Table of contents (74 papers)

Role of Filter Sizes in Effective Image Classification Using Convolutional Neural Network

Vaibhav Sharma, E. Elamaram
Pages 625–637

Sentiment Analysis on Product Reviews Using Machine Learning Techniques

Rajkumar S. Jagdale, Vishal S. Shirsat, Sachin N. Deshmukh

Pages 639–647

Vector-Controlled Induction Motor Drives Using Intelligent RST Robust Controller

Bhola Jha, M. K. Panda, V. M. Mishra, S. N. V. Ganesh
Pages 649–667

Optimization of Electricity Bill on Study of Energy Audit by Using Grid Integration of Renewable Energy Sources

Shubham Soni, Inderpreet Kaur, Deepak Kumar
Pages 669–676

Computer-Aided Diagnosis of Epilepsy Based on the Time-Frequency Texture Descriptors of EEG Signals Using Wavelet Packet Decomposition and Artificial Neural Network

N. J. Sairamya, S. Thomas George, M. S. P. Subathra, Nallapaneni Manoj Kumar
Pages 677–688

User Identification Methods in Cognitive Radio Networks

A. K. Budati, S. Kiran Babu, Ch. Suneetha, B. B. Reddy, P. V. Rao
Pages 689–699

Design and Performance Analysis of Optical Signal Processing Module in Open Air and Underwater Environment

C. R. Uma Kumari, Dhanalakshmi Samiappan
Pages 701–710

Analysis of Jitter and Shimmer for Parkinson's Disease Diagnosis Using Telehealth

Harisudha Kuresan, Sam Masunda, Dhanalakshmi Samiappan
Pages 711–721

Real-Time Biomedical Recursive Images Detection Algorithm for Indian Telemedicine Environment

Syed Thouheed Ahmed, M. Sandhya
Pages 723–731

From Nonlinear Digital Filters to Shearlet Transform: A Comparative Evaluation of Denoising Filters Applied on Ultrasound Images

S. Latha, Dhanalakshmi Samiappan
Pages 733–741

Application of Multi-domain Fusion Methods for Detecting Epilepsy from Electroencephalogram Using Classification Methods

L. Susmitha, S. Thomas George, M. S. P. Subathra, Nallapaneni Manoj Kumar
Pages 743–754

In Silico Studies of Charge Transfer Complexes of 6-(Trifluoromethyl)furo[2,3-b]pyridine-2-carbohydrazides with Iodine as σ -Acceptor

Shirish Kumar Kodadi, Parthasarathy Tigulla
Pages 755–770

A Cognitive Approach for Design of Smart Toilet in Healthcare Units

Mohan Debarchan Mohanty, Mihir Narayan Mohanty
Pages 771–780

Autonomic Nervous System for Sympathetic and Parasympathetic for Cardiac Event Coherence

Noel G. Tavares, R. S. Gad, A. M. Hernandez, Uday Kakodkar, G. M. Naik
Pages 781–794

Steady-State Visual Evoked Potential-Based Real-Time BCI for Smart Appliance Control

Noel G. Tavares, R. S. Gad
Pages 795–805

Autonomic Nervous System for Sympathetic and Parasympathetic for Cardiac Event Coherence

Abstract

Human body physiology is regulated through the central neural control (CNS) which takes signal from the respiratory system and ambiance which signifies atmospheric pressure, temperature and various gases in the environment. The central nervous system then controls the metabolic control of various organs through the afferent nerves and the efferent nerves reflecting the various reflex of the organs back to the CNS, which regulates the cardiovascular system (CVS) for the stroke volume (SV) of the blood and heart rate (HR). The SV and HR collectively synthesize the cardiac output of the heart balancing the body for the coherence or non-coherence states. We have defined and simulated here in this paper the Neural Mass Model (NMM), which is one of the component which feeds the CNS and controls the cardiovascular system for the human blood pressure (ABP) and heart rate. We have defined and simulated arterial blood pressure model, i.e., Windkessel model; describing the arterial blood pressure for the particular input volume of the blood and ECG model for the computing heart rate and heart rate variability (HRV). The integration of CNS, Windkessel and EEG model has thrown light on some aspects of sympathetic and parasympathetics of ANS for further improvisation and experimentations.
