analysis such as Descriptive Statistics, Frequencies, Cross Tabulation, T Tests, Analysis of Variance (ANOVA), Correlation</p> <p>Multivariate Analysis and Reporting</p>	<p>6 hours</p> <p>6 hours</p> <p>6 hours</p>

	Regression, Simple Regression, Multiple Regression, Factor analysis, Cluster analysis Interpretations of Results, Report Writing, Familiarity with the usage of a statistical package.	6hours
<u>Pedagogy:</u>	Lectures/ tutorials/laboratory work/ field work/ outreach activities/ project work/ vocational training/viva/ seminars/ term papers/assignments/ presentations/ self-study/ Case Studies etc. or a combination of some of these. Sessions shall be interactive in nature to enable peer group learning.	
<u>Learning Outcomes</u>	An ability to conduct research and write a research report	
<u>References/Reading s</u>	<ol style="list-style-type: none"> 1. Cooper D R and Schindler, "Business Research Methods", Tata McGraw-Hill, New Delhi, Latest Edition 2. Zikmund W G, "Business Research Methods"; Thomson Learning, Latest Edition. 	

MBC009

Management Accounting

2 Credits

<u>Prerequisites for the course:</u>	Nil	
<u>Objective:</u>	To introduce Cost Concepts that are used in an organisation.	
<u>Content:</u>	<p>Cost concepts Cost concepts, Elements of cost, Cost control, Cost information, Traditional cost management systems, Preparation of cost sheet.</p> <p>Decisions using the costing data - Cost Volume Profit Analysis (CVP Analysis), Marginal Costing Cost Volume Profit Analysis for making managerial decision. Break Even Point, Margin of Safety, Marginal Costing and Absorption Costing, Key Factors</p> <p>Variance Analysis Direct, Indirect Cost Variance (Material, Labour, Fixed & Variable Overhead Variance, Calendar Variance, Capacity Variance), Revenue & Profit Variance.</p> <p>Activity based costing (ABC) Design a traditional Activity based Cost System, Use information from ABC to improve operations, assign marketing, distribution, and selling expenses to customers, analyse and manage customer profitability.</p>	<p>4 hours</p> <p>8 hours</p> <p>6 hours</p> <p>6 hours</p>
<u>Pedagogy:</u>	Lectures/ tutorials/laboratory work/ field work/ outreach activities/ project work/ vocational training/viva/	

	seminars/ term papers/assignments/ presentations/ self-study/ Case Studies etc. or a combination of some of these. Sessions shall be interactive in nature to enable peer group learning.	
<u>Learning Outcomes</u>	An ability to take managerial decisions considering the impact of costs on the operations of an organisation.	
<u>References/Reading s</u>	<ol style="list-style-type: none"> 1. Anthony Atkinson, Robert Kaplan, Ella Mae Matsumura, S. Mark Young, G. Arun Kumar, Management Accounting, Pearson Education Publication, Latest Edition. 2. MBA (Financial Services)

Programme	: MBA (Financial Services)
Course Code	: FSC113
Course Title	: Corporate Finance
Number of Credits	: 4
Effective from AY	: 2020-21

Need of the Course	: This course focuses on corporate finance from the managerial point of view. Students will engage in vivid discussions about the key considerations behind fundamental choices CFOs face. Students will also gain insight on the company’s financial decision-making processes and learn how to make educated financial decisions. Corporate financial management involves the process through which the corporation creates value through its capital allocation decisions. Using a blend of quantitative tools and analyses, managers forecast financial needs and opportunities, assess the value of these opportunities, and implement a strategy for achieving the company’s financial goals. Major corporate finance decisions include capital budgeting decisions, valuation analysis, financing decisions, risk management, and dividend policy. Students will learn how to analyze how a company functions by looking into the yearly reports disclosed by companies. They will gain knowledge on how to apply the most important ratios (e.g. leverage/ return on investment) and will be able to analyze the company results.	
Description of the Course	: The Core function of any concern is financing, this course presents the foundations of finance with an emphasis on applications vital for corporate managers with more emphasis on financial decisions made by corporate managers both within the firm and in their interactions with investors. Topics include criteria for making investment decisions, valuation of financial assets and liabilities, relationships between risk and return, capital structure choice, pay-out policy, Management and estimation of capital and emphasizing on sources and raising funds from domestic as well as international markets.	
Objectives of the Course	:The main objectives of the course are: 1. To provide an in-depth understanding of the core finance functions and decisions in the area of corporate financial management. 2. To provide a practical and problem insight for effective financial decision-making	
Course Content

Course Outcome	<p>Upon completion of this course, students will be able to:</p> <p>CO 1: Articulate themselves more effectively in different types and modes of communication.</p> <p>CO 2: Illustrate the parameters of interpersonal communication and body language.</p> <p>CO 3: Develop their managerial skills in motivating group members.</p> <p>CO 4: Develop their managerial skills and command a better control over interactions and communication as a team leader.</p>	

Programme	: MBA (Financial Services)
Course Code	: FSC211
Course Title	: Quantitative Techniques and Research Methodology
Number of Credits	: 4
Effective from AY	: 2020-21

Need of the Course	:To familiarize students with the meaning and importance of carrying out successful research, its wide applications in various fields of study and the importance of making calculated decisions in the present globalised business world.	
Description of the Course	:This course is designed to motivate the students to identify research gap, identification and collection of relevant data (uni-variate, bi-variate, and multi-variate data sets) and finally analysis of data using various statistical techniques starting from reliability/normality testing, organising, describing, relationship and prediction, and testing the significance. Students are also familiarized with intellectual honesty and ethics while preparing a research report.	
Objectives of the Course	1. To understand the significance of research. 2. To develop research questions, objective and related hypothesis. 3. To learn how to process the data and interpret results.	
Course Content		
Unit 1	: Introduction to Research	8 Hours
Steps in the process of Research – Types of Research – Identification of Research Gap –Develop Research Questions, related Objectives and Hypothesis – Importance of Data (primary/secondary) identification, collection and analysis. [<i>Self-study of reading relevant research papers</i>].		
Unit 2	: Data Analysis-I	16 Hours
Uni / Bi / Multi Variate Data – Organising sample data – Describe the nature of sampling distribution – Analysing relationships and prediction (Predictive Analytics) – Application of probability and probability distributions (Binomial / Poisson / Normal). [<i>self-study of reading relevant research papers</i>] [<i>Includes practical problems</i>]. [<i>Using Ms-Excel</i>]		
Unit 3	:Data Analysis-II	18 Hours
Importance of Theory of Estimation and Testing of Hypothesis (Large and Small Sample Testing, Non-Parametric Testing). [<i>self-study of reading relevant research papers</i>] [<i>includes practical problems</i>] Multi-variate data analysis using Exploratory Factor Analysis (EFA), Confirmatory Factor Analysis (CFA) and Structural Equation Modelling (SEM). [<i>Self-study of reading relevant research papers</i>]. [<i>Using Ms-Excel</i>]		
Unit 4	:Report Writing	6 Hours
What constitutes a research report – Types of reports – Intellectual honesty and ethics (Plagiarism, Cheating, Fabrication and Falsification, Multiple Submission, Misuse of Academic Materials, Complicity in Academic Dishonesty).[<i>Self-study of reading relevant research papers</i>].		

Pedagogy	<p>The following methods and forms of study are used in the course</p> <ul style="list-style-type: none">• Lectures, Case Studies and Practicals.• Self-study on carrying out literature review and preparing content analysis.• Self-study of solving home assignments using MS Excel and other statistical software, working with psychometric and econometric data and also doing research based on the web.
Reference/Readings	<ol style="list-style-type: none">1. Chawla, Deepak and Sondhi, Neena. Research Methodology: Concepts and Cases. 2/e, 2016, Vikas Publishing House Private Ltd.2. Cooper, Donald R and Schindler, Pamela S, Business Research Methods, 9/e, 2006, Tata McGraw Hill.3. Krishnaswami, O. R, Ranganathan. M and Harikumar P. N. Research Methodology. 1/e, 2016. Himalaya Publishing house.4. Gupta, S.C. Fundamentals of Statistics. 17/e, 2019. Himalaya Publishing House.5. Aizel, Amir D and Sounderpandian, Jayavel. Complete Business Statistics, 6/e, 2019. Tata McGraw Hill.
Course Outcome	<p>Upon completion of the course the students will be able to:</p> <p>CO1: Successfully complete Content Analysis.</p> <p>CO2: Identify and collect relevant data and use appropriate tool for analysing the data.</p> <p>CO3: Ensuring intellectual honesty and ethics while preparing research report.</p>

MBA (Financial Services)

Programme	: MBA (Financial Services)
Course Code	: FSC212
Course Title	: Investment Management
Number of Credits	: 4
Effective from AY	: 2020-21

Need of the Course	The focus of Investment Management is to instill the knowledge of fundamental investment principals amongst student community. The focus of Security Analysis is on how others analyse your company’s securities on their own. Whereas, that of Portfolio Management is on how investors analyse your company’s securities in comparison with others’ on the security market. The course is to provide a good understanding of the field of investments and to learn about the theoretical frame work of Indian Capital Markets, to gain the skill in assessing and estimating the Investment Opportunities with the help of Risk and Return Analysis in Capital Markets. The understanding can be quite valuable because each of us must make various investment decisions during our lifetimes designed with a view to develop the skills required for portfolio management so as to be able to judge the competitive position of firms in capital market and review the related business decisions.	
Description of the Course	This course is intended to provide a general overview of capital markets, financial instruments, and investment process. The course emphasizes the role of modern financial theory in portfolio management. Therefore the students will learn a wide range of topics such as, financial markets, trading, security valuation, diversification and asset allocation, modern asset pricing models, performance measurement, active portfolio management, financial derivatives, and fixed income securities	
Objectives of the Course	1. To enable students, develop skills in analyzing various types of securities. 2. To familiarize the students with the various approaches of portfolio management and portfolio selection.	
Course Content		
Unit 1	: Introduction to Investment Management	12 Hours
Investment Management - Nature and Scope - Investment Avenues - Types of Financial Assets and Real Assets - Security, Return and Risk - Systematic and Unsystematic Risk - Sources of Risk - Measurement of Risk and Return - Sources of Investment Information - Fixed Income Securities – Bonds, Preference Shares – Sources of Risk - Valuation, Duration of Bonds - Theory of Interest Rates - Yield Curve - Bond Innovations and their Valuation. <i>(Including Practical Problems/Case Studies)</i>		
Unit 2	: Securities Analysis	12 Hours
Analysis of Variable Income Securities - Fundamental Analysis - Company Analysis –		

Economic Analysis - Technical Analysis – Dow’s Theory - Charts – Efficient Market Hypothesis and its Implications - Tax Aspects of Investment - Securities Trading Procedure - A Critical Survey of Software Packages for Security Analysis <i>(Including Practical Problems/Case Studies)</i>		
Unit 3	: Portfolio Management	12 Hours
Meaning of Portfolio Management - Portfolio Analysis - Objectives - Process - Selection of Securities - Portfolio Theory - Markowitz Model- Sharpe’s Single Index Model - Efficient Frontier with Lending and Borrowing - Optimal Portfolio - Capital Asset Pricing Model - Arbitrage Pricing Theory - Two Factor and Multi Factor Models. <i>(Including Practical Problems/Case Studies)</i>		
Unit 4	: Portfolio Management Strategies	12 Hours
Portfolio Strategies - Bond Portfolio Management Strategies - Equity Portfolio Management Strategies - Strategies using Derivatives – Hedging - Portfolio Revision - Rebalancing Plans - Portfolio Evaluation - Sharpe’s Index - Treynor’s Measure and Jensen’s Measure. <i>(Including Practical Problems/Case Studies)</i>		
Pedagogy	:Lectures/ Class room Discussions/Assignments/Seminar/ Presentations	
Reference/Readings	<ol style="list-style-type: none"> 1. Donald E. Fischer and Ronald J. Jordan: Security Analysis and Portfolio Management, Pearson. 2016 2. Stanely S.C. Haim Levy and Marshall Sarnat: Portfolio and Investment Selection Theory and practice, prentice hall International New Jersy. 2015 	
Course Outcome	<p>After completion of this course the students will</p> <p>CO1: Gain comprehensive and in depth knowledge about investment, process and avenues</p> <p>CO2: Enable students to analyse securities and management of portfolio.</p>	

MBA (Financial Services)

Programme	: MBA (Financial Services)
Course Code	: FSC213
Course Title	: Financial Derivatives
Number of Credits	: 4
Effective from AY	: 2020-21

Need of the Course	The introduction to Derivatives course is perfect for beginners or anyone who would like to build up their understanding about the capital markets. It also prepares an individual for a career in the fascinating world of trading financial assets as well as trains them how to make money trading derivatives. This course will constantly help learners with strategies for equity and derivatives investment and provide knowledge for trading, hedging and arbitrage opportunities. This course is a perfect choice to understand the complexities of the world of derivatives. A sound understanding of Derivatives aids to hedge risk in the underlying, create option ability, provide leverage, speculate as well as switch asset allocation which are very essential in the globalised scenario.	
Description of the Course	The course is designed to provide basic knowledge about risk management and the new instruments of capital market i.e., derivatives used for managing risk. It mainly comprises of a description of the concepts of risk management, Forwards/Futures, Options and Swaps along with the trading mechanics and pricing of these instruments. The Course will help to understand the complex world of derivatives markets.	
Objectives of the Course	<ol style="list-style-type: none">1. To describe and explain the fundamental features of a range of key financial derivatives instruments.2. To demonstrate an understanding of the risk management approaches and techniques in the field of derivatives markets.3. To provide the ability to solve problems requiring pricing derivative instruments and hedge market risk based on numerical data and current market trends.4. To teach the skills required to understand the risk management needs of clients and to communicate the solutions for the complexities in financial derivatives.	
Course Content		
Unit 1	: Introduction to Financial Derivatives	10 Hours
Financial Derivatives – Introduction – Need and Scope - economic benefits of derivatives - Types - Features - Functions- Factors contributing to the growth of derivatives - Exchange traded versus OTC derivatives -traders in derivatives markets - Financial Derivatives Market in India - Major Recommendations of Dr. L.C. Gupta Committee – Regulatory system of Derivative markets in India – trading mechanism of Derivatives on BSE and NSE. Brief overview of currency, interest rate and commodity derivatives.		

Unit 2	: Futures and Forwards Financial Derivatives	12 Hours
Futures - Evolution of Futures Market in India – Functions – Traders – Trading Mechanism – Specifications of Contracts – Clearing House – Operations of Margins – Settlement Procedures and Types – Pricing of Futures - Cost of Carry and Reverse Cost of Carry – Futures and Forwards – Index Futures – Currency Futures – Interest Rate Futures – Hedging using Futures - Arbitrage and Speculation Opportunities. <i>(includes practical problems)</i>		
Unit 3	: Options Derivatives	14 Hours
Types – Pay-offs – Moneyness of Options – Trading mechanism – Factors impact the Option Price – Option Pricing Models – Put –Call Parity Model – Binomial Option Pricing Model – Black and Scholes Model – Sensitivities of Option Price - Option trading strategies. <i>(includes practical problems)</i>		
Unit 4	: Swaps and Interest Rate Derivatives	12 Hours
Interest rate futures (IRF's) and Forward Rate Agreements (FRA's) – Contract Specifications – Pricing– Hedging using IRF's and (FRS's) Contracts – Arbitrage and Speculative Opportunities - Financial Swaps - features and uses of swaps - Mechanics of interest rate swaps – valuation of interest rate swaps – currency swaps – valuation of currency swaps. <i>(includes practical problems)</i>		
Pedagogy	ICT enabled Classroom teaching/ Case study/ Practical / live assignment/ Interactive class room discussions	
Reference/Readings	<ol style="list-style-type: none"> 1. N.D.Vohra and B.R.Bagri, Futures and Options, Tata McGraw Hill, New Delhi. 2. MBA (Financial Services)

Programme	: MBA (Financial Services)
Course Code	: FSC214
Course Title	: Financial Reporting and Analysis
Number of Credits	: 4
Effective from AY	: 2020-21

Need of the Course	: Any manager (supervisory level officer) in any organization should be capable of taking various corporate decisions and guide reporting officers. To implement corporate decisions, requirement of understanding financial information and analysing financial statements is a basic necessity. Financial analysis and reporting is designed to enhance the student’s knowledge in financial management and enable them in making career in corporate organization.	
Description of the Course	: The basic course outline is; it covers units on Financial Reporting, Preparation of Financial Statements and its analysis. It adds the recent developments in the area of financial reporting and analysis.	
Objectives of the Course	: The objectives of this Course are: 1. To examine the information contained in corporate annual and quarterly reports. 2. To assess the performance of a company from viewpoint of different stakeholders and 3. To understand the recent developments in the area of financial reporting and analysis.	
Course Content		
Unit 1	:Financial Reporting	12 Hours
Purpose and Scope of Financial Reporting, Users of Financial Reports, Underlying Assumptions, Content of annual reports, Quality of financial reporting, Reporting regulation in India, Reporting regulations for Partnership firms, Reporting regulations of Companies. Role and Relevance of Accounting Standards.		
Unit 2	:Preparation of Financial Statements	12 Hours
Financial characteristics of different types of businesses viz., manufacturing organisations, trading organisations, banking companies, insurance companies, service organisations- Income Statement for Merchandising firms, Income Statement for Service firms, and Balance Sheet, Statement of Changes in Equity, Cash Flow Statement and Fund Flow Statement.		
Unit 3	:Analysis of Financial Statements	12 Hours
Comparative Analysis and Common-Size Statement Analysis, Trend Analysis, Ratio Analysis		
Unit 4	:Developments in Financial reporting and Analysis	12 Hours
Spreadsheet modelling and financial analysis, Recent scandals in financial reporting, Contemporary issues in Financial reporting. Role and Relevance of Statutory Audit, Inspections by regulators, Reporting of Financial Instruments, Value Added Statements, Corporate Social Responsibility Reporting.		

Pedagogy	: The pedagogy for this course constitutes a mix of Lectures, Cases/Mini-cases, and Discussions on annual reports.
Reference/Readings	<ol style="list-style-type: none">1. Meigs&Meigs, Accounting the Basis for Business Decisions, Tata McGraw Hill, New Delhi. 20172. Chakraborty & Hrishikesh – Management Accountancy, Oxford University Press. 2015
Course Outcome	: Upon the completion of this course the students will be able to CO 1: Understand the contents of financial reports. CO 2: Analyze the financial statements. CO 3: Learn the uses of financial accounting data. CO 4: Discuss the recent developments in Financial Reporting and analysis.

MBA (Financial Services)

Programme	: MBA (Financial Services)
Course Code	: FSC215
Course Title	: Marketing of Financial Service Products
Number of Credits	: 4
Effective from AY	: 2020-21

Need of the Course	Financial services have global customers and understanding marketing of financial products plays a vital role in this dynamic environment. Adopting suitable marketing strategies in different markets is the key to a successful business.	
Description of the Course	Discuss marketing basics and its application to financial services markets. Throw light on the tools and techniques used for marketing research which facilitates managerial decision-making.	
Objectives of the Course	To familiarize the students with the concepts of marketing and its scope. Understanding the nature of services in developing the marketing mix. Comprehending different marketing strategies adopted in the banking industry Exposure to tools and techniques used for marketing of mutual funds and insurance products and other financial products in the corporate arena.	
Course Content		
Unit 1	: Basics of Marketing	12 Hours
Marketing Environment – Market Analysis – Market Segmentation, Targeting and Positioning. Marketing Strategies: Product strategies – Pricing strategies – Distribution strategies – Promotion strategies. Product life Cycle, New product Development. B2B Marketing – Marketing Planning and Control.		
Unit 2	: Service Marketing	18 Hours
Difference between goods and services – scope and nature of services – services marketing mix – Product Elements in services – Distribution in Services – Pricing and Revenue Management of services – Promotion and Communication in services – Designing and Managing Service Processes – Managing People for service Advantage - Constructing the Physical Service Environment. Importance of Customer Relationship Management - Service Quality and Productivity — Customer Loyalty		
Unit 3	: Marketing of Banking Services	10 Hours
Marketing strategies of Banking Services – Banking products and services; Distribution, Pricing and Promotion Strategy for Banking Services - managing People, Process and Physical Environment in banks. Attracting and Retaining bank customers. Marketing strategy of credit cards, debit cards, saving accounts and different types of loans. Case Studies on strategies by banks.		
Unit 4	: Marketing of Mutual Funds and Insurance Products and Securities	8 Hours
Mutual Funds and Insurance Markets in India and the Marketing strategies involved. Marketing of insurance products- Life and Non Life Products. Marketing of Pension Funds. Marketing of Securities – Shares, Bonds, Debentures, Gold ETF’s, and Commodities etc. ETFs used for disinvestments, Case Studies on promotion tools used to market financial securities.		

Pedagogy	: Case based analysis, assignments, field survey, project work
Reference/Readings	<ol style="list-style-type: none">1. Mary Ann Pezzullo, Marketing Financial Services (1978, Hardcover)2. Varshney & Gupta "Marketing Management" Sultan Publications3. Ravishankar, Services Marketing-The Indian Experiences, South Asia Publications, New Delhi, 1999.
Course Outcome	<p>Upon the completion of this course the students shall be able to</p> <p>CO1: Understand the concept of marketing</p> <p>CO2: Understand the scope and nature services marketing.</p> <p>CO3: Demonstrate an ability to create a services marketing plan or critically evaluate existing marketing strategies and tactics in the banking sector.</p> <p>CO4: Demonstrate an ability to create a services marketing plan or critically evaluate existing marketing strategies and tactics in Mutual Funds and Insurance Products and Securities.</p>

Programme	: MBA (Financial Services)
Course Code	: FSC311
Course Title	: IT for Financial Services
Number of Credits	: 4
Effective from AY	: 2020-21

Need of the Course	: Integration of Information technology into Financial Services has gained immense significance during recent times. The companies offering financial services need to improve the service quality and delivery to the customers by integrating an element of IT into it. This course is designed to equip the learners with the use of Information technology in the financial services domain and introduce them to the emerging area of Fintech.	
Description of the Course	: The course mainly focusses on Fintech in Financial Services industry and digitalization in the Indian banking sector. This course covers the emerging concept of cryptocurrency, its working mechanism and regulatory framework. Further, it discusses about the Cyber security, Securing financial transactions on the web and the IT Act 2000 and its amendments.	
Objectives of the Course	1. To expose the learners to the emerging area of fintech in Financial Services industry. 2. To equip the learners with the digitalization in the Indian Banking Sector. 3. To enable the learners about the concept of Blockchain technology and Cryptocurrency. 4. To equip the learners with the Laws governing Cyber security.	
Course Content		
Unit 1	: Fintech in Financial Services Industry	15 Hours
FinTech - The Rise of FinTech - Reshaping the Financial Services Industry. FinTech in the Payments Industry - Multichannel Digital Wallets - Digital Wallets - Applications supporting Wallets. FinTech in the Lending Industry - Formal Lending - Informal Lending - FinTech Disrupting the Lending Business - P2P Lending - POS Lending - Online Lending (B2B/B2C) - Payday Lending - Microfinance – Crowdfunding. FinTech in a Wealth Management Industry - Financial Advice - Automated Investing - Socially Responsible Investing - Equity Research FinTech. FinTech in the Insurance Industry - Ushering in the New Age of Collaborative Insurance through - P2P Insurance - On-Demand Insurance: Insuring only When One Wants It.		
Unit 2	: Information Technology in Banking	9 Hours
IT in Banking: Impact of IT on Indian Banking sector, Digital Transformation of Indian Banks, Recent IT trends in the Banking sector – Card based payments, Use of MICR based cheque processing, Electronic		

clearing services, use of RTGS/NEFT, E-banking (Mobile banking, Internet banking), Neobanks, Digital payments, Smart bank strategies - Electronic Fund Management –Automated Teller Machines, Internet Banking, UPI payment, Computerisation of Clearing of Cheques, Cheque Truncation System, SWIFT and Bank Identification Code, Recent development in Payment and settlement system in India, Cyber-crimes and Fraud management in Banking.		
Unit 3	: Introduction to Cryptocurrency and Blockchain Technology	12 Hours
What is cryptocurrency, types, introduction to blockchain technology, working mechanism of cryptocurrency, investment in cryptocurrency, usage of cryptocurrency for purchases and payments, cryptocurrency in India, Regulation of Cryptocurrency.		
Unit 4	: Cyber Security and IT Act 2000	12 Hours
Introduction to cyberspace, Cybercrime, need for cyber security, securing web-browser, secured password – Cyber security initiatives in India – security of financial transactions – emerging cyber security threats – Cyber law basics, IT Act 2000 and its amendments.		
Pedagogy	: Interactive Lectures/Discussions/ presentations/case study/ individual or group projects/ assignments/Class activities or a combination of some of these. The sessions shall be interactive to enable peer group learning.	
Reference/Readings	<ol style="list-style-type: none"> 1. Sharma Mukund, Banking and Financial Services, Himalaya Publications, Latest edition 2. Agarwal O. P., Banking and Insurance, Himalaya Publications, Latest edition 3. Course Outcome	<p>Upon the completion of this course the learners shall be able to:</p> <p>CO1. Understand the fintech disruptions in the Financial Services Industry.</p> <p>CO2. Examine the digital transformation in Indian Banking Industry.</p> <p>CO3. Explore the concept of Blockchain technology and cryptocurrency.</p> <p>CO4. Discuss the cyber security law basics and provisions of IT Act 2000.</p>	

Programme	: MBA (Financial Services)
Course Code	: FSC312
Course Title	: Business Analytics in Financial Services
Number of Credits	: 4
Effective from AY	: 2020-21

Need of the Course	: Modern business organizations across industry segments are increasingly relying on data-driven decisions. This is true for varied sub-segments of financial services industry. Global enterprises are accelerating their investments in business analytics and looking for data-minded professionals. In the light of this trend, it is important to acquire skills in business analytics.	
Description of the Course	: The course introduces learners to the concept of business analytics, its major categories and role in strategic business decision making. Subsequently the three major categories of business analytics are covered in significant detail. This includes descriptive, predictive and prescriptive analytical techniques.	
Objectives of the Course	<ol style="list-style-type: none">1. To familiarize the learners about the domain of business analytics.2. To equip learners with tools and techniques in descriptive analytics.3. To enable learners, acquire skills in performing predictive analytics using varied tools and techniques.4. To equip learners with tools and techniques of prescriptive analytics for determining optimal solutions to given business resources problem.	
Course Content		
Unit 1	: Introduction to Business Analytics	6 Hours
Meaning and significance of business analytics - Applications of business analytics – Types of business analytics - Descriptive analytics - Predictive analytics – Prescriptive analytics - Building analytics capability – Business analytics process – Role of business analytics in strategy – Deployment of business analytics model – Requirements for effective implementation of business analytics models – Big data analytics – Challenges in data driven decision making – Application software in business analytics.		
Unit 2	: Descriptive Analytics	12 Hours
Introduction to descriptive analytics – Structured and unstructured data – Descriptive statistics - Data visualization: Univariate visualization, Bivariate visualization, Multivariate visualization - Graphical exploratory data analysis (Example: Box-plots, heatmap, Histograms, Scatterplots) – Building business intelligence dashboard – Mapping – Interactive data charts – Association rules – Sequence rules – Segmentation rules: Cluster analysis (K-means and Hierarchical clustering) – Social media analytics.		
Unit 3	: Predictive Analytics	18 Hours
Regression models: Introduction to classical linear regression model - Assumptions of CLRM – Specification and estimation of bivariate and multiple regression models – Statistical inference and hypothesis testing – Properties of least square estimators (BLUE) – Model diagnostics – Model misspecification errors – Violation of regression assumptions.		

Decision Tree: Introduction – Chi-Square Automatic Interaction Detection (CHAID) tree development – Classification and Regression Tree (CART) – Random forest – Machine learning applications in decision tree analysis. Other techniques: Discriminant analysis - Principal component analysis – Artificial Neural Network.		
Unit 4	: Prescriptive Analytics	12 Hours
Introduction to prescriptive analysis – Linear programming (LP) model building – Sensitivity analysis in LP – Graphical solution to LP – Dual LP – Primal-Dual relationships – Linear Integer programming – Portfolio optimization techniques.		
Pedagogy	: lectures/ case analysis/assignments/class room interaction/lab	
Reference/Readings	<ol style="list-style-type: none"> 1. Laursen, G. and Thorlund, J. (2010), Business Analytics for Managers, Wiley. 2. Kumar, U. (2017), Business Analytics: The Science of data-Driven Decision Making, Wiley. 3. Rao, P. (2013), Business Analytics: An Application Focus, PHI Learning, Delhi. 4. Baesens, B. Course Outcome	: Upon completion of the course learners will be able to: CO1. Explain the concepts in business analytics, its process and strategic significance. CO2. Perform descriptive analytics on data with techniques of descriptive statistics and data visualization. CO3. Perform cluster analysis and social media analytics using relevant application software. CO4. Apply techniques of regression models, decision trees, Discriminant analysis, and Artificial Neural Network in developing predictive models. CO5. Determine optimal solutions for given business resource problem with application of linear programming. CO6. Construct optimal investment portfolios using appropriate optimization techniques.	

Programme	: MBA (Financial Services)
Course Code	: FSO314
Course Title	: Equity Valuation
Number of Credits	: 4
Effective from AY	: 2020-21

Need of the Course	: Equity valuation is one of the most important analytical processes in finance that has widespread applications in investments, corporate valuations, mergers and acquisition transactions, legal and tax matters and other similar areas. A course in equity valuation provides knowledge of necessary valuation techniques and models that can be used to determine true worth of a firm’s equity.	
Description of the Course	: The course introduces the learners to the fundamentals of valuation theory and process. It has extensive coverage of varied equity valuation models applied in practice including dividend discount models, free cash flow models, price and enterprise multiples-based models and asset-based models with specific reference to determination of intrinsic worth of shares using company fundamentals.	
Objectives of the Course	1. To familiarize learners about equity valuation concepts, applications, process and model categories. 2. To provide applied knowledge of dividend discount models of valuation. 3. To equip learners with the knowledge of free cash flow models of equity valuation. 4. To develop skills in applying market based and asset-based models of equity valuation.	
Course Content		
Unit 1	: Introduction to Equity Valuation	8 Hours
Concept and types of value – Applications of equity valuation – Valuation process – Reporting valuation results – Valuation data and data quality considerations – Selecting equity candidates for analysis and valuation – Major categories of equity valuation models.		
Unit 2	: Discounted Dividend Models of Valuation	14 Hours
Underlying principle of dividend discount models – Single and multiple holding period valuations – Gordon growth model – Multistage dividend discount models: Two-stage, H-Model and Three-stage model – Estimation of growth rates –Estimating expected rate of return for discounting – Using spreadsheet applications for building DDM valuation models.		
Unit 3	: Free Cash Flow Models of Valuation	14 Hours
Concept of free cash flow – Measuring cash flows – Categories of free cash flows: FCFF and FCFE - Present value of free cash flows – Constant growth FCFF and FCFE models – Computing and Forecasting FCFF and FCFE – Single stage and Multi stage free cash flow models.		

Unit 4	: Market Based and Asset Based Valuation Approaches	12 Hours
Market based approach - Price multiples: P/E, P/B. Price to Sales, Price to Cash Flow models – Enterprise value multiples – Asset based approach: Intrinsic value – Case studies in valuation approaches adopted by investment bankers.		
Pedagogy	: lectures/ case analysis/assignments/class room interaction/lab

Course Outcome	: Upon completion of the course learners will be able to: CO1. Explain the concepts in equity valuation, its application and process. CO2. Determine value of a firm's equity using dividend discount models. CO3. Estimate equity value of listed companies using free cash flow models. CO4. Value equity shares by applying market based and asset-based models. CO5. Develop spreadsheets for equity valuation.	

Programme	: MBA (Financial Services)
Course Code	: FSO315
Course Title	: Start-ups in Financial Services
Number of Credits	: 4
Effective from AY	: 2021-22

Need of the Course	: The purpose of this course is to enable the students to understand the intricacies of becoming an entrepreneur in financial services. It gives an overview of the financial and registration requirements for start-ups in the field of financial services.	
Description of the Course	: This course begins with explanation on development and growth of entrepreneurship in today’s economy. The next section works towards demystify key financing concepts to give entrepreneurs and aspiring entrepreneurs a guide to secure funding. Further on, it highlights the procedural requirements in the field of financial services. Finally concluding with the upcoming field of FINTECH.	
Objectives of the Course	1. To understand the concept of entrepreneurship and its prospects. 2. To demystify key financing concepts to give entrepreneurs and aspiring entrepreneurs a guide to secure funding. 3. To get an exposure to the registrations and regulations for entrepreneurship in financial services. 4. To recognize the upcoming areas in the field of start-ups like FINTECH.	
Course Content		
Unit 1	: Introduction to Start-up Ecosystem	12 Hours
Origin, growth, and development of entrepreneurship – The entrepreneurial and intra-preneurial mind – Entrepreneur, entrepreneurship, and enterprise –Entrepreneurial development training– Process of Development and Growth (Imitation, Innovation, and Invention) – Creativity – Agents of Growth (Entrepreneur, Intrapreneur, Government) – Birth of an Enterprise (Growth agents, process, outcome) Business Plan: Meaning and importance – Business Plan for an existing venture Vs new venture – Business Valuation Approaches – Components of Business Plan – Do’s and Don’ts of Business Plan. Process of preparing successful business plan		
Unit 2	: Financing a Plan	12 Hours
Financing a Plan: Sources of Development Finance – Role of Financial Institutions and Consultancy Firms – Evolution of Venture Capital – Growth Agents Vs Venture Capital Vs Economic Development – Economic Impact of Venture Capital – Global Venture Capital Scenario – Role of Venture Capital Associations Managing a venture. Crowdfunding, Angel investors and government assistance schemes as source of raising finance. Managing at different Life Cycle Stages – Strategies available (concentration, stability, growth, retrenchment, and consolidation) – Preparing for the New Venture Launch – Early Management		

Decisions – Growth of the New Venture – New Venture Expansion – Going Public – Ending the Venture.		
Unit 3	: Registration Procedures and Requirements	12 Hours
<p>Who is a Registered Investment Advisor, Regulations of SEBI (Investment Advisers), Regulations, 2013, Procedure for registration, Qualification and certification requirement, General Obligations and Responsibilities, Capital Adequacy Requirements, Disclosures to clients, Maintenance of Records, Procedure for action in Case of default?</p> <p>Portfolio Managers: Registration procedure, Capital adequacy requirement, Conditions of registration, Eligibility criteria and Fees, Obligation and Responsibilities, Services offered Brokers and Sub-Brokers: Registration of the Stock Brokers, Eligibility criteria, Registration of the Sub-Brokers, Deposits and Net worth requirements, fees and Charges, Documents to be submitted, different services offered by the Brokers.</p>		
Unit 4	: Start-ups in Fintech	12 Hours
<p>Meaning of Fin tech Start-ups, Evolution of Fintech, Payments, Cryptocurrencies and Block chains, Fintech offerings in India-PPIs, UPIs, Payment Bank, P2P Lending platforms, Digital Lenders. (Case studies on start-ups in Financial services industry)</p>		
Pedagogy	: ICT enabled Classroom teaching/ Case study/ Practical / live assignment/ Interactive class room discussions, Live terminal.	
Reference/Readings	<ol style="list-style-type: none"> 1. Timmons, Jeffry A; New Venture Creation: Entrepreneurship for the 21st Century, Irwin McGraw-Hill. 2015 2. Robert D. Hisrich and Micheal P. Course Outcome	<p>: Upon completion of the course the students will be able to:</p> <p>CO1. Comprehend the importance and components of entrepreneurship.</p> <p>CO2. Explain the modalities of financing start-ups</p> <p>CO3. Adopt the registration and procedural requirements</p> <p>CO4. Get an exposure to the contemporary scenario of start-ups in Financial Services.</p>	

Programme : MBA (Financial Services)
Course Code : FSO316
Course Title : Tax Planning for Investments
Number of Credits : 4
Effective from AY : 2020-21

Need of the Course	: Tax planning is very essential for everyone as every citizen have to pay the tax to the Government in some form or the other. Savings are the form of investments and the investments are subject to various tax rates. This course makes the student aware of basic concepts under income tax, exemptions under income tax, heads of income, personal and retirement tax planning and various tax saving investment avenues. This course would enable students to build their careers as tax consultants.	
Description of the Course	: Tax Planning for investments course is designed with a view to equip the students with the knowledge of tax planning. This course enables the student in computation of gross total income, net taxable income and income tax liability. The students are exposed to various tax saving investments and tax planning strategies. The student while learning this course has to follow the current financial year as their assessment year.	
Objectives of the Course	<ol style="list-style-type: none">1. To understand the basic concepts of Income Tax and get exposure to the heads of income under Income tax act of 1961.2. To equip the learners with the tax planning under Capital gains and Income from other sources.3. To familiarize the learners with various tax saving instruments.4. To impart the knowledge of computation of tax liability, filing of returns and personal and retirement tax planning skills.	
Course Content		
Unit 1	: Basic Concepts under Income tax and Residential Status	14 Hours
Introduction – Basic concepts under Income tax act of 1961 - Residential Status – Scope of income and tax incidence for individuals - Incomes exempt from tax u/s 10. Heads of income – Income from Salaries, Income from House Property, Profits and Gains from Business and Profession, Income from Capital Gains, Income from Other Sources (Overview)		
Unit 2	: Capital Gains Tax Planning and Income from other sources	12 Hours
Income from Capital Gains – chargeability – computation of short term and long-term capital gain – allowable deductions, capital gains exempt from tax (Includes practical problems). Income from Other Sources, Basis of charge, dividend, interest on securities, allowable deductions.		
Unit 3	: Tax Saving Investments	10 Hours
Allowances available for the respective FY – Tax saving deductions, Tax saving u/s 80C, Best tax savings investments and its comparison with cases. Tax deducted at Source (TDS), Advance tax.		

Unit 4	: Tax Planning	12 Hours
Tax planning, purpose, importance and benefits, types of tax planning in India - concept of Tax evasion, Tax avoidance - Personal Tax planning, Computation of Gross total income, net taxable income and tax liability for individuals – Old and new tax regime for computation of tax liability of individuals – Tax planning for retirement – Filing of returns and Assessment.		
Pedagogy	: ICT enabled Interactive lectures, applications and case discussions/Assignments/Seminar presentations/Practical exercises.	
Reference/Readings	<ol style="list-style-type: none"> 1. Singhanian, V.K., Direct Taxes: Laws and Practices, Taxman Publications, New Delhi. Latest Edition. 2. Singhanian, V. Course Outcome	<p>Upon the completion of this course the learners shall be able to:</p> <p>CO1. Explain and recognize ethical issues in business and in the field of CSR.</p> <p>CO2. Identify the different issues in CSR and Sustainability for the development of the society.</p> <p>CO3. Develop managerial understanding of social responsibility of Business</p> <p>CO4. Examine the legal framework of International Business scenario.</p>	

Programme : MBA (Financial Services)
Course Code : FSO318
Course Title : Debt Management
Number of Credits : 4
Effective from AY : 2020-21

Need of the Course	Debt or Credit mechanism has undergone phenomenal changes in recent years. The officer dealing with debt or credit should possess a good knowledge and expertise in dealing with the debt undertaken by the businesses. The apt assessment of the various options of availing debt finances and the timely honoring of the debt is the key to avoid default. The current course focuses on inculcating the required expertise in the said domain.	
Description of the Course	This paper is intended to equip the candidate with knowledge, skills and attitudes required for the application of debt management principles in various lending financial institutions.	
Objectives of the Course	The course focuses to provide in depth understanding of 1. Different credit facilities, credit delivery mode along with the Regulatory framework. 2. Appraisal of Credit and the Various techniques of credit appraisal 3. Debt Management Strategies 4. Monitoring of Debt Repayment & NPA Management	
Course Content		
Unit 1	: Overview of Credit	12 Hours
Types of Credit Facilities: Various Types of Credit Facilities - Cash Credit, Overdrafts, Demand Loan, Bills Finance - Drawee Bill Scheme, Bills Discounting. Peer-to-Peer Lending as source of raising debt finance by corporate firms. Credit Delivery: Modes of Delivery, Sole Banking Arrangement, Multiple Banking Arrangement, Consortium Lending, Syndication. Credit Thrust, Credit Priorities, Credit Acquisitions, Statutory & Regulatory restrictions on Advances.		
Unit 2	: Credit Appraisal	14 Hours
Credit Appraisal: Validation of proposal, Dimensions of Credit Appraisals, six “C”, Structuring of Loan documents, Credit Risk, Credit Risk Rating, Credit Worthiness of Borrower, Purpose of Loan, Source of Repayment, Cash Flow, Collateral. Technical Appraisal, Commercial / Market Appraisal, Managerial Appraisal, Financial Appraisal, Economic Appraisal, Environmental Appraisal, Project Cost & Means of Finance, Cost of Production & Profitability, Sensitivity Analysis, Break-even Analysis.		
Unit 3	: Debt Management Strategies	8 Hours
Debt Management Strategies, Optimum level of Debt, Debt Management in MSME, Bankruptcy Code, Case studies on Debt Management.		

Unit 4	: Monitoring, Supervision & Follow up of Debt	14 Hours
<p>Credit Monitoring - Process of Monitoring, Different Monitoring Tools, Check-list for Monitoring, monitoring by using various statements, QIS Formats / guidelines, Supervision & Follow Up.</p> <p>Corporate Debt Restructuring (CDR) Mechanism, CDR Structure & Operations, New RBI Framework for Distressed Assets, Willful Defaulters, Penal Measures, Compromise, Legal Action, Civil litigation, Pre and Post - filing precautions, Type of Decrees, Modes of Execution of Decree, Lok Adalat, Debt Recovery Tribunal, SARFAESI, Write Off.</p>		
Pedagogy	Interactive Lectures/Discussions/ Presentations/case study/ individual or group projects/ assignments/Class activities or a combination of some of these.	
Reference/Readings	<ol style="list-style-type: none"> 1. Glen Bullivant, Credit Management, Gower Publishing Ltd. (2010) 2. John D. Finnerty & Douglas R. Singer, Soumitra Sharma, Growth and External Debt Management, Palgrave Macmillan 	
Course Outcome	<p>Upon the completion of this course the learners shall be able to:</p> <p>CO1. Explain the concept of credit facilities, types and modes of credit.</p> <p>CO2. Discuss in detail the credit appraisal process</p> <p>CO3. Explain the various debt management strategies.</p> <p>CO4. Monitor, supervise and follow up the debt repayment by the borrowers.</p>	

Programme : MBA (Financial Services)
Course Code : FSO319
Course Title : International Financial Markets
Number of Credits : 4
Effective from AY : 2020-21

Need of the Course	The global economy is massive and growing. The International Financial Market is the place where financial wealth is traded between individuals (and between countries). It can be seen as a wide set of rules and institutions where assets are traded between agents in surplus and agents in deficit and where institutions lay down the rules. The need of the course is to provide a good understanding of the International Financial Market. The knowledge gained in the course will make students better-informed financial market participants.	
Description of the Course	The course will give students a good understanding of various aspects of International Financial Market. The course outlines the topics: Overview of International Financial Markets, International Bond Markets, International Stock Markets, and International Financial Crisis.	
Objectives of the Course	<ol style="list-style-type: none">1. To enable learners to discuss various aspects of International Financial Markets.2. To enable learners to apply the concepts of International Bond Markets.3. To enable learners to apply the concepts of International Stock Markets.4. To enable learners to discuss the implications of International Financial Crisis.	
Course Content		
Unit 1	: Overview of International Financial Markets	10 Hours
Impact of Market Imperfections – Motives for International Investment – Motives for Firms to Obtain Funds from Foreign Markets – Instruments Used to Facilitate International Transactions: Currency Futures, Currency Options, Swaps – Markets Used to Facilitate International Transactions – Recent Developments Affecting International Financial Markets.		
Major International Organizations - Bank for International Settlements, The World Federation of Exchanges, International Finance Service Centre (IFSC) in Gujarat’s GIFT city. Off-shore financial centres. Tax havens, FATCA.		
Unit 2	: International Bond Markets	14 Hours
Development of International Bond Markets – Comparison of Global Bond Market Yields – Assessment of Bond Yield Differentials Across Countries – International Bond Valuation: Impact of Interest Rate Movements, Impact of Exchange Rate Movements, Hedging Exchange Rate Exposure – International Bond Diversification – Use of Swaps in International Bond Market – Currency Cocktail Bonds.		

Unit 3	: International Stock Markets	14 Hours
Use of Foreign Stock Market by Issuers - Use of Foreign Stock Market by Investors – Characteristics of Stock Markets – Around-the-Clock Global Security Trading – Benefits from International Diversification. Comparison of International Stock and Bond Portfolios – Estimating Return and Risk from International Diversification – Operationalizing International Diversification – Managing Exchange Rate Risk of securities portfolio.		
Unit 4	: International Financial Crisis	10 Hours
Introduction to Financial Crisis – Macroeconomic and Microeconomic Causes – Stages of the Crisis – Securitization and how it fuelled the Crisis – Credit Crisis in U.S. – Credit Crisis in Europe - Credit Crisis in Japan - Credit Crisis in China - Credit Crisis in India – Asian Crisis - Learnings from Crisis.		
Pedagogy	: Lectures/ classroom discussion/ discussion using relevant research papers/ presentation/case study/ group project/ assignment or a combination of some of these. The sessions shall be interactive to enable peer group learning.	
Reference/Readings	<ol style="list-style-type: none"> 1. Chevallier, J., Goutte, S., Guerreiro, D., Saglio, S., and Sanhaji, B. (2019). <i>International Financial Markets</i>. Routledge, Taylor and Francis Group. 2. Grabbe, J. O. (1996). <i>International Financial Markets</i>. Prentice Hall. 3. Grote, R., and Marauhn, T. Palgrave, Macmillan Publishers Limited. 	
Course Outcome	: Upon completion of this course, the students shall be able to: CO1. Discuss the significance of International Financial Market. CO2. Apply the concepts of International Bond Markets. CO3. Apply the concepts of International Stock Markets. CO4. Discuss the Implications of International Financial Crisis.	

Programme	: MBA (Financial Services)
Course Code	: FSO320
Course Title	: Financial Econometrics
Number of Credits	: 4
Effective from AY	: 2020-21

Need of the Course	Financial econometrics is one the most applied fields in the context of financial modelling. It enables learners understand the underlying relationships between financial variables and use these relationships in forecasting, predictions and policy making process. Financial econometrics has extensive applications in various segments of financial services industry particularly, financial markets, banking, insurance, corporate finance, and mutual funds.	
Description of the Course	The course provides extensive coverage of econometric models for cross-section, time series and panel data. For cross section data, models with dummy variables, logit, probit and Tobit models are covered in this course. Further it includes univariate and multivariate time series models for forecasting of series as well as volatility in given time series. Similarly, with respect to panel data econometrics, the course curriculum extends coverage from basic pooled, fixed effects and random effects model to advanced topics in panel unit root, cointegration and dynamic panels.	
Objectives of the Course	<ol style="list-style-type: none">1. To familiarize learners with advanced regression models for cross-section data.2. To equip learners with knowledge and skills in application of time series modelling for forecasting.3. To facilitate learners, develop models for examining short run and long run relationship between multiple time series.4. To equip learners with skills in developing advanced panel data models for micro and macro level analysis.	
Course Content		
Unit 1	: Introduction to Financial Econometrics and Advanced Regression Models	12 Hours
Financial econometrics: Meaning, nature, process and applications of financial econometrics – Regression models with dummy variables - Applications of Dummy Variables in Seasonal Analysis, and Structural breakpoint analysis – Linear probability model - Binary and Multinomial Logit models - Probit Model – Tobit model.		
Unit 2	: Time Series Econometrics - I	12 Hours
Stochastic process - Stationarity in time series: Concept, Significance, Tests of stationarity in time series, ACF and PACF functions, Unit root tests – Econometric modelling and forecasting using time series data – AR, MA, ARMA and ARIMA modelling – Diagnostics and forecasting using ARIMA – Evaluating		

forecast accuracy – Forecasting using Markov regime switching models.		
Unit 3	: Time Series Econometrics - II	14 Hours
Modelling short run and long run relationships between time series – Vector Autoregression models (VAR) – Granger causality – Cointegration and error correction models – ARDL model - Volatility models: ARCH/GARCH models – DCC GARCH and GARCH-BEKK models – Kalman filter.		
Unit 4	: Panel Data Econometrics	10 Hours
Panel data structure – Pooled OLS Regression – Fixed Effects model – Random effects model – Properties of Various Estimators - Fixed Effects versus Random effects model – Wald test - Breuch and Pagan Lagrange Multiplier Test – Hausman Test – Non-Stationary Panel - Panel unit root and cointegration tests – Dynamic panels and instrument variables.		
Pedagogy	: lectures/ case analysis/assignments/class room interaction/lab sessions using software E-views and Gretl applications.	
Reference/Readings	<ol style="list-style-type: none"> 1. Fabozzi, F., Focardi, S., Rachev, S. and Arshanapalli, B. (2014) The Basics of Financial Econometrics: Tools, Concepts and Asset Management, Wiley. 2. Asteriou Dimitriou,(2006), Applied Econometrics, Palgrave Macmillan, New York 3. Greene, W. (2004) Econometric Analysis, Prentice Hall, New York. 4. Gujarati, D. (2004) Basic Econometrics, McGraw Hill, New Delhi. 5. Hayashi, F (2000), Econometrics, Princeton University Press, Princeton. 6. Ramanathan Ramu (2002), Introductory Econometrics with applications, Thomson South Western, Singapore 8. Wooldridge (2006), Introductory Econometrics, Thomson-South Western, Singapore. 	
Course Outcome	: Upon completion of the course learners will be able to: CO1. Apply probability-based models including LPM, logit, probit and Tobit models to financial data. CO2. Perform forecasting by developing ARIMA, Markov Regime switching models and VAR Models. CO3. Develop models for examining long-run relationship between financial variables using Johansen's cointegration and ARDL models. CO4. Forecast financial market volatility using advanced GARCH volatility models and Kalman filter. CO5. Demonstrate ability to develop useful panel data models with appropriate diagnostic procedures.	

Programme : MBA (Financial Services)
Course Code : FSO321
Course Title : Bank Management
Number of Credits : 4
Effective from AY : 2020-21

Need of the Course	The focus of Bank management is to inculcate the knowledge of banking sector among the student community. This paper helps to understand the overview of Indian banking system, various types of risk faced by them and also the various strategies/ methods adopted to manage and reduce the risk. This paper also emphasizes on NPA and customer relationship management in the banking sector.	
Description of the course	This course is designed to provide knowledge about the overview of the banking sector. As a financial services student, it is essential to understand the various components of the Indian Banking system, its risk management process, NPA's management, and customer relationship management.	
Objectives of the course	<ol style="list-style-type: none">1. To introduce the students to the Indian Banking system, its products, and operations.2. To familiarize the students about the various risk faced by banks and to manage them.3. To understand the working mechanism of managing NPA's in the Banking sector.4. To discuss about the customer relationship management in banks.	
Course Content		
Unit 1	: Overview of Banking Sector	12 Hours
Meaning and Importance of Banking, Structure of Indian Banking system, Role and Functions of RBI, Functions of Commercial Banking, Banking Products and Services, Banking operations and monetary control tools – CRR, SLR, Policy rates, Open market operation, Selective credit control, and other tools, Growth and Development in Banking sector, Shadow banking system.		
Unit 2	: Risk Management in Banking	12 Hours
Introduction, Risk Vs Uncertainty, Types of Risk in Banks, Risk Management Process, General Risk Management using CAMELS rating, Measures for identifying and controlling risks - Credit Risk, Interest Rate risk – Gap analysis, Duration analysis, Liquidity risk, market risk – Risk adjusted return on capital value at risk, Operating risk, International banking operation management, International risk assessment.		
Unit 3	: Assets Liability Management	12 Hours
Overview of Bank's balance sheet and income statements, Assets Liability Management, Objectives of ALM, Pre-requisite of ALM, Asset and Liability Committee (ALCO) Non-Performing Assets (NPA), Capital Adequacy in Banks, off-balance sheet business, RBI guidelines on NPAs and Asset classification, Bad Bank Concept, Present status of capital adequacy and NPA in India, Know Your Customer (KYC) and Money Laundering in Banks.		
Unit 4	: Customer Relationship Management in Banks	12 Hours
Customer Relationship Management in Banking: Meaning, Objective and Importance of CRM. Understanding the goal of CRM and Customer Touch points in banks. CRM process and CRM cycle – Assessment phase, Planning phase, Executive phase. e-CRM in banks, Modules in CRM, Developing and Implementation of CRM strategy, Recent trends in CRM.		

Pedagogy	: The pedagogy for this course constitutes a mixture of Lectures, Case study, Assignment and Group Discussions
Reference/ Readings	<ol style="list-style-type: none"> 1. O.P. Agarwal, Banking and Insurance, Himalaya Publishing House, 2. Mukund Sharma, Banking and Financial Services, Himalaya Publishing House 3. M. Y. Khan: Indian Financial System, McGraw Hill, 4. Course Outcome	<p>After completion of this course, the students shall be able to:</p> <p>CO1. Explain the fundamentals of the Banking sector</p> <p>CO2. Summarize on risks in the banking sector and gain in-depth knowledge of banking operations.</p> <p>CO3. Explain the working mechanism of the banking sector in managing its NPA's.</p> <p>CO4. Explain the customer relationship management in banking sector.</p>

Programme	: MBA (Financial Services)
Course Code	: FSO322
Course Title	: Mutual Funds Management
Number of Credits	: 4
Effective from AY	: 2020-21

Need of the Course	Indian Mutual Fund industry has completed more than half century of its existence and it's growing at a rapid pace. This course has been designed with a view of acquainting the students with the knowledge of Indian mutual funds industry. It shall further facilitate the students in preparing for Certification Examination of Mutual Fund and make their career in Mutual Fund industry.	
Description of the Course	Mutual funds management course is designed to equip the students with the knowledge of Indian Mutual Industry and its various facets. It covers the Introduction to Indian mutual funds, types of mutual funds and innovative portfolio structures in mutual funds. Further it discusses the fund distribution channels and sales practices of mutual funds along with the quantitative evaluation and regulatory framework of mutual funds.	
Objectives of the Course	<ol style="list-style-type: none">1. To enable the learners to understand mutual fund structures and various distribution channels.2. To evaluate the mutual fund schemes and compare them.3. To understand the investment management in mutual funds.4. To learn the computation of NAV and provide the exposure to accounting and taxation policies of mutual funds.	
Course Content		
Unit 1	: Mutual Fund Structures and Fund Distribution Channels	12 Hours
Innovative Portfolio Structures: Index Funds, Exchange Traded Funds (ETF), Gold ETF, Arbitrage Funds, Monthly Income Plans, Fixed maturity Plans, Capital Protection Oriented Schemes, Debt Funds, Liquid Funds, Fund of Funds, International Funds, Venture Capital Funds, ESG Funds, Systematic Investment Plans (SIP), Systematic Transfer Plan (STP), Systematic Withdrawal Plan (SWC). Fund Distribution Channels of Mutual Funds, Stock exchange as a channel of distribution, and the Sales Practices.		
Unit 2	: Quantitative Evaluation of Mutual Fund Schemes and Investor Services	12 Hours
Quantitative Evaluation: Returns, Compounded Annualised Growth Rate, Risk – Beta, Standard Deviation, Risk Adjusted Return Measures – Sharpe Ratio, Treynor Ratio, Jensen’s Measure, Sortino Ratio, Information Ratio. Investor services: Transactions of mutual funds, Cut off timings and time-stamping of MF application forms.		

Unit 3	: Investment and Valuation policies of Mutual Funds	12 Hours
Equity Portfolio Management – Stock selection and classification – Passive fund management – Active fund management – Debt Portfolio Management – debt investment strategies – Investment policy and Restrictions. Valuation of investments of mutual funds , Method of valuation of investments, Underwriting of securities, Valuation of real estate assets and declaration of NAV.		
Unit 4	: Accounting and Taxation of Mutual Funds	12 Hours
Net Asset Value (NAV) – Meaning – Computation – factors affecting NAV – Pricing of units – Fees and expenses – Investment management and advisory fees – Initial expenses – Recurring expenses – Total expenses – Accounting policies. Investor Transactions, Distributable Reserves, Unique Aspects of Real Estate Schemes Accounting. SEBI updated regulations. Taxes for AMCs: Securities Transaction Tax and Income Distribution Tax, Taxes for Investors: Securities Transaction Tax, Taxes on Dividend, Capital Gains, Set-off and Carry Forward of Losses, Dividend Stripping and Bonus Stripping.		
Pedagogy	: Interactive Lectures/Discussions/ presentations/case study/ individual or group projects/ assignments/Class activities or a combination of some of these. The sessions shall be interactive to enable peer group learning.

Programme: MCA

Course Code: CSC-101

Number of Credits: 3 (3L-0T-0P)

Effective from AY: 2021-22

Title of Course: Data Structures & Algorithms

Contact Hours: 36 hours (36L-0T-0P)

<u>Prerequisites for the course</u>	Program Prerequisites	
<u>Objectives</u>	The aim of the course is to emphasize the importance of data structures in implementing efficient algorithms. It provides an exposure to various algorithm design techniques and an introduction to algorithm analysis.	
<u>Content</u>	Revision of Programming & Data Structures Problem solving, Data Types: Primitive and User Defined Selection Constructs, Repetition Constructs, Recursion Pointers Algorithm Representation: - Pseudocode and flowcharts Three level Approach Abstract Data Types (ADTs) Basic Linear Data Structures (LinkedList, Stack, Queue)	6 hours
	Algorithm Analysis Analysis of Algorithms Algorithm Complexity: Space and Time Cases of Complexity: Best, Worst and Average Growth of Functions: Asymptotic Notation	3 hours
	Advanced Linear Data Structures Variants of Linked List and its applications (e.g. Polynomial addition, Sparse matrices) Applications of stacks (e.g. Infix-to-Postfix conversion, Evaluating Postfix Expressions, Bracket Matching) Variants of Queue and Applications	5 hours
	Nonlinear Data Structures: Trees: Binary Search Trees, AVL Trees, B-trees & variants. Tree Traversal Algorithms Heaps and its applications (e.g. implementation of Priority Queue) Graph: Adjacency Matrix and Adjacency List Representations Graph Traversal Algorithms: Breadth First Search and Depth First Search	12 hours

	Divide & Conquer Strategy Algorithms based on Divide and Conquer Strategy: Sorting Algorithms (QuickSort, MergeSort) Binary Search	3 hours
--	--	---------

	Greedy Algorithms <ol style="list-style-type: none"> 1. Huffman Coding Algorithm 2. Minimum Cost Spanning Tree (Prim's, Kruskal's) 3. Single Source Shortest Path (Dijkstra's) 	4 hours
	Dynamic Programming Coin Change Problem Longest Common Subsequence All-pair shortest Path (floyd-warshall)	3 hours
<u>Pedagogy</u>	<ul style="list-style-type: none"> • Lectures/Tutorials/Assignments/Quizzes • Each data structure should be explained along with implementation of its ADT, its applications and complexity 	
<u>References/Readings</u>	<ol style="list-style-type: none"> 1. Horowitz, Ellis, Sartaj Sahni, and Susan Anderson-Freed. "Fundamentals of data structures in C" WH Freeman & Co., Latest Edition. 2. Thomas H. Cormen, Charles E. Leiserson, et al "Introduction to Algorithms", Latest Edition 3. Allen, Weiss Mark. Data structures and algorithm analysis in C. Pearson Education India, Latest Edition. 4. Dasgupta, Papadimitriou, and Vazirani, Algorithms, by McGraw-Hill. 5. Jeri R. Hanly and Eliot B. Koffman "Problem Solving and Program Design in C" Pearson Education, VII Edition, 2012 6. R.G.Dromey "How to Solve it by Computer ", PHI , Latest Edition 	
<u>Learning Outcomes</u>	Upon successful completion of the course, a student will be able to <ul style="list-style-type: none"> • Implement common data structures such as lists, stacks, queues, graphs, and binary trees for solving programming problems. • Identify and use appropriate data structures in the context of solution to a given problem. • Be able to analyze the complexity of a given algorithm 	

Programme: MCA

Course code: CSC-102

Number of credits: 2 (2L-0T-0P)

Effective from AY: 2021-22

Title of course: Object Oriented Concepts

Total contact hours: 24 hours (24L-0T-0P)

<u>Prerequisites for the course</u>	Program Prerequisites	
<u>Objectives</u>	Aim of this course is to introduce the learner to the object oriented paradigm.	
<u>Content</u>	Classes and objects Programming paradigm; procedural to object oriented Class; attributes & methods; classes as modules & types; uniform type system, wrapper type classes Object; object references; objects instantiation & interaction; constructor & destructor; pass-by-reference & pass-by-value Object copying & cloning; composite objects Static & non-static members Enumeration & Annotations	7 hours
	Object oriented principles Encapsulation Inheritance; types of inheritance; diamond problem Abstraction; virtual methods Polymorphism; overloading and overriding	6 hours
	Object oriented features Interfaces Access modifiers Errors & Exceptions; user-defined exceptions Collections Anonymous & Inner classes Type parametric polymorphism (e.g. Generics in Java & Templates in C++)	6 hours
	Advanced features Persistence & Serialization; JSON User packages & custom libraries; reflection Predicates & streams Lambda functions	5 hours
<u>Pedagogy</u>	Hands-on assignments / tutorials / peer-teaching / flip classroom. Concepts can be explained using UML class diagrams.	
<u>References/ Readings</u>	Main Reading 1. Timothy Budd, "An Introduction to Object Oriented Programming", Pearson Education, 3rd Edition 2. Brett D. McLaughlin, Gary Pollice & David West, "Head First Object-Oriented Analysis Design",	

	<p>O'Reilly</p> <ol style="list-style-type: none"> Ken Arnold, James Gosling, David Holmes, "The Java Programming Language", Addison-Wesley Professional Stanley Lippman, "C++ Primer", Addison Wesley Cay S. Horstmann, "Core Java Volume I—Fundamentals", Pearson Herbert Schildt, "Java: The Complete Reference", Oracle Press Joshua Bloch, "Effective Java", Addison Wesley Kathy Sierra & Bert Bates, "Head First Java", O'Reilly Bjarne Stroustrup, "The C++ Programming Language", Addison Wesley https://www.tutorialspoint.com/java/index.htm 	
<u>Learning Outcomes</u>	<ol style="list-style-type: none"> Learner will appreciate mapping real-world scenarios in the object-oriented world Learner will understand object-oriented principles Learner will be able to design object oriented softwares Learner will be able to analyse 	

Programme: MCA

Course code: CSC-103

Number of credits: 4(4L-0T-0P)

Effective from AY: 2021-22

Title of course: Operating Systems

Total contact hours: 48 (48L-0T-0P)

<u>Prerequisites for the course</u>	Programme Prerequisites	
<u>Objectives</u>	This course focuses on the principles and understanding of the functionality of an operating system and evaluates their trade-off in various environments.	
<u>Content</u>	Introduction and Systems Structures Computing Environments, Operating-systems Services, System Calls, System Programs, Virtual Machines, monolithic and micro kernel architectures	4 hours
	Process Management Process-Concept and states, Process Creation and Control, Scheduling Criteria, Scheduling Algorithms, MultiLevel Queues., Multiple-processor scheduling, real time CPU scheduling	6 hours
	Threads Motivation and Challenges, Multithreading Models, Threading Issues, Thread libraries, Thread scheduling	4 hours
	Process Synchronization Cooperating processes and Race Conditions, The critical-section problem, Peterson's solution, mutex locks, Synchronization Hardware, Semaphores and theirImplementation, Classic problems of synchronization	6 hours
	Inter process Communication, Overview of IPC, Examples of IPC Systems, Communication in Client Server Systems.	3 hours
	Deadlocks System Model, Deadlock characterization, Methods for Handling Deadlocks, Deadlock Prevention, Deadlock Avoidance, Deadlock Detection, Recovery From Deadlock	4 hours
	Memory Management Hardware Support, Address Binding, Swapping, Contiguous Memory Allocation, Fragmentation, memory Protection, Paging, Structure of the page table, Segmentation, Example: Intel architecture	6 hours
	Virtual-Memory Management Background, Demand Paging, Copy-on-write, Page Replacement algorithms, Allocation of Frames, Thrashing, Allocating Kernel Memory	6 hours

	File System File Concept, Access Methods, Directory Structure, File-system mounting, File sharing, Protection; Virtual file systems, Implementing File Systems, Directory implementation, Allocation Methods, Free-space Management, Efficiency and performance, Recovery, Log-structured file systems	6 hours
	Secondary-storage Structure Overview of Mass-storage Structure, Disk Structure, Disk Attachment, Disk Scheduling ,Disk Management, Swap-Space Management	3 hours
<u>Pedagogy</u>	lectures/ tutorials/assignments/class presentations and debates/peer reviews/self-study.	
<u>References/ Readings</u>	Main Reading <ol style="list-style-type: none"> 1. Silberschatz ,Galvin and Gagne , Operating systems Principles – 8th edition or Later(Wiley Asia Student Edition) 2. Deitel H.M., “An Introduction to Operating Systems”, Addison Wesley Publishers Company, Latest Edition 3. Milenkovic M., “Operating Systems : Concepts and Design”, McGraw Hill International Edition Computer Science series ; Latest Edition 4. Tanenbaum A. S., Modern Operating Systems”, Prentice Hall of India Pvt. Ltd.,Latest Edition 5. Operating Systems – a modern perspective - Gary Nutt , Addison Wesley, Latest Edition 	
<u>Learning Outcomes</u>	<ol style="list-style-type: none"> 1. To understand the services provided by and the design of an operating system. 2. To understand the structure and organization of the file system. 3. To understand what a process is and how processes are synchronized and scheduled. 4. To understand different approaches to memory management. 5. Students should be able to understand the implementation and use of system calls for managing processes, memory and the file system. 6. Students should understand the data structures and algorithms used to implement an OS. 7. Evaluate operating system implementations 	

Programme: M.C.A

Course Code: CSC-104

Number of Credits: 3 (3L-0T-0P)

Effective from AY: 2021-22

Title of the Course: Internet Technologies

Contact Hours: 36 hours (36L-0T-0P)

<u>Prerequisites for the course:</u>	Programme requisites	
<u>Objectives:</u>	The objective to introduce the TCP/IP architecture and allied protocols of the Internet by following a top-down approach.	
<u>Content:</u>	Computer Networks and the Internet: Networking and Inter-networks, Internetworking devices, Internet: Network edge and Network core. TCP/IP protocol stack: Protocol stack, Connection oriented, connectionless services, Packet switching, circuit switching, Delay, Loss, and Throughput in Packet-Switched Networks.	6 hours
	Application layer: Principles of Application Layer Protocols, the Web and HTTP, MIME, mail access protocols, DNS, Peer to Peer Applications.	8 hours
	Transport layer: Transport-layer services, Multiplexing and demultiplexing, UDP protocol, Principles of reliable data transfer, Connection oriented transport - TCP protocol, Principles of congestion control, TCP congestion control.	6 hours
	Network layer: Packet switching: virtual circuit & datagram networks, The Internet Protocol (IP): Forwarding and Addressing in the Internet, route aggregation, subnetting, CIDR, IP datagram, fragmentation, NAT, DHCP, ICMP. Routing protocols: shortest path, link state routing algorithm, distance vector routing. Internet routing: Autonomous Systems (AS), RIP, OSPF, BGP. Address Resolution Protocol (ARP) and RARP.	10 hours
	Internet Security protocols Basic cryptography concepts, Secure Socket Layer (SSL), Internet Security Protocol (IPSec), Virtual Private Network (VPN).	6 hours
<u>Pedagogy:</u>	lectures/ tutorials/assignments/self-study	

<u>References/ Readings</u>	<ol style="list-style-type: none"> 1. Forouzan, Behrouz A., and Firouz Mosharraf. “Computer networks: a top-down approach”. McGraw-Hill, 2012. 2. Andrew S. Tanenbaum., “Computer Networks”, (5th Edition) Prentice Hall of India. 3. James F. Kurose, Keith W. Ross, “Computer Networking: A Top-Down Approach” Pearson, Sixth Edition 2017.
<u>Learning Outcomes</u>	<p>After completion of this course, students will be able to</p> <ul style="list-style-type: none"> • Have a good understanding of layered communication architecture (TCP/IP) and knowledge of some of the important networking protocols • Understand the concepts of reliable data transfer and how TCP implements these concepts. • Basic knowledge of the routing algorithms.

Programme: MCA

Programme: M.C.A

Course Code: CSC-106

Title of the Course: LINUX Lab

Number of Credits: 4 (2L-0T-2P)

Contact hours: 72 hours (24L-0T-48P)

Effective from AY: 2021-22

<u>Prerequisites for the course:</u>	Program Prerequisites	
<u>Objectives:</u>	The objective is to introduce students to the Linux operating system environment and provide a knowledge of basic Linux commands and shell scripting and system call API.	
<u>Content:</u>	LINUX Environment Linux Installation and disk partitioning. Shell, Linux commands, Internal and External Commands, using the documentation/manual, users in Linux: user id, effective user id, use of commands su, sudo, id Basic commands: echo, who, whoami, date, cal, ls, passwd, history, shutdown. Input and output redirection operators (<,<<, >, >>)	3L + 3P
	The Linux File System, File and Directory management Structure of LINUX file system. Parent-child relationship. Concept of Home directory, current working directory and referring to home directory. Special Files: . and .. Absolute and relative pathnames. Use of PATH variable, Use of command: mkdir, rmdir, pwd, ls and cd. Use of file management commands: nano, touch, cat, cp, mv and rm. FIND command: Searching for a file using find, Finding List of files and directories. Concept of hard disk partitions, file system, Superblock and Inodes, General structure of Linux inode. use of stat command. Analysing the output of ls -l command. File type and permission. Use of chmod command. File ownership: Changing ownership using chown and chgrp commands. Modification and access times. Default file and directory permissions. Use of umask command. Concept of symbolic links. Hard and soft links. Use of ln command to create hard and soft links. Use of commands du, df, tar, zip, gzip, type, which	4L + 8P

	<p>Filters:</p> <p>File commands- sort, wc, uniq, comm, cmp, diff, pg, tail, head, less, and more , Cut and Paste command</p> <p>Shells' sequence of interpretation of a command; Connecting commands with pipes</p> <p>Regular expressions: grep & sed command</p> <p>AWK script:</p> <p>Selection criteria and action- The BEGIN and END sections, Splitting a line into fields and using printf. Getline function and reading input from files. Writing output to file and pipes. Awk system variables. Using regular expressions. Relational and Boolean operations. Command line parameters and environment variables. Programming constructs: if, for, while.</p>	6L + 8P
	<p>Process Management</p> <p>Concept of UNIX process. Role of init in process creation. Process ID and exit status of a process. Displaying process attributes using ps command, Killing processes, foreground and background processes. Use of commands job, fg, bg</p>	1L + 2P
	<p>Package management:</p> <p>Installing & removing packages</p>	1L+1P
	<p>Shell Script</p> <p>Shell scripts and execution methods. The dot command, Interactive and Non Interactive execution. Use of export command, Aliases and command history. Shell variables, Special variables, Built-in shell parameters. Command line arguments. Escaping and quoting. Difference between single and double quotes. Command substitution, brace and tilde expansion, I/O using read and echo. Escape sequences, 'test' command, arithmetic expressions, operators, Control flow: For, If, While, Case. Shell functions, error handling, debugging.</p>	4L + 8P
	<p>System programming</p> <p>Introduction to system programming, System calls and library functions.</p> <p>Files and Directory system calls</p> <p>List of sample programs</p> <ol style="list-style-type: none"> 1. Write a program to implement the functionality of Linux command <i>touch</i> 2. Write a program to implement the functionality of Linux command <i>cat</i> 	5L + 18P

	<ol style="list-style-type: none"> 3. Write a program to implement the functionality of Linux command <i>ls</i> 4. Write a program to redirect the output of all the printf statements to a user file using dup system call. 5. Write a program to read the standard input from a user file using dup system call. 6. Write a program to implement the functionality of Linux command <i>chmod</i> 7. Write two programs : one called parent.c, the other called child.c. The parent program reads two integers from the keyboard and arithmetic operator (+, -, *, /). The read information is transmitted to a child process. After the child process finishes the operation, it transmits the result to the parent process. The parent process prints the result on the screen. 8. Write a c program namely “parent.c”, which reads the processes along with their burst time (bt) and saves it in a file. Using fork, create a child process namely fcfs.c, which takes the filename containing process information as a parameter from the parent. The child process task is to calculate the average waiting time using the FCFS scheduling algorithm. 	
<u>Pedagogy:</u>	Practical/ tutorials/assignments/self-study	
<u>References/Readings</u>	<ol style="list-style-type: none"> 1. Unix Concepts and Applications – Sumitaba Das, Tata MacGraw Hill. 2. Unix and Shell Programming – Graham Glass and King Ables Pearson Education 3. C and Unix Programming – Kerningham and Pike, Prentice Hall 4. UNIX man pages 	
<u>Learning Outcomes</u>	<p>Upon completion of this course, the student will be able to:</p> <ol style="list-style-type: none"> 1. Run various LINUX commands 2. Write shell script on LINUX OS. 3. Use various advanced LINUX tools such as grep, SED and AWK 	

Programme: M.C.A

Course Code: CSC-108

Title of the Course: Communication Skills

Number of Credits: 2 (2L-0T-0P)

Contact Hours: 24 hours (24L-0T-0P)

Effective from AY: 2021-22

<u>Prerequisites for the course:</u>	Programme requisites	
<u>Objectives:</u>	To introduce essentials of effective communication in different contexts	
<u>Content:</u>	Oral Communication Difference between formal and informal communication, importance of non verbal communication, skills required for effective communication, Public Speaking Skills.	4 hours
	Written Communication Writing cover letters, Resumés/CVs/Biodata, Letters of Invitation, Report Writing	4 hours
	Content creation Creating content for the website, creating profiles, creating content for brochures of events.	4 hours
	Multimedia and E-Correspondence Conducting Research before presentation, Making PowerPoint Presentation effective (visual), Communication during PowerPoint Presentation, Email etiquette (components, formats, attachments, content and language), Maintaining social media presence.	6 hours
	Preparing for Interview Types (personal, telephonic, online), Techniques of answering interviews, Participating in group discussions.	4 hours
	Allied Communication Effective Reading techniques, analyzing feedback and giving inputs.	2 hours
<u>Pedagogy:</u>	Lectures/ tutorials/laboratory work/ field work/outreach activities/ project work/ vocational training/viva/ seminars/ term papers/assignments/presentations/ self-study/ Case Studies etc. or a combination of some of these. Sessions shall be interactive in nature to enable peer group learning.	
<u>References/ Readings</u>	1. Kelly M. Quintanilla and Shawn T. Wahl, “Business and Professional Communication “ Sage Publications, 2018,	

	<p>2. Anjanee Sethi ,Bhavna Adhikari, “Effective Business Communication “ Tata MacGraw Hill Education, India. 2009;</p> <p>3. Nido Qubein, “How to be a Great Communicator in Person, On Paper, and on Podium” Viva Books, India. 2008;</p> <p>4. Number of credits: 3 (3L-0T-0P)

Effective from AY: 2021-22

Title of course: Web Development

Total contact hours: 36 hours (36L-0T-0P)

<u>Prerequisites for the course</u>	Knowledge of HTML and basic of CSS(Program Prerequisites); Internet Technologies(CSC-104); Object Oriented Programming(CSC-102;CSC-106)	
<u>Objectives</u>	This course will introduce the learner to the different website development technologies	
<u>Content</u>	Introduction <ul style="list-style-type: none">● Evolution of internet & World Wide Web● Client-Server Architecture● Revisit HTML & CSS	1 hours
	Enhancing HTML & CSS <ul style="list-style-type: none">● HTML 5● CSS3	2 hours
	Front-end Design <ul style="list-style-type: none">● Good Design Rubrics● Separation of concerns for HTML & CSS; structure vs visual representation● HTML DOM● CSS Box Model, pseudo -classes & -elements, CSS animation● Adaptive & responsive design, viewport & media queries, mobile-first design● Introduction to a design library and/or & framework (e.g. Bootstrap)	4 hours
	Client-side Scripting <ul style="list-style-type: none">● Dynamic web pages● JavaScript, programming features, javascript events & functions● Manipulating DOM● Beyond ECMA 4● Introduction to a Javascript library and framework (e.g. JQuery, ReactJS)	10 hours
	HTTP & Middle-ware <ul style="list-style-type: none">● HTTP, Request & Response, methods & error code, headers, URL encoding & decoding● XML, data & XPath● JSON	3 hours
	Server-side Programming <ul style="list-style-type: none">● Server instance	9 hours

	<ul style="list-style-type: none"> ● Request handling & response creation ● HTML forms & file uploads ● Session management & application data ● Database connectivity ● Introduction to a Server-side library and/or template engine and/or framework (e.g. PHP - Laravel; JSP - Spring) 	
	Advanced Web Development <ul style="list-style-type: none"> ● Model-View-Controller (MVC) & Model-View-ViewModel and others ● Web service architecture and micro-services ● REST calls, Asynchronous JavaScript and XML (AJAX) ● Independent client-server web development ● Difference between Server-side vs client-side rendering ● Introduction to Web stacks, JAM stack & full stack development 	7 hours
<u>Pedagogy</u>	Hands-on assignments / tutorials / peer-teaching / flip classroom/ presentations	
<u>References/ Readings</u>	<ol style="list-style-type: none"> 1. Robert W. Sebesta, -Programming the World Wide Web, Pearson Education 2. https://www.w3schools.com/ 3. Steven Holzner, -HTML 5 Black Book 4. https://www.tutorialspoint.com/ 5. Frank W. Zammetti, —Modern Full-Stack Development, Apress 6. Nader Dabit, -Full Stack Serverless, O'Reilly 	
<u>Learning Outcomes</u>	<ol style="list-style-type: none"> 1. Learner will be able to make decision on what web technology to use and for what purpose 2. Learner will have fair idea on the popular technologies used in website development 3. Learner will appreciate the architecture of web applications and the design decisions

Title of Course: Database Management Systems

Number of Credits: 3 (3L-0T-0P)

Contact hours: 36 hours (36L-0T-0P)

Effective from AY: 2020-21

<u>Prerequisites for the course</u>	A High Level Programming Language(Program Prerequisites);Data Structures and Algorithms(CS101); Operating Systems(CS103)	
<u>Objectives</u>	This course will enable the learner to understand the different issues involved in the design and implementation of a database system and provide both theoretical knowledge and practical skills required in the creation and use of a Relational DataBase Management System.	
<u>Content</u>	Basic concepts Database & Database Users, Characteristics of the Database Approach, Database Systems, Concepts & Architecture Data Models(RDBMS, Legacy systems, Object Oriented, NOSQL), Schemes & Instances DBMS Architecture of Data Independence, Database languages & Interfaces	4L
	Data Modelling using the Entity – Relationship approach	4L
	Relational Model, Languages & Systems Relational Data Model & Relational Algebra Relational Model Concepts Relational Model Constraints, Relational Algebra/Relational Calculus	5L
	SQL-A Relational Database Language Data SQL - DDL,DML. Views & Queries in SQL. Specifying Constraints & Indexes in SQL. Nested Subqueries, correlated Subqueries	6L
	Advanced SQL Embedded SQL, Dynamic SQL, Triggers and Stored Procedures.	3L
	Relational Data Base Design Function Dependencies & Normalization for Relational Database Functional Dependencies Normal forms based on primary keys (1NF, 2NF, 3NF, BCNF) Covers of Functional Dependencies, Canonical covers. Loss less join and Dependency preserving decomposition algorithms.	5L
	Transactions and Recovery Techniques Concept of a transaction, Recovery concepts, Recovery Techniques.	4L
	Concurrency Control	5L

	Serializability, Locking Techniques, Time stamp ordering Granularity of Data items	
<u>Pedagogy</u>	Hands-on assignments / tutorials / peer-teaching / troubleshooting	
<u>References/ Readings</u>	Main Reading <ol style="list-style-type: none"> 1. Korth, Silberchartz, — Database System Concepts McGrawhill Publication. 2. Elmasri and Navathe, — Fundamentals of Database Systems , Addison Wesley, New Delhi. 3. Database Management Systems –R. Ramakrishnan, J.Gehrke – T.McGraw Hill 4. Desai B., — An Introduction to Database Concepts , Galgotia Publications, New Delhi. 5. 2. Rob,Coronel, —Database Systems (Design, Implementation and Management) 6. Date C. J. , — An Introduction to Database Systems , Publication House, New Delhi. 	
<u>Learning Outcomes</u>	<ol style="list-style-type: none"> 1. Understand and evaluate the role of a DBMS in information Technology applications in Organizations. 2. Recognise and use logical design methods and tools required in the design of DB applications. 3. Understand the relational database design principles. 4. Implement a database Solution to an IT Platform. 5. Understand the basics of SQL and construct queries using SQL. 6. Develop sophisticated queries to extract information from databases. 7. Use embedded SQL queries in a Host Level Language. Understand how the DBMS manages and recovers from concurrent and multiple transactions. 	

Programme: MCA

Course code: CSC-203

Title of course: Mathematics for Computer Science

Number of credits: 4 (4L-0T-0P)

Total contact hours: 48 hours (48L-0T-0P)

Effective from AY: 2021-22

<u>Prerequisites for the course</u>	Program Prerequisites	
<u>Objectives</u>	Students will be able to: Apply the concepts of mathematics in the modeling and design of computational problems and deeper understanding of subjects like machine learning/deep learning and other computer science subjects.	
<u>Content</u>	<p>Introduction – importance of mathematics and their applications for computer science/machine learning/data science/deep learning <i>Functions, variables, equations, graphs</i> revision</p> <p>Probability and Statistics: Probability Rules & Axioms, Bayes' Theorem, Random Variables, Variance and Expectation, Conditional and Joint Distributions, Standard Distributions (Bernoulli, Binomial, Multinomial, Uniform and Gaussian), Moment Generating Functions, Maximum Likelihood Estimation (MLE), Prior and Posterior, Maximum a Posteriori Estimation (MAP) and Sampling Methods- confidence intervals, Hypothesis testing, p-values, A/B testing-ANOVA, t-test-Linear regression, regularization</p> <p>Calculus Overview of Differential and Integral Calculus, Partial Derivatives Product and chain rule-Taylor's series, infinite series summation/integration concepts- Fundamental and mean value-theorems of integral calculus, evaluation of definite and improper integrals-Beta and Gamma functions, Functions of multiple variables, limit, continuity, partial derivatives-Basics of ordinary and partial differential equations -Applications of Calculus</p>	<p>2 hrs</p> <p>7 hrs</p> <p>7L</p>

	<p>Linear Algebra: Systems of Linear Equations-Matrices-Solving Systems of Linear Equations-Vector Spaces-Linear Independence-Basis and Rank-Linear Mappings Affine Spaces</p> <p>Analytic Geometry Norms-Inner Products-Lengths and Distances Angles and Orthogonality-Orthonormal Basis Orthogonal Complement-Inner Product of Functions-Orthogonal Projections-Rotations</p> <p>Matrix Decompositions Determinant and Trace-Eigenvalues and Eigenvectors-Cholesky Decomposition Eigendecomposition and Diagonalization Singular Value Decomposition-Matrix Approximation.</p> <p>Vector Calculus Differentiation of Univariate Functions-Partial Differentiation and Gradients-Gradients of Vector-Valued Functions-Gradients of Matrices Useful Identities for Computing Gradients- Backpropagation and Automatic Differentiation- Higher-Order Derivatives-Linearization and Multivariate Taylor Series</p> <p>Optimization Primal Solutions and Concept and Need for Duality; Optimization Using Gradient Descent- Constrained Optimization -Lagrange Multipliers- Convex Optimization,</p>	<p>7L</p> <p>7L</p> <p>6L</p> <p>7L</p> <p>5L</p>
<u>Pedagogy</u>	Problem solving approach and carrying out small project work using matlab tools	
<u>References/ Readings</u>	<ol style="list-style-type: none"> 1. Statistics -Robert S. Witte and John S. Witte 2. Barron's AP Statistics, 8th Edition -Martin Sternstein, PhD. 3. Statistics for Business and Economics - James T. McClave, P. George Benson and Terry T Sincich 4. Naked Statistics: Stripping the Dread from 	

	<p>the Data – Charles Wheelan</p> <p>5. Introduction to Linear Algebra - Gilbert Strang</p> <p>6. Linear Algebra and Its Applications - David C. Lay</p> <p>7. Functions and Graphs - I M Gelfand</p> <p>8. Cartoon guide to calculus – Larry Gonick</p> <p>9. Optimization Methods in Business Analytics—edX, MIT</p>	
<u>Learning Outcomes</u>	<p>1. To build a strong foundation in maths required for learning computer science/data science subjects.</p> <p>2.To understand fundamental concepts and tools in calculus and linear algebra with emphasis on their applications to computer science in particular to data science/machine learning</p>	

Programme: MCA

Course Code: CSC-204

Title of Course: Software Design & Engineering LAB

Number of Credits: 4 (2L-0T-2P)

Contact hours: 72 hours (24L-0T-48P)

Effective from AY: 2021-22

<u>Prerequisites for the course</u>	Hands-on experience in object oriented programming (Program Prerequisites); Object Oriented Concepts(CSC-106)	
<u>Objectives</u>	This course will enable the learner to work in the software development ecosystem with tools and in team with a stress on how to adopt them in various activities and techniques	
<u>Content</u>	Introduction to Software Development process <ul style="list-style-type: none">• Software development processes and methodologies: Waterfall, agile methodologies.	3L
	Version control, build and continuous integration <ul style="list-style-type: none">• Baseline, identification, accounting, control, audit, source and version control (Git and Github; subversion), change control procedure, pull requests, fork & branches.• Tools used in SCM	4L+4P
	Project Management using Scrum/ Lean approach <ul style="list-style-type: none">• Project planning and monitoring. Team management. Retrospectives.• User story, estimation using user story, sprint planning, burndown chart.	6L+4P
	TDD and Refactoring <ul style="list-style-type: none">• TDD, Refactoring exercises(Eclipse Refactoring, Junit), BDD (ex. JBehave/Cucumber).• Debugging: principles, approaches, use of debuggers.	2L+6P
	Testing <ul style="list-style-type: none">• Integration testing, GUI testing etc• Automatic testing(desktop/web-selenium)• Alpha and beta testing• Continuous Integration tool (Travis)• Defect tracking, bugzilla• Static code analysis tools (Gprof, Sonar)• Build management & Dependency tools – (Maven/Ant build)	3L+16P
	Design patterns: <ul style="list-style-type: none">• Reusability at design level. Principles of good design. Creational, structural and behavioral patterns.• Refactoring to patterns-(Decorators, Observer and Factory Pattern).	6L+14P

	Documentation: <ul style="list-style-type: none"> • Java Doc 	1P
	Project <ul style="list-style-type: none"> • Mini project implementation using Scrum tools 	3P
<u>Pedagogy</u>	Hands-on assignments / tutorials / peer-teaching / troubleshooting	
<u>References/ Readings</u>	<ol style="list-style-type: none"> 1. Martin Fowler, -Refactoring®, Pearson Education. 2nd Edition, 2019 2. <u>Learning Outcomes</u>	Students will be able to use tools for development, testing and project management.	

Programme: MCA

Course code: CSC-205

Number of credits: 3 (1L-0T-2P)

Effective from AY: 2021-22

Title of course: Web Development Lab

Total contact hours: 60 hours (12L-0T-48P)

<u>Prerequisites for the course</u>	Knowledge of HTML and basic of CSS(Program Prerequisites); Internet Technologies(CSC-104); Object Oriented Programming(CSC-102;CSC-106)	
<u>Objectives</u>	This course will focus on the practical use and aspects of the different website development technologies	
<u>Content</u>	Web Design Assignments <i>Suggested Sample (non-exhaustive) Assignments:-</i> <ul style="list-style-type: none">● Create a website on a topic given by the instructor. Evaluating the website with rubrics for good web design.● Build a website using HTML & CSS by looking at a screenshot/picture of a website component given by the instructor.● Websites built with tables, forms, images, iframes, etc.● A website for each of design strategies (fixed, adaptive, responsive, fluid, mobile-first, etc.).● Assignments using css pseudo-classes & -elements; grid & flex design; understanding the CSS box model & working with the browser developer tools; CSS transformations, transitions & animations● Assignment to create a website built with Bootstrap based on a topic given by the instructor.	2L +12P
	Client-side Scripting Assignments <i>Suggested Sample (non-exhaustive) Assignments:-</i> <ul style="list-style-type: none">● An assignment for understanding the programming aspects of JavaScript and working with the browser developer tools. The use of the newer features of JavaScript (after ECMA 4) is encouraged.● An assignment working with regular expressions. A search and filter utility can be built.● Assignments for form data processing and validation and use of HTML5 form elements. A web page with form and validated data could be put in a table. The code could be written using table DOM methods and/or HTML DOM methods and/or XML DOM methods.● Assignments using various events (mouse, keyboard, etc. events for the form elements, drag-and-drop, window, browser, etc.).● A web component built using HTML, CSS & JavaScript based on a existing Bootstrap component	2L + 20P

	(e.g. Accordion) <ul style="list-style-type: none"> Assignment with the use of a JavaScript library (jQuery, AngularJS, ReactJS, etc.) 	
	Developing a Game with HTML, CSS & JavaScript. The game should have at least 500 lines of (HTML+Javascript) code and make use of various mouse/keyboard events.	2L
	Server-side Programming Assignments <i>Suggested Sample (non-exhaustive) Assignments:-</i> <ul style="list-style-type: none"> Assignments to work with HTTP headers for passing data and meta-data, cookies, localStorage Assignments to handle data from web forms; handling the request and response payload Assignment to manage web sessions Assignment to develop a CRUD functionality by connecting to a database; AJAX calls 	2L + 12P
	Full stack Web Developments <i>Develop a CRUD application with MEAN/MERN stack</i>	2L + 4P
	Mini-project <i>Ideally done in a group. It should include design and implementation of a web application. Project implementation should mandatorily be built using a templating engine or programming framework (client-side and/or server-side). Project should also use a design framework (e.g. Bootstrap). Conduct and progress of the project could follow industry practices (e.g. git, scrum etc.).</i>	2L
<u>Pedagogy</u>	Hands-on assignments / tutorials / peer-teaching / projects	
<u>References/ Readings</u>	<ol style="list-style-type: none"> Robert W. Sebesta, -Programming the World Wide Web, Pearson Education https://www.w3schools.com/ Steven Holzner, -HTML 5 Black Book https://www.tutorialspoint.com/ Frank W. Zammetti, -Modern Full-Stack Development, Apress Nader Dabit, -Full Stack Serverless, O'Reilly 	
<u>Learning Outcomes</u>	<ol style="list-style-type: none"> Learner will be gain experience and be able to create complete websites Learner will be able to make decision on what web technology to use and for what purpose Learner will appreciate the architecture of web applications and the design decisions 	

Programme: MCA

Course Code: CSC-202

Title of Course: Database Management Systems LAB

Number of Credits: 3 (1L-0T-2P)

Contact hours: 60 hours (12L-0T-48P)

Effective from AY: 2020-21

<u>Prerequisites for the course</u>	A High Level Programming Language(Program Prerequisites); Hands-on experience in object-oriented programming(CSC-106).	
<u>Objectives</u>	This course aims at enabling learners to develop a skill set to design and implement a realistic application, representative of a typical real-life software system.	
<u>Content</u>	Installation of DBMS Softwares	2P
	Data Definition Language(DDL) Statements <ul style="list-style-type: none">• Creating a Database.• Creating a table, with or without constraints.• Understanding Data types.• Altering the structure of the table like adding attributes at a later stage, modifying size of attributes or adding constraints to attributes.• Removing the table created, i.e Drop table in SQL.• Creating Sequence (Auto increment field)	1L+4P
	Query in Data Dictionary <ul style="list-style-type: none">• To view the structure of the table created by the user.• To view user information.• To view integrity constraints.• Altering Session Parameters	1L+4P
	Data Manipulation Language(DML) Statements <ul style="list-style-type: none">• Inserting Data into the table.• Updating Data into the table.• Deleting Data from the table.	1L+6P
	Simple SQL statements <ul style="list-style-type: none">• Displaying all the attributes and tuples from the table.• Displaying selected attributes/tuples from the table.• Using Logical and comparison operators.• String manipulation• Date Comparisons	2L+6P
	Complex SQL Statements <ul style="list-style-type: none">• Using aggregate functions (using Group by and having clauses).• Sorting Data.• Creating SQL Aliases and Views.• Joins and Nested queries.	2L+12P

	<ul style="list-style-type: none"> • Correlated subquery • Derived tables • Given a complex table structure, display records from tables. 	
	Transaction Control Language(TCL) statements <ul style="list-style-type: none"> • Transactions could be made permanent in memory • To rollback the transaction. 	1L+2P
	Embedded SQL statements <ul style="list-style-type: none"> • Loops/ if else statements • Creating Triggers/Procedures/packages • ArrayList and Cursor. • PL/SQL Strings • PL/SQL Object Oriented • Exceptions 	3L+6P
	No SQL	1L+2P
	Mini Project <i>Will be done in a group of max 3 members(ideally). It should include design and implementation of a real world scenario. Project implementation should mandatorily be built using a two tiered architecture.</i> <ol style="list-style-type: none"> 1. Obtaining Client Specifications and converting the same to a Conceptual Design. 2. The project will be implemented on a (at least) two tiered architecture on any RDBMS platform. 3. A Project Report will need to be submitted – ideally Documentation for A User and an Administrator separately. <p>The project report that they submit consists of (i) Feasibility study (ii) ER Diagrams (iii) Tables normalized in an appropriate normal form with integrity and domain constraints noted. (iv) User Interface Design -Form and Report design , including triggers that may need to be written (v) User Manual Peer reviews of ERDs are held in the class.</p>	4P (in class)
<u>Pedagogy</u>	Hands-on assignments / tutorials / peer-teaching / troubleshooting	
<u>References/ Readings</u>	<ol style="list-style-type: none"> 1. Korth, Silberchartz, — Database System Concepts McGrawhill Publication. 2. Elmasri and Navathe, — Fundamentals of Database Systems , Addison Wesley, New Delhi. 3. Documentation of the DBMS Platform 	

<p><u>Learning Outcomes</u></p>	<ol style="list-style-type: none"> 1. Design and implement a database schema for a given problem-domain 2: Create and maintain tables using SQL 3: Populate and query a database 4. Use Transaction Control Language 5. Creating and Using User Defined Data Types 6. Writing Triggers & Stored Procedures 7. Prepare reports 8. Application development using PL/SQL & front end tools

Programme: M .C.A
Course : CSC 301
Number of Credits: 3(3L+0P)
Effective from AY: 2020-21

Title of the Course: Machine Learning
Hours: 36L

<u>Prerequisites for the course:</u>	Mathematics for Computer Science(CSC-203)	
<u>Objectives:</u>	This course provides students with an in-depth introduction to three main areas of Machine Learning: supervised and unsupervised and reinforcement learning.this course will cover some of the main models and algorithms for regression, classification, clustering and Markov decision processes	
<u>Content:</u>	<p>1. Introduction :- well posed learning problem – designing a learning system-perspectives and issues in machine learning.</p> <p>2. Concept learning – concept learning task –notation – inductive learning hypothesis-concept learning as search-version space and candidate elimination algorithm-decision tree –random forest.</p> <p>3. Revision of linear regression - logistic regression-Support vector machine kernel- Model selection and feature selection-Ensemble methods: Bagging, boosting. Evaluating and debugging learning algorithms.</p> <p>4. Continuous Latent Variables-Revision of Principal Component Analysis -Maximum variance formulation - Minimum-error formulation - Applications of PCA - PCA for high-dimensional data.</p> <p>5. Neural Networks -Feed-forward Network Functions – perceptron -Weight-space symmetries -Network Training - Parameter optimization -Local quadratic approximation - Use of gradient information - Gradient descent optimization - Error Backpropagation - Evaluation of error-function derivatives - A simple example - Efficiency of backpropagation - The Jacobian matrix - The Hessian Matrix - Diagonal approximation - Outer product</p>	<p>2 hrs</p> <p>3 hrs</p> <p>5 hrs</p> <p>5 hrs</p> <p>7 hrs</p>

	<p>approximation - Inverse Hessian- Finite differences - Exact evaluation of the Hessian - Fast multiplication by the Hessian.</p> <p>6. Deep learning – Deep Feedforward Networks - - Gradient-Based Learning - Hidden Units - Architecture Design -CNN and RNN (simple RNN and LSTM) , language models(Transformers,BERT, GPT3)</p> <p>8. Unsupervised learning ;Clustering.K-means.EM.Mixture of Gaussians.</p> <p>9. Sequential Data - Markov Models - Hidden Markov Models -Maximum likelihood for the HMM -The forward-backward algorithm - The sum-product algorithm for the HMM -Scaling factors - The Viterbi algorithm.</p> <p>10. Reinforcement learning – introduction- learning task-Q learning-non deterministic rewards and actions-temporal difference learning.</p>	<p>5 hrs</p> <p>3 hrs</p> <p>3 hours</p> <p>3 hrs</p>
<u>Pedagogy:</u>	lectures/ tutorials/assignments/self-study	
<u>References/Readings</u>	<p>Main Reading :-</p> <ol style="list-style-type: none"> 1.Introduction to Statistical Learning, Gareth James, Daniela Witten, Trevor Hastie, Robert Tibshirani, Springer, 2013. 2. EthemAlpaydin, Introduction to Machine Learning, MIT Press. 3. Richard O. Duda, Peter E. Hart, David G. Stork Pattern Classification,. 4. Peter Flach , Machine Learning , Cambridge 5.Christopher M. Bishop,Pattern recognition and machine Learning, springer. 6.Deep Learning, Ian Good fellow, MIT press 	

	7.Tom Michele, Machine Learning, McGraw-Hill.	
<u>Learning Outcomes</u>	<ol style="list-style-type: none"> 1. Develop an appreciation for what is involved in learning from data. 2. Understand a wide variety of learning algorithms. 3. Understand how to apply a variety of learning algorithms to data. 4. Understand how to perform evaluation of learning algorithms and model selection. 5. Equips them with a general understanding of deep learning. 	

Programme: MCA

Course Code: CSO -1

Number of Credits: 4 (4L-0T-0P)

Effective from AY: 2021-22

Title of Course: Introduction to Cryptography

Total contact hours: 48 hours (48L-0T-0P)

<u>Prerequisites for the course</u>	Knowledge of computer networks and protocols(CSC-104)	
<u>Objectives</u>	To understand basics of Cryptography and Network Security.To learn about how to maintain the Confidentiality, Integrity and Authenticity of a data. To understand different protocols for network security to protect against the threats in the networks.	
<u>Content</u>	Foundations of Cryptography and Security <ul style="list-style-type: none">• Ciphers and Secret Messages,• Security Attacks and Services.• Classical encryption techniques	4 hours
	Mathematical Tools for Cryptography <ul style="list-style-type: none">• Substitutions and Permutations• Modular Arithmetic• Euclid's Algorithm• Finite Fields• Polynomial Arithmetic	4 hours
	Design Principal of Block Ciphers <ul style="list-style-type: none">• Theory of Block ciphers• Feistel Cipher network Structures• DES, triple DES and AES• Modes of Operation (ECB, CBC, OFB, CFB)• Strength of DES, AES	8 hours
	Pseudo Random Numbers and Stream Ciphers <ul style="list-style-type: none">• Pseudo random sequences• Linear Congruential generators• Cryptographic generators• Design of stream Ciphers• RC4	2 hours
	Public Key Cryptography <ul style="list-style-type: none">• Prime Numbers and testing for primality• Factoring large numbers• Discrete Logarithms	2 hours
	Asymmetric Algorithms <ul style="list-style-type: none">• RSA• Diffie-Hellman• ElGamal• Introduction of Elliptics curve cryptosystems• Key Management	8 hours

	<ul style="list-style-type: none"> • Key exchange algorithms • Public Key Cryptography Standards 	
	Hashes and Message Digests <ul style="list-style-type: none"> • Hashing functions and their properties • Message Authentication code • MD5 • SHA-3 • HMAC 	6 hours
	Digital Signatures, Certificate and Standards <ul style="list-style-type: none"> • Digital signature standards (DSS and DSA) • Public Key Infrastructures • Digital certificates • Basics of PKCS standards 	4 hours
	Authentication <ul style="list-style-type: none"> • Kerberos • X509 Authentication Service 	4 hours
	Web Security protocols <ul style="list-style-type: none"> • IP Security • Transport Layer Security (TLS) • Wireless Security 	6 hours
<u>Pedagogy</u>	Hands-on assignments / tutorials / peer-teaching / troubleshooting	
<u>References/ Readings</u>	<ol style="list-style-type: none"> 1. Stallings William, “ Cryptography and Network Security: Principles and Practises”, 5th edition, Prentice Hall 2. Kahate Atul, “Cryptography and Network Security” Tata McGraw-Hill 3. Menezes A. J., P.C. Van Oorschot and S.A. Vanstone, “Handbook of Applied Cryptography” 	
<u>Learning Outcomes</u>	<p>After successful completion of the course, the learners would be able to</p> <ul style="list-style-type: none"> • Provide security of the data over the network. • Implement various networking protocols. • Protect any network from the threats in the world. 	

Programme: MCA

Course Code: CSO-2

Title of Course: Android App Development

Number of Credits: 4 (4L-0T-0P)

Total contact hours: 48 hours (48L-0T-0P)

Effective from AY: 2021-22

<u>Prerequisites for the course</u>	Hands-on experience in object oriented programming(CSC-106) and web development basics(CSC-201,CSC-205) and Knowledge of OS(CSC-103)	
<u>Objectives</u>	On completion of this course, the learner should be able to successfully build, debug and deploy android apps.	
<u>Content</u>	Android OS, Ecosystem & Basics <ul style="list-style-type: none">• Mobile Platforms & OSs; Approaches to mobile development; Android OS; Android System Architecture; Android App Lifecycle; Play Store• Intro; Create Your First Android App; Layouts, Views and Resources; Text and Scrolling Views; Resources to Help You Learn• Activities and Intents; The Activity Lifecycle and Managing State; Starting Activities with Implicit Intents• Debugging your apps; Testing your app; Support libraries, and Backwards Compatibility	15 hours
	User Interface <ul style="list-style-type: none">• Screen Sizes; User Interaction - User Input Controls, Menus; Screen Navigation; RecyclerView• Delightful User Experience; Drawables, Themes and Styles; Material Design; Providing Resources for adaptive layouts• Testing the User Interface	15 hours
	Background Tasks <ul style="list-style-type: none">• Background Tasks; AsyncTask and AsyncTaskLoader; Connecting to the Internet; Broadcast Receivers; Services• Triggering, Scheduling, and Optimizing Background Tasks; Notifications; Alarm Manager; Transferring Data Efficiently	9 hours
	Data Saving, Retrieving, Loading <ul style="list-style-type: none">• Overview to storing data• Shared Preferences; App Settings• SQLite; Firebase• Sharing Data: Content Resolvers and Content Providers• Using Loaders to Load and Display Data• Connecting with API service endpoints	9 hours
<u>Pedagogy</u>	Hands-on assignments / tutorials / peer-teaching /	

	troubleshooting	
<u>References/ Readings</u>	<ol style="list-style-type: none"> 1. Bill Philips & Brian Hardy, “Android Programming: The Big Nerd Ranch Guide” 2. Dawn Griffiths & David Griffiths, “Head First Android Development” 3. Ian F. Darwin, “Android Cookbook” 4. https://developer.android.com 5. https://kotlinlang.org 	
<u>Learning Outcomes</u>	<ol style="list-style-type: none"> 1. Learner will understand the android ecosystem, android versions & compatibility across them. 2. Learner will be able to design user interfaces specifically to be run native android devices. 3. Learner will be able to evaluate which type of views & widgets are preferable for various use cases. 4. Learner will be able to build and design navigation flows in an app. 5. Learner will be able to connect the app to Android services or apps already available on the device. 6. Learner will be able to build apps that can store data locally or remotely. 	

Programme: MCA

Course Code: CSO-3

Title of Course: Programming Paradigms

Number of Credits: 4 (4L-0T-0P)

Total contact hours: 48 hours (48L-0T-0P)

Effective from AY: 2021-22

<u>Prerequisites for the course</u>	Hands-on experience in programming(Program Prerequisites; CSC-101)	
<u>Objectives</u>	To Learn and understand various programming paradigms.	
<u>Content</u>	Introduction <ul style="list-style-type: none">• Programming paradigm concept, motivation, types and classification of paradigms.• Factors with respect to programming languages: Binding times and flexibility; Scoping; First class values; Abstraction; Typing; Storage Allocation & Dynamic Memory	4 hours
	Imperative Programming <ul style="list-style-type: none">• Variables and data types; Operators and expressions; Input/Output operations, Decision constructs; Looping constructs• Procedural (<i>in Python/C</i>) -- blocks & scope; procedures (functions)• Object Oriented (<i>in Java/C++</i>) -- classes & objects, object-oriented principles (encapsulation, abstraction, inheritance, polymorphism)	4 hours
	Functional Programming (<i>in Haskell/Clojure</i>) <ul style="list-style-type: none">• Revision of mathematical Functions“ concepts• Side effects; Pure functions• Type induction• Defining functions• Currying; Function composition• Recursion• Lazy evaluation; infinite lists• List comprehensions• Higher order functions; Folds	16 hours
	Logic Programming (<i>in Prolog/ECLiPSe Constraint language</i>) <ul style="list-style-type: none">• Revision of mathematical Logic concepts• Programming “without algorithms”• Logic programming with facts, rules and goals• Recursion; Lists• Constraint logic programming; constraints as relationship between variables; solving puzzles (like sudoku)	8 hours
	Event-driven Programming (<i>in Python/.NET</i>) <ul style="list-style-type: none">• Events	8 hours

	<ul style="list-style-type: none"> ● Main loop & callback ● Scheduler & Event handlers; Triggers ● Exception handling ● Reliable eventing ● Asynchronous triggers 	
	Multi-Paradigms and more <ul style="list-style-type: none"> ● Language support for multi paradigms; Benefits & issues ● Parallel programming -- Data Parallelism (<i>in OpenMP</i>) and Message Passing (<i>in MPI</i>) ● Reactive programming (<i>in Elm/ReactiveX for Java, JS</i>) ● Meta programming (<i>in Lisp</i>) ● Natural Language Programming (<i>in SciLab/MATLAB</i>) 	8 hours
<u>Pedagogy</u>	Hands-on assignments / tutorials / peer-teaching / pair programming/ reading research papers/ presentations	
<u>References/ Readings</u>	<ul style="list-style-type: none"> ● Terrance W. Pratt, Marvin V. Zelkowitz, "Programming Languages - Design & Implementation" ● Robert L. Sebesta, "Concepts of Programming Languages" ● Ravi Sethi, "Programming Languages Concepts & Constructs" ● Bruce J. Mac Lennan, "Principles of Programming Languages: Design, Evaluation, and Implementation" ● Kenneth C. Louden, "Programming Languages: Principles and Practice" ● Allen Tucker, Robert Noonan, "Programming Languages: Principles and Paradigms" ● Graham Hutton, "Programming in Haskell" ● W. Clocksin, "Programming in Prolog" ● Slim Abdennadher, Thom Frühwirth, "Essentials of Constraint Programming" ● Roland Kuhn, Brian Hanafée, Jamie Allen, "Reactive Design Patterns" 	
<u>Learning Outcomes</u>	<ol style="list-style-type: none"> 1. Learner will be able to distinguish between different programming paradigms 2. Learner will be able to choose an adequate programming paradigm in solving specific software engineering problems 3. Learner will be able to recognize the similar concepts implemented in a different way across different programming languages and paradigms 	

Programme: MCA

Course Code: CSO-4

Number of Credits: 4 (4L-0T-0P)

Effective from AY: 2021-22

Title of Course: Theory of computation

Contact Hours: 48 hours (48L-0T-0P)

<u>Prerequisites for the course</u>	Program Prerequisites	
<u>Objectives</u>	<ol style="list-style-type: none">1. To give an overview of the theoretical foundations of computer science from the perspective of formal languages2. To illustrate finite state machines to solve problems in computing.	
<u>Content</u>	General Concepts of Automata Theory: Alphabets Strings, Languages, Grammars, Applications of Automata Theory.	2 hours
	Finite Automata (FA): Introduction, Deterministic Finite Automata (DFA) - definition and notations, language of a DFA. Nondeterministic Finite Automata (NFA)- Definition, language of an NFA, Equivalence of DFA and NFA, Applications of FA. Finite Automata with Epsilon Transitions, Eliminating Epsilon transitions, Minimization of DFA. Finite automata with output (Moore and Mealy machines) and inter-conversion.	10 hours
	Regular Expressions (RE): Introduction, Identities of RE. Finite Automata and Regular Expressions - conversions, Algebraic Laws for Regular Expressions, applications of RE. Regular grammars: Definition, regular grammars, and FA, Proving languages to be non-regular (Pumping lemma), Properties of Regular Language, applications.	8 hours
	Context-Free Grammar (CFG): Definition, Derivations Using a Grammar- Leftmost and rightmost derivation, Parse tree, Applications, Ambiguity in CFG. Minimization of CFG, CNF, GNF, Pumping Lemma for CFL's.	8 hours
	Pushdown Automata (PDA): Definition, Language of PDA- Acceptance by Final State and Acceptance by Empty stack, Equivalence of CFG and PDA, Deterministic PDA, Chomsky normal form of CFG Turing Machines (TM): Formal definition and behavior, Languages of a TM, TM as accepters, and TM as a computer	12 hours

	of integer functions, Types of TMs.	
	Recursive And Recursively Enumerable Languages (REL): Properties of recursive and recursively enumerable languages, Universal Turing machine, The Halting problem, Undecidable problems about TMs. Context-sensitive language and linear bounded automata (LBA), Chomsky hierarchy, Decidability.	8 hours
<u>Pedagogy</u>	lectures/ tutorials/assignments/self-study	
<u>References/ Readings</u>	<ol style="list-style-type: none"> 1. John E. Hopcroft, Rajeev Motwani, Jeffrey D. Ullman, Introduction to Automata Theory Languages and Computation, Pearson Education, India (latest edition) 2. H.R.Lewis and C.H.Papadimitriou, Elements of the Theory of Computation, PHI, (latest edition) 3. J.Martin, Introduction to Languages and the Theory of Computation, TMH (latest edition) 	
<u>Learning Outcomes</u>	<p>At the end of the course students will be able to:</p> <ul style="list-style-type: none"> ● To use basic concepts of formal languages of finite automata techniques ● To design Finite Automata for different Regular Expressions and Languages ● To Construct context-free grammar for various languages 	

Programme: MCA

Course code: CSO-5

Title of course: Data Analytics

Number of credits: 4 (4L-0T-0P)

Total contact hours: 48 hours (48L)

Effective from AY: 2021-22

<u>Prerequisites for the course</u>	Program Prerequisites; DBMS(CSC-202); Probability and statistics(CSC-203)	
<u>Objectives</u>	In this course, the learner will learn to ask the right questions to understand and analyze data by doing EDA and building statistical models. The learner will also learn to convert data into insights so as to be able to tell the story about data.	
<u>Content</u>	<p>1.Introduction:- what is data analytics and data science -areas of data sciences- data analytics intro</p> <p>2. Revision of statistics:- Measures of central tendency-Measures of location of dispersions-Statistical hypothesis generation and testing- Chi-Square test-t-Test-Analysis of variance-Correlation analysis-Maximum likelihood test-Practice and analysis with R/python.</p> <p>3. Data preparation-Business Intelligence tools- Datawarehouse-DataBase-setting up Microsoft SQL server for practice-ETL-BI tools-SQL programming for data science</p> <p>4. Getting started with basics of python & R- library for data science</p> <p>5. Visualization and Exploratory data analysis (EDA)- various plots using python , R and Tableau and sweetvize - histogram-kernel density plots- combining plot styles-box and violin plots-regression plots-heat maps and clustered matrices.</p> <p>6. Data analysis techniques-Regression analysis- Classification techniques-Clustering-Association rules analysis-Practice and analysis with R/python.</p>	<p>Hours</p> <p>3L</p> <p>3L</p> <p>7L</p> <p>2L</p> <p>9L</p> <p>9L</p>

	<p>7. Assessing the model:- Accuracy paradox- cumulative accuracy profile(CAP)- Drawing insights from the model- power insights from your CAP-coefficients of logistic regression-odd ratio-odd ratio vs coefficient-deriving insights from coefficients- Model maintenance .</p> <p>8. Case studies and projects:- Understanding business scenarios-Feature engineering and visualization- Sensitivity Analysis- data analytics project in python or R in different domains like financial , agriculture, health, language etc.</p>	<p>8L</p> <p>7L</p>
<u>Pedagogy</u>	<ol style="list-style-type: none"> 1. Problem solving approach with real life problems. 2. hands-on assignments 3. Learning theory and putting them into practice by doing projects in either python or R programming 	
<u>References/ Readings</u>	<ol style="list-style-type: none"> 1. Introduction to statistical learning by Trevor and Robert. 2. The Elements of Statistical Learning by Trevor Hastie. 3. Beginning R-the statistical programming language by Mark Gardener. 4. probability and statistics for Engineers and scientists by Ronald and Raymond. 5. Storytelling with data by Cole Nussbaumer Knaflic 6. Python for data analysis by Wes McKinney 	
<u>Learning Outcomes</u>	<p>Having done this course equips any aspiring data analyst /data scientist to know the data –learn to read between lines and to see the hidden insights otherwise not visible to ordinary vision of the common man. The hidden insights collected would help make right decision for any business problem</p>	

Programme: MCA

Course Code: CSO-6

Number of Credits: 4 (4L-0T-0P)

Effective from AY: 2021-22

Title of Course: Network Programming

Contact Hours: 48 hours (48L-0T-0P)

<u>Prerequisites for the course</u>	Operating Systems(CSC-103), Internet technology(CSC-104),Linux (CSC-107)	
<u>Objectives</u>	To introduce the basic concept of network programming in UNIX and Windows OS environments.	
<u>Content</u>	Basic UNIX programming: Overview of process, signal handling, and related system calls. Named and unnamed pipes and related system calls.	6 hours
	Elementary Socket Programming: Berkley Sockets Overview, Introduction to sockets, Socket addresses, Basic Socket system calls, Error handling. Concept of Reserved ports, Elementary TCP and UDP socket programming. Socket options. Name and Address Conversion functions. Interface Operations using „ioctl“.	12 hours
	I/O Operations: Synchronous vs. Asynchronous I/O. I/O Multiplexing using „select“ and „pselect“., Sockets and signals, Signal driven I/O. Nonblocking I/O: Nonblocked „accept“ and „connect“. Broadcasting and Multicasting. Sending and Receiving Out of Band data using „select“ and signals. Advance I/O functions.	12 hours
	Daemon processes and Inetd Super Server	2 hours
	Network Programming in the .NET Framework: System.Net classes overview, working with URI, IP addresses, DNS class, Requests and responses, authentication, and permission.	4 hours
	Socket programming in .NET Working with sockets in .NET, Asynchronous programming, socket permission, support for IPv6, support for TCP, .NET Remoting, support for UDP, multicast sockets. Network tracing, network information, cache management, security.	6 hours
	Programming applications: Time and date routine, Ping, Trivial file transfer protocol, design of chat application using multicast socket programming.	6 hours

<u>Pedagogy</u>	lectures/ Hands-on assignment/tutorials	
<u>References/ Readings</u>	Main Reading: 1. Steven W.R., Unix Network Programming, Prentice Hall of India. 2. Microsoft Software Developers Network Documentation.	
<u>Learning Outcomes</u>	After completing the course, students will be able to: <ul style="list-style-type: none"> • Analyze and write socket API based programs • Design and implement client-server applications using TCP and UDP sockets 	

Programme: MCA

Course Code: CSO-7

Title of Course: IoT architecture and protocols

Number of Credits: 4 (4L-0T-0P) **Contact Hours:** 48 hours (48L-0T-0P)

Effective from AY: 2021-22

<u>Prerequisites for the course</u>	Program Prerequisites, Operating Systems(CSC-103),Internet Technology(CSC-104).	
<u>Objectives</u>	To understand the fundamentals of Internet of Things and the protocols and standards designed for IoT	
<u>Content</u>	Introduction to IoT: Introduction, IoT ecosystem, Applications, Challenges.	2 hours
	Fundamentals: IoT Devices - Sensors, Actuators, and gateways, Basics of the wireless sensor network.	4 hours
	IoT Architecture & Design: oneM2M, IoTWF, Additional Reference Models, Core functional stack, Data Management and compute stack.	6 hours
	Communicating smart objects: Communication criteria, communication models, IoT access technologies – 3GPP MTC, IEEE 802.11, IEEE 802.15, WirelessHART, ZWave, Bluetooth Low Energy, Zigbee Smart Energy, DASH7	10 hours
	IoT Network Layer: IP as IoT network layer, IPv6, 6LoWPAN, 6TiSCH, RPL, CORPL, CARP	8 hours
	IoT Transport and Application protocols: Transport Layer: TCP, UDP, DCCP, SCTP, TLS, DTLS IoT application transport methods, HTTP, CoAP, XMPP, MQTT, AMQP, DDS	12 hours
	Security in IoT: MAC802.15.4, 6LoWPAN, RPL, Application Layer security.	3 hours
	IoT Application case study: Discuss any 3 applications of IoT	3 hours
<u>Pedagogy</u>	lectures/ tutorials/Hands-on assignments/self-study	
<u>References/ Readings</u>	1. David Hanes, Gonzalo Salgueiro, Patrick Grossetete, Robert Barton, Jerome Henry, “IoT Fundamentals: Networking Technologies, Protocols, and Use Cases for the Internet of Things”, CISCO Press, 2017	

	<ol style="list-style-type: none"> 2. Hersent, Olivier, David Boswarthick, and Omar Elloumi, The internet of things: Key applications and protocols. John Wiley & Sons, 2011. 3. Buyya, Rajkumar, and Amir Vahid Dastjerdi, eds. Internet of Things: Principles and Paradigms. Elsevier, 2016. 	
<u>Learning Outcomes</u>	<p>After completing the course, students will be able to:</p> <ul style="list-style-type: none"> ● Understand the concepts of the IoT Architecture Reference model ● Identify the IoT networking components and protocols. 	

Programme: MCA

Course Code: CSO-8

Title of Course: Quality Assurance and Usability

Number of Credits: 4 (4L-0T-0P)

Total contact hours: 48 hours (48L-0T-0P)

Effective from AY: 2021-22

<u>Prerequisites for the course</u>	Object oriented programming(CSC-106), software engineering tools & processes(CSC-204),web development(CSC-205)	
<u>Objectives</u>	The course is aimed at providing learners with the necessary exposure to the job responsibilities of Software Quality Assurance (QA) engineers & User Experience (UX) designers in the IT industry.	
<u>Content</u>	Testing Web Applications <ul style="list-style-type: none">• Manual Testing• Write test cases• Automated test scripting (e.g. Selenium, QTP)	8 hours
	Developer-centric Testing <ul style="list-style-type: none">• API testing (e.g. Postman, Karate, SOAP-UI)• Revisit to Unit Testing (e.g. NUnit, JUnit)• Tests for Model, View & Controller (MVC)	8 hours
	Building test suites <ul style="list-style-type: none">• Design Patterns in Test Automation<ul style="list-style-type: none">○ Page-Object Model (Page-Object pattern)○ Business-Layer Page-Object pattern○ Using software development design patterns (creational, structural and behavioral) in test scripting• Automated Testing Frameworks (e.g. Cucumber, Jasmine, Mocha, TestNG)• Testing for Behavior Driven Development & Testing for Business Driven Development (e.g. Gherkin)	12 hours
	Non functional testing <ul style="list-style-type: none">• Performance Testing (e.g. Apache JMeter)• Querying logs	6 hours
	Testing for Mobiles Apps	4 hours
	User Experience <ul style="list-style-type: none">• Gulf of evaluation and execution; 7 fundamental & universal design principles; Human error vs Bad design; Double-Diamond Model of Design• Visual Design Elements (line, color, shape, form vs space, value, texture) and extended elements (dot, typography, movement)	10 hours

	<ul style="list-style-type: none"> • Visual Design Principles (scale, dominance/emphasis, balance, harmony) • Wireframing, Mockup & Prototype (Paper & Digital); Use of tools (e.g. Pencil, Adobe XD, Sketch and/or Figma); Interaction & Animation • Raster (e.g. GIMP, Adobe Photoshop) & Vector (e.g. Inkscape, Adobe Illustrator, CorelDraw) Graphic Editing • Maintaining your UX designs" portfolio (e.g. Behance, Dribbble) 	
<u>Pedagogy</u>	Hands-on assignments / tutorials / peer-teaching / mini-project / case studies/ presentations	
<u>References/ Readings</u>	<ol style="list-style-type: none"> 1. Dorothy Graham, Rex Black, Erik van Veenendaal, "Foundations of Software Testing ISTQB Certification" 2. Don Norman, "The Design of Everyday Things" 3. Joseph A. Gatto, Albert W. <u>Learning Outcomes</u>	<ol style="list-style-type: none"> 1. Learners will understand software testing and quality assurance as a fundamental component of software life cycle 2. Learners will efficiently perform quality assurance activities using modern software tools 3. Learners will prepare test plans and schedules for a quality assurance project 4. Learners will understand design workflows while building software products 5. Learner will efficiently create user experience (UX) designs and other deliverables using modern software tools 	

Goa University
P.O. Goa University, Taleigao Plateau, Goa 403 206, India

Syllabus of M.Com Program offered under OA 18A
w.e.f the Academic Year 2020-21

Course Structure of M.Com. Programme Offered in Commerce, Goa Business School and Affiliated Colleges under OA 18A from the Batch Admitted in the Academic Year 2020-21 onwards.

A BRIEF DESCRIPTION OF THE PROGRAMME

The 2-year Master of Commerce course which to be conducted under semester CBCS System, is offered with an objective to provide an extensive specialized knowledge in different domains of Commerce and Business for inculcating an appropriate multiple skills and ethical values in the students. More specifically, the course aims at developing the human potential to serve the various fields of teaching profession and also to serve for research in the social sciences, thereby helping for the needs of industry at micro and macro levels.

OBJECTIVES OF THE COURSE

1. To provide the conceptual knowledge and its applications in various areas of commerce fields.
2. To facilitate the students the various opportunities of studying the professional courses in parallel with Commerce discipline.
3. To provide the knowledge to the students to reach the important positions in teaching, business, industries and related areas of employment opportunities.
4. To provide a scope to the learners to gain the knowledge in understanding the purpose and use of commerce subjects.

PRE-REQUISITES

To seek admission to M. Com Programme a candidate must have passed B. Com Programme with at least 40%. The admission to the M. Com Programme is based on the Common Entrance Examination conducted by the Goa University. The candidates admitted are expected to possess the basic knowledge in the area of all the Commerce Courses covered at B. Com level.

PROGRAMME OUTCOME

M.Com degree program offered by University is outcome based and the outcomes expected are as follows:

1. Enhancing the horizon of knowledge so as to enable the learners to carry out qualitative research and pursue academic or professional careers.
2. Developing Problem Analysis Skills and knowledge and applying the same in real life situation.
3. Using research knowledge and aptitude acquired in the course of study for solving socially relevant problems.

4. Understanding the role and applicability of knowledge acquired in the context of society, environment and sustainable development sticking on to the ethics and values.
5. Developing effective communication skills and ability to work in teams by strengthening group dynamics.
6. Fostering ability to engage in lifelong learning, demonstrating empathetic social concern, contributing to the development of nation, by making sure of awareness gained on various issues.

PROGRAMME SPECIFIC OUTCOME

1. Inculcates managerial skills and theoretical knowledge for managing business units with special focus on functional areas of business and management.
2. Imparts advanced accounting knowledge and skills and provides awareness regarding latest developments in the field of accounting.
3. Enables the acquiring advanced theoretical knowledge on research methods and techniques and also developing capabilities in the application of research in solving business related problems.
4. Acquires the expertise in specialized fields like finance, taxation, marketing, management and information technology.
5. Develops the quantitative aptitude and analytical skills of the learner.
6. Facilitates the learner to pursue career in professional areas of commerce and management such as taxation, financial services, consultancy etc.

DURATION OF THE COURSE:

The M.Com (Semester pattern with Credit System) degree Programme shall be of 2 years' duration divided into two parts, Part I and Part II, and 4 semesters. (In I and II Semesters there will be a total of 8 courses for a total of 16 credits in each semester and in III and IV Semesters there will be a total of 8 courses of 32 credits inclusive of Dissertation.) The M.Com degree examination Part I & II in aggregate shall be of 64 credits (1600 marks).

CREDITS (THEORY, TUTORIAL, PRACTICAL)

In order to award M. Com degree, the candidate must have earned 64 Credits during two years. Of these 32 Credits are from Core Courses and 32 Credits are from Specialization Courses offered during the Second Year. However, the candidate is allowed to opt for up to a maximum of 16 Credits from any other department to meet the requirement.

SUMMER TRAINING

Every student has to undergo a 4 weeks Summer Training in industrial organizations to gain hands on experience at the end of Semester II. Students are responsible for identifying the Organisations for their Summer Training Program.

DISSERTATION

As a part of M. Com Programme, Dissertation is offered as Optional during the Third and Fourth Semester as per OA-18A in lieu of Two Courses. Those students who are going to be offered the Dissertation Option may opt for 3 Courses each during the Semester III and IV.

SCHEME OF TEACHING

There will be 4 periods of 60 minutes each per week per paper. The classes will be conducted on both Offline and Online Mode. The Faculty member engaging the concerned Courses may decide which component of the syllabus to be offered on Off-line / Online Mode, and the required resources for each of the Courses are provided at the end of the Syllabus of each of the Courses.

LIST OF IDENTIFIED COURSES IN M. Com SEMESTER - I

Code No	Name of the Course	Credits	Page No
COC120	Cost and Management Accounting	4	06
COC121	Advanced Financial Management	4	08
COC122	Business Statistics and Research Methodology	4	10

M.COM SEMESTER III & IV –BUSINESS MANAGEMENT SPECIALISATION

Code No.	Name of the Course	Credits	Page No
Specialization Courses in Semester III			
COO340	Advertising and Sales Management	4	72
COO341	Consumer Behavior and Marketing Research	4	75
COO342	Training and Development	4	77
COO343	Performance and Compensation Management	4	79
COO344	Human Resource Development	4	81
COO345	Basic Econometrics	4	83
COO346	Customer Relationship Management	4	86
COO347	Entrepreneurship Management	4	88
COO348	Tourism and Travel Management	4	90
COO349	Marketing Research Analytics	4	92
Specialization Courses in Semester IV			
COO440	Retail Marketing	4	94
COO441	Services Marketing	4	96
COO442	Industrial and Rural Marketing	4	98
COO443	International Marketing	4	100
COO444	Enterprises Resource Planning	4	103
COO445	Industrial Relations and Labour Laws	4	105
COO446	International Trade and Environment	4	107
COO447	Advanced Statistical Analytical Models	4	109
COO448	Digital Marketing and Social Media Management	4	112
COO449	Organizational Behavior	4	114
Field Based Optional Course [Dissertation]			
COO450	Dissertation	8	

ABOUT OPTIONAL COURSES

At the beginning of the III Semester, Department will open the Specialization Courses from the list given above depending on availability of Faculty Members. Specialization Courses will be offered only if **20%** of the students opt for any Specialization Course. The students are required to opt for 4 Courses each during the Semester III and IV from the Specialization Courses offered. Students have the option of choosing any other Optional Courses (maximum of 2 Courses per Semester III and IV) offered by other Departments and also the Courses available at the **SWAYAM portal**. Those students who are going to take up the Dissertation Option may opt for 3 Courses each during Semester III and IV.

Recommended distribution of courses Semester – Wise

SEMESTER – I	No of Courses	SEMESTER – II	No of Courses
	CORE - I		CORE - I
	CORE - II		CORE - II
	CORE - III		CORE - III
	CORE - IV		CORE - IV

SEMESTER – III (including Dissertation)	No of Courses	SEMESTER – IV (Including Dissertation)	No of Courses
	OPTIONAL - I		OPTIONAL - I
	OPTIONAL - II		OPTIONAL - II
	OPTIONAL - III		OPTIONAL - III
	OPTIONAL - IV		OPTIONAL - IV

SUMMER TRAINING:

At the end of Semester – II, students will have to undergo four weeks (10th May to 10th June) Summer Training to gain on the job experience in commercial / industrial organisations / finance & investment companies / professional firms such as CA's, Stock Brokers, Project management Consultants / small and medium enterprises in Goa or outside. At the end of the summer training, students will be required to produce a certificate of experience for duration of four weeks to become eligible for admission to the second year M. Com Course. It is the responsibility of the students to identify and join the Organisations for their Summer Training. Students have to submit the Experience Letter and the Evaluation Form duly filled and certified by the official from where they have completed their Summer Training.

SEMESTER – I - SYLLABUS

Programme : M. Com
 Course Code : **COC120**
 Course Title : **Cost and Management Accounting**
 Number of Credits : 3
 Effective from AY : 2020-21

Need of the Course :	The subject ‘Cost and Management Accounting’ is very important and useful for optimum utilisation of existing resources. It is an indispensable discipline for Corporate Management, as the information collected and presented to Management based on Cost and Management Accounting techniques helps to solve not only specific problems but also guides them in decision making.	
Description of the Course :	This course is designed to motivate the students to understand (1) Introduction to Cost and Management Accounting and Marginal Costing (2) Standard Costing and Budgetary Control (3) Preparation and Interpretation of Financial Statements (4) Preparation of Fund Flow and Cash Flow Statement	
Objectives of the Course :	To understand the nature, scope and utility of Cost and Management Accounting. To understand how Cost Accounting arises out of the need to make business decisions. To acquire knowledge and understanding of the concepts, techniques and practices of Cost and Management Accounting and to develop skills for decision making.	
Course Content		
Unit 1	: Introduction to Cost and Management Accounting and Marginal Costing	10 Hours
Cost Accounting- Meaning, Objectives and Scope, Management Accounting-Meaning, Objectives and Scope, Tools and Techniques of Management Accounting, Relationship of Cost Accounting, Financial Accounting, Management Accounting and Financial Management, Conflicts in Profit versus Value Maximisation Principle, Role of Management Accountant in Decision Making. Marginal Costing- Meaning, Advantages, Limitations and Applications. Breakeven Analysis, Cost-Volume Profit Analysis, P/V Ratio and its Significance, Margin of Safety, Absorption Costing: System of Profit Reporting and Stock Valuation, Difference between Marginal Costing and Absorption Costing, Income Measurement under Marginal Costing and Absorption Costing. (Practical Problems)		
Unit 2	: Standard Costing and Budgetary Control	14 Hours
Standard Costing- Definition, Significance and Applications, Various Types of Standards, Installation of Standard Costing System-for Material, Labour, and Overhead. Variance Analysis for Materials, Labour and Overheads, Accounting Treatment of Variances. Benchmarking for Setting of Standards, Variance Reporting to Management. (Practical Problems) Budgetary Control- Budget Concept, Manual, Fixed and Flexible Budgets, Preparation and Monitoring		

of Various Types of Budgets, Budgetary Control System- Advantages, Limitations and Installation. Zero Base Budgeting, Programme and Performance Budgeting. (Practical Problems)

Unit 3	: Preparation and Interpretation of Financial Statements	11 Hours
Financial Statements- Nature, Attributes, Objectives, Importance, Limitations, Recent Trends in Presenting Financial Statements, Financial Statements Analysis- Types, Methods, Objectives, Limitations, Ratio Analysis- Accounting, Uses, Classification, Advantages, Limitations. (Practical Problems)		
Unit 4	: Fund Flow and Cash Flow Statement	13 Hours
Fund Flow Statement Analysis – Definition, Features, Steps for Preparation of Fund Flow Statement. Cash Flow Statement Analysis – Classification, Preparation of Cash Flow Statement, Uses of Cash Flow statement, Difference between Cash Flow and Fund Flow Statement. (Practical Problems)		
Pedagogy	The following methods and forms of study are used in the course Lectures, Case Studies and Self-study (doing home assignments based on solving practical problems) Self-study on reading reference books and solving additional problems in Cost and Management Accounting. In addition to the lectures, review sessions will be scheduled to address assignments, end of chapter questions and in some occasion's assigned cases.	
Reference/Readings	Advanced Cost & Management Accounting, Saxena, V/ Vashist, C. 4th edition Sultan Chand & Sons Advanced Cost Accounting, Jain, S/ Narang, K. 9th edition Kalyani Cost & Management Accounting, Inamdar, S. M. 14th edition Everest Cost & Management Accounting Kishore, R. M. 4th edition Taxman Allied Service Principles & Practice of Cost Accounting, Bhattacharyya, A. K. 3rd edition PHI	
Course Outcome	Upon Completion of the course the students will be able to: CO1 Apply Cost Accounting concepts and techniques in the decision-making process. CO2 Make decisions such as pricing, special order pricing, make-or-buy and elimination of a part of the company or replacement of equipment. CO3 Understand the relevance of different types of costs in the decision-making process such as relevant costs, sunk costs or controllable costs. CO4 Understand fundamental concepts in Financial, Cost & Management Accounting. CO5 Develop analytical skills associated with the preparation and interpretation of Financial Statement	

Programme : M COM
 Course Code : COC 121
 Course Title : **Advanced Financial Management**
 Number of Credits : 03
 Effective from AY : 2020-21

Need of the Course	: This course will enable to the student to understand how corporations make important investment and financing decisions, and how they establish working capital policies. The course also lays a foundation for more complex financial topics that arise in additional elective courses in finance. This course in financial management describes the corporation and its operating environment; it will help any future manager to understand how the finances of a company work, and how they will be interfacing with finance.
Description of the Course	: This course is designed to provide fundamental knowledge about the finances and management of finances of the company linked to the long term and short term decisions. The course provides an ability to manage and run a small company or organization, understanding its competitive and institutional positioning and identifying its strengths and weaknesses and also ability to evaluate the situation and the foreseeable evolution of the company based on the relevant records of information.
Objectives of the Course	: To provide fundamental knowledge about the finances and management of finances of the company. To enable the students to understand the process of financial decision making to enhance shareholder's wealth. To understand the techniques of financial management and apply the techniques in financial decision making. To understand the concept and techniques of earnings management and financial reporting.

Course Content

Unit 1	:Introduction to Financial Management	12 hours
Introduction – Meanings and Definition - Goals of Financial Management - Finance Functions - Interface between Finance and Other Business Functions – Time Value for Money – Valuation of Bonds and Shares.		
Unit 2	:Financing and Investment Decisions	14 hours
Introduction - Meaning of Cost of Capital - Cost of Different Sources of Finance - Weighted Average Cost of Capital – Leverage - Operating Leverage - Application of Operating Leverage - Financial Leverage - Combined Leverage - CAPITAL STRUCTURE – Introduction - Factors affecting Capital Structure - Theories of Capital Structure (Including problems). CAPITAL BUDGETING - Introduction - Capital Budgeting Process - Investment Evaluation - Appraisal Criteria - Capital Budgeting Techniques. (Including problems). RISK ANALYSIS IN CAPITAL BUDGETING - Risk adjusted Discount Rate - Certainty Equivalent Approach - Probability Distribution Approach -Sensitivity Analysis – Scenario Analysis- Simulation Analysis - Decision Tree Approach (Including problems).		
Unit 3	:Working Capital and Dividend Decisions Concepts of Working Capital	12 hours

- Operating Cycle - Determinants of Working Capital - Approaches for Working Capital Management - Estimation of Working Capital - Working Capital and Bank Finance. [Includes practical problems]. CASH MANAGEMENT - Motives for Holding Cash - Objectives of Cash Management - Models for determining Optimal Cash Needs - Cash Planning - Cash Forecasting and Budgeting. [Includes practical problems]. Inventory Management: Purpose of Inventory - Costs Associated with Inventories - Inventory Management Techniques - Importance of Inventory Management Systems Receivables Management: Introduction - Costs associated with maintaining Receivables - Credit Policy Variables - Evaluation of Credit Policy – Dividend Decisions - Theories of Dividends – Relevancy Models – Gordon’s Model – Walter’s Model – Irrelevancy Model - Miller and Modigliani Model - [Includes practical problems].

Unit 4	:Business Valuation and Earnings Management	10 hours
Conceptual Framework of Business Valuation, Approaches/Methods of Valuation and other Approaches to Value Measurement; Earnings Management (EM)– concept and definition, objectives and motives of EM, Techniques of EM, means to Check Window Dressing through EM, Corporate Frauds under Companies Act, 2013		
Pedagogy	: Lecture/ Classroom Discussion/ Presentation/ Case Study/ Group Project or a combination of some of these. Sessions shall be interactive in nature to enable peer group learning.	
Reference/Readings	: Khan, M.Y & Jain, P.K.: Financial Management; Tata McGraw Hill, New Delhi, 2008. Pandey, I. M.: Financial Management; Vikas Publishing House, New Delhi, 2005. Chandra, Prasana: Financial Management; Tata McGraw Hill, New Delhi, 2008. Brealey and Meyers: Principles of Corporate Finance; Tata McGraw Hill, New Delhi, 2008. Keown, Martin, Petty and Scott (Jr): Financial Management; Principles and Applications; Prentice Hall of India, New Delhi, 2002. Gitman, L.J: Principles of Managerial Finance; Addison Wasley, 2009. Vanhorne, James C: Financial Management and Policy; Prentice Hall of India, New Delhi, 2002. 8. Kishore Ravi, M: Financial Management; Taxman, 2006	
Course Outcome	CO1 Gain expert knowledge of principles and concepts used in finance; CO2 be able to find out the best course of action among several financial options; CO3 gain the understanding to apply financial concepts and principles in overall management of an enterprise; CO4 learn to manage short-term resources of a business firm; and CO5 have an idea as to how financial management decisions are taken in the Public sector undertakings CO6 gain understanding of the concept of Earnings management.	

Programme : M.Com
 Course Code : COC122
 Course Title : **Business Statistics & Research Methodology**
 Number of Credits : 4
 Effective from AY : 2020-21

Need of the Course :	To familiarize students with the meaning and importance of carrying out successful research, its wide applications in various fields of study and the importance of making calculated decisions in the present globalised business world.
Description of the Course :	This course is designed to motivate the students to identify research gap, identification and collection of relevant data (uni-Variate, bi-Variate, and multi-Variate data sets) and finally analysis of data using various statistical techniques starting from reliability/normality testing, organising, describing, relationship and prediction, and testing the significance. Students are also familiarized with intellectual honesty and ethics while preparing a research report.
Objectives of the Course :	1. To understand the significance of research. 2. To develop research questions, objective and related hypothesis. 3. To learn how to process the data and interpret results.

Course Content

Unit 1	: Introduction to Research	8 Hours
Need, Purpose and Importance of research – Application of research – Types and Methods of research – Steps in research. Identification of Research Gap – Content Analysis of the existing literature – Develop Research Questions, related Objectives and Hypothesis – Research Design. Importance of Data (sample Vs population / sampling methods / primary Vs secondary) identification, collection and analysis – Preparation of Questionnaire. Measurement and Scaling Techniques – Validity and Reliability – Collection of data (pilot studies and Pre-tests).		
Unit 2	: Data Analysis - I	16 Hours
Uni / Bi / Multi Variate Data – Organizing sample data (Tabulation and Graphs). [<i>self-study of reading relevant research papers</i>] [<i>Includes practical problems on testing Cross Tabulation</i>]. Describe the nature of sampling distribution – How to assess Performance, Reliability, Symmetry and Normality. [<i>self-study of reading relevant research papers</i>] [<i>Includes practical problems</i>]. Analysing relationships and prediction using Regression and Time Series Analysis (Predictive Analytics) – Assessing relationships, reliability, cause and effect, lag and lead, and level of significance. [<i>self-study of reading relevant research papers</i>] [<i>Includes practical problems</i>]. Application of probability, Mathematical Expectation and probability distributions (Binomial / Poisson / Normal). [<i>Includes practical problems</i>].		
Unit 3	: Data Analysis - II	18 Hours
Importance of Theory of Estimation and Testing of Hypothesis (Large and Small Sample Testing, Non-Parametric Testing). [<i>includes practical problems</i>] Basics of Multi-variate data analysis using Exploratory Factor Analysis (EFA), Confirmatory Factor Analysis (CFA) and Structural Equation Modelling (SEM). [<i>Self-study of reading relevant research papers</i>].		
Unit 4	: Report writing	6 Hours

What constitutes a research report – Types of reports – Intellectual honesty and ethics (Plagiarism, Cheating, Fabrication and Falsification, Multiple Submission, Misuse of Academic Materials, Complicity in Academic Dishonesty).	
Pedagogy	<p>The following methods and forms of study are used in the course Lectures, Case Studies and Practical's.</p> <p>Self-study on carrying out literature review and preparing content analysis.</p> <p>Self-study of solving home assignments using MS Excel and other statistical software's, working with psychometric and econometric data and also doing research based on the web.</p>
Reference/Readings	<p>Chawla, Deepak and Sondhi, Neena. Research Methodology: Concepts and Cases. 2/e, 2016, Vikas Publishing House Private Ltd.</p> <p>Cooper, Donald R and Schindler, Pamela S, Business Research Methods, 9/e, 2006, Tata McGraw Hill.</p> <p>Krishnaswami, O. R, Ranganathan. M and Harikumar P. N. Research Methodology. 1/e, 2016. Himalaya Publishing house.</p> <p>Gupta, S.C. Fundamentals of Statistics. 17/e, 2019. Himalaya Publishing House.</p> <p>Aizel, Amir D and Sounderpandian, Jayavel. Complete Business Statistics, 6/e, 2019. Tata McGraw Hill.</p>
Course Outcome (CO)	<p>Upon completion of the course the students will be able to:</p> <p>CO1: Successfully carryout Content Analysis.</p> <p>CO2: Identify and collect relevant data and use appropriate tool for analysing the data.</p> <p>CO3: Ensuring intellectual honesty and ethics while preparing research report.</p>

Programme : M COM
 Course Code : COC 123
 Course Title : **Business Environment and International Trade**
 Number of Credits : 3
 Effective from AY : 2020-21

Need of the Course	Business success is depending on the favorable environmental conditions, being a student of management one must have an idea about what's going on the surroundings and how it will be going to effect	
Description of the Course	This course will cover all the aspect which are important for the survival and growth of the business	
Objectives of the Course	To develop ability to understand and scan Business Environment. To understand the various economic factors and policy. To equip with knowledge of social and cultural factor. To enable the learning on international factors.	
Course Content		
Unit 1	Theoretical Framework of Business Environment	12 Hours
Concept, significance and nature of business environment; Elements of environment micro and macro; Techniques of environmental scanning and monitoring. Constitution of India-Preamble, Features, Fundamental Rights, Directive Principles and Union - State Reations, Critical elements of political environment; Government and business; Competition Act 2002, FEMA and Consumer Protection Act 1986.		
Unit 2	:Economic Environment	12 Hours
Significance and elements of economic environment; Economic system and business environment; Economic planning in India; Government policies, industrial policy, fiscal policy, monetary policy, EXIM policy. Public Sector, Private Sector, Joint Sector and Co-operative Sector in India; Balance of Payment; Special Economic Zones (SEZs);Micro, Small and Medium Enterprises (MSMEs); Village and Cottage Industry; Parallel Economy; Privatization; Devaluation of Rupee and Disinvestments.		
Unit 3	:Demographical Environment (Socio-Cultural)	12 Hours
Nature of Indian Society and Ethos; Social Interest, Institutions and Values Vis-a-visIndustrial Development; Responsibility of Business-Rationale, Scope, Responsibility Towards Self, Owners, Creditors, Depositors and Employees, Business Ethics-Meaning, Assumptions, Features, Principles, Need and Importance; Standards, Consumerism; Social Audit-Definition, Characteristics, Importance, Scope, Audit Process and Social Audit in India.		
Unit 4	International Business Environment :	12 Hours
Globalization-Concept, Merits, Demerits, and Interdependency; India's International Trade; MNCs-		

Meaning; Characteristics; Merits and Demerits; Multinational and Govt. Policy; Foreign Capital Inflows-Concept, Merits, Demerits and Present Trend; Collaborations and Agreements-Bilateral, Multilateral; Memorandum of Understandings (MOUs); International Economic Institutions – GATT, WTO, UNCTAD, World Bank, IMF; Transfer of Technology; Technology Policy. Factors Influencing Technological Environment. Role and Impact of Technology on Business.	
Pedagogy	: The methodology used in the class will combine lectures applications and case discussions.
Reference/Readings	Adhikary M: Economic Environment of Business, Sultan Chand & Sons, New Delhi. Ahluwalia, I.J.: Industrial Growth in India, Oxford University Press, New Delhi.  Course Title : **Human Resource Management**
 Number of Credits : 3
 Effective from AY : 2020-21

Need of the Course :	The primary concern of this course is to familiarize students with effective Management of Human Resources and to enable the students to meet HR challenges in the present scenario.
Description of the Course :	This course is designed to motivate the students to understand (1) Human Resource Management (2) Job Analysis, Job Enrichment and Job Enlargement, (3) Recruitment and Selection (4) Training and Development and Performance Management.
Objectives of the Course :	To understand the basic concepts of Human Resource Management (HRM). To explain what Human Resource Management is and how it relates to the Management process. To provide an overview of functions of HRM. To describe how the major roles of HR Management are being transformed.

Course Content

Unit 1	: Introduction to HRM and Recent Trends	11Hours
Introduction, Definitions of HRM, Nature of HRM, Features of HRM, Scope of HRM, Objectives of HRM, Functions and Principals of HRM. Introduction to E-HRM - Scope of E-HRM, Objectives of E-HRM, Types of E-HRM, Advantages and Disadvantages. Global Challenges in HRM- International HR Challenges. Environment of HRM- Internal and External forces affecting the HR function. Recent Trends in HRM: "Work life balance" as an important component of HRM- Corporate Social Responsibility (CSR) and HRM, HRM issues related BPO- KPO- Corporate Restructuring.		
Unit 2	: Strategic Human Resource Management , Job Analysis and Human Resource Planning	11 Hours
Strategic Human Resource Management- HRM and its Role in Creating Competitive Advantage; Creating Strategic HRM System. Job Analysis - Traditional Views, Modern Views, Uses of Job Analysis, Process of Job Analysis, Job Description, Job Specification. Methods for Collecting Job Analysis Information, Job Enrichment, Job Enlargement, Human Resource Planning Process, Steps in HR Planning Process, Affecting Factors and its Link with Strategic Planning.		
Unit 3	: Recruitment, Selection and Induction Process	12 Hours
Recruitment and Selection Process: Planning and Forecasting, Effective Recruiting, Internal and External Sources of Candidates, Recruiting a Diverse Workforce, Employee Testing and Selection, Induction and Placement.		
Unit 4	: Training, Development and Performance Management	14 Hours
Training and Development- Training and Development Process, Methods of Employee Training, Methods of Executive Development, Evaluating the Training Efforts. Performance Management- Components of Performance Management, Performance Appraisal Methods,		

Potential Appraisal, steps in Good Potential Appraisal System	
Pedagogy	<p>The following methods and forms of study are used in the course Lectures, Case Studies and Self-study (doing home assignments based on reading of research papers on various aspects of HRM) Self-study on reading research papers and Reference books in Human Resource Management area to understand the importance of Human Resource Planning concepts, especially on understanding recruitment and selection, training and development of employees, performance management and appraisal decision as Human Resource Executive.</p>
Reference/Readings	<p>Aswathapa, K. 5th ed. Human Resource Management, Tata McGraw Hill. Bernadin , Human Resource Management ,Tata Mcgraw Hill ,8th edition. Decenzo and Robbins, Human Resource Management, Wiley, 8th Edition. Dessler Human Resource Management, Pearson Education Limited, Dipak Kumar Bhattacharyya, Human Resource Management, Excel Books. Course Outcome	<p>After Completion of these course Students will able to :</p> <p>CO1: Understand the role of Banking in the Economy.</p> <p>CO2: Understand the Risk management of the Banking Sector and gain in-depth knowledge of banking services.</p> <p>CO3: Understand the Economic Role of Financial Intermediaries and will gain knowledge of other Non-Financial Institutions.</p>

SEMESTER III & IV –ACCOUNTING AND FINANCE SYLLABUS

Programme : M.Com
 Course Code : COO330
 Course Title : **Financial Derivatives Market**
 Number of Credits : 4
 Effective from AY : 2020-21

Need of the Course:	There has been an enormous growth in the markets for futures and options on real and financial assets. These markets are used by individuals and institutions to meet a variety of objectives, such as hedging, speculation, and even investment. The derivatives markets were built on a considerable development of methodologies and tools in the academic and financial communities for analyzing futures and options. As demonstrated by the recent financial crisis, the risk embedded in many complex derivatives securities can be multi-dimensional and new sources of risk may emerge in a rapidly changing market environment. Thus, this course stresses the importance of understanding the economic underpinnings of various derivative pricing frameworks rather than the mechanical pricing formulas. The course is structured in two parts. The first part provides students with the necessary economic models and quantitative skills for understanding and valuing derivative securities. This part of the course follows the textbook closely. The second part uses commodity futures markets as a laboratory for understanding how derivatives are used in practice for investment, risk management and speculation purposes. The lectures are based on class notes and assigned research articles, which will be distributed on blackboard. This part of the class will engage students in extensive discussion about policy debates and research papers.

 Course Code : **COO335**
 Course Title : **Corporate Valuations**
 Number of Credits : 4
 Effective from AY : 2020-21

Need of the Course	: Corporate Valuation is a process and a set of procedures used to estimate the economic value of an owner’s interest in a business. An accurate valuation of a closely held business is an essential tool for the companies to assess both opportunities and opportunity costs as they plan for future growth and eventual transition. It provides either a point-in-time assessment of relative value for an owner, or perhaps the price a buyer would be willing to acquire the business. Thus, the need of this course is to provide a good understanding about various aspects of Corporate Valuation.	
Description of the Course	: The course outlines the topics such as Overview of Corporate Valuation, Enterprise Discounted Cash Flow valuation, Relative Valuation & Non-DCF Approaches to Valuation, and Value Enhancement which are vital elements of corporate valuation.	
Objectives of the Course	: The following are the main objectives of the course - 1. To enable students to apply the various approaches to Corporate Valuation. 2. To enable students to apply the Enterprise Discounted Cash Flow valuation techniques in companies. 3. To enable students to apply the Relative Valuation & Non-DCF- Approaches to Valuation in companies. 4. To enable students to apply Value Enhancement techniques in companies.	
Course Content		
Unit 1	: Overview of Corporate Valuation	10 Hours
Context of Valuation, Approaches to Valuation, Features of the Valuation Process: Bias in valuation, uncertainty in valuation & Valuation complexity. Corporate Valuation in Practice, Information Needed for Valuation, Judicial Review and Regulatory Oversight on Evaluation, Intrinsic Value and the Stock Market, Role of valuation.		
Unit 2	: Enterprise Discounted Cash Flow valuation	16 Hours
Enterprise DCF Model: Introduction, meaning, advantage & Disadvantages. Similarities and differences in valuing a firm and capital project. Steps involved in Enterprise DCF model: Analyzing Historical Performance, Estimating the Cost of Capital, Forecasting Performance, Estimating the Continuing Value, Calculating and Interpreting Results. Enterprise DCF valuation: Two Stage and Three Stage Growth Model (Includes Case Study Discussion).		
Unit 3	:Relative Valuation& Non-DCF Approaches to Valuation	12 hours
Steps Involved in Relative Valuation, Equity Valuation Multiples, Enterprise Valuation Multiples, Choice of Multiple, Best practices Using Multiples, Assessment of Relative Valuation, Market Transaction Method, Non-DCF- Approaches: Book Value Approach, Stock and Debt Approach,		

Strategic Approach to Valuation, Guidelines for Corporate Valuation. (Includes Case Study Discussion).		
Unit 4	: Value Enhancement	10 hours
Discounted Cash Flow (DCF) Approach to Value Creation, Economic Value Added (EVA) Approach to Value Creation, The Challenge of Value Enhancement - Case Studies in Corporate Valuation – Cases on Banks, Investment by a Private Equity Firm, Technology Companies.		
Pedagogy	: Lectures/ classroom discussion/ presentation/case study/ group project/ assignment or a combination of some of these. The sessions shall be interactive to enable peer group learning.

Programme : M. Com
 Course Code : COO336
 Course Title : Cost Management and Control
 Number of Credits : 4
 Effective from AY : 2020-21

Need of the Course:	The success of business depends on many factors and one attribute to measure success is profit. In order to increase the profit of the enterprise, management must know the various tools and techniques which can be used to control and to reduce cost. This course will help the students to understand the basics of cost management, and to familiarised with practical applications of the latest tools and techniques used for controlling cost.
Description of the course:	This course is designed to provide knowledge about the basics of Cost management. This course also helps the students to understand the various techniques and performance evaluation methods used for controlling cost. It will also help the students to understand how to take decision to control the various costs by using LPP model, transportation and assignment problems.
Objectives of the course:	The main objectives of the course are: <ol style="list-style-type: none"> 1. To understand the basis of cost management 2. To have an in-depth knowledge of various cost management techniques used to control costs 3. To understand the application of learning curve and linear programming 4. To acquire knowledge regarding how to solve problems related to transportation and assignment

Course Content		
Unit 1	Introduction to Cost Management	10 Hours
Introduction, Meaning, Uses of Cost Management, Cost Control, Cost Reduction, Cost Avoidance, Strategic Cost Management – Competitive Advantage, Cost Leadership, Differentiation, Focusing. Contemporary Business Environment, Classification of Costs for Decision Making.		
Unit 2	Cost Management Techniques and Performance Evaluation	12 Hours
Activity Based Costing – Meaning, Objectives, ABC and Traditional costing, Advantages and Limitations of ABC, Cost Pools, Cost Drivers and Cost objects, Criteria for successful implementation of ABC system (Including problems). Target Costing – Meaning, Steps, Benefits of target costing, Value engineering in target costing. Transfer Pricing – Meaning, Objectives, Methods of transfer pricing, Transfer pricing in MNCs and Service Organisations. Balanced Scorecard – Balanced Scorecard perspective.		
Unit 3	Linear Programming, Network Analysis & Learning Curve	14 Hours
Linear Programming – Meaning, assumptions, Applications of LP techniques in cost control, Constraints, Limitations (Including Problems). Network Analysis – Introduction, objectives, stages, drawing network diagram, PERT and CPM (Including Problems). Learning Curve Model – Phases, factors affecting learning curve, Applications of learning curve (Including Problems)		
Unit 4	Transportation and Assignment Problems	12 Hours

Transportation Problems – Introduction, applications of Transportation in Cost reduction and control, conditions, stages, Methods for initial basic feasible solution, Unbalanced Transportation problems (Including problems). Assignment Problems – Introduction, stages, Application of Assignment problems in cost control, unbalance and assignment problems, maximize the objective function (Including Problems)	
Pedagogy	The pedagogy for this course constitutes a mixture of Lectures, Case study, Assignment and Group Discussions.
Reference/ Readings	Ravi M. Kishore, <i>Strategic Cost Management</i> , Taxmann, 5 th edition, 2018. Jawahar Lal, <i>Strategic Cost Management</i> . Himalaya Publishing House, 2016 Edward Blocher, <i>Cost Management: A Strategic Emphasis</i> , Tata McGraw Hill. 2012 Hilton, Maher, & Selto, <i>Cost Management</i> , Tata McGraw-Hill Publishing Co. 2015 Frederick S. Hillier, Gerald J. Lieberman, Bodhibrata Nag, Preetam Basu, <i>Introduction to Operation Research</i> , McGraw Hill, 2017, 10 th edition Horngreen, Foster, & Datar, <i>Cost Accounting: A Managerial Emphasis</i> , Prentice Hall. 2010 L.R. Potti, <i>Operations research</i> , Yamuna Publications
Course Outcome	CO1: Understand the basics of Cost Management and elements of costs CO2: Understand various techniques to be used to control the costs CO3: Understand and apply cost tools for taking managerial decision CO4: Able to do project planning and review of controlling techniques

Programme : M. Com
 Course Code : COO337
 Course Title : Accounting Standards and Financial Reporting
 Number of Credits : 4
 Effective from AY : 2020-21

Need of the Course:	The students must have knowledge of Accounting standards and Financial reporting in order to prepare and present the financial statements. This course will help the students to understand the various aspects of accounting standards. It will also familiarise the students the various forms of reporting other than financial information. It is a perfect choice to understand the various Accounting standards and financial reporting aspects to shape an individual towards career opportunity.
Description of the course:	This course is designed to provide knowledge about the various accounting standards adopted by India for preparation and presentation of financial statements. This course also covers specific accounting standards which students must be aware. This course will provide the knowledge of various development in financial reporting which are followed by the corporate firms while preparing and presenting their financial statements.
Objectives of the course:	The main objectives of the course are: 1. To understand the framework for preparation and presentation of financial statements 2. To acquire ability to solve problems in practical scenarios of Accounting standards 3. To develop an understanding of various forms of reporting

Course Content		
Unit 1	Framework for Preparation and Presentation of Financial Statements	10 Hours
Preparation and presentation of financial statements, Framework & its Purpose, Users and their information needs, Assumptions, Qualitative characteristics of financial statements, Constraints on relevant and reliable information, Recognition and Measurement of the elements of financial statements (Including problems and cases). Disclosure of Accounting Policies as per AS-1.		
Unit 2	Introduction to Accounting Standards and Financial Reporting	12 Hours
Accounting standards – Meaning, Objectives, Benefits, International Accounting Standards Committee (IASC), International Accounting Standards Board (IASB), Accounting Standard Board of India (ASB). Financial Reporting – Objectives, Users, Benefits, Qualitative Characteristics of Financial reporting information, International Financial Reporting Standards (IFRS), Generally Accepted Accounting Principles (GAAP) – Indian GAAP and US GAAP, IFRS Adoption/ Convergence, Indian Accounting Standards (IND AS), Process of formulation of accounting standards in India.		
Unit 3	Accounting Standards	14 Hours
Accounting standards – Meaning, Significance, AS-2 (Valuation of Inventories), AS-9 (Revenue Recognition), AS-10 (Accounting for Fixed Assets), Ind AS-16 (Property Plant and Equipment), AS-18 (Related Party Disclosures), AS-22 (Accounting for Taxes on Income), AS-26 (Intangible Assets), AS-29 (Provisions, Contingent Liabilities and Contingent Assets) Ind AS- 113 (Fair Value Measurement) (Including Practical Problems as per relevant accounting standards)		
Unit 4	Developments in Financial Reporting	12 Hours

Sustainability Reporting – Meaning, Benefits. Triple Bottom Line – Meaning, Benefits, Implementation, Reporting. Business Responsibility Reporting, Corporate Social Responsibility – Meaning, Reporting. Interim Financial Reporting, Segment Reporting (Including practical problems as per relevant accounting standards)	
Pedagogy	The pedagogy for this course constitutes a mixture of Lectures, Case study, Assignment and Group Discussions
Reference/ Readings	<p>10. Jawaharlal, Sucheta G. Financial Reporting and analysis, Himalaya Publishing House, 2018.</p> <p>11. Saini, D. & Saini, R. Accounting Standards, Himalaya Publishing House, 1st edition, 2018.</p> <p>12. Sharma, D.G., Accounting Standards, Taxmann.</p> <p>13. Rawat, D.S. Students guide to accounting standards, Taxmann, 5th edition.</p> <p>14. Bhalla, K. Financial Reporting Problems & Solutions, Taxmann, 2nd edition.</p> <p>15. Course Outcome	<p>After completion of this course the students will</p> <p>CO1. Understand the fundamentals for preparation and presentation of Financial statements</p> <p>CO2. Able to solve any accounting problems by using relevant accounting standards</p> <p>CO3. Achieve desired level of technical competence</p>
Online Resources	<p>1. https://www.icai.org/post.html?post_id=16957</p> <p>2. https://icmai.in/upload/Students/Syllabus2016/Final/Paper-17-Feb-2021.pdf</p>

Programme : M.Com.
 Course Code : **COO338**
 Course Title : **Basic Financial Econometrics**
 Number of Credits : 4
 Effective from AY : 2020-21

Need of the Course	: Estimation of fairly accurate models is crucial to decision making process in finance. The course in financial econometrics is needed to get required training in developing such models for informed decision making, management of financial risk and developing indicative but reliable forecasts.
Description of the Course	: Basic financial econometrics is an introductory course in financial econometrics covering topics in regression with special emphasis on assumptions, specification and estimation of bivariate and multiple regression models. It further includes study of violation of regression assumptions and measures for correcting models under such circumstances. The course introduces time series modelling with special focus forecasting techniques, analysis of time series using event study methodology. A component on volatility and factor models is introduced to enable learners acquire skills in modelling financial market volatility and make predictions.
Objectives of the Course	: (i) To provide foundational knowledge of regression analysis and develop skills in applying regression models to data. (ii) To provide knowledge and skills of diagnostic testing with respect to regression models. (iii) To enable learners master basic time series econometric techniques (iv) To enable learners acquire skills in developing volatility models and applying factor popular factor models to financial data.

Course Content

Unit 1	:Introduction to Financial Econometrics and Regression Analysis	12 Hours
Econometrics – meaning, and significance of econometrics in business decisions - Methodology of econometric analysis – Financial econometrics: Meaning, nature, process and applications of financial econometrics -Introduction to classical linear regression model - Assumptions of CLRM – Specification and estimation of bivariate and multiple regression models – Hypothesis testing and statistical inference – Properties of least square estimators (BLUE) – Basic model diagnostics using goodness of fit statistics– Regression terminology – Regression vs causation – Regression vs correlation – Reporting the results of regression analysis.		
Unit 2	: Econometric Modeling and Diagnostic Testing	14 Hours
Selection of model variables – Selection of functional form of regression – Model selection criteria – Issues in regression modelling - Autocorrelation, Heteroscedasticity, Multicollinearity – Consequences, tests for detection and remedial measures – Model misspecification errors – Types, consequences and tests of misspecification errors – Errors of measurement and relevant consequences.		
Unit 3	: Econometric modelling using Financial Time Series	12 Hours

Time series concepts – Sources of time series data - Components of time series – Measurement of seasonality, trend and cycles in time series, Stationarity in time series: Concept, Significance, Tests of stationarity in time series, ACF and PACF functions, Unit root tests, Transforming non-stationary time series – Econometric modelling and forecasting using time series data – AR, MA, ARMA and ARIMA modelling – Diagnostics and forecasting using ARIMA – Evaluating forecast accuracy - Event study methodology.

Unit 4	: Volatility and Factor Models	10 Hours
---------------	---------------------------------------	-----------------

Volatility models: ARCH process – GARCH process – Estimation of GARCH models – Variants of GARCH model – Forecasting with GARCH models - Factor models: Applications of Fama-French model, Fama-MacBeth model, Morgan Stanley’s Macro Proxy model.

Pedagogy	: lectures/ case analysis/assignments/class room interaction/lab

Programme : M. Com.
 Course Code : **COO339**
 Course Title : **Direct Taxes**
 Number of Credits : 4
 Effective from AY : 2020-21

Need of the Course	: Direct taxation is required to be understood by everyone as all of us pay the tax in some way or other to the government. This course makes the student aware of various direct tax laws and procedures that are required in planning the individual tax assessment. This course would enable students to build their careers in tax planning.	
Description of the Course	: This course enables the student to understand and compute the income from salaries, house property, business income, capital gains and income from other sources. Further, it provides a comprehensive knowledge on deductions from gross total income; tax rates available for the respective assessment year, tax deducted at source, filing of returns and advance payment of tax. The student while learning this course has to follow the current financial year as their assessment year.	
Objectives of the Course	: This course aims at providing the students a comprehensive introduction to Income Tax so as to enable them in computing income from different sources and calculation of tax liability for individual and corporate.	
Course Content		
Unit 1	: Direct Tax Laws - I	15 Hours
Introduction – Basic concepts under Income Tax Act of 1961 - Residential Status – Incomes exempt from tax under section 10. Income from Salaries – tax treatment of different forms of Salary Income, Perquisites – Valuation of Perquisites. (<i>Includes Practical Problems</i>), Income from House Property – chargeability – computation of income from let out and self-occupied house property (<i>Includes Practical Problems</i>).		
Unit 2	: Direct Tax Laws - II	15 Hours
Profits and gains of Business or Profession – chargeability – deductions allowed in respect of expenses/ allowances – depreciation – expenditure on scientific research – amortization of preliminary expenses – amounts expressly disallowed under the Act. (<i>Includes Practical Problems</i>), Income from Capital Gains – chargeability – computation of capital gain – capital gains exempt from tax – short term and long-term capital gains charged to tax (<i>Includes practical problems</i>).		
Unit 3	: Direct Tax Laws - III	10 Hours
Income from Other Sources, Computation of Gross total income and tax liability. Clubbing of income – set off and carry forward of losses, Deductions from gross total income – Return of income and assessment TDS –TCS - Advance Payment of tax – Interest (<i>Includes Practical Problems</i>) Tax Planning, Tax Avoidance, Tax Evasion and Tax Management. Filing of Income tax returns.		
Unit 4	: Taxation of Companies	8 Hours

<p>Corporate Tax Planning: Meaning and objectives – Scope of corporate tax planning – Types of companies – residential status of a company and tax incidence – Areas for corporate tax planning – Tax management – Assessment of income – Filing of returns.</p> <p>Taxation of Companies: Computation of income under the heads of income applicable to corporate assesses – Set off and carry forward of losses – Deductions available in respect of gross total income – Computation of taxable income – Tax liability of a company (<i>Only Theory</i>)</p>	
Pedagogy	: The teaching pedagogy of this course shall include the combination of the following: Interactive Lectures/Discussions/ presentations/individual or group projects/ assignments/Class activities or a combination of some of these. Practical Exercises to be solved in the classroom as well as for home work. Self-study with respect to topics assigned.
Reference/Readings	<ol style="list-style-type: none"> 1. Singhanian, V.K., Direct Taxes: Laws and Practices, Taxman Publications, New Delhi. Latest Edition. 2. Singhanian, V. K., Students' Guide to Income Tax, Taxmann Publications, New Delhi. Latest Edition. 3. Singhanian, et al, Direct Taxes: Planning and Management, Taxman Publication, New Delhi. Latest Edition. 4. Programme : M.Com.
 Course Code : **COO430**
 Course Title : **Security Analysis & Portfolio Management**
 Number of Credits : 4
 Effective from AY : 2020-21

Need of the Course	: Security analysis is about valuing the assets, debt, warrants, and equity of companies from the perspective of outside investors using publicly available information. Also, building a successful investment plan require a fundamental change in the way we think about investing. The purpose of this course is to provide analytical skills for better analysis of securities and management of portfolios.
Description of the Course	: The course outlines the topics such as Analysis of Risk & Return, Valuation and Analysis of Equity & Debt, Portfolio Analysis & Selection, and Portfolio Performance Evaluation & Revision, which are essential components for investment and trading in financial markets.
Objectives of the Course	: The following are the main objectives of the course - 1. To enable students to understand the analysis of Return and Risk of Securities. 2. To enable students to analyse the Equity and Debt of companies. 3. To enable students to analyse and select a Portfolio. 4. To enable students to evaluate Portfolio performance and revise the portfolios.

Course Content

Unit 1	: Introduction to Security Analysis	12 Hours
Risk and Return Analysis - Security return and risk – Systematic and Unsystematic Risk – Sources of Risk - Measurement of Risk and Return- Risk and Return analysis (Including problems) - Fundamental Analysis: Meaning – Objectives – Economy Analysis – Economic Forecasting –Forecasting Techniques – Industry Analysis – Industry Life Cycle – Company Analysis – Operating Analysis – Management Analysis – Financial Analysis - Technical Analysis: Meaning – Assumption of Technical Analysis – Dow Theory – Trends and Trend Reversal –Oscillators – Relative Strength Index – Charting – Types of Price Charts – Price Patterns – Other Technical Indicators		
Unit 2	: Equity and Debt Valuation and Analysis	12 Hours
Valuation of Equity: Share valuation Model – Dividend Discount Model - One Year Holding Period -- Multiple Year Holding Period – Constant Growth Model – Multiple Growth Model – Multiplier Approach to Share Valuation (Including problems) - Valuation of Debt: Issuers of debt securities- Features of debt securities- Types of bonds - Current Yield- Discounted cash flow approach- Yield to maturity- Relationship between bond price and its yield to maturity- Yield Curve (Including problems)		
Unit 3	: Portfolio Analysis and Selection	12 Hours
Meaning of portfolio management – Portfolio Management Process - Objectives of Portfolio - Traditional and Modern Portfolio Theories - Feasible Set of Portfolios – Efficient Frontier – Optimal		

Portfolios – Corner Portfolios - Return on Portfolio – Risk on Portfolio – Diversification of Portfolio - Efficient Frontier – Minimum Variance Analysis - Portfolio theory - Markowitz Model - Sharpe’s single index model - Efficient frontier – Capital Asset Pricing Model - Arbitrage Pricing Theory (Including problems)		
Unit 4	: Portfolio Performance Evaluation and Revision	12 Hours
Portfolio Performance Evaluation - Need – Meaning – Risk Adjusted Returns – Performance Evaluation Ratios – Sharpe’s Ratio – Treynor’s Ratio – Jenson Ratio – Portfolio Revision - Need for Revision – Meaning – Constraints –Portfolio Revision strategies – Formula Plans – Constant Rupee Value Plan – Constant Ratio Plan – Dollar Cost Averaging. (Including problems)		
Pedagogy	: Lectures / classroom discussion / presentation / case studies / group project / assignment or a combination of some of these. The sessions shall be interactive to enable peer group learning.	
Reference/Readings	<ol style="list-style-type: none"> 1. Chandra, P. (2017). <i>Investment Analysis and Portfolio Management</i>. McGraw-Hill Education. 2. Fischer, D. E. & Jordan, R. J. Programme : M.Com
 Course Code : **COO431**
 Course Title : **Treasury and Foreign Exchange Management**
 Number of Credits : 4
 Effective from AY : 2020-21

Need of the Course	: The Committee on Capital Market and Investors Protection conducts Certificate Course on Forex and Treasury Management (FXTM) for professional development of the members in this field. This course covers foreign exchange market, money market, bond market operations and related financial products. It therefore analyses the international finance environment within which banks, other intermediaries and companies operate and how it affects their operations in treasury	
Description of the Course	: This course aims at enabling the students to acquire skills for treasury management and understand the intellectual foundations of global financial markets, instruments and products, as also their use in managing financial risks.	
Objectives of the Course	: The object of the study is enable the students understand 1. Objectives of Treasury Management 2. Function and scope of Treasury Management	
Course Content		
Unit 1	: Introduction to Treasury Management	12 Hours
Meaning, Objectives, Significance, Functions and Scope of Treasury Management, Relationship between Treasury Management and Financial Management, Present Status of Treasury Management in India.		
Unit 2	: Treasury Organization	12 Hours
Picking the Right Model, Organisation Models: Dimensions, Role and Responsibilities of Chief Finance Officer Tools of Treasury Management; Internal Treasury, Controls; Liquidity Management, Regulation, Supervision and Control of Treasury Operations, Implications of Treasury on International, Treasury Operations in Banking.		
Unit 3	: Introduction to Forex Management	12 Hours
Introduction, Nature of Forex Management, Scope of Forex Management, Significance of Forex Management, Forex Manager and his Skills, Foreign Exchange Market and its Structure, Organisation of Foreign Exchange Market in India, Participant in Forex Market.		
Unit 4	:Foreign Exchange Exposure Management	12 Hours
Foreign Exchange Rates and its Determination, Exchange Rate Quotes; Types of Exchange Rates; Forex Trading; Currency Futures and Options, Foreign Exchange Risk Exposures and their Management; Exchange Rate Forecasting; Risk in Foreign Exchange Business		
Pedagogy	: The following methods and forms of study are used in the course •Lectures/ classroom discussion/ presentation/case study/ group project/ assignment or a combination of some of these. The sessions shall be interactive to enable peer group learning.	
Reference/Readings	1. Bharati Pathak, Indian Financial System,	

	<ol style="list-style-type: none"> 2. Dr. P. K. Srivastava, Banking theory and Practice, Himalaya Publishing House. 3. Dudley Lockett, Money and Banking, McGraw Hill. 4. Gerald Hatler, Bank Investments and Funds Management, Macmillan 5. M. Y. Khan, Indian Financial System, Tata McGraw Hill. 6. Principles of Banking, Indian Institute of Banking and Finance, Macmillan. 7. Srivastava, Divya Nigam, Management of Indian Financial Institutions, Himalaya Publishing House. 8. Stigum, Managing Bank Assets and Liabilities, Dow-Jones Irwin. 9. Vasant Desai, Banks and institutional management, Himalaya Publishing House. 10. Vasant Joshi, Vinay Joshi, Managing Indian Banks- Challenges Ahead”, Response Books.
Course Outcome	<p>: After the completion of the course the students will be able to:</p> <p>CO1:To have a contextual appreciation of the changes taking place in the global financial market, the issues facing the corporate financial manager, the development of academic theory and of practice in explaining and managing the financial risk which these changes bring.</p> <p>CO2:Understand and conquer the complexities of FX and treasury management</p> <p>CO3:Be able to solve integrated and practical treasury problem and Identify and evaluate exchange rate risks facing domestic and multinational companies.</p>

Programme : M. Com.
 Course Code : COO437
 Course Title : **Goods and Service Tax**
 Number of Credits : 4
 Effective from AY : 2020-21

Need of the Course	: Goods and Service Tax (GST) is one of the most crucial Indirect tax reforms in India since independence. GST renders numerous benefits to different parties such as business and industry, central and state governments and the ultimate consumers. Therefore, this course is designed to equip the students with the new concept of GST, the various tax provisions under GST law, relevant rules and procedures. This course would enable students to build their careers as GST tax practitioners.	
Description of the Course	: GST was implemented in India on July 1, 2017. This course is designed to develop the students with the various concepts of goods and service tax act law and procedures. The students learning this course shall understand about the persons liable to pay GST, valuation under GST, reverse charge, input tax credit, exemption from GST, composition scheme as well as the procedures of Customs duty.	
Objectives of the Course	: The purpose of this course is to gain expert knowledge of the principles of Goods and Service tax and Customs Duty, its relevant laws and provisions.	
Course Content		
Unit 1	: Introduction to Indirect taxes and GST	10 Hours
Indirect taxes – an overview – list of indirect taxes – taxation system before implementation of GST – taxes merged into GST - GST- an overview – taxable event in GST – Basic concepts under GST, GST Structure and Council, GST Act and Definitions - advantages of GST – Cascading effect under old tax regime.		
Unit 2	: GST Provisions	15 Hours
Exemption from GST – Rates of GST – Levy and Collection of GST - supply of goods or services or both – Composite supply and mixed supply - classification of goods and services – value of taxable supply of goods or services or both – valuation rules if value for GST is not ascertainable. Composition scheme in GST – Input Tax Credit – utilization of input tax credit – input service distributor – person liable to pay tax – reverse charge – Time and Place of supply		
Unit 3	: Basic Procedures in GST	10 Hours
Basic procedures in GST – Registration under GST – Tax invoice, credit and debit notes – Payment of taxes by cash and through input tax credit – returns under GST – Assessment – Demands and Recovery – Refunds		
Unit 4	: Customs Duty	13 Hours
Customs Act, 1962 and Customs Tariff Act, 1975: Nature of Customs duty – Territorial waters and customs waters – ‘Goods’ under Customs Act – Basic Customs Duty Customs Tariff Act (CTA) 1975 – Additional Customs Duty – Protective Duties – Countervailing Duties – Safeguard Duty – NCCD of Customs - Transaction Value at the time and place of importation – rate of exchange for customs valuation – Inclusions and exclusions from Assessable value – Methods of Valuation of Customs – Baggage – rate of Customs duty of Baggage (<i>Includes Practical Problems</i>).		

Pedagogy	: The teaching pedagogy of this course shall include the combination of the following: Interactive Lectures/Discussions/presentations/ individual or group projects/ assignments/Class activities /Self-study with respect to topics assigned.

Programme : M.Com.
 Course Code : **COO438**
 Course Title : **Advanced Econometrics**
 Number of Credits : 4
 Effective from AY : 2020-21

Need of the Course	: A significant amount of empirical research work in finance that facilitates policy making at macroeconomic level and management of risk at individual and institutional level transactions is well supported by the discipline of econometrics. However it is important to acquire skills in using advanced tools and techniques available in the field of econometrics and hence the need for this course in advanced econometrics.
Description of the Course	: Advanced econometrics develops on the basics of financial econometrics course and extends to the study of advanced econometric models with applications in cross-section, time series and panel data. Special advanced regression models designed for limited dependent variable, advanced multivariate time series models with vector autoregression specification, models for examining long-run relationship between variables of interest are covered in this course. Similarly, advanced volatility models and panel data econometrics with detailed procedures for identifying right panel data models are also included in this course.
Objectives of the Course	: (i) To enable learners apply cross-section regression models on limited dependent variables. (ii) To enable learners acquire skills in time series modelling and forecasting with advanced analytical techniques for short term and long-term relationships in variables of interest. (iii) To enhance skills in estimation and forecasting of volatility. (iv) To provide skills in building panel data models for examining dependency relationships amongst financial variables.

Course Content

Unit 1	: Limited Dependent Variable Models	12 Hours
Nature – Linear Probability Model – Limitations of LPM – Logit and Probit Models: Structure and specifications, Estimation, Interpretations, Computing marginal effects – Tobit Model: estimations and specification issues.		
Unit 2	: Multivariate Time Series Analysis	12 Hours
Vector autoregressive (VAR) models – Estimation and forecasting with VAR – Forecast error variance decomposition - Impulse response function – Generalized VAR - Forecasting with VAR models - Granger causality test – VAR based Granger causality test – Johansen Co-integration test – VECM model – ARDL model.		
Unit 3	: Advanced Volatility Models	12 Hours
Multivariate GARCH and conditional correlations models – Constant and Dynamic Conditional Correlations models – BEKK GARCH model – Stochastic volatility models: Concept, structure, Kalman		

filter.		
Unit 4	: Panel Data Econometrics	12 Hours
Panel data structure – Advantages of Panel Data –Pooled OLS Regression – Fixed Effects model – Random effects model – Properties of Various Estimators - Fixed Effects versus Random effects model – Wald test - Breush and Pagan Lagrange Multiplier Test – Hausman Test – Non-Stationary Panel - Panel unit root and cointegration tests.		
Pedagogy	: lectures/ case analysis/assignments/class room interaction/lab	
Reference/Readings	<ol style="list-style-type: none"> 1. Fabozzi, F., Focardi, S., Rachev, S. and Arshanapalli, B. Course Outcome	: Upon completion of the course learners will be able to: CO1 Apply probability based models including LPM, logit and probit models to data in social sciences. CO2 Perform forecasting by developing VAR models. CO3 Estimate Granger causality models including the VAR framework. CO4 Develop models for examining long-run relationship between financial variables using Johansen's cointegration and ARDL models. CO5 Forecast financial market volatility using advanced GARCH volatility models and Kalman filter. CO6 Demonstrate ability to develop useful panel data models with appropriate diagnostic procedures.

Programme : M.Com.
 Course Code : **COO439**
 Course Title : **Financial Research Analytics**
 Number of Credits : 4
 Effective from AY : 2020-21

Need of the Course	: Financial research analytics is a segment of business intelligence that facilitates business decision making through reliable analysis of financial data. It focuses on developing strategies for various business scenarios, forecast financial performance parameters under these varied scenarios and improve organizational performance. This course is needed as organizations are increasingly relying on data driven decision making. Financial research analytics is extensively data driven and therefore it is imperative to acquire analytical skills in this area to become more productive and be a problem solver in an organization.
Description of the Course	: This course introduces the domain of financial research analytics to learners and provides preliminary exposure to relevant software applications and R programming language to begin with. Subsequently the course expands to include data visualization techniques with focus on exploratory data analysis of financial data. This course also has components on developing financial models and scenarios based on accounting and financial data at firm level. The course also enables learners to acquire machine learning application usage skills for solving varied financial management problems of a firm.
Objectives of the Course	: (i) To apprise the learners about financial analytics process and provide exposure to relevant applications and programming used in financial analytics. (ii) To develop expertise in learners in using data visualization tools and techniques for obtaining business insights. (iii) To train learners in developing financial models and scenarios using financial analytical techniques in the areas of financial performance, working capital management, capital budgeting and valuation exercises. (iv) To enable learners apply machine learning techniques in financial research.

Course Content

Unit 1	: Introduction to Financial Analytics	10 Hours
Meaning of financial analytics – Applications of Financial analytics – Process and applications of financial modelling – Descriptive analytics – Predictive analytics – Basic R programming – Basic operations in analytics software such as Excel, Tableau, Orange.		
Unit 2	: Exploratory Data Analysis in Finance	12 Hours
Meaning of EDA – Applications of EDA - Data collection and data management – Data classification – Dealing with missing data - Data visualization: Univariate visualization, Bivariate visualization, Multivariate visualization - Graphical exploratory data analysis (Box-plots, heatmap, Histograms, Scatterplots) – Building business intelligence dashboard – Mapping – Interactive data charts – Data Mining.		

Unit 3	: Financial Modelling Using Accounting Data	12 Hours
Forecasting financial statements – Due diligence analysis - Forecasting operating revenues – Forecasting expenses – Forecasting working capital requirements – Determining project viability - Performing discounted cash flow valuation analysis – Project appraisal simulations – Determination of value drivers - Risk analysis in valuation.		
Unit 4	: Applications of Machine Learning in Finance	14 Hours
Concept and applications of machine learning – Machine learning applications in stock price predictions, derivatives pricing and portfolio management – Supervised learning algorithms: Regression (Linear regression, Decision tree and Random forest) and classification (Logistic regression, Linear discriminant analysis, Random forest) - Sentiment analysis of news and social media – Prediction accuracy metrics.		
Pedagogy	: lectures/ case analysis/assignments/class room interaction/lab	
Reference/Readings	<ol style="list-style-type: none"> 1. Fabozzi, F., Focardi, S., Rachev, S. and Arshanapalli, B. (2014) The Basics of Financial Econometrics: Tools, Concepts and Asset Management, Wiley. 2. Tatsat, H., Puri, S., Lookabaugh, B. Course Outcome	: Upon completion of the course learners will be able to: CO1 Explain the process of financial research analytics and modelling. CO2 Use software application to prepare data for analytical purpose and provide business insights through data visualization tools. CO3 Develop financial models and scenarios using software applications and accounting data at firm level. CO4 Apply machine learning techniques and tools in financial research.

SEMESTER III & IV –BUSINESS MANAGEMENT SYLLABUS

Programme : M. Com
 Course Code : **COO340**
 Course Title : **Advertising and Sales Management**
 Number of Credits : 4
 Effective from AY : 2020-21

Need of the Course:	Present competitive business world, that too in a dynamic globalised scenario, requires the understanding of the basic concepts of Advertising and Sales Management. The course will equip students with understanding of Types of Advertising, Media, Creativity in Advertising, Copy writing, Advertising campaigns, Sales management, Sales budget, Sales Control and Sales Personnel Performance.
Description of the Course:	The course begins with understanding the significance of Advertising, Media for Advertising, Different perspectives in Creative Advertising, Campaign in Advertising Management. Course also covers various aspects of Sales Management, Sales Force Management, Sales Budgeting, Control and Sales Personnel Performance.
Objectives of the Course:	<ol style="list-style-type: none"> 1. To ensure that students have complete clarity about the concept of Advertising Management and Media for Advertising. 2. To understand the importance of Creativity, Copy Writing and Campaign in Advertising Management. 3. To acquire knowledge and understanding of Sales Management, Management of Sales Force, Sales Budgeting, Sales Control and Sales Personnel Performance.

Course Content

Unit 1	:Introduction to Advertising Management and Media for Advertising	12Hours
Advertising –Definition – Advertising as a tool for Communication -Advertising Objectives - Importance – Role of Advertising– Advertising and Publicity - Advertising Management Process - AIDA – DAGMAR- Classification and Types of Online Advertising. Media for Advertising – Need and Importance of Media Planning–Planning and Operations of Advertising Media– Media Selection (Media Mix) – Media Planning – Media Strategy – Media Research– Types of Media – Media Planning Process – Digital Media.		
Unit 2	:Creativity, Copy Writing and Campaign in Advertising Management	12 Hours
Creativity in Advertising –Importance on Creativity in Advertising – Different perspectives of Advertising Creativity – Planning Creativity Strategy – Taking Creative Risk – Creative Process – Creative Strategy Development. Copy Writing in Advertising - Concept of Copy - Theme and Appeal- Copy Writing and Copy Research- Message: Design and Evaluation – Advertising Appropriation.		

Advertising Campaign - Planning an Advertising Campaign - Criteria for Choice - Evaluation of Advertising Campaign - Agency Client Relations - Preparation of The Campaign.

Unit 3	:Sales Management and Management of Sales Force:	12 Hours
---------------	---	-----------------

Objectives of Sales Management - Exchange Process - Interdependence of Sales and Distribution - Key Decision Areas in Sales Management - Sales Management Cycle - Sales manager – Responsibilities of a Sales Manager – types of sales manager – Essential qualities of an efficient Sales manager.

Management of Sales Force – Setting the sales objectives – Recruitment and Selection – Training of Sales Force – Sales Force compensation – Sales Force motivation – Sales Force Control.

Unit 4	:Sales Budgeting, Control and Sales Personnel Performance	12Hours
---------------	--	----------------

Sales Budgeting - Purpose of Sales Budget - Methods of Sales Budgeting - Preparation of Sales Budget.

Sales Control (Purpose of Sales Control - Sales Control System - Methods of Sales Control) - Sales Analysis (Marketing Cost Analysis - Sales Management Audit) - Sales Quotas (Purpose - Controlling Sales Person's Activities) - Types of Sales Quotas (Sales Volume Quotas - Methods of Setting Sales Volume Quotas) - Limitations of Sales Quotas - Administration of Quota System - Sales Territories - Developing Territories - Objectives and Criteria for Territory Formation - Purpose of Sales Territories.

Sales Personnel Performance - Needs and Objectives - Parameters Used to Monitor Sales Force - Contents of Sales Reports - Basic Sales Reports and their Analysis (Weekly Sales Report Format - Regional Sales Analysis - Distribution of Accounts by Size) - Performance Appraisal and Evaluation - Issues in Salesman's Valuation – Setting Performance Standards.

Pedagogy	<p>The following methods and forms of study are used in the course:</p> <ul style="list-style-type: none"> • Lectures, Case Studies and Self-study (doing home assignments based on reading and understanding in Advertising and Sales Management) • Self-study on reading reference books in Advertising and Sales Management area to understand the importance of Advertising, Media, Creativity, Advertising campaigns, Sales Force Management, Budgeting, Sales Control and Sales Personnel Performance. • In addition to the lectures, review sessions with self-learning of advanced areas in the course with latest developments.

Programme : M. Com
 Course Code : COO341
 Course Title : **Consumer Behaviour and Marketing Research**
 Number of Credits : 4
 Effective from AY : 2020-21

Need of the Course :	In the present globalised business world, technology is playing a crucial role when it comes to marketing because now a days from anywhere the customers can complete the purchasing decision making process. How and in what way the consumer behaviour gets affected by the information technology is a serious matter. Understanding the consumer behaviour provides valuable insights to the marketers for developing appropriate strategy for improving the value to the customers and also increasing the market share for the firm. Carrying out effective marketing research, using both qualitative and quantitative data, entails the firm to clearly understand various factors influencing consumer behaviour, how and in what way technology influences the decision making process and also assessing the level of satisfaction of consumers.
Description of the Course :	An overview of the role of consumer in marketing is provided in the beginning, followed by introduction to marketing research with an aim of making the students to learn the detailed process of successfully carrying out marketing research. The differences between qualitative and quantitative research gives an over view of how to select and carryout relevant marketing research under specific circumstances. Various applications of marketing research are provided at the end using research works carried out in various areas.
Objectives of the Course :	This paper provides students with a basic information w.r.t (1) why it is said that “Customers ARE the Business”, (2) how and in what way successful marketing research can be carried out for assessing consumer behaviour, (3) on what basis decision is made about selecting qualitative or quantitative research methodology, and finally (4) various applications of marketing research assessing various facets of consumer behaviour in the business world.

Course Content		
Unit 1	: Role of Consumer in Marketing	10 Hours
Marketing & Customer Orientation – Customer Focused Marketing – Diversity in Market Place – Factors influencing Buyer behaviour – Perception – Buyer Behaviour – Who is a Consumer (user, payer, buyer) – Organizational Vs Consumer Buying – Significance of Segmentation, Targeting and Positioning.		
Unit 2	: Introduction to Marketing Research	10 Hours
Marketing Research Vs Market Research – The Need for and Role of Marketing Research – Classification of Marketing Research (Problem identification Vs Problem solving) – Marketing Research Process [Problem or Opportunity Identification, Exploratory Research, Research Questions / Objectives / Hypothesis development, Conclusive Research, Result].		
Unit 3	: Qualitative and Quantitative Marketing Research	10 Hours
Data-based marketing decisions – Qualitative vs. Quantitative – Traditional way of understanding the consumer – New approach to understanding consumer – The Qualitative Research Techniques (Focus Groups, In-depth Discussion / Interview, Tele-depth Interviews, Online Forums, Mystery / Sensitized Shopping, Observations) – The Quantitative Research Techniques (Direct Measurement, Self-compilation, Interviewing, Telephone Interviews, Online Interviews, Postal Interviews) – Timelines of Research Activity (time frame assigned to each stages in research).		

Unit 4	: Applications of Marketing Research	18 Hours
Who the customers are [Demographic Profiling – Chi-Square Testing] – What influences the customers [Data Reduction and confirmation – EFA, CFA, and SEM] – How technology influences consumer behaviour [Various Theories, special emphasis on UTAUT Model] – Are the customers happy [assessing level of satisfaction – IPA Analysis]		
Pedagogy	The following methods and forms of study are used in the course Lectures, Case Studies and Self-study (doing home assignments based on reading research papers in the area of Consumer Behaviour and Marketing Research).	
Reference/Readings	<ol style="list-style-type: none"> 1. Ghai P K & Singh G, Consumer Behaviour – A Practical Orientation, Himalaya, 2017. 2. Noel, H, Consumer Behaviour, AVA Publishing (UK) Ltd. 2020. 3. Nair, Suja, Consumer Behaviour – Text and Cases, Himalaya, 2017. 4. Naragunkar, R, Marketing Research – texts and Cases, Tata McGraw-Hill, 2017. 5. Hauge, P, A practical Guide to Market Research, Grosvenor House Publishing Ltd, 2010. 	
Course Outcome	<p>Upon Completion of the course the students will be able to:</p> <p>CO1: Understand the role and importance of carrying out successful marketing research for assessing various facets of consumer behaviour.</p> <p>CO2: Understand, identify and also to apply appropriate qualitative and quantitative marketing research techniques depending on the research problems.</p> <p>CO3: Understand and interpret results of marketing research problems w.r.t who the customers are, what factors influences the customers, how technology influences customer behaviour and also the level of customer satisfaction.</p>

Programme : M.Com.
 Course Code : **COO342**
 Course Title : **Training and Development**
 Number of Credits : 4
 Effective from AY : 2020-21

Need of the Course	: The employee who receives the necessary training is more able to perform in their job. The training gives the employee a greater understanding of their responsibilities within their role, and in turn build their confidence. This confidence will enhance their overall performance and this can only benefit the company. Employees who are competent and on top of changing industry standards help the company hold a position as a leader and strong competitor within the industry. Thus, the need of this course to familiarize students with the various aspects of Training and Development.
Description of the Course	: The course outlines the topics: Introduction to Employee Training and Development, Needs Assessment and Program Design, Training Evaluation, and Training and Development Methods.
Objectives of the Course	: The following are the main objectives of the course - <ol style="list-style-type: none"> 1. To enable students to understand the need for training and development 2. To provide insights about various aspects of needs assessment and program design 3. To enable students to perform evaluation of training 4. To demonstrate training and development methods

Course Content

Unit 1	: Introduction to Employee Training and Development	12 Hours
Introduction – Training and Development: Key Components of Learning – Designing Effective Learning – Forces Influencing Working and Learning – Evolution of Training: From an Event to Learning – Learning as a Strategic Focus – Strategic Training and Development Process – Organizational characteristics that Influence Training – Training Needs in Different Strategies – Models of Organizing the Training Department – Marketing Training and Creating a Brand – Outsourcing Training		
Unit 2	: Needs Assessment and Program Design	12 Hours
Needs Assessment - Introduction – Needs of Need Assessment – Participants in Needs Assessment – Methods Used in Needs Assessment – Needs Assessment Process – Competency Models – Scope of Needs Assessment - Program Design – Introduction – Considerations in Designing Effective Programs – Using Knowledge Management for Learning and Transfer of Training		
Unit 3	: Training Evaluation	10 Hours
Introduction – Reasons for Evaluating Training – Overview of Evaluation Process – Outcomes Used in Evaluation of Training Programs – Determining Whether Outcomes are Appropriate – Evaluation Practices – Evaluation Designs – Determining Return on Investment – Measuring Human Capital and Training Activity		

Unit 4	: Training and Development Methods	14 Hours
Traditional Training Methods – Introduction – Presentation Methods – Hands-on Methods – Group Building Methods – Choosing a Training Method - Technology-Based Training Methods – Introduction – Technology’s Influence on Training and Learning – Computer-Based Training, Online Learning, Web-Based Training, and E-Learning – Developing Effective Online Learning – Social Media: Wikis, Blogs, Microblogs, and Social Networks – Blended Learning – Simulations and Games – Augmented Reality – Mobile Technology and Learning – Adaptive Learning – Distance Learning – Technologies for Training Support: Artificial Intelligence, Expert Systems, and Performance Support		
Pedagogy	: Lectures/ classroom discussion/ presentation/case study/ group project/ assignment or a combination of some of these. The sessions shall be interactive to enable peer group learning.

Programme : M.Com.
 Course Code : **COO343**
 Course Title : **Performance and Compensation Management**
 Number of Credits : 4
 Effective from AY : 2020-21

Need of the Course	: The Compensation is a vital part of human resource management, which helps in encouraging the employees and improving organizational effectiveness. Compensation packages with good pay and advantages can help attract and retain the best employees. Thus, the need of this course is to provide insights about various aspects of performance and compensation management.
Description of the Course	: The course outlines the topics: Introduction to Performance Management, Performance Measurement and Review, Introduction to Compensation Management, and Designing Compensation Systems
Objectives of the Course	: The following are the main objectives of the course - <ol style="list-style-type: none"> 1. To enable students to discuss the performance management process. 2. To provide overview of performance measurement and review. 3. To provide overview of compensation management system. 4. To enable students to understand the designing of compensation systems.

Course Content

Unit 1	: Introduction to Performance Management	12 Hours
Introduction – Principles of Performance Management – Performance Management as an Integrative Process – Performance Management versus Performance Appraisal – Performance Management Process – Models – Organizational and Individual Contributions – Performance Planning – Performance Standards		
Unit 2	: Performance Measurement and Review	12 Hours
Performance Measurement Issues – Criteria for Performance Measures – Classification of Metrics – Types of Measures – Organizational Measures – Individual Measures – Conducting Performance Reviews – Performance Review Meeting – Performance Review Issues – Organizational Issues – Performance Review Skills – Preparing for Review Meetings – Conducting a Performance Review Meeting – Evaluating Performance Reviews		
Unit 3	: Introduction to Compensation Management	12 Hours
Introduction – Compensation Management – Strategic Compensation – Strategic Compensation Decisions – Compensation Systems – Stakeholders of compensation System – Overview of Employment Laws Pertinent to Compensation Practice in India – Incentive Pay – Individual Incentives – Group Incentives – Company-wide Incentives – Designing Incentive Pay Programs		
Unit 4	: Designing Compensation Systems	12 Hours

Internal Consistent Compensation systems – Internal Consistency – Job Analysis – Job Evaluation – Job Evaluation Techniques – Market Competitive Compensation Systems – Market Competitive Pay Systems - Compensation surveys – Designing Merit Pay systems – Designing Sales Incentive Compensation Plans – Designing Person Focused Programs	
Pedagogy	: Lectures/ classroom discussion/ presentation/case study/ group project/ assignment or a combination of some of these. The sessions shall be interactive to enable peer group learning.

Course Title

: **Human Resource Development**

Number of Credits

: 4

Effective from AY

: 2021-22

Need of the Course :	Human Resource Development plays a vital role in enhancing as well as sustaining the Human Resource of the organizations which plays a significant role in the success of the organization.
Description of the Course :	This course is designed to enable the students to understand the fundamentals as well as the emerging trends in the area of Human Resource Development.
Objectives of the Course :	The objective of the course is to make student aware of the concepts, techniques and practices of human resource development. This course is intended to make students capable of applying the principles and techniques as professionals for developing human resources in an organization.

Course Content

Unit 1	: Introduction to Human Resource Development	10 Hours
Concept of HRD, Relationship between human resource management and human resource development, HRD mechanisms, processes and outcomes, HRD matrix, HRD interventions, Roles and competencies of HRD professionals, Challenges in HRD		
Unit 2	: HRD Process and Activities	14 Hours
Assessing need for HRD; Designing and developing effective HRD programs; Implementing HRD programs; Evaluating effectiveness of HRD Programs; Employee development activities- Approaches to employee development, leadership development, action learning, assessment and development centers; Intellectual capital and HRD; HRD mechanisms for workers; Role of trade unions; Industrial relations and HRD; Influence of motivation on development activities.		
Unit 3	: HRD Applications and Trends	12 Hours
Coaching and mentoring; Career management and development; Employee counselling; Competency mapping; PCMM, Balanced Score Card, Appreciative inquiry; Integrating HRD with technology, Employer branding and other emerging trends.		
Unit 4	: HRD in Organisations	12 Hours
Cases dealing with HRD practices in government organizations, manufacturing and service industries and MNCs; International experiences of human resource development.		
Pedagogy	Lecture/ Classroom Discussion/ Presentation/ Case Study/ Group Project/ Role Play	
Reference/Readings	1. Werner J. M., DeSimone, R.L., Human resource development, South Western. 2. Nadler, L., Corporate human resources development, Van Nostrand Reinhold. 3. Mankin, D., Human resource development, Oxford University Press India.

Programme : M.Com.
 Course Code : COO345
 Course Title : **Basic Econometrics**
 Number of Credits : 4
 Effective from AY : 2020-21

Need of the Course	: Econometrics as a discipline provides tremendous opportunity for understanding observed phenomena and relationships in the domain of social sciences. While the discipline of econometrics offers simple to very complex models for examining these relationships, a course in basic econometrics is needed to create foundation for grasping these advanced techniques and developing models that are able to explain more complex behaviour of economic variables. Basic econometrics course serves as the preliminary step in understanding econometric tools and modelling procedures.
Description of the Course	: Basic econometrics course is designed to provide knowledge of fundamental concepts in econometrics and familiarise learners with basic econometric tools. The course details on regression methodology of modelling including its forms, assumptions and diagnostics. It further includes topics in econometric analysis of cross-section data with particular focus on dummy variables and basic time series econometric models for forecasting.
Objectives of the Course	: (i) To provide foundational knowledge of regression analysis and develop skills in applying regression models to data. (ii) To provide knowledge and skills of diagnostic testing with respect to regression models. (iii) To enable learners master basic econometric techniques for analysis of cross-section data. (iv) To enable learners acquire skills in basic time series analysis and forecasting using econometric and event study methodology.

Course Content

Unit 1	: Introduction to Econometric Methodology and Regression Analysis	10 Hours
Econometrics – meaning, and significance of econometrics in business decisions - Methodology of econometric analysis – Nature and sources of data for econometric analysis – Preparation of data for analysis - Introduction to classical linear regression model - Assumptions of CLRM – Specification and estimation of bivariate and multiple regression models – Hypothesis testing and statistical inference – Properties of least square estimators (BLUE) – Basic model diagnostics using goodness of fit statistics – Regression terminology – Regression vs causation – Regression vs correlation – Reporting the results of regression analysis.		
Unit 2	: Econometric Modeling and Diagnostic Testing	16 Hours
Selection of model variables – Selection of functional form of regression – Model selection criteria –		

Issues in regression modelling - Autocorrelation, Heteroscedasticity, Multicollinearity – Consequences, tests for detection and remedial measures – Model misspecification errors – Types, consequences and tests of misspecification errors – Errors of measurement and relevant consequences.		
Unit 3	: Econometric Analysis of Cross-Section Data	10 Hours
Cross-section data – Data considerations and preparation, Sources of cross-sectional data – Cross-section data models - Dummy variables: Nature, ANOVA & ANCOVA Models – Cautions in the use of Dummy Variable – Interaction Effect using Dummy Variable – Applications of Dummy Variables - Seasonal Analysis, Structural breakpoint analysis using dummy variables.		
Unit 4	: Econometric Analysis of Time Series Data	12 Hours
Time series concepts – Stationarity in time series: Concept, Significance, Tests of stationarity in time series, ACF and PACF functions, Unit root tests, Transforming non-stationary time series – Econometric modelling and forecasting using time series data – AR, MA, ARMA and ARIMA modelling – Diagnostics and forecasting using ARIMA – Event study methodology.		
Pedagogy	: lectures/ case analysis/assignments/class room interaction/lab	
Reference/Readings	<ol style="list-style-type: none"> 1. Asteriou Dimitrius,(2006), Applied Econometrics, Palgrave Macmillan, New York 2. Cameroon Samuel (2005), Econometrics, McGraw Hill, New York. 3. Davidson, J. (2000) Econometric Theory, Blackwell, USA 4. Goldberger, A.S. Ramanathan Ramu (2002), Introductory Econometrics with applications, Thomson South Western, Singapore 10. Wooldridge (2006), Introductory Econometrics, Thomson-South Western, Singapore. 	
Course Outcome	<p>Upon completion of the course learners will be able to:</p> <p>CO1. Apply methodology of regression analysis in developing models for data in social sciences.</p> <p>CO2. Perform diagnostic tests on regression models and improvise their models.</p> <p>CO3. Demonstrate application of dummy variables for varied purposes in the context of cross-section data.</p> <p>CO4. Develop basic time series models for forecasting using ARIMA structure.</p> <p>CO5. Apply event study methodology on time series data for research and analytical purposes.</p>

Programme : M.Com
 Course Code : **COO346**
 Course Title : **Customer Relationship Management**
 Number of Credits : 4
 Effective from AY : 2020-21

Need of the Course	In today's corporate world staying competitive, efficient and effective, are key to being successful. Corporations employ best practices in the quest for excellence and the need for a student to understand and adopt the change is necessary. A student needs to get a real world understanding of customer relationship management.
Description of the Course	This course is focused on the holistic understanding of customer relationship management. It defines the CRM process, its concepts and goals. Value creation and its benefits to customers and organisations is highlighted. It finally explains CRM as a strategy and manner of implementation.
Objectives of the Course	For a student to be able to: <ol style="list-style-type: none"> 1. Understand and describe a customer relationship management application 2. Understand how it has been successfully implemented in various organizations and what does it take to ensure a successful implementation 3. To participate in an implementation of CRM by understanding the business case and importance of implementing such a system in an organization.

Course Content

Unit 1	Introduction to CRM:	8 Hours
Definition and concepts of CRM, Components of CRM, Understanding the goal of CRM and Customer Touch Points.		
Unit 2	CRM Process:	12 Hours
Introduction and Objectives of a CRM Process; The CRM cycle i.e. Assessment Phase; Planning Phase; The Executive Phase; Modules in CRM, 4C's (Elements) of CRM Process		
Unit 3	The Value Creation Process:	14 Hours
The value the customer receives: the nature of value, value proposition, value assessment. The value organisation receives: customer profitability, , customer acquisition and its economics, customer retention and it economics		
Unit 4	Developing CRM Strategy and CRM Implementation:	14 Hours
Role of CRM in business strategy, Understanding Service Quality: Technical, Functional, and dimensions of service quality, Managing Customer communications. Choosing the right CRM Solution; Framework for Implementing CRM: a Step-by-Step Process: Five Phases of CRM Projects: Development Customizations; Beta Test and Data Import; Train and Retain; Roll out and System Hand-off; Support CRM LINKS IN E-BUSINESS: E-Commerce and Customer		

Relationships on the Internet. Future of CRM.	
Pedagogy	: lectures/ case analysis/assignments/class room interaction/lab
Reference/Readings	1. Judith W .Kincaid , Customer Relationship Management Getting it Right, Pearson Education 2 .H.Peeru Mohamed , A Sagadevan, Custmer Relationship Management, A Step by Step Approach, Vikas Publishing House 3. Adrian Payne, HANDBOOK OF CRM: Achieving Excellence in Customer Management, Butterworth-Heinemann is an imprint of Elsevier 2005
Course Outcome	CO1. Students will gain an insight into business drivers, and what it takes to successfully implement a CRM application in a company. CO2. Students will design customer relationship management strategies by understanding customers’ preferences for the long-term sustainability of the Organizations.
Online Resources	<ul style="list-style-type: none"> • http://www.sasurieengg.com/e-course-material/MBA/II-Year-Sem-3/BA7015%20CUSTOMER%20RELATIONSHIP%20MANAGEMENT.pdf • https://www.businessmanagementideas.com/crm/customer-relationship-management/customer-relationship-management-crm-introduction-what-is-objectives-notes-examples/18371 • https://www.brainkart.com/subject/Customer-Relationship-Management_77/

Programme : M.Com
 Course Code : COO347
 Course Title : **Entrepreneurship Management**
 Number of Credits : 4
 Effective from AY : 2020-21

Need of the Course :	Entrepreneurship is important, as it has the ability to improve standards of living and create wealth, not only for the entrepreneurs but also for related businesses. Entrepreneurs also help drive change with innovation, where new and improved products enable new markets to be developed.
Description of the Course :	The course will inspire students and help them imbibe an entrepreneurial mind-set. The students will learn what entrepreneurship is and how it has impacted the world and their country. They will be introduced to key traits and the DNA of an entrepreneur, and be given an opportunity to assess their own strengths and identify gaps that need to be addressed to become a successful entrepreneur.
Objectives of the Course :	At the completion of this course, students should be able to: <ol style="list-style-type: none"> 1. The objective of this course is to develop and strengthen entrepreneurial quality and motivation amongst the students. 2. To motivate the entrepreneurial instinct and to develop necessary knowledge and skills among the students.

Course Content

Unit 1	: Entrepreneur & Entrepreneurship	12 Hours
Meaning and Importance, Evolution of term 'Entrepreneurship', Factors influencing entrepreneurship', Characteristics of an entrepreneur, Types of entrepreneurs, New generations of entrepreneurship viz. social entrepreneurship, Entrepreneurship, Health entrepreneurship, Tourism entrepreneurship, Women entrepreneurship etc., Barriers to entrepreneurship.		
Unit 2	: Business Planning Process:	12 Hours
Meaning of business plan - Business plan process - Advantages of business planning - Marketing plan - Production/operations plan - Organization plan - Financial plan - Final Project Report with Feasibility Study - preparing a model project report for starting a new venture.		
Unit 3	: Organization Assistance	12 Hours
Assistance to an entrepreneur, New Ventures, Industrial Park (Meaning, features, & examples), Special Economic Zone (Meaning, features & examples), Financial assistance by different agencies, MSME Act Small Scale Industries, Carry on Business (COB) license, Environmental Clearance, National Small Industries Corporation (NSIC), Financial assistance to MSME, Modernization assistance to small scale unit, The Small Industries Development Bank of India(SIDBI), The State Small Industries Development Corporation(SSIDC).		
Unit 4	: International Entrepreneurship Opportunities	12Hours
The nature of international entrepreneurship - Importance of international business to the firm - International versus domestic entrepreneurship - Stages of economic development - Entrepreneurship entry into international business - exporting - Direct foreign investment - barriers to international trade.		
Pedagogy	The following methods and forms of study are used in the course <ul style="list-style-type: none"> • Lectures/ classroom discussion/ presentation/case study/ group project/ 	

	assignment or a combination of some of these. The sessions shall be interactive to enable peer group learning.
Reference /Readings	1. David holt Entrepreneurship , New Venture Creation , Prentice Hall India. 2. S.S. Khanka ,Entrepreneurial Development S.Chand& Company Ltd. New Delhi 3. Peter F. Drucker , Innovation and Entrepreneurship 4. Vasant Desai, Dynamics of Entrepreneurship Development ,Himalaya Publication house
Course Outcome	Upon completion of the curse the students will be able to: CO1: Develop awareness about entrepreneurship and successful entrepreneurs. CO2: Develop an entrepreneurial mind-set by learning key skills such as design, personal selling, and communication. CO3: Understand the DNA of an entrepreneur and assess their strengths and weaknesses from an entrepreneurial perspective.

Programme : M.Com
 Course Code : **COO348**
 Course Title : **Tourism and Travel Management**
 Number of Credits : 4
 Effective from AY : 2020-21

Need of the Course	Tourism and Travel industry is one of the top ranked industries in the world responsible for transforming any economy. The role and importance of this industry enables a student to identify either the job opportunities available or start own business venture in tourism and travel related areas. Students are also encouraged to learn the double impact, positive and negative, of this industry to the local destination so that sustainability can be maintained and ensured for future generations.
Description of the Course	The course begins with basic understanding of tourism and travel industry clearly providing various reasons for people to travel and what constitutes tourism industry, i.e., tourism industry is in a way invisible but becomes visible in the form of a mixture of various other ancillary industries. The course provides detailed background on the demand for tourism and the related supply of tourism, so students can easily make out how to equate the demand-supply equation of tourism and travel industry. Marketing of tourism is also covered in detail by giving the importance and role of various marketing intermediaries. The course ends with providing a bird's eye view of the potential future implications of tourism and travel industry.
Objectives of the Course	Ensuring that the student is getting the complete clarity about the importance of tourism and travel industry, and also the significance of these two industries in transforming the economy in manifold ways by learning the multiplier effects.

Course Content

Unit 1	Introduction to Tourism and Travel:	12 Hours
Structure and Components of the Tourism and Travel Industry – Types of tourism - Economic and other impacts of tourism – Economics of Tourism – Tourism Investments Vs Returns – Tourism Vs Balance of Payment / Employment / Socio-Economic Trade off – Social Evils of Tourism Industry – Responsible Vs Irresponsible Tourism – Sustainable Tourism.		
Unit 2	Demand for Tourism and Tourist Destination	12 Hours
Demand: Concepts and Definitions of Demand for Tourism – Consumer Behaviour and Tourism Demand – Determinants of Tourism Demand – Measuring the Demand for Tourism – Patterns of Demand – Assessment of Quality and Satisfaction [IPA, SERVQUAL, SERVPERF, and HOLSAT]. Tourist Destination: The Geography of Tourism – Patterns and Characteristics of the Supply of Tourism – The Socio-cultural and Environmental Impacts – Tourist Motivation – Skills for the Key Sectors of the Travel and Tourism Industry – The Economic Impact of Tourism – Tourism and Development Planning – Determination of Carrying Capacity.		
Unit 3	Marketing of Tourism.	12 Hours
Role of Government organizations and marketing of tourism – Accommodation – Transportation – Intermediaries (tourism and travel)		

agents) – Attractions – Marketing for Tourism (The Historical Roots) – Marketing Management – Marketing Planning – Marketing Mix – The Future of Tourism marketing

Unit 4

Future of Tourism and Travel Industry

12 Hours

The future of travel and tourism around the world – Emergence of Medical, Health and Wellness tourism as a modern trend – Space Tourism: Problems and Prospects – Virtual Tourism: Role of Social Networking Sites and impact on Destination Image – What to Look for in the Next Century.

Pedagogy

: The following methods and forms of study are used in the course:
Lectures / Case studies /Self-Study (literature) and fact based assignments to better understand the importance of supply of tourism and demand for tourism.

Reference/Readings

1. Charles R Goeldner and J.R. Brent Ritchie, Tourism: Principles, Practices, Philosophies, Wiley India, 2011.
2. Pran Nath Seth & Sushama Seth Bhat, An Introduction to Travel and Tourism, Sterling Publishers Private Limited. 2010

Programme : M.Com
 Course Code : **COO349**
 Course Title : **Marketing Research Analytics**
 Number of Credits : 4
 Effective from AY : 2020-21

Need of the Course	: Marketing function is increasingly becoming data driven. Organizations are now collecting data on consumer behaviour, products and other parameters from various channels and performing analysis on this data to derive conclusions on underlying trends, relationships and develop business insights to deal with marketing challenges more effectively. The course in marketing research analytics precisely develops these abilities in learners.
Description of the Course	: This course commences with emphasis on understanding marketing research process and develops into a skill oriented plan enabling learners develop expertise in applying data visualization techniques, build marketing data dashboards with the help of relevant software applications and basic R programming. Further, learners will be able to get hands-on experience on customer analysis multivariate techniques and useful forecasting and pricing analysis techniques. A special feature of this course is exposure to machine learning applications for marketing research techniques.
Objectives of the Course	(i) To apprise the learners about marketing research process and provide exposure to relevant applications and programming used in marketing analytics. (ii) To develop expertise in learners in using data visualization tools and techniques for obtaining market insights. (iii) To train learners in applying multivariate marketing analytical techniques. (iv) To enable learners apply machine learning techniques in marketing research.

Course Content

Unit 1	: Introduction to Marketing Research and Data Analytics	12 Hours
Concept of marketing research – Classification of marketing research – Marketing research process – Role of marketing research – Defining marketing research problem – Market research designs – Marketing intelligence – Components and need - Applications of data analytics - Descriptive analytics – Predictive analytics – Basic R programming – Basic operations in analytics software such as Excel, Tableau, Orange.		
Unit 2	: Data Preparation, Visualization and Dashboards	12 Hours
Exploratory data analysis (EDA) in marketing research - Applications of EDA - Data collection and data management – Data classification – Dealing with missing data - Data visualization: Univariate visualization, Bivariate visualization, Multivariate visualization - Graphical exploratory data analysis (Example: Box-plots, heatmap, Histograms, Scatterplots) – Building business intelligence dashboard – Mapping – Interactive data charts – Data Mining.		
Unit 3	: Multivariate Data Analytics in Marketing Research	12 Hours
Discriminant analysis – Conjoint analysis – Correspondence analysis – Multidimensional scaling – Cluster analysis – Demand forecasting and pricing analysis.		

Unit 4	: Machine Learning Applications in Marketing Research	12 Hours
Concept and applications of machine learning – Supervised learning algorithms: Regression (Linear regression, Decision tree and Random forest) and classification (Logistic regression, Linear discriminant analysis, Random forest) – Text mining and sentiment analytics - Social media analytics.		
Pedagogy	: lectures/ case analysis/assignments/class room interaction/lab	
Reference/Readings	<ol style="list-style-type: none"> 1. Malhotra, N. and Dash, S. (2013), Marketing Research: An Applied Orientation, 6e, Pearson. 2. Zikmund, W. Programme : M. Com
 Course Code : **COO440**
 Course Title : **Retail Marketing**
 Number of Credits : 4
 Effective from AY : 2020-21

Need of the Course :	Present globalised world witnessed a dynamic change in the way goods and services are marketed, and retailing is one such initiatives seen in all countries which ensures everything under one roof. The retail marketing enables equating the demand with the supply with least possible cost ensuring satisfaction, both to the buyers and sellers. How and in what way retailing marketing is taking place enables a student to understand its importance and in future may help in setting up own retail outlets for catering the needs of the consumers.	
Description of the Course :	This course provides an overview of retailing, how and in what way the retailing marketing started and evolved over the years, the role of foreign players in retail marketing and impact of FDI on retail business around the world. Followed by explaining different retail marketing strategies available for successfully managing the retail business during its life cycle. The significance and importance of location and layout aspect is taken up subsequently for ensuring the establishment of a retail business. Once the retail business is setup, effective ways of merchandise planning, namely procurement and pricing strategies for ensuring effective selling is also covered at the end.	
Objectives of the Course :	This paper provides students with a basic information w.r.t (1) role, importance and significance of retailing, (2) how and in what way FDI helps in developing retailing business, various retail marketing strategies for improving competitive advantage, (3) the ways in which effectively identifying the location for a retail business, the layout pattern for easy accessibility, and (4) merchandise planning w.r.t procurement and pricing.	
Course Content		
Unit 1	: An Overview of Retailing	12 Hours
Introduction to Retail Industry – Growth of Retail in India – Global Retailers – Classification of retail organizations – types of ownership – merchandise offered – type of retail store – store retailing – non-store retailing – Traditional and Modern retail formats in India – Product retailing v/s Service Retailing – Role of Services in Retailing – Trends in the Indian Retail industry – Airport Retailing – Railway Retailing – Multichannel Retailing (Case Studies).		
International retail marketing – FDI in Indian Retail Sector – Single Brand & multi-Brand Retail – Global scenario of FDI in retail sector – FDI Policy Initiatives (Case Studies).		
Unit 2	: Retail Marketing Strategy	12 Hours
Retail Strategy – Process of formulating retail strategy – Target Market and Retail Format – Growth strategies – diversification strategies – achieving competitive advantage and positioning – International expansion – Financial Management in retail – Sources of finance – Global growth		

opportunities (Case Studies)		
Unit 3	: Retail Location and Layout	12 Hours
Importance of store locations – types of locations – steps involved in choosing a retail location Country/region analysis – trade area analysis – site evaluation and selection – steps in site selection – store design and layout – exterior design and layout – interior design and layout – interior design elements – Visual merchandising – Space planning – Store Atmospherics (Case Studies)		
Unit 4	: Merchandise Planning and Retail Marketing Mix	12 Hours
Merchandising – Merchandise planning – process of merchandise planning – Develop sales forecast – factors affecting merchandise function – functions of merchandise manager – Assortment Planning – Merchandise Budget – methods of determining inventory valuation - Merchandise buying – Branding Strategies – Private label brands – national brands – Process of merchandise procurement – Global sourcing – vendor relations - Merchandise Pricing – Retail price – Setting retail price – elements – Price adjustments – pricing strategy – external influences on retail pricing strategy – retail pricing objectives - Analyzing merchandise performance (Case Studies)		
Pedagogy	The following methods and forms of study are used in the course <ul style="list-style-type: none"> Lectures, Case Studies and Self-study (doing home assignments based on reading research papers in the area of Retail Marketing). 	
Reference/Readings	<ol style="list-style-type: none"> 1. Michael Levy, Barton Weiz & Ajay Pandit : Retailing Management (6th Edition), Tata Mc Graw Publishing Co., New Delhi 2. Programme : M. Com
 Course Code : **COO441**
 Course Title : **Services Marketing**
 Number of Credits : 4
 Effective from AY : 2020-21

Need of the Course :	<p>Though the three-sector economic model divides economies into primary (extraction of raw materials), secondary (manufacturing) and tertiary (service industries), service industries which exists to facilitate the transport, distribution and sale of goods are gaining prominence around the world in general and India witnessed a tremendous growth in service industries during the last few decades.</p> <p>In the present globalised business world, understanding the significance of service industries helps in identifying either a job profile or starting own business in service sector.</p>
Description of the Course :	<p>The course provides basics about what constitutes a service, its role, importance and significance. How and in what way the marketing mix is applied in services industries is covered next. Importance of maintaining effective customer relationship and also ensuring high quality standard for ultimate customer satisfaction is discussed subsequently. Various categories of services industries are discussed at the end so that the students will get the idea of variety of job opportunities available.</p>
Objectives of the Course :	<p>This paper provides students with a basic information w.r.t (1) role, importance and significance of services and service marketing, (2) how and in what way marketing mix concept can be applied to services marketing, (3) importance of maintaining efficient customer relationship and also ensuring good service quality, and (4) different types of service industries presently existing and their role and importance in transforming the economy.</p>

Course Content

Unit 1	: Introduction to Services Marketing	12 Hours
Meaning, Importance, and Significance of Services – Why Services Marketing? – Service and Technology – Distinctive Aspects of Service Management – Customer Involvement in Service Process – Managing Service Encounters		
Unit 2	: Service Marketing Mix	12 Hours
Customer Expectations and Perceptions of Service – Customer Behaviour in Service Setting – Targeting Customers, Managing Relationships, Services Market Segmentation – Positioning and Differentiation of Services. Positioning a Service in Marketplace – Creating the Service Product and Adding Value – Pricing Strategies for Services		
Unit 3	: CRM & Service Quality	12 Hours

Customer Relationship Management (CRM) - Customer Education and Service Promotion – Customer-Defined Service Standards. E services – online Consumer Behaviour – Self-service technologies

Service Quality in Service Marketing – Service Encounter -Role of HR & Internal Marketing - Monitoring and Measuring customer satisfaction –SERVQUAL & GAP model - Handling complaints effectively - Service Failure – Recovery

Unit 4	: Application of Service Marketing	12 Hours
---------------	---	-----------------

Bank Marketing – Insurance Marketing – Transport Marketing – Tourism Marketing – Hotel Marketing – Consultancy Marketing – Personal Care Marketing – Education Marketing – Hospital Marketing – Marketing Mix of Select Services (Courier Services, Entertainment Services, Electricity Services, Telecommunications Services, Automobile Services).

Pedagogy	<p>The following methods and forms of study are used in the course</p> <ul style="list-style-type: none"> Lectures, Case Studies and Self-study (doing home assignments based on reading research papers in the area of Service Marketing).
Reference/Readings	<ol style="list-style-type: none"> Zeithaml, Valarie A and Bitner, Mary Jo; Services Marketing: Integrating Customer Focus Across the Firm; McGraw-Hill, 2017. Programme : M.Com.
 Course Code : **COO442**
 Course Title : **Industrial and Rural Marketing**
 Number of Credits : 4
 Effective from AY : 2020-21

Need of the Course	:The industrial marketers face many distinctive marketing situations not normally encountered in the consumer market. Further, the industrial market has been the back bone of the high standard of living enjoyed by consumers in past or since the industrial revolution at global level. Also, the growth of rural marketing leads to increased business operations, professional activities, and services that can generate a lot of employment opportunities. Thus, the need of this course to familiarize students with the various aspects of Industrial and Rural Marketing.
Description of the Course	:The course outlines the topics: Introduction to Industrial Marketing, Industrial Marketing Channel Management, Pricing, and Sales Promotion, Introduction to Rural Marketing, and Rural Marketing Strategies
Objectives of the Course	: The following are the main objectives of the course - 1. To enable students to understand the various aspects of Industrial Marketing. 2. To provide insights about Industrial Marketing Channel Management, Pricing, and Sales Promotion. 3. To enable students to understand the various aspects of Rural Marketing. 4. To enable students to develop Rural Marketing Strategies.

Course Content

Unit 1	: Introduction to Industrial Marketing	12 Hours
Industrial Marketing – Concept – Features – Functions of Industrial Marketing Executive – Types of Industrial Product – Industrial Customer: Buying stages – Buying Stages – Decision-making Unit – Factors Influencing Purchasing Decisions – Human Dimension – Purchasing Systems and Techniques – Planning the Market Offering		
Unit 2	:Industrial Marketing Channel Management, Pricing, and Sales Promotion	12 Hours
Main Distribution Channels – Aspects of Contractual Arrangements – Merits and limitations of the Use of Middlemen – Factors in Channel Choice – Selling to Middlemen – Pricing Models – Pricing Objectives – Price Monitoring – Use of Probability in Pricing – Legislation and Pricing – Export Pricing – Sales Promotion – Personal Selling – COMPACT Model – Advertising – Other forms of Sales Promotion – Co-ordination of Promotion		
Unit 3	: Introduction to Rural Marketing	12 Hours
Rural Marketing – Meaning – Evolution of Rural Marketing – Rural Environment – Rural Economic Structure – Rural Infrastructure – Rural Marketing Mix – Evolving Rural Consumer – Evolution of Rural Distribution Channels – Rural Retail Environment – Emergence of Modern Retail in Rural Areas – Channel Behaviour in Rural Areas – Distribution Models in Rural Markets – Rural-centric Distribution Models		

Unit 4	:Rural Marketing Strategies	12 Hours
Product Strategies – Product Concept – Rural Product Classification – Product Decisions and Strategies – Pricing Strategies – Pricing in Rural India – Market Entry Strategies – Product Mix Pricing Strategies – Price Adjustment Strategies – Communication Strategies for Rural Markets – Challenges in Rural Communication – Developing Effective Rural Communication		
Pedagogy	: Lectures/ classroom discussion/ presentation/case study/ group project/ assignment or a combination of some of these. The sessions shall be interactive to enable peer group learning.	
Reference/Readings	<ol style="list-style-type: none"> 1. Havaladar, K. K. (2005). <i>Industrial Marketing – Text and Cases</i> (Second Edition). Tata McGraw-Hill Publishing Company Limited. 2. Kashyap, P. (2016). <i>Rural Marketing</i> (Third Edition). Pearson Education Limited. 3. Krishnamacharyulu, C. S. G. (2011). <i>Rural Marketing – Text and Cases</i> (Second Edition). Programme : M. Com
 Course Code : **COO443**
 Course Title : **International Marketing**
 Number of Credits : 4
 Effective from AY : 2020-21

Need of the Course	The subject ' International Marketing ' helps in understanding the complexities in the Global marketing environment and learn International marketing concepts, product strategy and branding issues, pricing and communicating decisions, negotiations with customers, International marketing research and Global E-marketing.
Description of the Course	This course is designed to motivate the students to understand (1) Introduction to International Marketing and Global Marketing Environment (2) Product Strategy and Branding for International Markets (3) Pricing and Communication Decision for International Markets (4) Negotiating with International Customers, International Marketing Research and Global E-Marketing.
Objectives of the Course	<ol style="list-style-type: none"> 1. To understand International Marketing and Global marketing environment. 2. To understand the Product strategy, Branding and Pricing of products. 3. To acquire knowledge and understanding of International marketing research, Global E-marketing, communicating and negotiating with customers.

Course Content

Unit 1	: Introduction to International Marketing and Global Marketing Environment	12 Hours
---------------	---	-----------------

Introduction to International Marketing – Introduction – Scope of International Marketing - Environmental and Cultural Dynamics of Global Markets - Main Functions in International Marketing - International Marketing vs. Domestic Marketing - Principles of International Marketing - Management Orientations (Ethnocentric, Polycentric, Regiocentric and Geocentric Orientations) - Benefits of International Marketing.

Global Marketing Environment – Definition –Reasons for Global Marketing Environment – Models of Environmental Analysis – PEST – SLEPT – STEEPLE - Factors within the Global Environment.

Unit 2	: Product Strategy and Branding for International Markets	12 Hours
---------------	--	-----------------

International Products - New Product Development (Identifying New Product ideas – International New Product Department – Testing New products in National Markets)- International Product Planning - Product Adoption vs Standardization - International Product Marketing - Factors influencing Product Adaptation in International Markets – International Product Life Cycle - Product Strategy (Importance of Product Strategy - Elements of a Product Strategy - Creating Product Strategy - Power of the Product Strategy).

Branding Issues – Strategic International Branding – Themes of Brand as Differentiator – Local Vs Global Brands – Strategic Advantages of Building International Brands.

Unit 3	: Pricing and Communication Decision for International Markets	12 Hours
---------------	---	-----------------

Pricing Decisions - Factors affecting International Pricing Strategies - Factors affecting Pricing Decisions - Pricing Approaches - Pricing Issues in International Marketing.

Communication in Marketing - Steps in Developing an Effective Communication - Integrated Marketing

Communication - Global Communication Strategy - Factors Influencing Communication Decisions – Advertising - Public Relations - Personal Selling - Sales Promotion.

Unit 4

: Negotiating with International Customers, International Marketing Research and Global E-Marketing

12 Hours

Negotiating with International Customers – The Pervasive Impact of Culture on Negotiation Behaviour - Implications for Managers and Negotiators - Negotiations with Interest to Customers - Cultural Differences - Differences in Language and Non-verbal Behaviours – Differences in Values - Differences in Thinking and Decision-making Process.

International Marketing Research - Scope of International Marketing Research - Research of Industry, Market Characteristics and Market Trends (Buyer Behaviour Research -Product Research - Distribution Research - Promotion Research - Pricing Research).

Global E-Marketing - Benefits of Global E-Marketing - Factors influencing the Global E-Marketing Strategy (Diversity of regulations - Infrastructure - Geographical distance - Language - User Demographics - Buyer behaviour - Payment systems).

Pedagogy

The following methods and forms of study are used in the course

- Lectures, Case Studies and Self-study (doing home assignments based on reading and understanding different International marketing)
- Self-study on reading reference books in International marketing management area to understand the importance of international marketing, product decisions, pricing decisions, marketing research, communication and negotiating with customers.
- In addition to the lectures, review sessions with self learning of advanced areas in the course with latest developments.

Reference/Readings

Programme : M.Com.
 Course Code : **COO444**
 Course Title : **Enterprises Resource Planning**
 Number of Credits : 4
 Effective from AY : 2020-21

Need of the Course	: The Enterprise Resource Planning is a business management software that allows an organization to leverage a suite of integrated applications to streamline and automate processes, creating a leaner, more accurate and efficient operation. ERP provides complete visibility into core business processes and optimizes systems through superior resource tracking and reporting, database management and data sharing and overall improved information systems. ERP systems can allow the business to expand without the addition of IT or staffing costs. ERP systems enable business growth. The need of this course is to provide a good understanding about various aspects of ERP which are vital in today's corporate world.
Description of the Course	: The course outlines the topics: Introduction to Enterprise Resource Planning (ERP), ERP Modules and Software Selection, ERP Implementation, and ERP Project Management
Objectives of the Course	: The following are the main objectives of the course - <ol style="list-style-type: none"> 1. To familiarise students the need for Enterprise Resource Planning in an Organization 2. To enable students to understand the ERP Modules and selection of software. 3. To provide overview of Implementation of Enterprise Resource Planning in an Organization 4. To enable students to understand the ERP Project Management.

Course Content

Unit 1	: Introduction to Enterprise Resource Planning (ERP)	12 Hours
Introduction – Definition of ERP – Need for an ERP – Benefits of an ERP System – Limitations of the ERP System – Evolution of ERP – Manufacturing Strategies – Material Requirements Planning (MRP) – Manufacturing Resource Planning (MRP II) – Conceptual Framework of ERP – Emerging Trends of ERP and Enterprise Applications		
Unit 2	: ERP Modules and Software Selection	12 Hours
Human Resource Management Module – Materials Management Module – Sales and Distribution Module – Issues in ERP Software Selection – ERP Software Selection Criteria – Methods in ERP Software Selection – Cost Benefit Analysis – ERP Software Selection Process		
Unit 3	: ERP Implementation	12 Hours
Approaches to Study ERP Implementation – Different Perspectives in ERP Implementation – Minimizing Customization – Characteristics of ERP Systems – Critical Success Factors for ERP		

Implementation – ERP Implementation Strategy – Phases in ERP Implementation – Benefits Realization in ERP Implementation – Change Management Issues		
Unit 4	: ERP Project Management	12 Hours
Project Organisation Structure – Roles and Responsibilities of Different Project Team Members – Core Team Selection – Consultant Selection – Project Scoping – ERP Implementation Project Plan – Resource Plan – Project Procedures and Standards for Governance – Project Charter – Project Risk Management		
Pedagogy	: Lectures/ classroom discussion/ presentation/case study/ group project/ assignment or a combination of some of these. The sessions shall be interactive to enable peer group learning.	
Reference/Readings	<ol style="list-style-type: none"> 1. Ganesh, K., Mohapatra, S., Anbuudayasankar, S. P., & Sivakumar, P. (2014). <i>Enterprise Resource Planning</i>. Springer. 2. Garg, V. Tata McGraw Hill Education Private Limited, New Delhi. 8. Summer, M. (2014). <i>Enterprise Resource Planning</i>. Pearson Education Limited. 	
Course Outcome	: Upon completion of this course, students will be able to: CO1: Elaborate the need for Enterprise Resource Planning in an Organization CO2: Discuss the ERP Modules and selection of software. CO3: Evaluate the Implementation of Enterprise Resource Planning in an Organization CO4: Discuss the ERP Project Management.	
Online Resources	e-PG Pathshala – Management – Management Information System – Management Information System and Information Resource Management https://epgp.inflibnet.ac.in/Home/ViewSubject?catid=23 National Digital Library of India https://ndl.iitkgp.ac.in/result?q={%22t%22:%22search%22,%22k%22:%22enterprise%20resource%20planning%22,%22s%22:%22[],%22b%22:%22filters%22:%22[]}}	

Programme : M.Com.
 Course Code : **COO445**
 Course Title : **Industrial Relations and Labour Laws**
 Number of Credits : 4
 Effective from AY : 2021-22

Need of the Course :	The course is designed to make the students aware about the dynamics of Industrial Relations and Labour laws.	
Description of the Course :	When one works in an industry understanding trade unions, collective bargaining and industrial conflict becomes inevitable. The course focuses on the managerial perspectives needed to understand industrial relation issues, labour laws and generate alternative decision making.	
Objectives of the Course :	This course intends to build in depth understanding of the various aspects, issues and implications of Industrial relations and labour laws	
Course Content		
Unit 1	: Introduction to Industrial Relations	10 Hours
Introduction, Overview of Industrial Relations, Composition of Industrial Relations, Importance of Industrial Relations, Perspectives of Industrial Relations, The Dynamic Context of Industrial Relations: Globalization and the National Economy, Role of Trade Union in Industrial Relations. Grievance Handling: Introduction, Grievance, Needs for Grievance Redressal, Steps in Grievance Redressal Procedure, Essential Pre-requisites of Grievance Procedure, Grievance Interview, Precautions in Grievance Handling, Conflict Resolution		
Unit 2	: Legal Framework of Industrial Relations	14 Hours
Settlement Machinery for Industrial Disputes: Conciliation, Arbitration & Adjudication, Legislation: The Trade Unions Act 1926, The Industrial Dispute Act 1947, The Factory’s Act 1948, the Workman’s Compensation Act, 1923 – the Employees State Insurance Act 1948 – the Employees Provident Funds and Miscellaneous Provisions Act, 1952. The Maternity Benefits Act 1961.		
Unit 3	: Outcomes in Industrial Relations and Emerging Scenario	12 Hours
Employee Involvement and Participation: Concept, Objectives and Forms, Ethical Codes, Collective Bargaining: Importance, Forms, Process of Negotiation, Recent Trends in Collective Bargaining, Industrial Relations and Technological Change, International Labour Organization (ILO): Objectives, Structure. Managing without Unions, The future Direction of Industrial Relations		
Unit 4	: Law and procedure for employee discipline	12 Hours
Meaning and significance of employee discipline, service rules and standing orders, misconduct, suspension and subsistence allowance, show cause notice, investigation, enquiry and charge sheet, principles of natural justice and enquiry procedure. Sections 11A, 17B, 33 and schedule 5 of Industrial Disputes Act and Section10A of Industrial Employment standing orders Act, Prevention of Sexual Harassment at Workplace.		
Pedagogy	Lecture / Classroom Discussion/ Presentation/ Case Study/ Group Project/ Role Play	
Reference/Readings	1) Essentials of Human Resource Management and Industrial Relations – P. Subbarao Himalaya.	

	2) Personnel management & Industrial Relation – P.C. Tripathi. 3) The Dynamics of Employee Relations – P. Blyton & Turnbull 4) Understanding Work & Employment: Industrial Relations in Transition – P. Ackers & A. Wilkinson
Course Outcome	Upon completion of the course the students will: CO1: be able to elaborate the concept of Industrial Relations and also effective handling of Industrial Grievances. CO2: well versed with the legal framework revolving around the Industrial Relations. CO3: equipped to the recent scenario in Industrial relations at National as well as International Level CO4: understand in detail the concept of employee discipline.

Programme : M.Com.
 Course Code : **COO446**
 Course Title : **International Trade and Environment**
 Number of Credits : 4
 Effective from AY : 2020-21

Need of the Course	: The international trade between different countries is an important factor in raising living standards, providing employment and enabling consumers to enjoy a greater variety of goods. International trade has occurred since the earliest civilizations began trading, but in recent years international trade has become increasingly important with a larger share of Gross Domestic Product devoted to exports and imports. The need of this course to provide insights about various aspects of International Trade and Environment which are vital in today's world of Globalization.
Description of the Course	: The course outlines the topics: Introduction to International Trade, Theories of International Trade, International Business Environment, and Globalization, its Challenges and Changes in International Business Environment
Objectives of the Course	: The following are the main objectives of the course - <ol style="list-style-type: none"> 1. To enable students to understand the significance of International Trade. 2. To provide insights about various Theories of International Trade 3. To provide overview of International Business Environment. 4. To enable students to discuss about Globalization, its Challenges, and Changes in International Business Environment.

Course Content

Unit 1	: Introduction to International Trade	14 Hours
Introduction – Importance of International Trade – Trade, Growth, and Economic Interrelatedness – Trade and National Characteristics – Sectoral Structure of Trade – Causes of International Trade – The No-Trade Model – Distribution of Gains from Trade: Big versus Small Countries – Trade Creation and Trade Diversion – International Trade Institutions and Rules – Trade Policy and Environmental Regulations – Trade and the Environment		
Unit 2	: Theories of International Trade	10 Hours
Mercantilist's Version – Absolute and Comparative Advantage – Factor Proportions theory – Neo-Factor Proportions Theory – Country Similarity Theory – Intra-Industry Trade – Trade in Intermediate Products and Services: Outsourcing – National Competitive Advantage – Terms of Trade		
Unit 3	: International Business Environment	14 Hours
Introduction – Classification of Environmental Forces – Environmental Stakeholders – Geo-Political Scales – Model of Business Environment – Perceptual Filters – Dynamism and Complexity – Environmental Forecasting – Forecasting in Dynamic and Complex Environment – Forecasting Techniques – Impact Analysis – Environmental Analysis and Strategic Process		

Unit 4	: Globalization, Challenges and Changes	10 Hours
Globalization – Consequences of Globalization – Changes in International Business Environment – Nature of International Business Environment – Implications for Individuals and Groups – Implications for Organizations – Implications for Governments – Changing Scope of Public Sector – Future Trends		
Pedagogy	: Lectures/ classroom discussion/ presentation/case study/ group project/ assignment or a combination of some of these. The sessions shall be interactive to enable peer group learning.	
Reference/Readings	<ol style="list-style-type: none"> 1. Bardhan, P. (2003). <i>International Trade, Growth, and Development</i>. Blackwell Publishing Limited. 2. Programme : M.Com.
 Course Code : **COO447**
 Course Title : **Advanced Statistical Analytical Models**
 Number of Credits : 4
 Effective from AY : 2020-21

Need of the Course	: Certain business problems are too complex involving varied factors, assumptions and analytical goals. The data sets that are used in resolving such complex business problems require skills in application of advanced statistical modelling techniques. The course in Advanced Statistical Analytical Models provides an opportunity to learners to acquire these skills and develop expertise in resolving distinct and complex business problems.	
Description of the Course	: This course provides training in advanced regression models including ridge regressions, ordinal and multinomial logit regression models that are used in understanding distinct and significant marketing problems. Further, it covers path modelling based on partial least squares which is emerging as a significant format of structural equation modelling. Mixed effects modelling that address the modelling needs of hierarchical data. The advanced risk analysis models including survival analysis are also included in this course. Learners can acquire skills in using software applications for optimization problems through linear programming.	
Objectives of the Course	: (i) To enable learners understand estimation and interpretation of advanced regression models. (ii) To enable learners in acquiring skills in structural equation modelling using partial least squares methodology. (iii) To develop skills in learners on modelling of hierarchical data. (iv) To facilitate estimation of risk analysis and optimization models using modern software applications.	
Course Content		
Unit 1	:Advanced Regression Models	14 Hours
Ridge regression – Regression models for counts and proportions – Ordinal regression models – Mulinomial logit model.		
Unit 2	: Path Modelling	14 Hours
Partial Least Squares path modelling – PLS regression and PLS SEM models – Path diagrams - Reflective and formative models – Inner and outer models – Confirmatory Tetrad Analysis - Validity testing in PLS-SEM – Importance Performance Map Analysis - Estimation with blindfolding - Mediation – Moderation – Partitioning – Bootstrapped significance output – Multi group analysis.		
Unit 3	: Mixed Effects Modelling	12 Hours
Nature of hierarchical data – Concept and need for mixed effects models – Crossed and nested designs – Fixed and random effects – Preparing data for mixed effects modeling – Fitting fixed effects model –		

Mixed effects modeling procedure - Model fit – Custom hypothesis tests - Multilevel analysis – Mixed model ANOVA.

Unit 4	: Risk Analysis and Optimization Models	12 Hours
Concept of risk analysis – Meaning and applications of Survival Analysis – Semi-Parametric survival models: Kaplan-Meier Curves (Logrank tests) – Life-table analysis – Cumulative incidence analysis – Cox regression – Parametric survival regression - Linear programming models.		
Pedagogy	: lectures/ case analysis/assignments/class room interaction/lab	
Reference/Readings	<ol style="list-style-type: none"> 1. Malhotra, N. and Dash, S. (2013), Marketing Research: An Applied Orientation, 6e, Pearson. 2. Hutcheson, G. and Moutinho, L. (2008), Statistical Modeling for Management, Sage Publications. 3. Garson, G. (2016), Partial Least Squares: Regression and Structural Equation Models, Statistical Publishing Associates, USA. 4. Hair, J., Hult, G, Ringle C. and Sarstedt, M. (2014), A Primer on Partial Least Squares Structural Equation Modeling, Sage Publishing. 5. Gujarati, D. (2011), Econometrics by Example, Palgrave MacMillan. 6. Hosmer, D., Lemeshow, S., May, S. (2008), Applied Survival Analysis: Regression Modelling of Time-to-Event Data, 2nd Edn., Wiley. 7. Galwey, N. (2007), Introduction to Mixed Modelling: Beyond Regression and Analysis of Variance, Wiley. 8. Saleh, A., Arashi, M., Kibria, B. (2019), Theory of Ridge Regression Estimation with Applications, Wiley. 9. Stevens, J. (2009), Applied Multivariate Statistics for the Social Sciences, 5th Edn., Routledge. 	
Course Outcome	: Upon completion of the course learners will be able to: CO1 Estimate and interpret advanced regression models for special circumstances and limited dependent variable. CO2 Develop path models using partial least squares estimations. CO3 Demonstrate application of mixed effects models for modelling hierarchical data. CO4 Apply advanced risk analysis models including survival analysis and Cox regressions in business decision making. CO5 Demonstrate usage of software applications in resolving optimization issues.

Programme : **M. Com.**
 Course Code : **COO448**
 Course Title : **Digital Marketing and Social Media Management**
 Number of Credits : 4
 Effective from AY : 2020-21

Need of the Course	Digital marketing has changed the way how we interact and communicate with each other. The social media companies and platforms were not existing some years back have become the integral part of life. This course is essential for the students to learn the essential principles and practices in the digital economy. Learning this course will open up the vast opportunities for making career in digital marketing.	
Description of the Course	This course equips the students with an understanding of how digital marketing works. It exposes the students to the new dimensions of digital marketing which incorporates SMS Marketing, Mobile Marketing, E-mail Marketing and Social media marketing.	
Objectives of the Course	The objective of this course is to familiarise the students with the basic knowledge of digital marketing those who wish to pursue the advanced studies in digital marketing and social media marketing.	
Course Content		
Unit 1	: Evolution of Marketing – Going Digital	15 Hours
Introduction to Digital Marketing and its Significance, Traditional Marketing Vs Digital Marketing, Digital Marketing Process, Understanding the digital consumer, Defining digital marketing strategy. Case studies on digital marketing strategies.		
Unit 2	: SMS Marketing and Mobile Marketing	10 Hours
Introduction to SMS Marketing, Why SMS Marketing, Kinds of SMS - Promotional SMS, Transactional SMS How to Integrate SMS on Software. What is Mobile Marketing? Methods of Mobile Marketing, How to create a mobile website?, Why Focus on Smartphone Apps, Advertising on Mobile App, Importance and Future Scope. Case studies.		
Unit 3	: E-mail Marketing	10 Hours
Email Marketing- Introduction and Significance, Benefits of E-mail marketing, designing e-mail marketing campaigns, Building E-mail List and Signup Forms, Email Marketing Strategy and Monitoring, E-mail marketing tools, How to write effective content and subject line, Managing engagement and conversation through email-marketing.		
Unit 4	: Social Media and Online Consumer Engagement	8 Hours
Meaning of Social media, different forms of social media, promoting business through online channels, Setting up Facebook Advertising Account, Understanding Facebook Audience and its Types, Designing Facebook Advertising Campaigns, Twitter Marketing Basics, Designing Twitter Advertising Campaigns, Introduction to LinkedIn Marketing, Developing digital marketing strategy in Integration form. Case studies.		

Pedagogy	: The teaching pedagogy of this course shall include the combination of the following: Interactive Lectures/Discussions/presentations/case study/ individual or group projects/ assignments/Class activities or a combination of some of these. The sessions shall be interactive to enable peer group learning.
Reference/Readings	<ol style="list-style-type: none"> 1. Programme : M. Com
 Course Code : **COO449**
 Course Title : **Organisational Behaviour**
 Number of Credits : 4
 Effective from AY : 2020-21

Need of the Course	The course helps the students to study the complex nature of human beings in organizations by identifying causes and effects of that behaviour. It is very important to study organizational behaviour because it provides an understanding of why people behave in certain manner in organizations. OB helps in predicting and controlling human behaviour. Hence the course is designed to facilitate understanding of the individual behaviour and group behaviour at the work place.
Description of the Course	This course covers all essential topics that will enhance the knowledge of students in “Organizational Behaviour”. It covers topics related to the organizational multidiscipline which provides an understanding of individual behavior, Various types of Groups operating in an organization, Power and Organizational Politics, Conflict Management Causes, Effects and Management of conflict at different levels of conflict and change management, Stress Management and Counseling.
Objectives of the Course	<ul style="list-style-type: none"> • The course is designed to bring an understanding among the students about the behaviour of individual and group in an organization. • It also provides ways to deal with the different levels of conflict and manage it. In this competitive world where there is a huge race among the individuals, the understanding of one’s own self and others can help to gain the advantage. • Human behaviour is unpredictable in nature so understanding of causes and effects of the behaviour is important area for individual who interacts in the community and society

Course Content

Unit 1	: Organizational Behaviour – Understanding Self.	12 Hours
Organisational Behaviour – Organisational Multidiscipline – Different Model of Men (Economic, Social, Organization, Self-Actualization, Complex, Impulsive and Compulsive) - Individual Behaviour is studied through – Perception – Personality –Values – Attitudes – Motivation – Learning.		
Unit 2	: Conflict Management and Stress Management.	12 Hours
Conflict Management – Define Conflict – Conflict and Competition – Changing Views of Conflict – Traditional and Current views of Conflict – Nature of Conflict – Levels of Conflict – Sources of Conflict – Functional and Dysfunctional Conflict – Effects of Conflict – A Model of Conflict – Assertive Behaviour – Interpersonal Orientation – Facilitating Smooth Relations.		
Stress Management – Concept – Extreme Products of Stress – Causes and Symptoms of Stress – Job		

Related Causes of Stress – Frustration – Stress and Job Performance – Stress and Employee Health – Stress Vulnerability – Approaches to Stress Management.		
Unit 3	: Group Behaviour and Power and Organisational Politics	12 Hours
<p>Group Behaviour – Group Dynamics – Definition – Properties of Group – Types of Groups – Formal and Informal Groups – Comparison between Formal and Informal Organisation – Nature and Effect of Informal Groups – Benefits of Informal Groups – Formation of Informal Leader – Identifying and Rewarding Informal Leaders – Key Roles of Informal Leader - Difference between Task Leadership Roles and Social Leadership Roles – Multiple Informal Leaders.</p> <p>Power and Organisational Politics – Meaning of Power – Dependency in Power Relationship Sources of Power – Legitimate – Reward – Coercive – Expert – Referent – Organisational Politics – Influence and Political Power.</p>		
Unit 4	: Counselling and Change Management.	12 Hours
<p>Counselling – Meaning – Characteristics of Counselling – Managers Counselling role – Need for Counselling – Types of Counselling – Directive – Non-Directive – Participative – A Contingent view.</p> <p>Change Management –Nature of Change – Responses to Change – Cost and Benefits of Change – Resistance to Change – Nature and Effect – Reasons for Resistance – Types of Resistance – Possible Benefits of Resistance – Implementing Change – Transformational Leadership and Change –Elements of Transformational Leadership – Three stage Model of change Process – Building Support for Change.</p>		
Pedagogy	<p>The following methods and forms of study are used in the course</p> <ul style="list-style-type: none"> • The methodology used in the class will combine lectures, applications and case discussion. • Lectures will address the assigned reading materials. The required readings, lecture notes, and the assigned home works and cases are intended to support learning objectives and will prepare the students adequately for the examinations. • In addition to the lectures, review sessions will be scheduled to address assignments, end of chapter questions and in some occasion's assigned cases.

Course Code: IMC 101

Title of the Course: Management Concepts and Organisational Behaviour

Number of Credits: 4

Total Contact Hours: 48

Effective from AY: 2020-21

<u>Prerequisites for the course:</u>	Same as programme pre-requisites	
<u>Objective:</u>	At the end of the course, the student should have the ability to understand managerial processes and have the competence to deal with people at work-place	
<u>Content:</u>	<p>Management Science: basic concepts and its role in decision making: Planning, organizing, staffing, leading and controlling.</p> <p>Organization Structure and Design: Role in Individual and Interpersonal behavior at work-place</p> <p>Introduction to Determinants of Individual Behaviour: Perception, Personality, Attitudes, , learning, Self-Concepts ; Theories/ Models for understanding these determinants</p> <p>Fundamentals of Interpersonal Behaviour: Group Dynamics, Tools for Interpersonal Analysis, Fundamentals of Leadership and Motivation and their application, Theories/ Models/ Styles</p> <p>Organizational Change and Development; Models of Change; Organizational Climate and Culture; Conflict, and Negotiations. Power and Politics in Organization.</p>	<p><u>8 Hours</u></p> <p><u>4 Hours</u></p> <p><u>15 Hours</u></p> <p><u>15 Hours</u></p> <p><u>6 Hours</u></p>
<u>Pedagogy:</u>	Lectures/ tutorials/laboratory work/ field work/ outreach activities/ project work/ vocational training/viva/ seminars/ term papers/assignments/ presentations/ self-study/ Case Studies etc. or a combination of some of these. Sessions shall be interactive in nature to	

	enable peer group learning.	
<u>Learning Outcomes</u>	The participant will be able to understand people's behavior at work-place, and take managerial decisions	
<u>References/Readings</u>	<ol style="list-style-type: none"> 1. Weihrich, Heinz and Harold Koontz; 'Essentials of Management: An International Perspective'; McGraw-Hill, Inc.; 10th edition, 2015 2. Title of the Course: Environmental Studies (as approved for other programmes)

Number of Credits: 4

Total Contact Hours: 48

Effective from AY: 2020-21

Course Code: IMC 103

Title of the Course: Probability and Statistics - I

Number of Credits: 4

Total Contact Hours: 48

Effective from AY: 2020-21

<u>Prerequisites for the course:</u>	Same as programme pre-requisites	
<u>Objectives:</u>	This course aims to introduce the basic concepts of probability theory	
<u>Content:</u>	Module 1: Experiments and sample spaces, events, algebra of events, probability axioms, conditional probability, independence of events, mutually exclusive events. Bayes theorem. 2: One dimensional random variable: discrete and continuous random variable, characteristics of distributions, cumulative distribution function, functions of one random variable. 3: Two dimensional random variable: marginal and conditional distributions, conditional expectation independence. 4: Covariance and correlation. Understanding linkages, visualizing 5. Discrete distributions: Bernoulli, Binomial, Poisson	12 Hours 12 Hours 12 Hours 5 Hours 7 Hours
<u>Pedagogy:</u>	Lectures/ tutorials/assignments/self-study	
<u>References/Readings</u>	1. William W. Hines and Douglas C. Montgomery, Probability and Statistics in Engineering and Management Science, Wiley India Pvt. Ltd., 2003 2. T.Veerarajan, Probability, Statistics and Random Processes, Tata McGraw Hill Pub. Co. Ltd., 2009	
<u>Learning Outcomes</u>	Upon successful completion of this course, students will have a good understanding of elementary probability	

Course Code: IMC 104

Title of the Course: Programming in Python

Number of Credits: 6

Total Contact Hours: 48L+48P

Effective from AY: 2020-21

<u>Prerequisites for the course:</u>	Same as programme pre-requisites	
<u>Objectives:</u>	The aim of the course is to provide an exposure to solve common computing problems through programming using Python language. The course is designed with a lab component to give the student hands-on experience of the basic concepts of programming.	
<u>Content:</u>	<p>Introduction to computer systems and data representation: Functional units of a Computer, Characteristics of a Computer, Data representation and Storage, Evolution of Programming Languages, Compilation and Interpretation, Structured and Procedural Programming languages (3 hours)</p> <p>The Problem Solving Process: – Requirement Analysis, Algorithmic Construction, Identifying Test Cases, Desk Checking, Implementation, Testing and maintenance issues, Data verification and validation. (4 hours)</p> <p>Python Programming Environment: Python overview, Structure of Python program, character Set, variable declarations and data types, Program Statements, Types of Instructions, Expression Evaluation rules, Type Conversions. Managing I/O operations (4 hours)</p> <p>Selection and Iterative Constructs :Writing conditions, IF-ELSE constructs Conditional operators, SWITCH ,WHILE and FOR loops, Use of BREAK and CONTINUE statements. Nested Loops (9 hours)</p> <p>Advance Data types: Lists, Tuples, Set, Dictionaries, Strings, Unicode, formatting strings, docString. Searching and sorting algorithms without using library functions. (6 hours)</p> <p>Modular Programming: Importance of User Defined Functions, Hierarchy charts, fan-in/out, cohesion and coupling and loosely coupled modules. Fan-in – Fan-out concepts. (5 hours)</p>	

	<p>User Defined Functions: Local and Global Variables, Scoping Rules, Parameters & arguments. Function with variable arguments. Modules, packages, scope. Recursion & Recursive Functions. Recursive v/s Iterative Functions.</p> <p>Custom Data Types and File Management: Object of a Class and basic concept of classes & OOP, Files, Exceptions in file handling.</p> <p>Introduction to Packages: Python packages for plotting, mathematical computation & linear regression.</p>	<p>(7 hours)</p> <p>(4 hours)</p> <p>(6 hours)</p>
<u>Pedagogy:</u>	Lectures/Practical/ tutorials/assignments/self-study.	
<u>References/ Readings</u>	<ol style="list-style-type: none"> 1. Taneja Sheetal, Kumar Naveen , —Python Programming - A modular approach, Pearson 2017 2. Guttag John V., —Introduction to Computation and Programming using Python, MIT Press, 2nd Edition 2016. 3. Maureen Sprankle, Jim Hubbard — Problem Solving and Programming Concepts, Pearson, 9th Edition 2012 	
<u>Learning Outcomes</u>	<p>Upon successful completion of the course, a student will be able to:</p> <ul style="list-style-type: none"> ● Analyze a given problem and develop a Python program to solve it. ● Identify test cases for a given problem. ● Understand, test, trace programs written in Python language. ● Working with python Standard Libraries 	

Suggested Lab Assignments:

Introduction to UNIX environment- Introduction to Fedora/Ubuntu, Basic directory and file handling commands, Editor (vi editor), man pages, installation of Python and Jupyter notebook.

Programs using decision control, branch and loop control structure

1. Program to find the largest of three numbers
2. Program to print the reverse of a given number.
3. Program to check whether a given number is Armstrong or not
4. Program to print the prime numbers from 2 to n, where n is an input given by the user.
5. Program to print the patterns.

Programs using List, Set, Tuple, Dictionary & Strings

6. Program to find the largest and smallest number in a list of integers (without using

library function).

7. Program to sort a given integer list in ascending order(without using library function).
8. Program to print the sum and average of the elements of the list(without using library function).
9. Program to find the duplicate elements in the list(without using library function).
10. Program to reverse a given string and check whether it is palindrome (without using library function).
11. Program to read a string and count the number of vowels in it.
12. Program to concatenate two strings without using library functions
13. Program to arrange the list of names in alphabetical order.
14. Program to find the union, intersection and difference between two sets.
15. Program to take a sentence as an input from the user and compute the frequency of each letter. Make use of dictionary type to maintain the count.

Programs using functions & Recursion.

16. Write functions for addition, subtraction and multiplication of two matrices.
Each function has two matrices as parameters and returns the result.
17. Program to print the Fibonacci series using recursion.
18. Program to find the GCD of two numbers using recursion.
19. Program to solve Tower of Hanoi

Programs user-defined data types & file handling

20. Program to store the item number, name, rate and quantity of 'n' items in a custom data type, where n is given as input by the user. Display the total value inventory items.
21. Program to store employee details in a Custom data type. The data should include employee ID, name, salary, and date of joining. The date of joining should be stored in a structure. The program should perform the following operations based on a menu selection
 - a) Display the details of the employees who have more than 5 years of experience with the company.
 - b) Increase the salaries according to the pay scale rules
22. Program to create a custom data type of Student with fields Roll No, Name, course, and Total_Marks. Read the data from the user and store them in a file. Write a function to display the Roll No, name of the student who has secured the highest marks.
23. Program to count the number of characters in a file.
24. Program to search for a particular word in a file.
25. Program to handle various file exceptions.
26. Program to implement linear regression method.
27. Program to plot graphs.

Course Code: IMC 105

Title of the Course: Soft Skills : Oral Communication

Number of Credits: 2

Total Contact Hours: 24

Effective from AY: 2020-21

<u>Prerequisites for the course:</u>	Same as programme pre-requisites	
<u>Objective:</u>	To introduce the essentials of effective communication in different contexts	
<u>Content:</u>	Difference between formal and informal communication; Communication process, types, Effectiveness in communication – the Roles of Sender, Receiver and the medium; Role of culture in communication; Importance of Non Verbal Communication	12 Hours
	Oral Communication: Skills required for effective interpersonal and group communication, Effective Public speaking. Noise in communication and its prevention. Barriers and Gateways in Communication;	12 Hours
<u>Pedagogy:</u>	Lectures/ tutorials/laboratory work/ field work/ outreach activities/ project work/ vocational training/viva/ seminars/ term papers/assignments/ presentations/ self-study/ Case Studies etc. or a combination of some of these. Sessions shall be interactive in nature to enable peer group learning.	
<u>Learning Outcomes</u>	The participant will be able to facilitate interpersonal Communication, participate in group discussions, and to write effectively.	

<p><u>References/Readings</u></p>	<ol style="list-style-type: none"> 1. Business and Professional Communication by Kelly M. Quintanilla and Shawn T. Wahl, 2018, Sage Publications 2. Effective Business Communication by Anjanee Sethi ,Bhavna Adhikari, 2009; Tata MacGraw Hill Education, India. 3. How to be a Great Communicator in Person, On Paper, and on Podiumby Nido Qubein, 2008; Viva Books, India.

Course Code: IMC 106

Title of the Course: Perspective Building: Film Appreciation

Number of Credits: 2

Total Contact Hours: 24

Effective from AY: 2020-21

Prerequisites for the course	Same as programme pre-requisites	
<u>Objective:</u>	To help the participants appreciate cinema (national and international) as having its own distinct language and philosophy, the way it stimulates people, and helps in making sense of the world.	
<u>Content:</u>	<p>Approaches to Films</p> <p>Document, Documentary and Narratives; Thought Orientation in Films; Text, Context and Non-Text</p> <p>Film and Other Art Forms</p> <p>Photography and Representation; Symbolism and Metaphors; Music, Dance and Drama; Presenting Reality and Fiction</p> <p>Films and our Minds</p> <p>Films and Emotions; Imagination; Identifying the Audience (Spectatorship); Communication and Persuasion</p> <p>Films and Morality</p> <p>Lessons from Films; Authorship and Copyright; Film Criticism; Evils and Issues – Pornography, Free Will, Laws and Artistic License</p>	<p>7 Hours</p> <p>8 hours</p> <p>8 hours</p> <p>7 hours</p>
<u>Pedagogy:</u>	Lectures/ tutorials/laboratory work/ field work/ outreach activities/ project work/ vocational training/viva/ seminars/ term papers/assignments/ presentations/ self-study/ Case Studies etc. or a combination of some of these. Sessions shall be interactive in nature to enable peer group learning.	

<u>Learning Outcomes</u>	<p>After completion of the course, students will develop the ability to</p> <ol style="list-style-type: none"> 1. Appreciate films as works of art 2. Recognize the impact of films on society 3. Critique films 	
<u>References/Readings</u>	<ol style="list-style-type: none"> 1. Jim Piper (2014) The Film Appreciation Book, 1st Edition; Allworth Publishers, USA 2. Satyajit Ray (2006) Speaking of Films, International Edition Penguin, India 3. Gregory Currie (1995) Image and Mind, Film, Philosophy and Cognitive Science; Cambridge University Press. 	

Course Code: IMC 201

Title of the Course: Business Analytics (Finance)

Number of Credits: 2

Total Contact Hours: 24

Effective from AY: 2020-21

Prerequisites for the course:	Programme requisites	
Objective:	To introduce fundamentals of financial data analysis.	
Content:	Reading of Annual Report, Balance Sheet, Profit and Loss Account, Vertical Form, Cash Flow statements, Comparative statements, Common Size Statements, Profitability Ratios. Basic Accounting Standards. Directors' Report, Auditor's Report, Notes to Accounts.	8 hours
	Understanding Annual Reports of Companies with Ratio Analyses and making basic performance decisions.	8 hours
	Time Value of Money, Forecasting cash flows, Estimation of Project Cost, Techniques of Capital Budgeting, Net Present Value (NPV), Internal Rate of Return (IRR), Discounted Payback, profitability Index.	8 hours
Pedagogy:	Lectures/tutorials/laboratory work/ field work/ outreach activities/ project work/ vocational training/viva/ seminars/ term papers/assignments/ presentations/ self-study/ Case Studies etc. or a combination of some of these. Sessions shall be interactive in nature to enable peer group learning.	
Learning Outcomes:	<ol style="list-style-type: none">1. The participants will be able to analyze financial information that facilitates long term and short term financial decisions.2. The participants shall be able make primary basic assessment of making capital investment decisions.	
References/Readings:	<ol style="list-style-type: none">1. N. Ramchandran, Ram Kumar Kakani: 'How to Read A Balance Sheet', Tata McGraw-Hill Professional: Finance Made Easy Series, 2009.2. N. Ramchandran, Ram Kumar Kakani: 'How to Read A Profit and Loss Account', Tata McGraw-Hill Professional:	

	<p>Finance Made Easy Series, 2017.</p> <p>3. N. Ramchandran, Ram Kumar Kakani: 'How to Read A Cash Flow Statement', Tata McGraw-Hill Professional: Finance Made Easy Series, 2017.</p>	
--	--	--

Course Code: IMC 202

Title of the Course: Microeconomics

Number of Credits: 4

Total Contact Hours: 48

Effective from AY: 2020-21

Prerequisites for the Course:	Programme requisites	
Objective:	Equip the students to understand consumer and firm behavior under profit and non-profit maximizing framework.	
Content:	Module 1: Introduction and Basic Concepts Nature and scope of micro economics – concept of equilibrium – static, dynamic and neutral equilibrium – Partial Vs. General equilibrium – role and limitations of price mechanisms in a free market economy	10 hours
	Module 2: Theory of Demand Theory of Consumer Behavior- Utility, indifference curve, [income and substitution effects, Slutsky's theorem, compensated demand]; Revealed preference; consumer surplus;	14 hours
	Module 3: Theory of production and costs Production function –short period and long period; law of variable proportions and returns to scale; Isoquants – least cost combination of inputs; Returns of factors; Economies of scale; Elasticity of substitution; Euler's Theorem; Cobb-Douglas, Constant Elasticity of Substitution (CES), Variable Elasticity of Substitution (VES) and Translog. Cost functions, cost curves, Elasticity of supply.	14 hours
	Module 4: price and output determination Demand and supply equilibrium; Cobweb theorem. Market forms – perfect and imperfect forms – equilibrium under perfect, monopoly, monopolistic, duopoly and oligopoly – importance of time element in price theory – price discrimination and measure of monopoly power – control and regulation of monopoly.	10 hours
Pedagogy:	Lectures/ tutorials/assignments/self-study	

Reference/Readings:	<ol style="list-style-type: none"> 1. Hal Varian, W. W. Norton and Company, Intermediate Microeconomics 2010, Sixth Edition or later 2. S.A. Greenlaw and D. Shapiro, Principles of Microeconomics, OpenStax Resource, Rice University, Second edition, 2017 	
Learning Outcomes:	Understand the factors that determine consumption and production decisions under different market structures.	

Course Code: IMC 203

Title of the Course: Linear Algebra

Number of Credits: 4

Total Contact Hours: 48

Effective from AY: 2020-21

Prerequisites for the course:	Programme requisites	
Objectives:	To provide students an introduction to vectors and matrices and their use in Data Sciences.	
Content:	Linear Equations in Linear Algebra: Systems of linear equations, row reduction, and echelon forms, Vector equations, matrix equation, solution sets of linear systems, linear independence, Matrix of linear transformation.	8 hours
	Matrix Algebra: characteristics of invertible matrices, Partitioned matrices, matrix factorizations, application to computer graphics, dimension and rank.	4 hours
	Determinants: Properties, Cramer's rule, volume and linear transformations.	4 hours
	Vector Spaces: vector spaces and subspaces, linear transformations, Bases, coordinate systems, Dimension of a vector space, rank, change of bases	8 hours
	Eigenvalues and eigenvectors: Characteristics equation, diagonalization, eigenvectors and linear transformations, discrete dynamical systems	8 hours
	Orthogonality: inner product, length, and orthogonality, orthogonal sets, orthogonal projections, Gram-Schmidt process, inner product spaces	8 hours
	Symmetric matrices and quadratic forms: diagonalization of symmetric matrices, quadratic forms, constrained optimization, Singular Value Decomposition (SVD).	8 hours
Pedagogy:	Lectures/ tutorials/assignments/self-study	

References/Readings:	<ol style="list-style-type: none"> 1. David C. Lay, Steven Lay, Judi Mc Donald, Linear Algebra and its Applications, Pearson, 2016. 2. Jim DeFranza and Daniel Gagliardi, Introduction to Linear Algebra with Application, McGraw Hill Education (India), 2015. 3. Steven J. Leon, Linear Algebra with Applications 8th Edition, Pearson, 2009 4. Gilbert Strang, Introduction to Linear Algebra 5th Ed. South Asian Edition, Wellesley-Cambridge Press, 2016. 	
Learning Outcomes:	The student will be able to use computational techniques and algebraic skills essential for the study of systems of linear equations to understand, formulate and solve problems.	

Course Code: IMC 204

Title of the Course: Algorithms and Data Structures

Number of Credits: 6 (4L+2P)

Total Contact Hours: 48L + 48P

Effective from AY: 2020-21

Prerequisites for the course:	IMC104 : Programming in Python	
Objectives:	To introduce the fundamental concepts of data structures and to emphasize the importance of data structures in developing and implementing efficient algorithms.	
Content:	<p>Introduction: Three level Approach - Application/User level, Abstract/Logical level, Physical/Implementation level; Concept of Abstract Data Types (ADTs), Data Structure definition, Data type vs. data structure, Applications of data structures,</p> <p>Algorithms analysis and its complexity, Best case, worst case , and Average case performance, time-space tradeoff, Asymptotic Analysis, Big-O notation.</p> <p>Linear Data Structures: Array and its application: Polynomials, Sparse matrices, String-pattern Matching. Linked Lists, Doubly linked list, Circular linked list, Stack and Queues.</p> <p>Nonlinear Data Structures: Trees: Binary tree representation, Binary Search Trees, AVL Trees, M-way Search Trees, B-trees. B tree algorithms, Heap Structures; Graphs: Graph representations; Graph Traversals</p> <p>Complexity of Searching & Sorting algorithms: Bubble sort, Quick sort, Selection sort, Insertion sort, Merge sort and Heap sort. An Empirical Comparison of Sorting Algorithms, Lower bounds for Sorting. Linear search, binary search.</p> <p>Dynamic programming and Greedy algorithms: Assembly line scheduling, Matrix-chain multiplication; Prim's Algorithm, Kruskal's Algorithm</p>	<p>4 hours</p> <p>4 hours</p> <p>10 hours</p> <p>12 hours</p> <p>12 hours</p> <p>6 hours</p>

Pedagogy:	lectures/Practical/ tutorials/assignments/self-study	
References/Readings:	<ol style="list-style-type: none"> 1. Horowitz, Ellis, Sartaj Sahni, and Susan Anderson-Freed. "Fundamentals of data structures in C". WH Freeman & Co., Latest edition. 2. Benjamin Baka, Basant Agarwal, "Hands on Data Structure and Algorithms with Python", Second Edition, O'Reilly, 2018. 3. Cormen Thomas, L. Charles, R. Ronald, S. Clifford, "Introduction to Algorithms", Second Edition,EEE, PHI. 4. Allen, Weiss Mark. "Data structures and algorithm analysis in C". Pearson Education India, 2011. 5. Dasgupta, Papadimitriou, and Vazirani. "Algorithms". McGraw-Hill, 2006. 	
Learning Outcomes:	<p>Upon successful completion of the course, a student will be able to</p> <ul style="list-style-type: none"> ● Implement common data structures such as lists, stacks, queues, graphs, and binary trees for solving programming problems. ● Identify and use appropriate data structures in the context of solution to a given problem. 	

Suggested Lab Assignments:

Object-Oriented Design Goals, Object-Oriented Design Principles.

1. The programming assignment should introduce and enforce the concepts of encapsulation, polymorphism and Inheritance.

ADT Specifications and Implementation of following basic data structures

2. Singly Linked Linear Lists
3. Singly Linked Circular Lists
4. Doubly Linked Linear Lists
5. Doubly Linked circular Lists
6. Stack using linked list

7. Queue using linked list

ADT Specifications and Implementation of following non-linear data structures

- 8. Binary Trees
- 9. Binary Search Trees
- 10. AVL Trees
- 11. B-Trees and its variants

Application of stack

- 12. Program to convert the given infix expression to postfix expression using stack.
- 13. Program to evaluate a postfix expression using stack.
- 14. Program to traverse a binary tree in the following way: Pre-order, In-order, Post-order

Applications of Binary Trees

- 15. Write a program to implement Huffman encoding using Binary tree.
- 16. Write a program to create a binary tree for the given infix expression.

Applications of AVL Trees

- 17. Write a program that reads a list of names and telephone number from a text file and inserts them into an AVL tree. Write function to allow the user to search the tree.

Searching and sorting

- 18. Program to implement Binary search technique using Iterative method and Recursive methods.
- 19. Programs to implement following sorting algorithm- Bubble sort, Selection sort, Insertion sort, Quicksort, Merge sort and Heap sort

Implementation of Dynamic programming

- 20. Assembly line scheduling
- 21. Matrix-chain multiplication

Implementation of Greedy algorithms

- 22. Prim's Algorithm
- 23. Kruskal's Algorithm

Course Code: IMC 205

Title of the Course: Probability & Statistics - II

Number of Credits: 4

Total Contact Hours: 48

Effective from AY: 2020-21

Prerequisites for the course:	IMC 103: Probability and Statistics - I	
Objectives:	To introduce the basic theory and techniques of parameter estimation and tests of hypotheses.	
Content:	<p>Module 1: Continuous distributions: Uniform, exponential, normal, standard normal, T-distribution, Chi-Square and F-distribution</p> <p>Module 2: Sampling distributions, Parameter Estimation of mean and proportion.</p> <p>Module 3: Hypothesis tests about mean and proportion, Chi-square tests, analysis of variance, least squares curve fitting, the coefficient of Determination, Confidence Intervals</p> <p>Module 4: Non parametric tests: sign test, Rank test, Median test</p>	<p>12 hours</p> <p>12 hours</p> <p>12 hours</p> <p>12 hours</p>
Pedagogy:	Lectures/ tutorials/assignments/self-study	
References/Readings:	<ol style="list-style-type: none">1. David M. Levine, David F. Stephan, Timothy C. Krehbiel, and Mark L. Berenson, Statistics for Managers: Using Microsoft Excel, Pearson Education, Inc., (2008) Fifth Edition or later2. Christian Heumann, Michael Schomaker, and Shalabh, Introduction to Statistics and Data Analysis: With Exercises, Solutions and Applications in R, Springer, (2016).3. James T. McClave, P. George Benson, Terry Sincich Statistics for Business and Economics, Pearson, (2018).4. Robert S. Witte and John S. Witte, Statistics, Wiley, Eleventh Editio, (2017).	
Learning Outcomes:	Students will be able to design samples for data collection, summarise data visually and in tabular form, and execute statistical analyses with spreadsheet software.	

Course Code: IMC 206

Title of the Course: Soft Skills: Written Communication

Number of Credits: 2

Total Contact Hours: 24

Effective from AY: 2020-21

Prerequisites for the course:	Programme requisites	
Objective:	To introduce the essentials of effective communication in different contexts	
Content:	<p>Written Communication: Fundamentals of effective writing; different forms of written communication; report writing; Structure and content of various types of reports; Creativity in Communication.</p> <p>Content Writing: Writing content for the website, Writing profiles. Writing content for brochures of events, Designing and writing for newsletters. Handling Public relations through Press release/reports/advertisements.</p> <p>E-Correspondence: Email etiquette (components, formats, attachments, content and language) , Maintaining social media presence.</p>	<p>10 hours</p> <p>8 hours</p> <p>6 hours</p>
Pedagogy:	Lectures/ tutorials/outreach activities/vocational training/ seminars/ term papers/assignments/ presentations/ self-study/ Case Studies etc. or a combination of some of these. Sessions shall be interactive in nature to enable peer group learning.	
Learning Outcomes:	Students will be able to communicate effectively in various written forms.

Title of the Course: Marketing Analysis

Number of Credits: 4

from AY: 2020-21

Total Contact Hours: 48Effective

<u>Prerequisites for the course:</u>	Same as programme pre-requisites	
<u>Objective:</u>	At the end of the course, the students would have competence in understanding and using Marketing Frameworks, Theories and analytical tools for analysing and decision making in the area of Marketing.	
<u>Content:</u>	<p>Role of Marketing, Core Concepts of Needs, Wants and Demands, Marketing Orientation of Companies. Strategic Planning and Marketing Management Process. External Environment including Customers and Suppliers.</p> <p>Consumer Behaviour and Consumer markets, Theories of Consumption Behaviour, Buying Process and decision making process. Types of Buying behavior. Organisational Buying behavior, Industrial Market, Reseller Markets, Government Markets.</p> <p>Marketing Information Systems, concepts and components, Market Measurement and Forecasting techniques, Demand Estimation, Segmentation, Targeting and Positioning, Types of segmentation, Basis for Segmentation.</p> <p>Marketing Plan, Process and evaluation, New Product Development Process, Product Life Cycle concept, different strategies of different stages of PLC, Strategies for Leaders, Followers, Challengers and Nichers.</p> <p>Product Concept and hierarchy, Product decisions,</p>	<p>8 hours</p> <p>8 hours</p> <p>8 hours</p> <p>8 hours</p>

	<p>Branding and Packaging Decisions, Pricing and setting of Price, Methods of Pricing and initiating responses to Price Cuts. Channels of Distribution, Role and Types of Channel, Distribution Channel design and management and modification. Retailing and Wholesaling. Advertising and Integrated Marketing Communication. Advertising decisions, Media decisions, Sales promotion concept and designing. Sales Management and Personal Selling. Digital Marketing and Social Media Marketing.</p> <p>Marketing Plan, Audits and Control of Marketing Decisions. Annual Plan Control, Profitability Control, Efficiency Control and Strategic Control.</p>	8 hours
<u>Pedagogy:</u>	Pedagogy includes interactive sessions involving lectures, case studies, presentations, debates and field based work.	
<u>Learning Outcomes</u>	<ol style="list-style-type: none"> 1. Ability to identify the market Segments 2. Ability to analyse the market Segments 	
<u>References/Readings</u>	<ol style="list-style-type: none"> 1. Majarao, Simon; 'The Essence of Marketing'; Prentice Hall of India Limited; New Delhi; Latest edition. 2. Title of the Course: Deductive and Inferential Mathematics

Number of Credits: 4

Total Contact Hours: 48

Effective from AY: 2020-21

Prerequisites for the Course:	XII Mathematics	
Objective:	On completion of this course, the learner should be able to successfully explore, conjecture and reason logically to arrive at a solution to a given problem using appropriate mathematical methods and will learn to estimate the impact of a policy/decision in the presence of uncertainty	
Content:	Mathematical Logic& Proofs An open sentence, a closed sentence, Definition of proposition or a Statement.Strong emphasis on the Distinction between Inclusive OR and Exclusive OR. Truth tables.Compound Proposition. Algorithms, Truth tables and Tautologies	12 hours
	Equivalent statements (\equiv). Examples and important logical results. De Morgan Laws for negation.Conditional and Biconditionals, Arguments and Proofs	
	Well-formed-formulae . Equivalence of formulae. Various laws governing the well-formed formulae. Duality law. Normal Form. Disjunctive normal form, conjunctive normal form, Principal disjunctive normal form, Principal conjunctive normal form. Propositional Calculus. Predicate Calculus. Predicate Formula. Equivalence of Predicate Formulae. Inference Theory.	12 hours
	Inferential Statistics Introduction to Probability Theory using Kolmogorov Technique: Definition of an experiment. Outcomes of an experiment. Outcomes which are not decomposable .	12 hours

	<p>Sample space as the set of all non-decomposable outcomes of an experiment. Event as any subset of the sample space of an experiment under consideration.</p> <p>Idea of variations. Standard deviation as the root mean square deviation with respect to the mean. Mathematical Expectation and Expected Values.</p> <p>Random Variables: Idea of Distribution of a Function. Some standard Distributions such as Binomial., Normal, Poisson and Exponential. Their standard properties with the stress on Normal Distribution. Use of Normal Distribution Table to solve problems.</p>	12 hours
Pedagogy		
Reference/Readings	<ol style="list-style-type: none"> 1. A textbook of Discrete Mathematics by Dr. S. K. SarkarS, Chand & Company, New Delhi. 2. Discrete Mathematics and its Applications by Kenneth Rosen, Tata McGraw Hill. 3. Discrete Mathematics for Computer Scientists by John Truss, Addison Wesley (Pearson Education). 4. Discrete Mathematics and Graph Theory by Purna Chandra Biswal, Prentice Hall of India. 5. Statistics for Management by Richard Levin and David Rubin, Prentice Hall of India. 6. Statistics for Business and Economics by Anderson, Sweeney and Williams, Thomson South Western. 7. Statistics for Management by Anand Sharma, Himalaya Publishing House, Mumbai. 8. Engineering Mathematics Volume II by Kandasamy, Tilagavathy and Gunavanthys. Chand & Company, New Delhi. 	
Learning Outcomes	<ol style="list-style-type: none"> 1. Learner will understand how to explore, conjecture and reason logically to model/arrive at a solution to a given problem 2. Learner will be able to use a variety of mathematical methods effectively to solve problems 3. Learner will learn decision making in the presence of uncertainty and will learn to quantify the uncertainty in estimation /the decision 	

Course Code: IMC 303

Title of the Course: Macroeconomics

Number of Credits: 4

Total Contact Hours: 48

Effective from AY: 2020-21

<u>Prerequisites for the course:</u>	Same as programme pre-requisites	
<u>Objectives:</u>	Provide a basic understanding of how aggregate variables like national income, aggregate prices, employment, and exchange rates get determined by interaction of public policy and individual agents	
<u>Content:</u>	<p><u>Module 1: Introduction to Macroeconomics : What is it about.</u> Aggregate Income and its Dimensions, Measuring output, Real and Nominal Incomes, Savings, Balance of Payments and the Money supply. The sources and Use of Savings, The Balance of Payments, The Money supply</p> <p><u>Module 2: Consumption & Investment.</u> Keynes on Consumption, Consumption Smoothing, Temporary and Permanent Shocks, Stochastic Income Expectations, Effect of Interest Rates, Aggregating Across Individuals, Savings and Portfolio Choice, Profit Maximization and the Optimal Capital Stock, Adjustment Costs and Investment Decisions, Financial Structure and Investment, Residential and Inventory Investment, Irreversibility and Investment, Investment in Developing Countries, Investment in India</p> <p><u>Module 3: Trade Balance and Exchange rates, Demand for Money, Labour market.</u> The Real Exchange Rate, Other Approaches to the Trade Balance, Exchange Rates and Assets, Purchasing Power Parity, Choice of Exchange Rate Regimes, Money, Bonds, and Private Wealth, Nominal and Real Interest Rates, Financial Assets and the Budget Constraint, Money as a store of value, Seigniorage, Profit Maximization and Labour Demand, Utility and Labour Supply, Aggregate Supply with /</p>	<p>10</p> <p>14</p> <p>14</p>

	<p>without Money illusion, Introducing Unemployment, Cyclical Unemployment and the Output Gap, The Static Phillips Curve, The Dynamic Phillips Curve</p> <p>Module 4: IS-LM model :</p> <p>Walras Law, Nominal Versus Real Rate of Interest, The IS Curve, The LM Curve, IS and LM - Fiscal and Monetary Policy, IS - LM in India, Ricardian Equivalence–determination of equilibrium income and interest rates – fiscal and monetary policy.</p>	10
<u>Pedagogy:</u>	Lectures/ tutorials/assignments/self-study	
<u>References/Readings</u>	<p><i>Essential Reading</i></p> <p>1. Macroeconomics by Errol D’Souza, Pearson Education, Delhi Second Edition 2012</p> <p><i>Additional Reading</i></p> <p>2. Macroeconomics: Theories and Policies, by Richard T. Froyen, Pearson Education, 10th Edition or later, 2013</p>	
<u>Learning Outcomes</u>	Understand the factors that determine consumption and production decisions under different market structures.	

Course Code: IMC 304

Title of the Course: Database Management Systems

Number of Credits: 6 (4L + 2P)

Total Contact Hours: 48L+48P

Effective from AY: 2020-21

<u>Prerequisites for the course:</u>	Operating Systems, Data and File Structures, A programming language	
<u>Objectives:</u>	To Provide students with theoretical knowledge and practical skills to effectively design , implement and query a relational database application	
<u>Content:</u>	<p>Basic concepts Database & Database Users, Characteristics of the Database Approach, Database Systems, Concepts & Architecture Data Models, Schemes & Instances, DBMS Architecture of Data Independence, Data Base languages & Interfaces, Introduction to present day Database Systems (NoSQL, GraphDB).</p> <p>Relational Model The Relational Model, Overview of Design Process, Data Modelling using the Entity – Relationship approach , Structure of Relational Databases, Relational Algebra</p> <p>SQL-A Relational Database Language Data Data Definition in SQL, structure of SQL queries, Set operations, aggregate functions, Nested Subqueries, Modification of the database, Views Specifying Integrity Constraints & Indexes in SQL. A Relational Database Management System</p> <p>Relational DataBase Design Features of a Good Relational design, Function Dependencies & Normalization , Normal forms based on primary keys (1NF, 2NF, 3NF, BCNF) Covers of Functional Dependencies, Canonical covers. Loss less join and Dependency preserving decomposition algorithms.</p> <p>Transactions Concept and states of transactions, Properties of Transactions, issues in Concurrent execution of transactions, concept of serializability, Recovery techniques</p>	<p>6 hours</p> <p>10 hours</p> <p>12 hours</p> <p>10 hours</p> <p>10 hours</p>

<u>Pedagogy:</u>	Lectures/ tutorials/assignments/class presentations and debates/peer reviews/workshops/self-study	
<u>References/ Readings</u>	<ol style="list-style-type: none"> 1. Korth, Silberchartz, “ Database System Concepts” McGrawhill Publication. 2. Elmasri and Navathe, “ Fundamentals of Database Systems”, Addison Wesley, New Delhi. 3. Database Management Systems –R. Ramakrishnan, J.Gehrke – T.McGraw Hill 4. Desai B., “ An Introduction to Database Concepts”, Galgotia Publications, New Delhi. 5. Rob,Coronel, “Database Systems (Design, Implementation and Management)” 6. Date C. J. , “ An Introduction to Database Systems”, Publication House, New Delhi. 	
<u>Learning Outcomes</u>	<ol style="list-style-type: none"> 1. Understand and evaluate the role of database management systems in information technology applications within organizations; 2. Recognise and use logical design methods and tools for databases; 3 Implement a database solution to an information technology problem; 4. Understand the SQL data definition and SQL query languages; 5. Develop sophisticated queries to extract information from databases 6. Understand how the database manages and recovers from concurrent and multiple transactions 	

Suggested Lab Assignments:

A. Installation of DBMS Software

B. Data Definition Language(DDL) Statements

Creating tables, with or without constraints.

Understanding Data types.

Creating User Defined data Types

Altering the structure of the table

Dropping tables..

CreatingSequences

C. Query in Data Dictionary

1. To view the structure of the table created by the user.
2. To view user information.
3. To view integrity constraints.

D. Data Manipulation Language(DML) Statements

1. Inserting Data into the table.
2. Updating Data into the table.
3. Deleting Data from the table.

E. Simple SQL statements

1. Displaying all the attributes and tuples from the table.
2. Displaying selected attributes/tuples from the table.
3. Using Logical and comparison operators.
4. Ordering data

F. Complex SQL Statements

1. Using aggregate functions (using Group by and having clauses).
2. Creating SQL Aliases and View.
3. Joins and Nested queries.
4. Creating temporary tables in SQL statements

G. Transaction Control Language(TCL) statements**H. Embedded SQL statements**

1. Procedures with and without cursors

I. Amazon Relational Data Service Setup

Course Code: IMC 305

Title of the Course: Soft Skills :Interview Facing Skills and Mock Interviews

Number of Credits: 2

Total Contact Hours: 24

Effective from AY: 2020-21

<u>Prerequisites for the course:</u>	Same as programme pre-requisites	
<u>Objective:</u>	To introduce the basics of writing resumes and preparatory skills required to face interviews	
<u>Content:</u>	Fundamentals of Resume Writing, Writing effective Cover letters and emails to organizations.	4 hours
	Group Discussions – different types, Different types of interviews and basic competencies required in facing interviews.	4 hours
	Preparation required prior to facing an interview – industry and firm analysis. SWOT analysis; Frequently asked questions in interviews	4 hours
	Mock interviews to assess conceptual clarity, domain knowledge, soft skills, and perspectives held, etc. 4 hours 4 hours 4 hours 1	12 hours
<u>Pedagogy:</u>	Lectures/ tutorials/laboratory work/ field work/ outreach activities/ project work/ vocational training/viva/ seminars/ term papers/assignments/ presentations/ selfstudy/ Case Studies etc. or a combination of some of these. Sessions shall be interactive in nature to enable peer group learning	
<u>Learning Outcomes</u>	An ability to face interviews	

<u>References/Reading</u> <u>s</u>	1. Prasad, HariMohan,How to prepare for Group Discussion and Interview, Tata McGraw Hill, Latest Edition 2. Patnaik, Priyadarshini, Group Discussion and Interview Skills, Cambridge University Press, Latest Edition

Title of the Course: Perspective Building: Character Development

Number of Credits: 2

Total Contact Hours: 24

Effective from AY: 2020-21

Prerequisites	for	Same as programme pre-requisites	
<u>Objective:</u>		Have a holistic outlook towards life, to face and solve the challenges in their day to day life by strengthening their Emotional intelligence. Using their Talents to develop their personality and using this to bring happiness in their life and career. Changing their behaviour by becoming passionate and positively energized in doing their studies, job and life.Help them to become productive, proactive and persevere in all that they do in their lives and to become good Managers and professionals	
<u>Content:</u>		Talents you are born with, using Talents to enhance your personality and succeed.	3 hours
		Using the E – Enthusiasm. Using this to build your passion and positive Energy.	3 hours
		E - Efforts – Persevere and reach your goals.	3 hours
		In Efficiency - un Productive and not planned or not Pro active .	3 hours
		Dealing with their negative Self Awareness, Self Regulation, Motivation, Empathy and Social Skill.	3 hours
		E - Positive Emotional Intelligence to reach your goals.	3 hours
		Negative Attitude with regards to oneself, family and Friends.	3 hours

	Positive Attitude	3 hours
<u>Pedagogy:</u>	Use of Presentations, Activities, Discussions	
<u>Learning Outcomes</u>

Programme : Certificate of Proficiency

Course Code: COP

Title of the Course: Japanese Language (Beginners Level-I)

Effective from AY: 2020

Duration of the Course: 50 hours (1 Semesters)

<u>Prerequisites for the course:</u>	Open to all interested in learning level I Japanese Language having completed XII th Std.	
<u>Objective:</u>	In the A1 Katsudo course the students learn Japanese language through activities. Katsudo means activities in Japanese. The focus of the course is to make students more familiar with day to day conversations and related vocabulary. Since reading and writing practice is taken care in the course A2 (Rikai), here in A1 more importance is given to understanding conversations and to learn new vocabularies and basic grammar of the Japanese language. Hence tests are conducted in the form of interviews rather than conducting written test. The session 23 gives the students a chance to interact and try to communicate with native Japanese speaking students from Nihon University. An additional native Japanese support lecturer from Tokyo will be present during sessions 14 to 22 to make the course more interactive and get experience starting basic conversations with Japanese natives. This will also help students to compare and learn the accent and intonations of several Japanese language speakers	
<u>Content:</u>	Orientation & Lesson 1 <ol style="list-style-type: none">1. (konnichiwa) - P 22-252. Lesson 2 (Moo ichido onegaishimasu) L-1, P 26-303. Lesson 3 (Doozo yoroshiku) L-2, P32-354. Lesson 4(Kazoku wa san-nin desu) <i>*Please bring your family photo with you</i> L-3, P 36-405. Lesson 5 (Nani ga Suki desu ka) L-4, P42-456. Lesson 6 (Doko de tabemasu ka) L-5, P46-507. Visitor's session (Students of Nihon University) Talking on/Tasting Japanese food8. Lesson 7 (Heya ga mittsu arimasu) L-6, P 52-559. Lesson 8 (Ii heya desu ne) L-7, P 56-59	

	10. Lesson 9 (Nan ji ni okimasu ka) L-8, P 62-65 11. Lesson 10 (Itsu ga ii desu ka) L-9, P 66-70 12. Review 13. Lesson 11(Shumi wa nan desu ka?) L-10, P 74-77 14. Lesson 12 (Issho ni ikimasen ka?) L-11, P 78-82 15. Visitor's session (Students of Nihon University) Learn about Japanese festivals and traditional plays. Eg. Janken, Karuta, Bon-odori, Fukuwarai 16. Lesson 13 (Doo yatte ikimasu ka) L-12, P. 84-87 17. Lesson 14 (Yuumeina otera deu) L-13, P. 88-92 18. Lesson 15 (Kawaii!) L-14, P. 94-97 19. Lesson 16 (Kore, kudasai) L-15, P. 98-102 20. Lesson 17 (Tanoshikatta desu) L-16, P. 104-107 21. Lesson 18 (Tsugi wa Kyootoni ikitai desu) L-17, P. 108-113 22. Visitor's session (students of Nihon University) /Chat room 23. Review	
<u>Assessment</u>	Mid Term Assessment (04) Final Test (Written and Oral - 01)	
<u>Pedagogy:</u>	Written and Listening Activities, Oral Expression Activities, Participation throughout the Course, Progress Test, Mid Term Test, Final Test.	
<u>References/Readings</u>	<i>Marugoto A1 Elementary Katsudo</i>	
<u>Learning Outcomes</u>	By the end of the course the students will be able to understand and initiate basic conversations in Japanese. When the course is coupled with the A2 Rikai course, it further enhances the understanding of the student about the basics of the Japanese language.	

Programme: Certificate of Proficiency

Course Code: COP

Title of the Course: Japanese Language (Beginners Level-II)

Effective from AY: 2020

Duration of Course: 50 hours (1 Semester)

<u>Prerequisites for the course:</u>	Open to all interested in learning level II Japanese Language having completed XII th Std. and Japanese Language (Beginners Level -I)	
<u>Objective:</u>	Learn to read and write Hiragana and Katakana native Japanese characters. Introduce the student to basic Japanese words and vocabulary. In lesson 1 and lesson 2 the students learn the Hiragana and Katakana characters, their phonetics and writing methods. Through the lessons 3 to 14 the students practice reading and understand the meanings of several new vocabulary used in day to day conversations. The periodical test in session 3,5,13 and 25 enable to systematically evaluate the progress made by the students in learning the language. Based on test outcomes the students are counseled and advised on an individual basis that which areas they should focus, put additional practice to improve their proficiency in the language.	
<u>Content:</u>	<ol style="list-style-type: none">1. Orientation, Lesson 1 (Hiragana)2. Review, Hiragana test - Read and Write Hiragana3. Hiragana test review, Lesson 2 (Katakana)4. Review, Katakana test - Read and Write Katakana5. Katakana test review, Lesson 3 (Nice to meet you)6. Lesson 4 (There are three people in my family) - L37. Lesson 5 (What food and drinks do you like?) - L48. Lesson 6 (Where are you going to have lunch?) – L59. Lesson 7 (There are three rooms in my home) – L610. Lesson 8 (It is a good room) – L711. Lesson 9 (What time is it now?) – L812. Lesson 10 (What time do you start and finish work?) – L9	

	13. Mid-term Written test review, Lesson 11 (What's your hobby?) 14. Visitor' session (Students of Nihon University) Cultural session: Calligraphy 15. Lesson 12 (What kinds of events are there In your town?) – L11 16. Lesson 13 (How do you get from home to work?) – L12 17. Lesson 14 (What things are there in your town?) –L13 18. Lesson 15 (Is there anything that you want to buy?) –L14 19. Lesson 16 (How much do clothes cost?) – L15 20. Lesson 17 (What are you going to do on your next day off?) – L16 21. Lesson 18 (where and how was your recent holiday?) –L17 22. Visitor' session (Students of Nihon University) /Chat room/Cultural session:songs, origami 23. Review	
<u>Assessment</u>	Mid Term Assessment (04) Final Test (Written and Oral - 01)	
<u>Pedagogy:</u>	Written and Listening Activities, Oral Expression Activities, Participation throughout the Course, Progress Test, Mid Term Test, Final Test.	
<u>References/Readings</u>	<i>Marugoto A1 Elementary Rikai</i>	
<u>Learning Outcomes</u>	By the end of the course the students will be able to read and write Hiragana and Katakana characters independently. They would be able to understand basic level Japanese vocabulary. When the course is coupled with the A1 Katsudou course, it further enhances the understanding of the student about the basics of the Japanese language.	

Programme: Certificate of Proficiency**Title of the Course: Certificate of Proficiency in Japanese Language Level Elementary 1- A2 Part-1 (Katsudoo)****Effective from AY: 2021-2022**

<u>Prerequisites for the course:</u>	Open to all interested in learning Japanese Language and acquiring a certificate of proficiency. Japanese Certificate of Proficiency A-1 or School Level Certificate-Equivalent is required. Minimum qualification - Higher Secondary (Std.XII) examination conducted by the Goa State Board of Secondary and Higher Secondary Education or of any other Board recognized by Goa University as its equivalent.	
<u>Objective:</u>	This course is intended for students who have basic level Japanese knowledge (Japanese A1 Certified) and wants to further continue improving their Japanese language proficiency. Students should be already fluent in reading and writing Hiragana, Katakana characters and basic Kanji characters. In this level of the course Elementary 1-A2 Part-1 the students gain practical ability to communicate in everyday situations. A lot of emphasis will be placed on practicing listening and speaking Japanese in the class. The lessons are based on context and situations which students will face when interacting with Japanese nationals while living abroad or while living and travelling in Japan. This course offers learning in both language and culture. The course helps to deepen intercultural understanding by learning Japanese culture and reflecting on the students own culture in the city or country where they are from. The students who take this course are advised to continue and complete the Part-2 of the course named Elementary 1-A2 Part-2 (Rikai). This course is based on JF Standard for Japanese Language Education.	
<u>Content:</u> Topics 1 - 9	Based on Course Book: Marugoto Elementary 1 A2- Coursebook for Communicative Language Activities (Katsudoo)	100 Hours
Topic 1: わたし かぞく My family and Myself	Lesson 1: 東京に すんでいます We live in Tokyo Goals: 1. かぞくや じぶんが どこに すんでいるか、なにをしている か かんたんに 話します Talk briefly about where you/your family live and what you/they do 2. かぞくや ともだちと なにごで 話すか 言います Say what language you speak with your family and friends	

	<p>Lesson 2: しゅみは クラシックを 聞くことです My hobby is listening to classical music</p> <p>Goals:</p> <ol style="list-style-type: none"> 1. しゅみについて 話します Talk about your hobbies 2. じこしょうかいの サイトの みじかい コメントを 読みます Read short, simple comments about someone's self-introduction on a website 3. じこしょうかいの サイトに みじかい コメントを 書きます Write short, simple comments about someone's self-introduction on a website
<p>Topic 2: きせつと てんき Seasons and weather</p>	<p>Lesson 3: 日本は いま、はるです It's spring now in Japan</p> <p>Goals:</p> <ol style="list-style-type: none"> 1. きせつの へんかについて かんたんに 話します Talk about the change of seasons 2. すきな きせつと その りゆうを かんたんに 話します Say what season you like and why
	<p>Lesson 4: いい てんきですね It's a nice day, isn't it?</p> <p>Goals:</p> <ol style="list-style-type: none"> 1. てんきについて 話して あいさつを します Greet people by talking about the weather 2. でんわの かいわの はじめに てんきについて 話します Start a conversation over the phone by talking about the weather
<p>Topic 3: わたしの まち My town</p>	<p>Lesson 5: この こうえんは ひろくて、きれいです This park is big and beautiful</p> <p>Goals:</p> <ol style="list-style-type: none"> 1. ちずを見ながら、じぶんの まちの おすすめの ばしょ / ちいきについて ともだちに 言います。 Tell a friend about a place/area of your recommendation, using a map of your town 2. ちずを見ながら、ともだちが きょうみをもっている ところが どんな ところか、きをつける ことは なにか、言います。 Tell a friend what a place that he/she is interested in is like and what to be careful about, using a map
	<p>Lesson 6: まっすぐ 行って ください Please go straight</p> <p>Goals:</p> <ol style="list-style-type: none"> 1. ちかくの ばしょへの 行きかたを 言います Tell someone how to get to a place nearby 2. あいてが 聞きまちがえた ことを なおします Correct some information misunderstood by someone 3. とおくに 見える たてものの とくちょうを 言います Describe the features of buildings seen in the distance

Topic 4: でかける Going out	Lesson 7: 10 時でも いいですか Is ten o'clock OK? Goals: 1. ともだちと まちあわせの じかんと ばしょについて 話しま す Talk with a friend about the time and place you will meet 2. まちあわせに おくれると いう Eメールを 読みます Read an E-mail from a friend saying he/she will be late 3. おくれた りゆうを 言って あやまります Apologise for being late and give a reason
	Lesson 8: もう やけいを 見に 行きましたか Have you been to see the night view yet? Goals: 1. おすすめの ばしょに ともだちを さそいます / さそいに こ たえます Invite a friend to visit a place of your recommendation / Respond to an invitation 2. ともだちに よりみちを したいと 言います Say that you would like to drop by somewhere

<u>Pedagogy:</u>	Extensive Listening and Speaking Activities, Oral Expression Activities, Limited Writing, Participation throughout the Course, Progress Test, Final Test.
<u>References/Readings</u>	<ol style="list-style-type: none"> 1. Marugoto Japanese Language and Culture, Elementary 1 A2- Coursebook for Communicative Language Activities, Japan Foundation, 2017 2. JF Standard for Japanese Language Education, User Guide Book, 2nd edition, 2010
<u>Learning Outcomes</u>	<ol style="list-style-type: none"> 1. Can understand sentences and frequently used expressions related to areas of most immediate relevance (e.g. very basic personal and family information, shopping, local geography, employment). 2. Can communicate in simple and routine tasks requiring a simple and direct exchange of information on familiar and routine matters. 3. Can describe in simple terms aspects of his/her background, immediate environment and matters in areas of immediate need.

Programme: Certificate of Proficiency

Title of the Course: Certificate of Proficiency in Japanese Language Level Elementary 1- A2 Part-2 (Rikai)

Effective from AY: 2021-2022

<u>Prerequisites for the course:</u>	Open to all interested in learning Japanese Language and acquiring a certificate of proficiency. Japanese Certificate of Proficiency A-1 or School Level Certificate-Equivalent is required. Minimum qualification - Higher Secondary (Std.XII) examination conducted by the Goa State Board of Secondary and Higher Secondary Education or of any other Board recognized by Goa University as its equivalent. Japanese Certificate of Proficiency Elementary 1-A2 Part-1 (Katsudoo) is mandatory for this course.	
<u>Objective:</u>	<p>This course is intended for students who have basic level Japanese knowledge (Japanese A1 Certified) and wants to further continue improving their Japanese language proficiency. Students should be already fluent in reading and writing Hiragana, Katakana characters and basic Kanji characters. In this level of the course Elementary 1-A2 Part-2 the students gain practical ability to communicate in everyday situations. A lot of emphasis will be placed on reading, vocabulary, grammar and writing Japanese. The lessons are based on context and situations which students will face when interacting with Japanese nationals while living abroad or while living and travelling in Japan. This course offers learning in both language and culture. The course helps to deepen intercultural understanding by learning Japanese culture and reflecting on the students own culture in the city or country where they are from.</p> <p>The students who take this course should have completed Elementary 1-A2 Part-1 (Katsudoo) course. This is a compulsory prerequisite for this course.</p> <p>This course is based on JF Standard for Japanese Language Education.</p>

ANNEXURE II

DIPLOMA OF PROFICIENCY IN SPANISH LANGUAGE

Module Title: Diploma of Proficiency in Spanish Language	Level: 3 / B1
Course Code:	Hours: 100
Pre-requisites: Certificate of Proficiency 1 and 2 or Entrance Test	
Eligibility: 12 th Std Certificate + Entrance Test	
Aims: <p>This course aims at consolidating and enhancing the skills previously acquired and more specifically aims developing the ability in the students to:</p> <ul style="list-style-type: none">➤ Communicate with confidence on familiar routine and non-routine matters related to his/her interests and professional field.➤ Deal with most situations likely to arise whilst interacting in a Spanish speaking context.➤ Produce simple connected texts on topics, which are familiar, or of personal interest.➤ Describe experiences, events and thoughts on more abstract, cultural topics. <p>Secondly, it introduces the students to intercultural awareness and skills. It aims at enabling them to integrate a multicultural social or academic environment in a Spanish speaking country:</p> <ul style="list-style-type: none">➤ Use generic IT applications, multimedia and internet for language learning and communication.➤ Develop skills for successful collaborative learning.➤ Socially position themselves in relation to the Latin American and Spanish cultures.	
Learning outcomes: <p>At the end of the course, students will be expected to demonstrate their ability to:</p> <ul style="list-style-type: none">➤ Perform and respond to a wide range of language functions, using their most common exponents in a variety of familiar contexts.➤ Use reasonably accurately a repertoire of frequently used patterns and routines associated with predictable situations.➤ Comprehend and produce straightforward connected texts on a range of familiar subjects within his/her field of interest.➤ Communicate subjects within his/her field of interest with a satisfactory level of accuracy provided interlocutors/authors avoid very idiomatic usage and articulate clearly. <p>PRESCRIBED TEXT BOOK: AULA INTERNACIONAL 3 - NUEVA EDICION.</p> <ul style="list-style-type: none">• Teaching methodology: <p>The methodology is based on a communicative approach in order for students to become independent language users, guiding them in acquiring and improving their comprehension</p>	

and oral skills as well as their written expression through the different learning areas: Grammar, Vocabulary, Reading Comprehension, Speaking and Listening. Based on themes that are prevalent in the Hispanic world, students will be familiar with socio-cultural elements of the language. It includes independent work (group and individual), various media and forms of presentation (oral: lectures; audio-visual: TV, video; ICT: internet, CD ROM).

- **Assessment:**

Continuous Assessment: 4 tests x 1 hour (Written and Oral Comprehension and Expression) for 40%.

Final Examination: 3 hours Written Examination (Grammar, Reading Comprehension, Writing for 40% marks) and 1 hour duration Oral Examination (Listening Comprehension and Oral Expression) – for 20% marks. Total 60%.

Proposed duration:

Lectures + Tests/Tutorials: 4 x 23 weeks: 92 hours

Independent Learning and Home Assignments: 8 x 1: 8 hours

TOTAL: 100 hours

IRO 133	Spanish Language Level II (Advanced II)	4
IRO 134	The ARCTIC in Global Politics	4

Proficiency Courses:

Course Code	Course Title
COP	Certificate of Proficiency in Spanish Language (Beginners Level I and II)
COP	Certificate of Proficiency in Japanese Language (Beginners Level –I and II)
COP	Certificate of Proficiency in Japanese Language Level Elementary 1- A2 Part-1 (Katsudoo)
COP	Certificate of Proficiency in Japanese Language Level Elementary 1- A2 Part-2 (Rikai)

Programme: MA International Studies

Course Code: IRC 101

Title of the Course: Theories in International Relations

Number of Credits: 4

Effective from AY: 2018-19

<u>Prerequisites for the course:</u>	Open to all Master Students of Goa University.	
<u>Objective:</u>	The course is designed with the view to equip students with conceptual tools necessary to efficaciously comprehend the fundamental forces, processes and actors, militating within the international system. Towards this end, the Course will endeavor to introduce students to principal theoretical debates and analytical tools, imperative to a fulsome study of International Relations. Both, mainstream theoretical traditions and pertinent critical perspectives are intended to be examined. An abiding goal of this course is to alter the image of the study of theory, which is often disparaged by students, as abstract and outside the purview of the real world.	

<u>Content:</u>	1. Introducing Theory-Practice Interface: Defining Theory, Its Role and Significance; Theorizing about International Relations and System of Analysis; Major Theoretical Debates as part of Lineage and Practice of IR.	08 Hours
	2. Mainstream IR Theories: Realism (Classical & Structural; Defensive and Offensive) / Liberalism (Interdependence, Neoliberal Institutionalism, Commercial Liberalism).	08 Hours
	3. Constructivism and the ‘English School’: Identity, Constructivism (Social Construction of Knowledge, Construction of Social Reality).	08 Hours
	4. Global Conflict and Cooperation Theories: Balance of Power; Security Dilemma; Anarchy vis-à-vis Regime Stability; Power Politics vs. International Order and Cooperation.	08 Hours
	5. Unit V. Post-Cold-War ‘IR’ Theory:	08 Hours

	<p>Democratic Peace' Theory; Hegemonic Stability' Theory; Decision-Making Theories.</p> <p>6. Critical IR Theories and Non-Western Perspectives:</p> <p>Marxism, Post-Structuralism, Post-Modernism, Post-Colonialism, Feminism, and Global' IR.</p>	08 Hours
<u>Pedagogy:</u>	Lectures/ Tutorials/Assignments/Self-Study/Discussions/Audio-Visual	
<u>References/Readings</u>	<ol style="list-style-type: none"> 1. Timothy Dunne and Steve Smith. 2007. Eds. <i>International Relations Theories: Discipline and Diversity</i>. <u>Learning Outcomes</u>	Clear understanding of the role played by international and regional organisations in international affairs.	

Programme: MA International Studies

Course Code: IRC 106

Title of the Course: India's Foreign Policy

Number of Credits: 4

Effective from AY: 2018-19

<u>Prerequisites for the course:</u>	Open to all Master Students of Goa University.	
<u>Objective:</u>	The course seeks to acquaint students with the historical evolution of India's foreign policy since independence, both in terms of the conceptual underpinnings and philosophical moorings on the one hand, as also the vent of diplomatic practice, on the other. The object of the Course is to introduce students to the traditions in Indian Foreign Policy, which have defined the nation's strategic approaches to myriad themes and shaped and conditioned its perspectives, in terms of national interest, referenced to the extant. Emphasis would be on comprehending the changing contours of Indian Foreign Policy through the 21 st century, amidst the broader pattern of continuity that underpins it, spanning Non Alignment 2.0 to the incorporation of the whole gamut of Maritime Affairs, in the nation's strategic calculus. Particular emphasis would be laid on the foundation aspects of foreign policy as also shedding light on the mechanics and dynamics of foreign policy making and implementation. Emerging aspects embodying India's interface with global and regional players and multilateral organizations and forums shall also be dealt with.	
<u>Content:</u>	1. Making of India's Foreign Policy: Historical Overview; Conceptual Underpinnings (Principles, Philosophical Traditions, Determinants – Domestic and International); Dynamics-Mechanics (Structure, Institutions, Processes); External Change-Agents (Role of Think Tanks, Public Diplomacy). 2. National Security and Strategic Autonomy in India's Foreign Policy: Genesis, Doctrines, Trends and Patterns, Changing Dimensions, in Indian Security Framework (External/Internal, Continental vis-à-vis Nautical) and Nuclear Construct (PNE to Minimum Nuclear Deterrent).	08 Hours 08 Hours

	<p>3. India's Interface with its Neighbours: 'Neighbourhood-First' Doctrine (Blending Balanced Strategic Engagement of Geographical Neighbourhood (South Asian littorals), Geopolitical and Civilizational Neighbourhood (Continental South East Asia); Disaggregated Relationships in Himalayan South-Asia (Bhutan and Nepal), Maritime South-Asia (Sri Lanka and Maldives), Peninsular South-Asia (Bangladesh), Beachhead South Asia (Afghanistan and Myanmar).</p> <p>4. India's Relations with Strategic Regions and Regional and Global Powers: Strategic Regional Engagements in South East Asia (Look East to Act-East); Persian Gulf and West Asia (Link-West); Europe (Think-West); India-Africa Summit and India-LAC Relations (Renew South-South)</p> <p>5. <u>Learning Outcomes</u>	A comprehensive understanding of India's Foreign Policy and its predicaments.	

Programme: MA International Studies

Course Code: IRC 107

Title of the Course: US Foreign Policy in Perspective

Number of Credits: 4

Effective from AY: 2018-19

<u>Prerequisites for the course:</u>	Open to all Master Students of Goa University.	
<u>Objective:</u>	Notwithstanding the diffusion of power since the end of the Cold War, the United States and its role in shaping the 21 st century global order, continues to assume significance. The course aims to acquaint and familiarize with the nature and scope of US Foreign Policy, in its evolutionary trajectory. It intends to introduce students to the changing contours of a dynamic external-policy framework, vis-à-vis different regions of the globe, not to mention its policy-response to mutating thematic challenges manifesting themselves on the horizon and delineate the undercurrents, which underpin the American policy in the global realm, highlighting the forces, institutions and actors.	
<u>Content:</u>	1. Introduction to US Foreign Policy: Conceptual and Historical Evolution, Unfolding Diplomatic Traditions, Fundamental Principles and Philosophical Moorings Shaping Foreign Policy Orientation (Isolationism vis-a-vis Internationalism), Dynamics of American Economic Development (Mercantilism to Capitalism), Constitutional Scheme (Congress, Presidency, Judiciary, Federal Arrangement).	08 Hours
	2. Mechanics of US Foreign-Policy Making and National-Security Strategizing: Determinants, Foreign Policy Apparatus and National Security Establishment (State Department, Defense Department, NSC, Internal and External Pressure Groups, Cross-cutting Influences).	08 Hours
	3. Unit III: US Strategic Involvement around the Globe: Asia-Pacific (Cold War Alliances to Pivot-to-Asia) Middle East & West Asia (Dual	08 Hours

	<p>Containment, Energy, Israel); AF-PAK (Radicalization to Counter-Terrorism).</p> <p>4. US Engagement with Major and Regional Powers: Asia-Pacific (China, Japan, South Korea); South Asia (India, Pakistan, Afghanistan), Eurasia (Russian Federation); Middle East & West Asia (Israel, Saudi Arabia, Iran, Egypt).</p> <p>5. United States and International Institutions: United Nations, NATO, Regional Groupings (OAS, GCC, APEC, ASEAN-ARF, EAS, AU); G7, G20, IMF/World Bank.</p> <p>6. US Strategic Approaches and Responses to Global Challenges: International Terrorism, Nuclear Non-Proliferation, Energy Security, Humanitarian Crises, Democratization, Maritime Security in the Indo-Pacific, Restructuring and Reforming of the Global Institutional Architecture, Arab-Israeli Conflict, Korean Peninsula Crisis.</p>	<p>08 Hours</p> <p>08 Hours</p> <p>08 Hours</p>
Pedagogy:	Only open to those pursuing as Masters in International Studies.

Title of the Course: Geopolitics: Theory and Practice

Number of Credits: 4

Effective from AY: 2018-19

<u>Prerequisites for the course:</u>	Open to all students of Goa University who are interested in learning about the significance of geopolitics in International Relations as an optional course.	
<u>Objective:</u>	This optional course is aimed at making students understand that there is a complex history and geography – both given and written- to the term ‘_Geopolitics’. The term was coined at very end of the 19 th century at the service of new forms of nationalism, colonial project and inter-imperialist rivalry in the Europe and the World. With the complex interplay between space and power at its conceptual core, geopolitics has most often been associated with a ‘_realist’ and state-centric approach to international relations. But recent decades have witness the raise of a critical geopolitics that focuses on a far wider range of social actors, experiences (including non-Western) and practices. This course provides a concise survey of classical geopolitics from a critical geopolitical perspective. It draws attention to politics behind the production of geopolitical knowledge (in plural) of international relations. Illustration/cases used in this course are drawn largely from both continental and maritime Asia and the Indian Ocean Region.	

<u>Content:</u>	<p>1. Conceptualizing Geopolitics: Critical Perspectives on Space–Place, Scale and Knowledge- Power. Origins, Evaluation and Legacies of Western Geopolitical Tradition: (Rudolf Kjellen)(Organic Theory of State), Friedrich Ratzel (Lebensraum), Karl Haushofer (German School of Geopolitics), Halford J. Mackinder (Heartland), Alfred Thayer Mahan (Sea Power), Nicholas J. Spykman (Rimland).</p> <p>2. Cold War Geopolitics: Eurocentric Visualizations of the Globe (Worlds & Blocks); Post Cold War Geopolitics and Maritime Order (Indian Ocean Region and ‘Indo- Pacific’).</p> <p>3. Critical Geopolitics: Climatic Change (Perspectives on and from Global South); Geopolitics and Geoeconomics of Connectivity in Asia and Beyond (Silk Routes: Old and New; One Belt One Road).</p> <p>4. Contours of Geopolitical Visions in the Contemporary World: End of Cold War; The New Militarism, Rise of Multipolarity in the Geopolitical Context; A Different Kind of Geopolitics? New Tensions in Geopolitical and Geostrategic Context.</p> <p>5. Anti-geopolitics: New Forms of Resistance, Gender and Geopolitics</p> <p>6. Emerging Geopolitics in the 21st Century: Popular Geopolitics in the Era of Globalisation:US Grand Strategy: An American Empire?; The End of Eurocentrism?; Role of India in the Emerging World.</p>	<p>08 Hours</p> <p>08 Hours</p> <p>08 Hours</p> <p>08 Hours</p> <p>08 Hours</p> <p>08 Hours</p>
<u>Pedagogy:</u>	Lectures/ Tutorials/Assignments/Self-Study/Discussions/Audio-Visual

Programme: MA International Studies

Course Code: IRO 107

Title of the Course: 'Understanding' China

Number of Credits: 4

Effective from AY: 2018-19

<u>Prerequisites for the course:</u>	Open to all students of Goa University interested in understanding and studying modern day China as an optional course.	
<u>Objective:</u>	The course exposes the students to an introductory yet well-rounded comprehension of the Chinese State and the Chinese Nation, alike. Emphasis would be on acquainting students with the historical sweep of Chinese civilization through its iconic Imperial Dynasties, leading into the Peoples Revolution and ever since. The endeavour would also be to familiarize students with the complexities, intricacies and nuances of Chinese Party-State political structure and linkages to various organs of State Power. Notwithstanding, Chinese foreign policy and national security would also be under the microscope in terms of understanding the conceptual underpinnings and the evolution to contemporary dynamics, undergirded by a historical anchored narrative. Chinese economy, which has become the most emblematic dimension of its National Power and global presence, shall be examined and elucidated, in terms of the industrial and financial heft and pelf being brought to bear on regional and global engagements and re-alignments. The element of Chinese Soft Power, returning back with a proverbial vengeance, in subtle and not so subtle ways, shall also be illuminated as a recurrent feature within this Course.	
<u>Content:</u>	<p>1. Introduction to China: Geographical Contours, Continental and Maritime Geostrategic Attributes (Geopolitical Facets, Geo-Economic Realities); Historical Antecedence (Brief Overview of Imperial China, Nationalist Revolution, Post Revolution Chinese State, Contemporary Dynamics); Societal Profile (Cultural and Ethnic Dimensions); Ingress into Tibet, Cross-Strait Relations.</p> <p>2. Understanding China's Political Economy: Political Power Structure (CPC, Linkages with State Council, NPC, CPPCC, CMC-PLA,</p>	<p>o8 Hours</p> <p>o8 Hours</p>

	<p>Supreme Peoples' Court; Supreme Peoples' Procuratorate); Mao's 'Four Olds'; Deng's 'Four Cardinal Principles'; Jiang's 'Three Represents'; Hu's 'Scientific Socialism' and 'Harmonious Growth'; Xi's 'Four Comprehensives'; Economic transition from Mao's Centralized Statist Planning to Deng's Socialism with Chinese Characteristics; Four Stages of Chinese Growth Process; Fundamentals of Contemporary Chinese Economy, Twin Centennial Goals.</p> <p>3. Foreign Policy and National Security: Conceptual Principles, Diplomatic Orientation & Practice; National Security Doctrine; Role of Party, State & Military in Foreign Affairs & National Security; Strategic Dimensions (Economic Diplomacy, Infrastructural Ingress, Resources-based Engagement, Military Modernization & Transformation, Maritime Territorial Disputes and Power Projection-Continental & Transcontinental Maritime Strategy, Dimensions of Strategic Rise of China as Regional Hegemon & Major Global Power).</p> <p>4. China's Global and Regional Ties: Relations with the US (Strategic Dichotomy and Concordance towards G2), Japan (Pragmatic Cooperation amidst Historical Animus, Politico-Diplomatic Discord and Military Competition), India (Confrontation, Competition, Cooperation, Collaboration), Russia (Ideological Bonhomie to Estrangement to Reversed Asymmetry and Dependency).</p> <p>China's Engagement with Regions and Regional Powers: ASEAN (Continental and Maritime) East Asia Summit (EAS), South Asia (Himalayan, Peninsular and Maritime) and the Indian Ocean Region (IOR), Shanghai Cooperation Organization (SCO) and Central Asia Republics (CARs), African Continent, Latin American Region.</p> <p>5. Issues and Role in National and Global Governance: National Plans & Initiatives for Chinese Economic, Industrial, Infrastructural, Urbanizing & New-Age Technological Development; Outbound Infrastructure & Capacity-Building Investment Initiatives (Belt-n-Road); 'Go-Out' Strategy for Energy Security & Independence (Strategic Footprint across Central Asia, Africa & Latin America) and Revolution in Renewables; New Architecture for Financial Multilateralism and Minilateralism (AIIB, NDB); Chinese Foray into the Arctic.</p>	<p>08 Hours</p> <p>08 Hours</p> <p>08 Hours</p> <p>08 Hours</p>

Programme: MA International Studies

Course Code: IRO 122

Title of the Course: Spanish Language Level I (Beginners II)

Number of Credits: 4

Effective from AY: 2018-19

<u>Prerequisites for the course:</u>	Open to all students of Goa University interested in learning Spanish Language Level I (Beginners II). Spanish Language Level I (Beginners I) or basic knowledge of Spanish (School Level Certificate-Equivalent) is required.	
<u>Objective:</u>	LEVEL 1 - Beginners II. Correlative to A1.2 According to the Common European Framework of Reference for Languages - CEFR. This Beginner level course aims from a communicative perspective, to develop, in an integrated and significant way, the fundamental linguistic skills (Reading Comprehension, Writing, Listening, Grammar and Speaking) in Spanish Language. The methodology is based on a communicative approach in order for students to become independent language users, guiding them in acquiring and improving their comprehension and oral skills as well as their written expression through different learning areas such as Grammar, Vocabulary, Reading Comprehension, Speaking and Listening. Based on themes that are prevalent in the Hispanic world, students will be familiar with socio-cultural elements of the language.	
<u>Content:</u>	<ol style="list-style-type: none">1. Presente de indicativo de los verbos irregulares. Preposiciones: a, de, en, por. Pronombres interrogativos: ¿cuándo?, ¿cuánto? Locuciones preposicionales de lugar: (muy) lejos (de), (muy) cerca de, todo recto... El contraste entre hay / está(n). Adverbios de lugar: aquí, ahí, allí.2. Expresiones de tiempo: ayer, el otro día... Determinantes demostrativos: este/a/os/as, ese/a/os/as aquel/aquella/os/as.	01 Credit (12 Hours)

Programme: MA International Studies

Title of the Course: The ARCTIC in Global Politics

Course Code: IRO 134

Number of Credits: 04

Total Contact Hours: 48

Effective from AY: 2021-22

Prerequisites for the Course:	Open to all eligible students of Goa University	
Objective:	The Four Credits Course seeks to acquaint students, with a rudimentary but holistic understanding of the Arctic region; quite epochal indeed, given how obscured the regional expanse remains, in public consciousness and imagination. The Course goes to work with unfolding the geographical contours of the region, proceeding to offer a peek into the physiological attributes, the demographic tenor, and political territoriality reposed within sovereign units. Besides, an evolutionary historicity that traces the antecedence of the region in the context of its geopolitics, the emergent strategic dimensions of its geo-economics, as also the international legal regimes that define the Polar region and the governance frameworks inherent in its regulation. Hence, the Course would introduce the students into the geopolitical, geo-economic, governance driven and legally conditioned comprehension of the region, segueing congruently with the thematic-specific Courses of the MA International Studies programme.	
Content:	Unit 1: <u>Primer to the Arctic</u> Geography; Environment; Demography, State–Territoriality. History of Indigenous Peoples in Comparative Perspective; Rights of Indigenous Peoples; Traditional Cultures and Modernism; Preservation of Arctic Heritage.	04 hours
	Unit 2: <u>Historicity of the Arctic</u> Significance of ‘Region’ Construct; Region-Building; Political History of Arctic Territories; Cold War Militarization of the Arctic; Historical Role of Sovereign Powers.	04 hours
	Unit 3: <u>Geopolitics of the Arctic</u> <u>Hard Security in the Arctic:</u> 21 st Century Competition and Cooperation in 21 st Century, High Modernism Statecraft of Major Powers <u>Energy Security and the Arctic:</u> Climate Change and Energy in the Arctic; Security and Mineral Resources in the Arctic; Sovereign National Interests in the Arctic; Increasing Interests of Non-Arctic States in the Arctic; Higher Order Geopolitics.	10 hours

	<p><u>Issues in Arctic Geopolitics</u>: Military-Industrial-Technological Construct, Strategic Policies surrounding Natural Resources Management; Maritime Fault-lines; Soft Security in Ecological Protection. <u>Civilian Interests and Power Politics in the High North</u>: Delineating Strategies and National Interests Perspectives of Major & Middle Powers.</p> <p>Unit 4: The Arctic and its Geo-Economics <u>Introduction to the ‘Arctic Economic Region’</u>: Definition, Configuration, Strategic Dimensions <u>The Arctic as Resources Repository</u>: Strategic Resources Configuration & Profile (Fisheries, Whaling, Mineral Ores); Extractive Industries (Oil & Gas) & Economic Communities around Fisheries, Tourism, etc. <u>Regional Development Models in the Arctic</u>: Arctic and Sub-Arctic Regional Plans, Cross-border and Trans-regional Cooperation; Circular Economy, Smart City Solutions, Green Financing of Polar Renewable Energy. <u>Sustainability in the Arctic</u>: Economic, Social & Cultural Aspects of Sustainability (Post-Colonial Narratives and Geo-Assembling Discourses) & Resource Development (Agro-Production, Biodiversity, Food Security, Trade Routes); Blue Economy-Sustainable Development in the Arctic Ocean.</p> <p>Unit 5: International Legal Dimensions in the Arctic <u>The Arctic Region and Law of the Seas</u>: Maritime Boundaries (Extended Continental Shelves, Arctic Straits), International Energy Policy, Marine Scientific Research. <u>The Arctic and International Relations Laws</u>: Sovereignty, Security & Dispute Settlement Issues, Existing Multilateral Institutions, Instruments & Norm Development in the Arctic; Hard Law-Soft Law Hybridization & Arctic Legal Order. <u>Environmental Laws and the Arctic Environment</u>: Climate Change, Ecology and Resources Management, Maritime Environmental, Transportation and Shipping Laws. <u>Communities Law and Evolving Indigenous Governance in the Arctic</u>: Human Rights; Rights of Minorities & Indigenous Peoples; Saami Rights in Nordic Countries; Treaty Interpretations; Power Politics & Politics of Groups; Questions related to Rights over Lands & Waters.</p> <p>Unit 6: Governance and Regionalism in the Arctic <u>‘Governance’ & ‘Governing’ in the Arctic Region</u>: Concept; Exceptionalities; Sovereign & Non-State Actors; State & Non-State Stakeholders. <u>National Territorialised Governance and Internationalism in the Arctic</u>: Resident and Littoral Sovereigns (Canada, The Kingdom of Denmark, Iceland, Finland, Norway, Russian Federation, Sweden, United States); International Regimes (The International Maritime Organization (IMO); The UN Commission on</p>	<p>10 hours</p> <p>10 hours</p> <p>10</p>

Learning Outcomes	<p>The Course shall endeavour to facilitate a well-rounded understanding of the Arctic region, albeit cursorily, of the physiological, politico-diplomatic and socio-economic aspects of polar politics. Furthermore, the students would understand the complexities of the multitude of sovereign state dispositions, as also the cross-cutting dimensions of geopolitics and geo-economics, impinging, on the intersection of attendant policy and praxis.</p>	

Programme: Certificate of Proficiency

Course Code: COP

Title of the Course: Japanese Language (Beginners Level-I)

Effective from AY: 2020

Duration of the Course: 50 hours (1 Semesters)

<u>Prerequisites for the course:</u>	Open to all interested in learning level I Japanese Language having completed XII th Std.	
<u>Objective:</u>	In the A1 Kutsudo course the students learn Japanese language through activities. Katsudo means activities in Japanese. The focus of the course is to make students more familiar with day to day conversations and related vocabulary. Since reading and writing practice is taken care in the course A2 (Rikai), here in A1 more importance is given to understanding conversations and to learn new vocabularies and basic grammar of the Japanese language. Hence tests are conducted in the form of interviews rather than conducting written test. The session 23 gives the students a chance to interact and try to communicate with native Japanese speaking students from Nihon University. An additional native Japanese support lecturer from Tokyo will be present during sessions 14 to 22 to make the course more interactive and get experience starting basic conversations with Japanese natives. This will also help students to compare and learn the accent and intonations of several Japanese language speakers

<u>Assessment</u>	Mid Term Assessment (04) Final Test (Written and Oral - 01)	
<u>Pedagogy:</u>	Written and Listening Activities, Oral Expression Activities, Participation throughout the Course, Progress Test, Mid Term Test, Final Test.	
<u>References/Readings</u>	<i>Marugoto A1 Elementary Katsudo</i>	
<u>Learning Outcomes</u>	By the end of the course the students will be able to understand and initiate basic conversations in Japanese. When the course is coupled with the A2 Rikai course, it further enhances the understanding of the student about the basics of the Japanese language.	

Programme: Certificate of Proficiency

Course Code: COP

Title of the Course: Japanese Language (Beginners Level-II)

Effective from AY: 2020

Duration of Course: 50 hours (1 Semester)

<u>Prerequisites for the course:</u>	Open to all interested in learning level II Japanese Language having completed XII th Std. and Japanese Language (Beginners Level -I)	
<u>Objective:</u>	Learn to read and write Hiragana and Katakana native Japanese characters. Introduce the student to basic Japanese words and vocabulary. In lesson 1 and lesson 2 the students learn the Hiragana and Katakana characters, their phonetics and writing methods. Through the lessons 3 to 14 the students practice reading and understand the meanings of several new vocabulary used in day to day conversations. The periodical test in session 3,5,13 and 25 enable to systematically evaluate the progress made by the students in learning the language. Based on test outcomes the students are counseled and advised on an individual basis that which areas they should focus, put additional practice to improve their proficiency in the language.	
<u>Content:</u>	<ol style="list-style-type: none">1. Orientation, Lesson 1 (Hiragana)2. Review, Hiragana test - Read and Write Hiragana3. Hiragana test review, Lesson 2 (Katakana)4. Review, Katakana test - Read and Write Katakana5. Katakana test review, Lesson 3 (Nice to meet you)6. Lesson 4 (There are three people in my family) - L37. Lesson 5 (What food and drinks do you like?) - L48. Lesson 6 (Where are you going to have lunch?) – L59. Lesson 7 (There are three rooms in my home) – L610. Lesson 8 (It is a good room) – L711. Lesson 9 (What time is it now?) – L812. Lesson 10 (What time do you start and finish work?) – L9	

	13. Mid-term Written test review, Lesson 11 (What's your hobby?) 14. Visitor' session (Students of Nihon University) Cultural session: Calligraphy 15. Lesson 12 (What kinds of events are there In your town?) – L11 16. Lesson 13 (How do you get from home to work?) – L12 17. Lesson 14 (What things are there in your town?) –L13 18. Lesson 15 (Is there anything that you want to buy?) –L14 19. Lesson 16 (How much do clothes cost?) – L15 20. Lesson 17 (What are you going to do on your next day off?) – L16 21. Lesson 18 (where and how was your recent holiday?) –L17 22. Visitor' session (Students of Nihon University) /Chat room/Cultural session:songs, origami 23. Review	
<u>Assessment</u>	Mid Term Assessment (04) Final Test (Written and Oral - 01)	
<u>Pedagogy:</u>	Written and Listening Activities, Oral Expression Activities, Participation throughout the Course, Progress Test, Mid Term Test, Final Test.	
<u>References/Readings</u>	<i>Marugoto A1 Elementary Rikai</i>	
<u>Learning Outcomes</u>	By the end of the course the students will be able to read and write Hiragana and Katakana characters independently. They would be able to understand basic level Japanese vocabulary. When the course is coupled with the A1 Katsudou course, it further enhances the understanding of the student about the basics of the Japanese language.	

Programme: Certificate of Proficiency

Title of the Course: Certificate of Proficiency in Japanese Language Level Elementary 1- A2 Part-1 (Katsudoo)

Effective from AY: 2021-2022

<u>Prerequisites for the course:</u>	Open to all interested in learning Japanese Language and acquiring a certificate of proficiency. Japanese Certificate of Proficiency A-1 or School Level Certificate-Equivalent is required. Minimum qualification - Higher Secondary (Std.XII) examination conducted by the Goa State Board of Secondary and Higher Secondary Education or of any other Board recognized by Goa University as its equivalent.	
<u>Objective:</u>	This course is intended for students who have basic level Japanese knowledge (Japanese A1 Certified) and wants to further continue improving their Japanese language proficiency. Students should be already fluent in reading and writing Hiragana, Katakana characters and basic Kanji characters. In this level of the course Elementary 1-A2 Part-1 the students gain practical ability to communicate in everyday situations. A lot of emphasis will be placed on practicing listening and speaking Japanese in the class. The lessons are based on context and situations which students will face when interacting with Japanese nationals while living abroad or while living and travelling in Japan. This course offers learning in both language and culture. The course helps to deepen intercultural understanding by learning Japanese culture and reflecting on the students own culture in the city or country where they are from. The students who take this course are advised to continue and complete the Part-2 of the course named Elementary 1-A2 Part-2 (Rikai). This course is based on JF Standard for Japanese Language Education.	
<u>Content:</u> Topics 1 - 9	Based on Course Book: Marugoto Elementary 1 A2- Coursebook for Communicative Language Activities (Katsudoo)	100 Hours

GOA UNIVERSITY

Sub P.O. Goa University, Taleigao Plateau, Goa 403 206

DEPARTMENT OF WOMEN'S STUDIES

**M.A. Syllabus following the Choice-based Credit System
Total credits 64 credits**

About Women's Studies:

Women's Studies in India, is an interdisciplinary field of feminist scholarship designed to facilitate critical thinking and develop new knowledge. The discipline helps students understand the creation and perpetuation of inequalities with the intention to develop in students the capacity and skills to bring about change, create new areas of service and to ultimately impact policy and the discourse on women's development in the country. The programme also aims at creating research capacities for students to engage with the academic discipline of Women's Studies using a variety of pedagogical tools.

Prerequisites for Admission:

The prerequisite for admission into the M.A. Women's Studies Programme is the minimum prescribed percentage in a Bachelor's Degree in any subject and as per Goa University Ordinance for admission. The entrance test shall be based on general knowledge, analytical ability, logical reasoning and the specific subject syllabus announced on the website.

Semesters and Courses:

The Department offers a two year M.A. Programme in the subject of Women's Studies taught over 4 semesters. The M.A. Programme is governed by Goa University Ordinances and comprises of the following courses:

CORE COURSES

<u>Sr. No.</u>	<u>Subject Code Course Title</u>	<u>Number of Credits</u>
1.	WSC - 111 Core Concepts in Women's Studies and Feminist Thought	4
2.	WSC - 112 Mapping the Women's Movement	4
3.	WSC - 113 Gender, Development and the State: Issues in the World, India & Goa	4
4.	WSC - 114 Doing Feminist Research	4
5.	WSC - 115 Field Work Skills and Practice	4
6.	WSC - 116 Gender and Marginality	4
7.	WSC - 117 Gender-Sensitive Interventions for Change	4
8.	WSC - 118 Gender, Human Rights and Law	4

OPTIONAL COURSES

<u>Sr. No.</u>	<u>Subject Code Course Title</u>	<u>Number of Credits</u>
1.	WSO - 111 Women's Health: Critical Debates	4
2.	WSO - 112 Gender and Culture	4
3.	WSO - 113 Re-reading History: Feminist Perspectives	4
4.	WSO - 114 A Gender Review of Literature	4
5.	WSO - 115 Gender and Political Processes	4
6.	WSO -116 Gender and Media	4
7.	WSO - 117 Demography, Labour, Work and Gender	4
8.	WSO - 118 Gender, Environment and Ecology	4
9.	WSO - 119 Gender and Education	4
10.	WSO - 120 Women and Violence	4
11.	WSO - 121 Basic Research-enhancing Skills	2
12.	WSO - 122 Gender Sensitivity and Equity	2
DISSERTATION - WSD - 111		8

WOMEN'S STUDIES COURSE OUTLINES

CORE COURSES

Programme: M. A (Women's Studies)

Course Code: WSC-111

Title of the Course: CORE CONCEPTS IN WOMEN'S STUDIES AND FEMINIST THOUGHT

Number of Credits: 4

<u>Learning Outcomes</u>	<ol style="list-style-type: none"> 1. Field work will provide the student an exposure to ground realities and will provide an opportunity to learn hands on, as also by observation and active participation. 2. Field work will help the students to integrate the classroom learning with actual practice. Students under the guidance of field contacts as supervisors will be given the opportunity to experience field situations that may be complex and challenging. 3. The course will enable student's self-development and the realization of personal limitations and capabilities. 	

Programme: M. A. (Women's Studies)

Course Code: WSC-116

Title of the Course: GENDER AND MARGINALITY

Number of Credits: 4

Effective from Academic Year: 2018-19

<u>Prerequisites for the course:</u>	Students registered for the M.A. Women's Studies Programme and as per GU Ordinance	
<u>Objective:</u>	The course will discuss identity politics, exclusion and state affirmative action/initiatives for inclusion. Theories of power politics and collective action. Students will be given an exposure to the work of Ambedkar, Phule as well as the lesser heard voices of women in history and contemporary Dalit feminist writings. The course covers the canvas of cultural oppression, ethnic conflict and violence, class exploitation, poverty and disabled persons rights from a gendered lens.	
<u>Content:</u>	Module 1: Class and Religion: Identity politics, Recognition vs Redistribution. Women factory workers, Domestic Labour: Issues, challenges and lacunae in the law (Domestic Labour Act 2010), class exploitation, poverty and vulnerability, Case studies of gender and religious conflicts in India, Women as targets, Women as custodians of community identity and honor. Politics of food.	12 hours
	Module 2: Intersectionality revisited. Caste and Tribes: Historical roots of caste: Work of Ambedkar and Phule. Caste and Gender. Contemporary Dalit voices. Issues of tribal women, Forest and Wildlife Acts vs Livelihood. Field Trip.	20 hours
	Module 3: Sex: Transgender Rights, <i>Hijra</i> Community in India, Lesbian, Gay, Bi-sexual Transgender, Queer, Inter-sexed A-sexual (LGBTQIA): Recent debates and trends. National Legal Services Authority of India (NALSA) Act.	6 hours
	Module 4: Disability and Senior Citizens: Contemporary debates on rights, inclusion. Disability and gender, State response to disabled persons issues, National Policy for Persons with Disability 2006, Disability Act 2016, Senior Citizen 2010.	10 hours
<u>Pedagogy:</u>	lectures/assignments/self-study/ documentaries, films and discussion/ group readings and discussions/ presentations/ field trip

<u>Learning Outcomes</u>	<ol style="list-style-type: none"> 1. The students will be introduced to theories on gender, intersectionality and difference with a focus on marginalized sections based on class, religion, caste, tribe, sex, age, and disability in particular. 2. The field trip will sensitize students to the socio-economic realities faced by marginalized people. 	

Programme: M. A. (Women's Studies)

Course Code: WSC-117

Title of the Course: GENDER-SENSITIVE INTERVENTIONS FOR CHANGE

Number of Credits: 4

Effective from Academic Year: 2018-19

<u>Prerequisites for the course:</u>	Students registered for the M.A. Women's Studies Programme and as per GU Ordinance	
<u>Objective:</u>	This course will introduce students to participatory methods and tools (including participatory reflection and action: PRA) to bring about change and the objective of this course is to encourage students to create campaigns, group dynamic games and other gender sensitization and gender analytical tools, as well as programmes for gender equality that can be used with various groups of stakeholders. Students will work on group projects as well as individual assignments. The students will be encouraged to use various media, address different target groups. This course is completely project based. Students will be expected to use the tools created for the target audience during their Gender-Sensitive Interventions for Change (GSIC) projects. In the final month of the course, the students will self-assess the impact of the intervention created with guidelines followed for the assessment.	
<u>Content:</u>	Module 1: Participatory Workshops to learn the use of different participatory tools: Social Mapping, Simulation games, group dynamic sessions, skits and songs, flexi flans, 3 pile sorting cards, story with a gap. Modelling tools to match target group. What is Corporate Social Responsibility (CSR)? Project creation for CSR activities.	24 hours
	Module 2: Intervention for Change and Tool Creation	24 hours
<u>Pedagogy:</u>	Participatory Tools and Workshop Planning/ designing games for participatory learning/ Project implementation in the field /assignments/self-study/ group discussions/ presentations

<u>Learning Outcomes</u>	<ol style="list-style-type: none"> 1. The students will develop confidence to implement gender sensitive projects of their own creations in a variety of settings to bring about change. 2. Students will be able to develop projects of their choice which they can propose for CSR activities. 3. Students will develop creative and innovative games to translate and facilitate participatory learning. 	

Programme: M. A. (Women's Studies)

Course Code: WSC-118

Title of the Course: GENDER, HUMAN RIGHTS AND LAW

Number of Credits: 4

Effective from Academic Year: 2018-19

<u>Prerequisites for the course:</u>	Students registered for the M.A. Women's Studies Programme and as per GU Ordinance	
<u>Objective:</u>	In this course students will be introduced to the international discourse on human rights and will focus specifically on the Convention on the Elimination of Discrimination against Women (CEDAW), Vienna Declaration and the Beijing Platform for Action (BPFA, 1995) and initiatives for 'gender mainstreaming' while also looking at the principles of equality and non-discrimination as reflected in the Universal Declaration of Human Rights (UDHR), International Convention for Economic, Social and Cultural Rights (ICESCR) and International Convention on Civil and Political Rights (ICCPR). Issues related to enforcement of existing international approaches to advancing women's rights. Within the Indian context, students will be introduced to the law (sections of the Indian Penal Code specifically dealing with women's rights, various acts for the prevention of crime and protection of women's rights as well as landmark judgments). Some of the other issues that this course will address are: history and culture of silence related to crimes against women, need for anonymity of the victim, substantive equality and politics of affirmative action and positive discrimination through women specific laws and supreme court guidelines such as: the Protection of women from Domestic Violence Act 2005, ITPA, Vishaka Judgment, etc. Landmark cases of human rights violations. The family law in Goa will also be critically analysed.	
<u>Content:</u>	Module 1: Understanding Law - substance, structure and culture of law; women's experiences and conceptualization of human rights including rights under the Constitution of India. Principles of substantive equality and non-discrimination, progressive realization of rights. Interrogating the public-private divide. Intersectionality and law.	12 hours
	Module 2: The UN system, International discourse on	12 hours

	<p>human rights: UN Declaration of Human Rights, ICESCR, ICCPR Convention on the Elimination of Discrimination against Women (CEDAW), Vienna Declaration. Critical debates around universalism and cultural relativism. Reports, alternate reports and shadow reports</p> <p>Module 3: Access to justice: National Human Rights Institutions - Paris Principles, Constitution of India and legal systems, women specific legislation such as Protection of Women from Domestic Violence Act, 2005, and Sexual Harassment of Women at the Workplace (Prevention, Prohibition and Redressal) Act, 2013, or even general legislation (such as the Food Security Act, etc.).</p> <p>Module 4: Critical assessment of law from a rights perspective. Family Laws of Goa, Indian Penal Code, The Immoral Traffic (Prevention) Act 1956, Dowry Prohibition Act 1961, Indecent Representation of Women (Prohibition) Act 1986. The Scheduled Castes and the Scheduled Tribes (Prevention of Atrocities) Act 1989.</p>	<p>12 hours</p> <p>12 hours</p>
<u>Pedagogy:</u>	lectures/assignments/self-study/ films, documentaries and discussion/ group readings and discussions/ presentations/ human rights café/role play
