## 28. How can our programs be improved? What specific comments do you have regarding the curriculum?

22 responses

The students should do regular internships or traineeship throughout the year. It should not be just restricted to summer internship

I have observed that most of the students I worked with tend to fulfill only the basic requirements of their role. However, there was one exceptional student among the 15+ I interacted with who consistently went above and beyond to address any issues that arose.

I also noticed that some students demonstrated a rebellious attitude towards their employers, reminiscent of a old government workforce mindset. They seemed reluctant to take on additional responsibilities when required to exceed their designated roles. It became apparent that they needed to be challenged in order to foster personal growth, as they were not inclined to develop independently. I found that showing them examples of others successfully completing the tasks I assigned within a given timeframe often motivated them to take action.

It's unclear why this phenomenon occurs, but it seems that many students compare their roles in India with those of their peers in the Middle East or Europe. Consequently, they desire comparable earnings without putting in the same level of effort.

Overall, there is room for improvement in motivating students to go beyond their required duties and cultivate a proactive approach to personal and professional development.

More practicals hours and skill based courses to be included.

Thank you for the opportunity to hire students from Goa University. We appreciate the partnership and the quality of candidates we have received.

Curriculum can be improved only by taking together opinions of various stakeholder such as teachers, parents , industry , students etc.

NO IMPROVEMENT NEEDED

Parity in workload across semester. Due weightage to research and research guidance. Only then quality of research can be raised

There should be periodic orientation on improving the mindset of the students to ensure that their "overall usefulness" (other than that related to the academic side only) to society or institution is enhanced.

More emphasis could be laid on incorporation of innovative pedagogical tools in class rather than keeping them restricted only on paper. So that lectures become very engaging and not one directional.

Through workshops, seminars and hands-on experience.

Programs can be improved by offering more skill oriented course. Curriculum revision is necessary after certain period.

Including more practical component

nil

Make it little more practical

More case n application based learning

Take Course (Subject) Teachers in confidence while designing the Curriculum.

Ned to include more nos of Project/opportunity for hands on experiments in curriculum.

Requires the need to provide students with information relating to new advances in the said field, something outside the said curriculum.

1. The Programme can be improved by making them more practical oriented
2. Curriculum should be application-oriented.

Practical exposure, cognitive skills and industry experience.

-

Curriculum should be competency based facilitating students as learners motivating the students for research adopting new technology.
