TABLE OF CONTENTS

Chapter 1 | 18 pages

Deep Learning Algorithms for Real-Time Healthcare Monitoring Systems

By G. Boopathi Raja

Abstract ▾

Chapter 2 | 19 pages

Neural Network-Based Efficient Hybrid Control Scheme for the Tracking Control of Autonomous Underwater Vehicles

By Manju Rani, Naveen Kumar, Anita Dahiya

Abstract ▾

Chapter 3 | 26 pages

Integrated Storage Allocation and Privacy Preserve Deduplication Process over Cloud Using Dekey Method

By F. Antony Xavier Bronson, V. Sai Shanmuga Raja, Saravanan Elumalai, G. Senthil Velan, P. Solainayagi

Abstract ▾

Chapter 4 | 13 pages

Internet of Things for Smart Cities: Application and Challenges

By Arun Kumar Rana, Priya Trivedi, Paras Chawla

Abstract ▾

Chapter 5 | 13 pages

IoT-Based Garbage Monitoring System with Proposed Machine Learning Model for Smart City

By Arun Kumar Rana, Sachin Dhawan, Sumit Kumar Rana, Sandeep Kajal

Abstract ▾

Chapter 6 | 9 pages

Application of Natural Language Processing and IoT to Emulate Virtual Receptionist

By Amrita Singh, Rishabh Jha

Abstract ▾

Chapter 9 | 14 pages

Internet of Medical Things Devices: A Review

By Sachin Dhawan, Arun Kumar Rana, Sumit Kumar Rana, Kashif Nisar

Abstract ▾

Chapter 10 | 17 pages

COVID-19 Patient Remote Health Monitoring System Using IoT

By Jivan Parab, M. Lanjewar, C. Pinto, M. Sequeira, G.M. Naik

Abstract ▾

Chapter 11 | 11 pages

Prediction of Alanine Using Neural Network Model

By M. Sequeira, Jivan Parab, G.M. Naik

Abstract ▾

Chapter 12 | 11 pages

Hybrid Algorithm for Detection of COVID-19 Using CNN and SVM

By Pranjali G Gulhane, Anuradha Thakare

Abstract ▾

Chapter 13 | 19 pages

Deep Learning Algorithms for IoT-Based Hybrid Sensor Using Big Data Analytics

By R. Ganesh Babu, S. Markkandan, A. Sugunapriya, P. Karthika

Abstract ▾

Chapter 14 | 19 pages

Delineation of Landslide Hazard Zones of a Part of Sutlej Basin in Himachal Pradesh Through Frequency Ratio Model

By Asutosh Goswami, Suhel Sen, Rupa Sanyal

Abstract ▾

Chapter

Prediction of Alanine Using Neural Network Model

By *M. Sequeira, Jivan Parab, G.M. Naik*

ABSTRACT

The near-infrared region is increasingly been used for rapid clinical testing in the medical field. A medical doctor caring for patients suffering from liver diseases often relies upon the levels of blood alanine to assess the condition of the patient. This manuscript discusses the neural network approach to estimate the alanine content using the near-infrared (NIR) absorption spectra in the range of 2,050–2,350 nm. NIR spectra were obtained from 64 laboratory samples on a spectrophotometer. The recorded dataset was divided into training and validation sets containing 57 and 7 samples, respectively. The former was used to train the model and the latter was used to test the prediction of the created model. Before applying the training using a neural network, principal component analysis (PCA) transformation is done on the dataset. The inputs to the neural network were the PCA scores. The network was trained using the Levenberg–Marquardt algorithm. Bland–Altman analysis of the model gave a bias of 0.04 mg/dL and the limits of agreement from -0.88 to 0.95 mg/dL. The model gave a root mean square error for prediction of 0.43 mg/dL and an accuracy of 97.68% on the validation dataset.
