Semester IV

Name of the Program: Master of Commerce [M.Com]

Course Code : COM-603

Title of the course : Advanced Econometrics

Number of Credits : 4

Effective from AY : 2022 – 2023

Prerequisites for the course:  Objective:  1. To enable learners to apply cross-section regression models on limited dependent variables.  2. To enable learners to acquire time series modeling and forecasting skills with advanced analytical techniques for short-term and long-term relationships in variables of interest.  3. To enhance skills in estimation and forecasting of volatility.  4. To provide skills in building panel data models for examining dependency relationships amongst financial variables.  Content:  Unit 1  Limited Dependent Variable Models  Nature – Linear Probability Model – Limitations of LPM – Logit and Probit Models: Structure and specifications, Estimation, Interpretations, Computing marginal effects – Tobit Model: estimations and specification issues.  Unit 2  Multivariate Time Series Analysis  Vector autoregressive (VAR) models – Estimation and forecasting with VAR – Forecast error variance decomposition – Impulse response function – Generalized VAR - Forecasting with VAR models – Granger causality test – Johansen Co-integration test – VECM model – ARDL model.  Unit 3  Advanced Volatility Models  Multivariate GARCH and conditional correlations models – Constant and Dynamic Conditional Correlations models – BEKK GARCH model – Stochastic volatility models: Concept, structure, Kalman filter.  Unit 4  Panel Data Econometrics  Panel data structure – Advantages of Panel Data –Pooled OLS Regression – Fixed Effects model – Random effects model – Properties of Various Estimators – Fixed Effects versus Random effects model – Wald test - Breush and Pagan Lagrange Multiplier Test – Hausman Test – Non-Stationary Panel - Panel unit root and cointegration tests  Pedagogy:  Lectures / case analysis / assignments / classroom interaction / lab. Practical problems may be solved using available open source	Effective from AY	: 2022 – 2023		
1. To enable learners to apply cross-section regression models on limited dependent variables. 2. To enable learners to acquire time series modeling and forecasting skills with advanced analytical techniques for short-term and long-term relationships in variables of interest. 3. To enhance skills in estimation and forecasting of volatility. 4. To provide skills in building panel data models for examining dependency relationships amongst financial variables.  Content:  Unit 1  Limited Dependent Variable Models  Nature – Linear Probability Model – Limitations of LPM – Logit and Probit Models: Structure and specifications, Estimation, Interpretations, Computing marginal effects – Tobit Model; estimations and specification issues.  Unit 2  Multivariate Time Series Analysis  Vector autoregressive (VAR) models – Estimation and forecasting with VAR – Forecast error variance decomposition - Impulse response function – Generalized VAR - Forecasting with VAR models – Granger causality test – Johansen Co-integration test – VECM model – ARDL model.  Unit 3  Advanced Volatility Models  Multivariate GARCH and conditional correlations models – Constant and Dynamic Conditional Correlations models – BEKK GARCH model – Stochastic volatility models: Concept, structure, Kalman filter.  Unit 4  Panel Data Econometrics  Panel data structure – Advantages of Panel Data –Pooled OLS Regression – Fixed Effects model – Random effects model – Properties of Various Estimators - Fixed Effects versus Random effects model – Wald test - Breush and Pagan Lagrange Multiplier Test – Hausman Test – Non-Stationary Panel - Panel unit root and cointegration tests  Pedagogy: Lectures / case analysis / assignments / classroom interaction / lab.	-	NIL		
dependent variables.  2. with advanced analytical techniques for short-term and long-term relationships in variables of interest.  3. To enhance skills in estimation and forecasting of volatility.  4. To provide skills in building panel data models for examining dependency relationships amongst financial variables.  Content:  Unit 1  Limited Dependent Variable Models  Nature – Linear Probability Model – Limitations of LPM – Logit and Probit Models: Structure and specifications, Estimation, Interpretations, Computing marginal effects – Tobit Model: estimations and specification issues.  Unit 2  Multivariate Time Series Analysis  Vector autoregressive (VAR) models – Estimation and forecasting with VAR – Forecast error variance decomposition - Impulse response function – Generalized VAR - Forecasting with VAR models – Granger causality test – Johansen Co-integration test – VECM model – ARDL model.  Unit 3  Advanced Volatility Models  Multivariate GARCH and conditional correlations models – Constant and Dynamic Conditional Correlations models – BEKK GARCH model – Stochastic volatility models: Concept, structure, Kalman filter.  Unit 4  Panel Data Econometrics Panel data structure – Advantages of Panel Data – Pooled OLS Regression – Fixed Effects model – Random effects model – Properties of Various Estimators - Fixed Effects versus Random effects model – Wald test - Breush and Pagan Lagrange Multiplier Test – Hausman Test – Non-Stationary Panel - Panel unit root and cointegration tests  Pedagogy: Lectures / case analysis / assignments / classroom interaction / lab.	Objective:	dependent variables.		
4. To provide skills in building panel data models for examining dependency relationships amongst financial variables.  Content:  Unit 1 Limited Dependent Variable Models Nature – Linear Probability Model – Limitations of LPM – Logit and Probit Models: Structure and specifications, Estimation, Interpretations, Computing marginal effects – Tobit Model: estimations and specification issues.  Unit 2 Multivariate Time Series Analysis Vector autoregressive (VAR) models – Estimation and forecasting with VAR – Forecast error variance decomposition – Impulse response function – Generalized VAR - Forecasting with VAR models – Granger causality test – Johansen Co-integration test – VECM model – ARDL model.  Unit 3 Advanced Volatility Models Multivariate GARCH and conditional correlations models – Constant and Dynamic Conditional Correlations models – BEKK GARCH model – Stochastic volatility models: Concept, structure, Kalman filter.  Unit 4 Panel Data Econometrics Panel data structure – Advantages of Panel Data –Pooled OLS Regression – Fixed Effects model – Random effects model – Properties of Various Estimators – Fixed Effects versus Random effects model – Wald test - Breush and Pagan Lagrange Multiplier Test – Hausman Test – Non-Stationary Panel - Panel unit root and cointegration tests  Pedagogy: Lectures / case analysis / assignments / classroom interaction / lab.		with advanced analytical techniques for short-term ar relationships in variables of interest.	_	
Limited Dependent Variable Models  Nature – Linear Probability Model – Limitations of LPM – Logit and Probit Models: Structure and specifications, Estimation, Interpretations, Computing marginal effects – Tobit Model: estimations and specification issues.  Unit 2  Multivariate Time Series Analysis  Vector autoregressive (VAR) models – Estimation and forecasting with VAR – Forecast error variance decomposition - Impulse response function – Generalized VAR - Forecasting with VAR models - Granger causality test – VAR based Granger causality test – Johansen Co-integration test – VECM model – ARDL model.  Unit 3  Advanced Volatility Models  Multivariate GARCH and conditional correlations models – Constant and Dynamic Conditional Correlations models – BEKK GARCH model – Stochastic volatility models: Concept, structure, Kalman filter.  Unit 4  Panel Data Econometrics  Panel data structure – Advantages of Panel Data –Pooled OLS Regression – Fixed Effects model – Random effects model – Properties of Various Estimators - Fixed Effects versus Random effects model – Wald test - Breush and Pagan Lagrange Multiplier Test – Hausman Test – Non-Stationary Panel - Panel unit root and cointegration tests  Pedagogy:  Lectures / case analysis / assignments / classroom interaction / lab.		4. To provide skills in building panel data models for examining	g dependency	
Nature – Linear Probability Model – Limitations of LPM – Logit and Probit Models: Structure and specifications, Estimation, Interpretations, Computing marginal effects – Tobit Model: estimations and specification issues.  Unit 2  Multivariate Time Series Analysis  Vector autoregressive (VAR) models – Estimation and forecasting with VAR – Forecast error variance decomposition - Impulse response function – Generalized VAR - Forecasting with VAR models – Granger causality test – VAR based Granger causality test – Johansen Co-integration test – VECM model – ARDL model.  Unit 3  Advanced Volatility Models  Multivariate GARCH and conditional correlations models – Constant and Dynamic Conditional Correlations models – BEKK GARCH model – Stochastic volatility models: Concept, structure, Kalman filter.  Unit 4  Panel Data Econometrics  Panel data structure – Advantages of Panel Data –Pooled OLS Regression – Fixed Effects model – Random effects model – Properties of Various Estimators - Fixed Effects versus Random effects model – Wald test - Breush and Pagan Lagrange Multiplier Test – Hausman Test – Non-Stationary Panel - Panel unit root and cointegration tests  Pedagogy:  Lectures / case analysis / assignments / classroom interaction / lab.	Content:	Unit 1	15 Hours	
Probit Models: Structure and specifications, Estimation, Interpretations, Computing marginal effects — Tobit Model: estimations and specification issues.  Unit 2  Multivariate Time Series Analysis  Vector autoregressive (VAR) models — Estimation and forecasting with VAR — Forecast error variance decomposition - Impulse response function — Generalized VAR - Forecasting with VAR models — Granger causality test — Johansen Co-integration test — VECM model — ARDL model.  Unit 3  Advanced Volatility Models  Multivariate GARCH and conditional correlations models — Constant and Dynamic Conditional Correlations models — BEKK GARCH model — Stochastic volatility models: Concept, structure, Kalman filter.  Unit 4  Panel Data Econometrics Panel data structure — Advantages of Panel Data —Pooled OLS Regression — Fixed Effects model — Random effects model — Properties of Various Estimators — Fixed Effects versus Random effects model — Wald test — Breush and Pagan Lagrange Multiplier Test — Hausman Test — Non-Stationary Panel — Panel unit root and cointegration tests  Pedagogy: Lectures / case analysis / assignments / classroom interaction / lab.		Limited Dependent Variable Models		
Interpretations, Computing marginal effects – Tobit Model: estimations and specification issues.  Unit 2  Multivariate Time Series Analysis  Vector autoregressive (VAR) models – Estimation and forecasting with VAR – Forecast error variance decomposition - Impulse response function – Generalized VAR - Forecasting with VAR models - Granger causality test – VAR based Granger causality test – Johansen Co-integration test – VECM model – ARDL model.  Unit 3  Advanced Volatility Models  Multivariate GARCH and conditional correlations models – Constant and Dynamic Conditional Correlations models – BEKK GARCH model – Stochastic volatility models: Concept, structure, Kalman filter.  Unit 4  Panel Data Econometrics  Panel data structure – Advantages of Panel Data –Pooled OLS Regression – Fixed Effects model – Random effects model – Properties of Various Estimators - Fixed Effects versus Random effects model – Wald test - Breush and Pagan Lagrange Multiplier Test – Hausman Test – Non-Stationary Panel - Panel unit root and cointegration tests  Pedagogy: Lectures / case analysis / assignments / classroom interaction / lab.		Nature - Linear Probability Model - Limitations of LPM - Logit and		
estimations and specification issues.  Unit 2  Multivariate Time Series Analysis  Vector autoregressive (VAR) models – Estimation and forecasting with VAR – Forecast error variance decomposition - Impulse response function – Generalized VAR - Forecasting with VAR models - Granger causality test – VAR based Granger causality test – Johansen Co-integration test – VECM model – ARDL model.  Unit 3  Advanced Volatility Models  Multivariate GARCH and conditional correlations models – Constant and Dynamic Conditional Correlations models – BEKK GARCH model – Stochastic volatility models: Concept, structure, Kalman filter.  Unit 4  Panel Data Econometrics  Panel data structure – Advantages of Panel Data –Pooled OLS Regression – Fixed Effects model – Random effects model – Properties of Various Estimators - Fixed Effects versus Random effects model – Wald test - Breush and Pagan Lagrange Multiplier Test – Hausman Test – Non-Stationary Panel - Panel unit root and cointegration tests  Pedagogy: Lectures / case analysis / assignments / classroom interaction / lab.		Probit Models: Structure and specifications, Estimation,		
Unit 2 Multivariate Time Series Analysis  Vector autoregressive (VAR) models – Estimation and forecasting with VAR – Forecast error variance decomposition - Impulse response function – Generalized VAR - Forecasting with VAR models - Granger causality test – VAR based Granger causality test – Johansen Co-integration test – VECM model – ARDL model.  Unit 3 Advanced Volatility Models  Multivariate GARCH and conditional correlations models – Constant and Dynamic Conditional Correlations models – BEKK GARCH model – Stochastic volatility models: Concept, structure, Kalman filter.  Unit 4 Panel Data Econometrics Panel data structure – Advantages of Panel Data –Pooled OLS Regression – Fixed Effects model – Random effects model – Properties of Various Estimators - Fixed Effects versus Random effects model – Wald test - Breush and Pagan Lagrange Multiplier Test – Hausman Test – Non-Stationary Panel - Panel unit root and cointegration tests  Pedagogy:  Lectures / case analysis / assignments / classroom interaction / lab.		Interpretations, Computing marginal effects – Tobit Model:		
Multivariate Time Series Analysis  Vector autoregressive (VAR) models – Estimation and forecasting with VAR – Forecast error variance decomposition - Impulse response function – Generalized VAR - Forecasting with VAR models – Granger causality test – VAR based Granger causality test – Johansen Co-integration test – VECM model – ARDL model.  Unit 3  Advanced Volatility Models  Multivariate GARCH and conditional correlations models – Constant and Dynamic Conditional Correlations models – BEKK GARCH model – Stochastic volatility models: Concept, structure, Kalman filter.  Unit 4  Panel Data Econometrics  Panel data structure – Advantages of Panel Data –Pooled OLS Regression – Fixed Effects model – Random effects model – Properties of Various Estimators - Fixed Effects versus Random effects model – Wald test - Breush and Pagan Lagrange Multiplier Test – Hausman Test – Non-Stationary Panel - Panel unit root and cointegration tests  Pedagogy:  Lectures / case analysis / assignments / classroom interaction / lab.		· · · · · · · · · · · · · · · · · · ·		
Vector autoregressive (VAR) models – Estimation and forecasting with VAR – Forecast error variance decomposition - Impulse response function – Generalized VAR - Forecasting with VAR models - Granger causality test – VAR based Granger causality test – Johansen Co-integration test – VECM model – ARDL model.  Unit 3  Advanced Volatility Models  Multivariate GARCH and conditional correlations models – Constant and Dynamic Conditional Correlations models – BEKK GARCH model – Stochastic volatility models: Concept, structure, Kalman filter.  Unit 4  Panel Data Econometrics Panel data structure – Advantages of Panel Data –Pooled OLS Regression – Fixed Effects model – Random effects model – Properties of Various Estimators - Fixed Effects versus Random effects model – Wald test - Breush and Pagan Lagrange Multiplier Test – Hausman Test – Non-Stationary Panel - Panel unit root and cointegration tests  Pedagogy: Lectures / case analysis / assignments / classroom interaction / lab.			15 Hours	
with VAR — Forecast error variance decomposition - Impulse response function — Generalized VAR - Forecasting with VAR models — Granger causality test — VAR based Granger causality test — Johansen Co-integration test — VECM model — ARDL model.  Unit 3  Advanced Volatility Models  Multivariate GARCH and conditional correlations models — Constant and Dynamic Conditional Correlations models — BEKK GARCH model — Stochastic volatility models: Concept, structure, Kalman filter.  Unit 4  Panel Data Econometrics  Panel data structure — Advantages of Panel Data —Pooled OLS Regression — Fixed Effects model — Random effects model — Properties of Various Estimators - Fixed Effects versus Random effects model — Wald test - Breush and Pagan Lagrange Multiplier Test — Hausman Test — Non-Stationary Panel - Panel unit root and cointegration tests  Pedagogy: Lectures / case analysis / assignments / classroom interaction / lab.				
response function – Generalized VAR - Forecasting with VAR models - Granger causality test – VAR based Granger causality test – Johansen Co-integration test – VECM model – ARDL model.  Unit 3  Advanced Volatility Models  Multivariate GARCH and conditional correlations models – Constant and Dynamic Conditional Correlations models – BEKK GARCH model – Stochastic volatility models: Concept, structure, Kalman filter.  Unit 4  Panel Data Econometrics  Panel data structure – Advantages of Panel Data –Pooled OLS Regression – Fixed Effects model – Random effects model – Properties of Various Estimators - Fixed Effects versus Random effects model – Wald test - Breush and Pagan Lagrange Multiplier Test – Hausman Test – Non-Stationary Panel - Panel unit root and cointegration tests  Pedagogy:  Lectures / case analysis / assignments / classroom interaction / lab.				
- Granger causality test – VAR based Granger causality test – Johansen Co-integration test – VECM model – ARDL model.  Unit 3  Advanced Volatility Models  Multivariate GARCH and conditional correlations models – Constant and Dynamic Conditional Correlations models – BEKK GARCH model – Stochastic volatility models: Concept, structure, Kalman filter.  Unit 4  Panel Data Econometrics  Panel data structure – Advantages of Panel Data –Pooled OLS Regression – Fixed Effects model – Random effects model – Properties of Various Estimators - Fixed Effects versus Random effects model – Wald test - Breush and Pagan Lagrange Multiplier Test – Hausman Test – Non-Stationary Panel - Panel unit root and cointegration tests  Pedagogy:  Lectures / case analysis / assignments / classroom interaction / lab.		·		
Johansen Co-integration test – VECM model – ARDL model.  Unit 3  Advanced Volatility Models  Multivariate GARCH and conditional correlations models – Constant and Dynamic Conditional Correlations models – BEKK GARCH model – Stochastic volatility models: Concept, structure, Kalman filter.  Unit 4  Panel Data Econometrics  Panel data structure – Advantages of Panel Data –Pooled OLS Regression – Fixed Effects model – Random effects model – Properties of Various Estimators - Fixed Effects versus Random effects model – Wald test - Breush and Pagan Lagrange Multiplier Test – Hausman Test – Non-Stationary Panel - Panel unit root and cointegration tests  Pedagogy: Lectures / case analysis / assignments / classroom interaction / lab.				
Unit 3 Advanced Volatility Models Multivariate GARCH and conditional correlations models — Constant and Dynamic Conditional Correlations models — BEKK GARCH model — Stochastic volatility models: Concept, structure, Kalman filter. Unit 4 Panel Data Econometrics Panel data structure — Advantages of Panel Data —Pooled OLS Regression — Fixed Effects model — Random effects model — Properties of Various Estimators — Fixed Effects versus Random effects model — Wald test — Breush and Pagan Lagrange Multiplier Test — Hausman Test — Non-Stationary Panel — Panel unit root and cointegration tests  Pedagogy: Lectures / case analysis / assignments / classroom interaction / lab.				
Advanced Volatility Models  Multivariate GARCH and conditional correlations models – Constant and Dynamic Conditional Correlations models – BEKK GARCH model – Stochastic volatility models: Concept, structure, Kalman filter.  Unit 4  Panel Data Econometrics  Panel data structure – Advantages of Panel Data –Pooled OLS Regression – Fixed Effects model – Random effects model – Properties of Various Estimators - Fixed Effects versus Random effects model – Wald test - Breush and Pagan Lagrange Multiplier Test – Hausman Test – Non-Stationary Panel - Panel unit root and cointegration tests  Pedagogy: Lectures / case analysis / assignments / classroom interaction / lab.			45 110	
Multivariate GARCH and conditional correlations models – Constant and Dynamic Conditional Correlations models – BEKK GARCH model – Stochastic volatility models: Concept, structure, Kalman filter.  Unit 4  Panel Data Econometrics  Panel data structure – Advantages of Panel Data –Pooled OLS Regression – Fixed Effects model – Random effects model – Properties of Various Estimators - Fixed Effects versus Random effects model – Wald test - Breush and Pagan Lagrange Multiplier Test – Hausman Test – Non-Stationary Panel - Panel unit root and cointegration tests  Pedagogy:  Lectures / case analysis / assignments / classroom interaction / lab.			15 Hours	
and Dynamic Conditional Correlations models – BEKK GARCH model – Stochastic volatility models: Concept, structure, Kalman filter.  Unit 4  Panel Data Econometrics  Panel data structure – Advantages of Panel Data –Pooled OLS Regression – Fixed Effects model – Random effects model – Properties of Various Estimators - Fixed Effects versus Random effects model – Wald test - Breush and Pagan Lagrange Multiplier Test – Hausman Test – Non-Stationary Panel - Panel unit root and cointegration tests  Pedagogy:  Lectures / case analysis / assignments / classroom interaction / lab.				
- Stochastic volatility models: Concept, structure, Kalman filter.  Unit 4  Panel Data Econometrics  Panel data structure - Advantages of Panel Data -Pooled OLS  Regression - Fixed Effects model - Random effects model -  Properties of Various Estimators - Fixed Effects versus Random effects model - Wald test - Breush and Pagan Lagrange Multiplier Test - Hausman Test - Non-Stationary Panel - Panel unit root and cointegration tests  Pedagogy:  Lectures / case analysis / assignments / classroom interaction / lab.				
Unit 4 Panel Data Econometrics Panel data structure — Advantages of Panel Data —Pooled OLS Regression — Fixed Effects model — Random effects model — Properties of Various Estimators - Fixed Effects versus Random effects model — Wald test - Breush and Pagan Lagrange Multiplier Test — Hausman Test — Non-Stationary Panel - Panel unit root and cointegration tests  Pedagogy: Lectures / case analysis / assignments / classroom interaction / lab.		·		
Panel Data Econometrics Panel data structure — Advantages of Panel Data —Pooled OLS Regression — Fixed Effects model — Random effects model — Properties of Various Estimators - Fixed Effects versus Random effects model — Wald test - Breush and Pagan Lagrange Multiplier Test — Hausman Test — Non-Stationary Panel - Panel unit root and cointegration tests  Pedagogy:  Lectures / case analysis / assignments / classroom interaction / lab.				
Panel data structure – Advantages of Panel Data –Pooled OLS Regression – Fixed Effects model – Random effects model – Properties of Various Estimators - Fixed Effects versus Random effects model – Wald test - Breush and Pagan Lagrange Multiplier Test – Hausman Test – Non-Stationary Panel - Panel unit root and cointegration tests  Pedagogy:  Lectures / case analysis / assignments / classroom interaction / lab.			15 Hours	
Regression — Fixed Effects model — Random effects model — Properties of Various Estimators - Fixed Effects versus Random effects model — Wald test - Breush and Pagan Lagrange Multiplier Test — Hausman Test — Non-Stationary Panel - Panel unit root and cointegration tests  Pedagogy:  Lectures / case analysis / assignments / classroom interaction / lab.				
Properties of Various Estimators - Fixed Effects versus Random effects model – Wald test - Breush and Pagan Lagrange Multiplier  Test – Hausman Test – Non-Stationary Panel - Panel unit root and cointegration tests  Pedagogy:  Lectures / case analysis / assignments / classroom interaction / lab.		_		
effects model – Wald test - Breush and Pagan Lagrange Multiplier  Test – Hausman Test – Non-Stationary Panel - Panel unit root and cointegration tests  Pedagogy:  Lectures / case analysis / assignments / classroom interaction / lab.				
Test — Hausman Test — Non-Stationary Panel - Panel unit root and cointegration tests  Pedagogy: Lectures / case analysis / assignments / classroom interaction / lab.		·		
Cointegration tests           Pedagogy:         Lectures / case analysis / assignments / classroom interaction / lab.

**Course Outcomes** Upon completion of the course, learners will be able to:

COO1: Apply probability-based models, including LPM, logit, and probit models, to data in social sciences.

**COO2:** Perform forecasting by developing VAR models.

COO3: Estimate Granger causality models, including the VAR framework.

COO4: Develop models for examining the long-run relationship between financial variables using Johansen's cointegration and ARDL models.

COO5: Forecast financial market volatility using advanced GARCH volatility models and Kalman filter.

**COO6:** Demonstrate ability to develop useful panel data models with appropriate diagnostic procedures.
